* 1867—Gladiateur, first French bred horse that won; 1867—snow fell during the day; 1869—second received 300 sovs. and the third 100 sovs. out of the stakes; 1872—start altered to New Level Post; 1876—Kisber, the first Hungarian bred horse that won. The race has been run in June in the following years—1791, 1794, 1797, 1802, 1808, 1810, 1813, 1821, 1824, 1829, 1832, 1835, 1840, 1862, 1870, 1874, 1878.

† Walked over and divided after a dead heat with Camellia.

‡ This race was established in 1776, but did not receive the name until 1778, when it was named out of compliment to Colonel St. Leger, and run for the first time on Doncaster town moor.

§ Walked over and divided after a dead heat with Formosa.

‖ A dead heat—stakes divided.

1881*	J. Bennett *b.* T. Taylor.
1885	J. Roberts, jr., *b.* Cook.
1885†	Roberts, jr. *b.* J. Bennett.

* Bennett resigned.
† Roberts made the largest break of these matches—155. This and the previous match were 3,000 up; the others, with the exception of the first, 1000 up.

AQUATIC CHAMPIONSHIP.

Yr.	Winner.
1866	R. Chambers *b.* J. Sadler.
1867	H. Kelley *beat* Chambers.
1868	J. Renforth *beat* Kelley.
1874	J. H. Sadler *b.* R. Bagnall.
1875	J. H. Sadler *b.* R. W. Boyd.
1876	E. Trickett *b.* J. H. Sadler.
1877	E. Trickett *beat* M. Rush.
1879	Hanlan *beat* Elliott.
1880	Hanlan *beat* Trickett.
1881	Hanlan *beat* Laycock.
1882	Hanlan *beat* Boyd.
1882	Hanlan *beat* Trickett.
1883	Hanlan *beat* Kennedy.
1883	Hanlan *beat* Wallace Ross.
1884	Hanlan *beat* Laycock.
1884	W. Beach *beat* Hanlan.
1885	W. Beach *beat* Hanlan.
1885	W. Beach *b.* Neil Matterson.
1886	W. Beach *beat* J. Gaudaur.
1886	W. Beach *b.* Wallace Ross.

After Trickett had carried off the Championship to Australia in 1876, a Championship of England Cup was instituted, which, after being held in turn by R. W. Boyd, J. Higgins, and W. Elliott, was finally won by Hanlan, when he defeated the latter in 1879. G. J. Perkins is at present the holder of a new England Championship Cup.

FARES BY DISTANCE: If hired and discharged *within* the Four Mile Radius, for any distance not exceeding two miles.... s. 1 d. 0

For every additional mile or part of a mile 0 6

If hired *outside* the Four Mile Circle, wherever discharged, for the first and each succeeding mile or part of a mile..... 1 0

If hired *within*, but discharged *outside*, the Four Mile Circle, not exceeding one mile, 1s.; exceeding one mile, then for each mile *ended* within the circle, 6d.; and for each mile or part of a mile *ended* outside 1 0

FARES BY TIME: *Inside* the Four Mile Circle. Four-wheeled Cabs, for one hour or less, 2s.; two-wheeled Cabs 2 6

For every additional quarter of an hour or part of a quarter, four-wheeled Cab, 6d.; if a two-wheeled Cab 0 8

If hired *outside* the Circle, wherever discharged, for one hour or less 2 6

If above one hour, then for every quarter of an hour or less 0 8

If hired *within*, but discharged *outside*, the Four Mile Circle, the same.

EXTRA PAYMENTS.—*Hirers of Cabs should be particular in noticing these regulations, as disputes generally arise from their not being clearly understood.*

Whether hired by distance or by time:

LUGGAGE.—For each package carried outside the carriage..... s. 0 d. 2

EXTRA PERSONS: For each above two (two children under 10 years of age count as one person) 0 6

For each child under 10 years old when carried together with two or more persons 0 3

WAITING:—By distance: for every 15 minutes completed—if hired within the Four Mile Circle, four wheels, 6d.; two wheels.. 0 8

If hired without Circle, 2 or 4 wheels .. 0 8

GENERAL REGULATIONS.—Fares are according to distance or time, at the option of the hirer, *expressed at the commencement of the hiring*; if not otherwise expressed, the fare to be paid according to distance; but driver can refuse to be hired by time between 8 p.m. and 6 a.m.

DRIVER, if hired by distance, is not compelled to drive more than six miles. If hired by time, the driver may be required to drive at any rate not exceeding four miles an hour; if required to drive more than four miles within the hour he may demand, in addition to the fare regulated by time, for every mile or any part exceeding four miles, the fare regulated by distance.

AGREEMENT to pay more than legal fare is not binding.

If the driver agreed beforehand to take any sum less than the proper fare, the penalty for demanding more than the sum agreed upon is 40s.

The driver of every hackney carriage shall have with him, and when required produce, the Authorized Book of Distances, and every driver of any hackney carriage shall, when hired, deliver to the hirer a printed ticket, showing fares, &c.

In case of any dispute between the hirer and driver, the hirer may require the driver to drive to the nearest Metropolitan Police Court or Justice Room, when the complaint may be determined by the sitting magistrate without summons; or if no Police Court or Justice Room be open at the time, then to the nearest Police Station, where the complaint shall be entered, and heard by the Magistrate at his next sitting.

All property left in any hackney carriage shall be deposited by the driver at the nearest Police Station within twenty-four hours, if not sooner claimed by the owner, such property to be returned to the person who shall prove to the satisfaction of the Commissioner of Police that the same belonged to him, on payment of all expenses incurred, and of such sum to the driver as the Secretary of State has by order prescribed.

Driver may demand a reasonable sum as a deposit, from persons hiring and requiring him to wait at any place, over and above the fare to which the driver is entitled for driving thither. Penalty 40s., if driver, having received such deposit, refuse to wait, or go away before the expiration of the time for which the deposit shall be a sufficient compensation; or if the driver shall refuse to account for such deposit.

DAYS OF GRACE.

Bills of Exchange or Promissory Notes, payable at any time after date, have three Days of Grace allowed; thus, a bill dated 1 Jan. at two-months' date is not due till March 4; but by a recent Act no Days of Grace are allowed on Bills drawn at sight or on demand; such must, therefore, be paid on presentation. Bills falling due upon "Bank Holidays" are payable the day after; but those falling due on Sundays, on Good Friday, or Christmas Day, must be paid the day before.

THE FIRST DAY OF THE YEAR.

Readers of Parish Registers and other ancient documents are sometimes puzzled by the dates, and especially by the apparent discrepancies in the time when the year commenced. It began:—

7th to 14th Centuries, at Christmas.
12th Century, by the Church, on March 25.
14th Century, by Civilians, same time.

In 1752 the New Style was introduced, and 1753 commenced on the 1st of January. Previous to this two dates were used, one for the civil year, and the other for the historical; the former commenced March 25, and the latter Jan. 1; thus we find the same event with two dates, *e.g.*, Feb. 20, 1681-2. Another change was made in the calendar by the same Act, 24 Geo. II. c. 23; the day after September 2nd was accounted the *fourteenth*, hence the difference between Old and New Michaelmas and other days.

* Only the six thus marked were indisputably General or Œcumenical.

BIRTHS.—When a birth takes place, personal information of it must be given to the registrar, and the register signed in his presence, by one of the following persons:—1. The father or mother of the child. If they fail, 2. The occupier of the house in which the birth happened; 3. A person present at the birth; or, 4. The person having charge of the child. The duty of attending to the registration thereof rests firstly on the parents. One of them must, within 42 days of the birth, give to the registrar by word of mouth the information needed to enable him to register, and must sign the register in his presence. If they fail to do this without reasonable cause, they will become liable to a penalty of forty shillings. In case of their failure, one of the other persons above named must give personal information and sign the register within the same period. If at the end of 42 days no one has given information and signed the register, the registrar may write to any one of the above-mentioned persons, requiring him or her to come to him for that purpose, at a stated time and place. Any person who fails to comply with this requisition will become liable to a penalty of forty shillings. Not only will liability to a penalty be avoided, but the registration of a birth will be free of charge when it takes place within 42 days, unless either of the persons above named sends to the registrar a written request to come and register at his or her residence, or at the house where the child was born, when the registrar on so attending to register may claim a fee of one shilling. *After three months a birth cannot be registered except in the presence of the Superintendent Registrar, and on payment of fees to him and the registrar.* After twelve months a birth can be registered only on the Registrar-General's express authority, and on payment of further fees. It is important to persons of all classes to be able to prove their age and the place of their birth. The only legal proof of these is afforded by the civil registers, which the law now requires to be made as above described. Registration of birth in no respect lessens the importance and sanctity of the rite of baptism, or absolves churchmen from the duty of having their children baptized. The child's baptismal name may be inserted in the birth register within twelve months after the registration of the birth.

DEATHS.—When a death takes place, personal information of it must be given to the registrar, and the register signed in his presence, by one of the following persons:—1. The nearest relatives of the deceased present at the death, or in attendance during the last illness. If they fail, 2. Some other relative of the deceased in the same (registrar's) sub-district. In default of any relatives, 3. A person present at the death; or, the occupier of the house in which the death happened. If all the above named fail, 4. An inmate of the house, or, the person causing the body to be buried. Relatives present or in attendance are first required to attend to the registration. One of them must, within five days of the death, give to the registrar by word of mouth the information needed, and must sign the register; or must within the same time send him written notice of the death, accompanied by a certificate of the cause of death, signed by a registered medical practitioner, if any such attended the deceased. The written notice will be useless without a legal medical certificate. If notice is sent, information must nevertheless be given and the register signed within fourteen days from the death. If relatives present or in attendance fail without reasonable cause to carry out these provisions, they will become liable to a penalty of forty shillings. In case of their failure, one of the other persons above named must give personal information and sign the register in their stead. It is advisable that every death should be registered and a certificate of registry be obtained from the registrar before the funeral. This certificate should be delivered to the clergyman or other person who performs the funeral or religious service. The penalty for not delivering this certificate is forty shillings. If at the end of fourteen days, one of the persons above mentioned has not attended to the registration, the registrar may by written application require any one of them to come to him and do so, at a stated time and place. Any person failing to attend on this application will be liable to a penalty of forty shillings. Whenever the deceased has been attended by a registered medical practitioner, a certificate of the cause of death, signed by him, must be delivered to the registrar. Any person receiving such a certificate from the practitioner and not so delivering it, will incur a penalty of forty shillings. The registration of a death is free of charge when it takes place within the above-mentioned periods, unless on request it is effected at an informant's house, or at the house where the death happened, when a fee of one shilling will be payable to the registrar. After twelve months a death can be registered only on the Registrar-General's express authority, and on payment of fees.

CORONERS' INQUESTS are held in all cases of violent and unnatural deaths, such as the case of a person slain or drowned, or dying suddenly, and of any person dying in prison. Sudden deaths are not understood where persons die of fevers, apoplexy, or some other visitation of God, and Coroners do not obtrude into the houses of persons for the purpose of holding inquests, but are sent for by the peace officers, to whom it is the duty of those in whose houses violent or unnatural deaths occur, to make immediate communication, whilst the body is fresh, and, if possible, whilst it remains in the same situation as when the death occurred. Inquests are not to be held on Sunday. When the Coroner receives due notice of a violent death, casualty, or misadventure, he issues his warrant or precept to summon a jury to appear at a particular time and place for the purpose of instituting the inquiry, when, how, and by what means the deceased came by his death. The jury must consist of at least twelve lawful and honest men, "*probi et legales homines,*" and the number is immaterial provided twelve agree. The jury is usually summoned from the householders residing in the neighbourhood in which the death took place. Any person summoned as a juror is bound to attend, or, failing to attend, is liable to be fined in any sum not exceeding forty shillings. The exemptions of persons from serving on juries contained in Jury Acts do not apply to Coroners' inquests.

VACCINATION.

The parent of every child born in England must, within 3 months after the birth, or the per-

son having the custody of any child must within 3 months after receiving the custody of the child, have it vaccinated by some medical practitioner, or take it to the Public Vaccinator of the vaccination district in which the child shall be then resident, to be vaccinated. When the child is not vaccinated by the Public Vaccinator, the parent or custodian must also transmit a certificate of successful vaccination, signed by the medical practitioner, to the Vaccination Officer appointed by the Guardians of the district, within 7 days after the performance of the operation. For neglecting to procure vaccination, or to transmit the certificate as required, a penalty of 20*s.* is incurred.

PROCEEDINGS AS TO A MARRIAGE BEFORE A REGISTRAR.

Notice and Declaration.—In case of a marriage intended to be procured at a Registrar's Office, it is necessary for one of the parties to give notice under his or her hand (in the form prescribed by the 19 & 20 Vict. c. 119, schedule A) to the Superintendent Registrar of the district within which the parties shall have dwelt for not less than seven days then next preceding, or if the parties dwell in the districts of different superintendent registrars, to give the like notice to the superintendent registrar of each district. Every such notice has to be accompanied by a solemn declaration by one of the parties that there is no lawful hindrance to such marriage. If the marriage is intended to be had by licence, it is necessary only for one of the parties to give notice to the superintendent registrar in whose district he or she has resided for the space of fifteen days immediately preceding; and if the other party reside in a different superintendent registrar's district, it is not requisite that notice of the intended marriage shall be given to the superintendent registrar in whose district the other party resides.

Certificate.—After the expiration of twenty-one days next after the day of the entry of notice of marriage which is to be had without licence, the superintendent registrar is required, provided there be no lawful impediment, to issue, upon the request of the party giving the notice, a certificate in the form prescribed by the 19 & 20 Vict. c. 119, schedule B. At any time within three calendar months next after the day of the entry of the notice of marriage the intended marriage may be solemnized under the authority of the certificate.

Licence.—In the case of marriage by licence the superintendent registrar is required, after the expiration of one whole day next after the day of the entry of the notice of marriage, provided there be no lawful impediment, to issue his certificate and also a licence to marry. At any time within three calendar months next after the day of the entry of the notice of marriage the intended marriage may be solemnized under the authority of the licence.

Marriage Ceremony.—After the expiration of twenty-one days after the entry of the notice if the marriage is intended to be had without licence, or of one whole day if by licence, the marriage may be contracted and solemnized at the office and in the presence of the superintendent registrar and some registrar of the district, and in the presence of two witnesses, between the hours of eight and twelve in the forenoon, with open doors. Each of the parties is required to declare as follows:—"I do solemnly declare that I know not of any lawful impediment why I, *A. B.*, may not be joined in matrimony to *C. D.*;" and each of the parties shall say to the other, "I call upon these persons here present to witness that I, *A. B.*, do take thee, *C. D.*, to be my lawful wedded wife [*or* husband]." A wedding-ring is usually required. Provision is made in the Marriages and Registration Act, 1837, sect. 23, for the declaration and form of words to be used in Welsh in Wales and in all places where the Welsh tongue is commonly used.

Illegitimacy.—A man may be summoned to petty sessions on the application of the mother of a bastard child, or by the Guardians of the Poor where the bastard child becomes chargeable to the Union or parish; and the Justices, on his being proved to be the father of the child, may make an order requiring him to pay for its maintenance and education a sum of money not exceeding 5*s.* a week. The mother has the custody of her bastard children. No person is required as father of an illegitimate child to give information concerning the birth of such child, and the registrar is forbidden to enter in the register the name of any person as father of such child unless at the joint request of the mother and of the person acknowledging himself to be the father of such child. Such person is in that case required to sign the register, together with the mother. A menial servant found to be *enceinte* may be peremptorily dismissed without notice; but any attempt to examine without her consent a servant supposed to be *enceinte* renders the master liable to an action. A man who is adjudged the father of a bastard child may be peremptorily discharged by his master. In case any living new-born child is found exposed, it is the duty of any person finding such child, and of any person in whose charge such child may be placed, to give information to the Registrar of Births.

INFECTIOUS DISEASES.

Precautions Necessary to be Observed.—By the Public Health Act, 1875, it is provided that any person who—(1) While suffering from any dangerous infectious disorder wilfully exposes himself without proper precautions against spreading the said disorder in any street, public place, shop, inn, or public conveyance, without previously notifying to the owner, conductor, or driver thereof that he is so suffering; or, (2) Being in charge of any person so suffering, so exposes such sufferer; or, (3) Gives, lends, sells, trans-

mits, or exposes, without previous disinfection, any bedding, clothing, rags, or other things which have been exposed to infection from any such disorder, shall be liable to a penalty not exceeding £5. A person suffering from such disorder who enters a public conveyance without previously notifying to the owner or driver that he is so suffering, shall be ordered by the Court to pay the owner and driver the amount of any loss and expense they may incur in respect of the disinfection of the conveyance. Every owner or driver of a public conveyance is required to immediately provide for the disinfection of such conveyance after it has to his knowledge conveyed any person suffering from a dangerous infectious disorder; but no such owner or driver can be required to convey any person so suffering until he has been paid a sum sufficient to cover any loss or expense incurred in disinfecting the conveyance. Any person who knowingly lets for hire any house, room, or part of a house in which any person has been suffering from any dangerous infectious disorder without having such house, room, or part of a house, and all articles therein liable to retain infection, disinfected to the satisfaction of a legally qualified medical practitioner, as testified by a certificate signed by him, is liable to a penalty not exceeding £20. Any person letting for hire, or showing for the purpose of letting for hire, any house or part of a house, who, on being questioned by any person negotiating for the hire of such house as to the fact of there being, or within six weeks previously having been therein any person suffering from any dangerous infectious disorder, knowingly makes a false answer to such question, is liable to a penalty not exceeding £20, or to imprisonment with or without hard labour for a period not exceeding one month. Where, on the certificate of the Medical Officer of Health, or of any two medical practitioners, it appears to any urban or rural sanitary authority that any house, or part thereof, is in such a filthy or unwholesome condition that the health of any person is affected or endangered thereby, or that the whitewashing, cleansing, or purifying of any house, or part thereof, would tend to prevent or check infectious disease, the local authority may give notice in writing to the owner or occupier of such house, or part thereof, to whitewash, cleanse, or purify the same as the case may require, and such person is liable to a penalty not exceeding 10s. for every day during which he fails to comply with the notice, and the sanitary authority may cause the required work to be done, and may recover the expenses from the person in default. A sanitary authority may direct the destruction of any bedding, clothing, or other articles which have been exposed to infection from any dangerous infectious disorder, and may give compensation for the same. Where any suitable hospital or place for the reception of the sick is provided within the district of a sanitary authority, or within a convenient distance of such district, any person who is suffering from any dangerous infectious disorder, and is without proper lodging or accommodation, or is lodged in a room occupied by more than one family, may, on a certificate signed by a legally qualified medical practitioner, and with the consent of the superintending body of such hospital or place, be removed by order of any justice to such hospital or place, at the cost of the sanitary authority. The foregoing provisions do not apply to the Metropolis, but the requirements of the law there in force are in most respects the same. At present the law does not require that the occurrence of cases of infectious disease should be notified to the authorities, but the recently published report of the Royal Commissioners on Small-pox and Fever Hospitals recommends that "every person suffering from infectious disease, or those in charge of him, or, if these neglect their duty, the occupier of the house in which the sick person is residing, or if he is a pauper, his medical attendant, should be required by law to notify the nature of the disease to the Medical Officer of Health so soon as they or any of them are aware of it." The perfect isolation of every case of dangerous infectious disease is the only effectual mode of preventing its spread, and this is best attained by the voluntary co-operation of patients and those in charge of them with the medical attendant or Medical Officer of Health when the disease first makes its appearance.

Streets and Footpaths.—The scavenging of streets and the cleansing of footways and pavements is generally undertaken by the sanitary authority of each district, but under certain circumstances the cleansing of footways and pavements adjoining premises, and the removal of filth and ashpit refuse, may be imposed upon occupiers. It is, however, unlawful in any Urban Sanitary District to place or leave on any footway any furniture, goods, wares, or merchandise, or any cask, tub, basket, pail, &c.; or to place over any footway any blind, shade, covering, awning, or other projection less than eight feet in height from the ground; or to place any goods, wares, merchandise, matter, or thing whatsoever, so that the same project in such a manner as to obstruct or incommode the passage of any person over or along a footway; or to roll any cask, tub, hoop, or wheel upon any footway, except for the purpose of crossing the footway; or to throw or lay down any materials in any street, or beat or shake any carpet, rug, or mat in any street after the hour of eight in the morning.

RATES OF BROKERAGE.

There is no scale fixed or recognized by the Committee of the Stock Exchange, but the following are the charges usually made for commission by stockbrokers :—

		s.	d.
British and foreign funds ..	per £100 stock	2	6
Exchequer bills	,,	1	0
Colonial Govt. and railw. bonds	per cent...	5	0
Shares under £5	per share..	1	0
,, £5 to £10	,,	1	6
,, £10 to £25	,,	2	0
,, £25 to £50	,,	5	0
,, £50 and above ..	per cent.	10	0

In cases in which stock is under £50 the commission charged is ¼ per cent.

ADMIRALTY KNOTS & STATUTE MILES.

The circumference of the earth is divided into 360 degrees, each degree containing 60 knots or nautical miles, consequently the circumference of the earth—viz. 131,385,456 feet—divided by (360 × 60=) 21,600 gives the length of a knot, viz. 6,082·66 feet, which is generally considered the standard, except by the Admiralty. The Admiralty knot is =6,080 feet; the statute mile being = 5,280 feet.—*Molesworth Pocket Book.*

TO ASCERTAIN THE WEIGHT OF CATTLE.

Measure the girt close behind the shoulder, and the length from the fore part of the shoulder-blade along the back to the bone at the tail which is in a vertical line with the buttock, both in feet. Multiply the square of the girt, expressed in feet, by five times the length, and divide the product by 21; the quotient is the weight, nearly, of the four quarters, in imperial stones of 14 lbs. avoirdupois. For example, if the girt be 6 feet, and the length 5¼ feet, we shall have 6 × 6 = 36, and 5¼ × 5 = 26¼; then 36 × 26¼ = 945, and this, divided by 21, gives 45 stones exactly. It is to be observed, however, that in very fat cattle the four quarters will be about one-twentieth more, while in those in a very lean state they will be one-twentieth less than the weight obtained by the rule.

SPECIAL MARRIAGE LICENCES.

Special Licences are granted by the Archbishop of Canterbury (after application at the Faculty Office, Doctors' Commons, through a Proctor), under special circumstances to marry in a particular church, without previous residence in the district; but the reasons assigned must be such as to meet with his Grace's approval. Fees for Licence stamp, &c., average £29 8s.

MARRIAGE LICENCES.

Marriage Licences can be obtained in London by application at the Faculty Office, at the Vicar-General's Office, and at the Bishop of London's Registry, all in Doctors' Commons, between 10 and 4, by one of the parties about to be married. In the country they may be obtained at the offices of the Bishops' Registrars, but Licences obtained at the Bishop's Registry only enable the parties to be married in the diocese in which they are issued; those procured at the Faculty Office or at the Vicar-General's Office are available for London or the country. No instructions, either verbal or in writing, can be received, except from one of the parties; nor will any agent be allowed to interfere, either in procuring or paying for the licence. Affidavits are prepared from the personal instructions of one of the parties about to be married, and the licence is delivered to the party upon payment of fees amounting to thirty shillings, which, with the stamps, make the entire cost £2 2s. 6d. The cost of licences through a clerical surrogate in the country varies, according to the diocese, from £2 12s. 6d. to £3 3s. By the 4th George IV., cap. 76, it is enacted, "in order to avoid fraud and *collusion* in obtaining licences for marriage, that before any such licence be granted one of the parties shall make a declaration, on oath, that there is no legal impediment to the intended marriage; and also that one of *such parties hath had* his or her usual place of abode for the space of 15 days immediately preceding the issuing of the licence within the boundary of the parish church, or the district parish in the church of which the marriage is to be solemnized."

PAWNBROKERS' REGULATIONS.

For the TICKET on goods pledged for 10s. or less ..... ½d.
On goods pledged for more than 10s. .... 1d.
For INTEREST on pledges not exceeding 40s., for every 2s. or part of 2s., per month .. ½d.
And after the first month any time not exceeding 14 days to be charged as half a month.
On pledges exceeding 40s., for every half-crown, or part of half a crown, per month ½d.

FORFEITURE.—Pledges for 10s. and under must be redeemed within twelve calendar months and seven days from the date of pledging. At the end of that time they become the property of the pawnbroker.

Pledges above 10s., if not redeemed within twelve calendar months and seven days from the day of pledging, may be sold by auction by the pawnbroker, but may be redeemed at any time before the day of sale.

Within three years after sale the pawner may inspect the account of the sale in the pawnbroker's books on payment of one penny, and receive any surplus produced by the sale. But deficit on sale of one pledge may be set off by the pawnbroker against surplus on another.

If any pledge is destroyed or damaged by fire, the pawnbroker will be bound to pay the value of the pledge after deducting the amount of the loan and profit—such value to be the amount of the loan and profit and 25 per cent. on the amount of the loan.

If any ticket is lost, mislaid, or stolen, the pawner should at once apply to the pawnbroker for a form of declaration to be made before a magistrate, or the pawnbroker will be bound to deliver the pledge to any person who produces the ticket to him and claims to redeem the same.

When the loan is 5s. or under, the charge on form of declaration is one halfpenny; when the loan is above 5s., one penny.

SPECIAL CONTRACTS.—A pawnbroker may make a special contract with a pawner in respect of a pledge on which the pawnbroker makes a loan of above 40s., provided always that—

(1.) The pawnbroker at the time of the pawning shall deliver to the pawner a special contract pawn-ticket, signed by the pawnbroker.

(2.) The duplicate of the special contract pawn-ticket shall be signed by the pawner.

The pawnbroker may also charge:—For ticket, profit per calendar month, for storage of the pledge, and payment to inspect account of sale, such sums and rates as may be agreed upon between the pawnbroker and the pawner at the time of making the contract.

After the first calendar month any time not exceeding fourteen days will be charged as half a month, and any time exceeding fourteen days and not more than one month will be charged as one month.

The charge for storage of the pledge will be per calendar month, or any part of a month, in addition to the charges above mentioned.

Pledges may be pawned under special contract for a period of not less than three months.

In all other respects pledges under special contract are subjected to the same rules as to sale by auction, inspection of account of sale, payment of surplus produced by sale, and loss of ticket, as are set forth above in the case of ordinary pledges for more than 10s.

Foreign Moneys.

TABLE FOR CALCULATING THE VALUE OF ANY GIVEN WEIGHT OF STANDARD SILVER IN TROY OUNCES.

Ozs.	Market Price of Silver in Pence per Troy Ounce.													
	48	49	50	50½	51	51½	52	52½	53	54	55	56	57	58
1	48	49	50	50·5	51	51·5	52	52·5	53	54	55	56	57	58

4	192	196	200	202·0	204	206·0	208	210·0	212	216	220	224	228	232
5	240	245	250	252·5	255	257·5	260	262·5	265	270	275	280	285	290
6	288	294	300	303·0	306	309·0	312	315·0	318	324	330	336	342	348
7	336	343	350	353·5	357	360·5	364	367·5	371	378	385	392	399	406
8	384	392	400	404·0	408	412·0	416	420·0	424	432	440	448	456	464
9	432	441	450	454·5	459	463·5	468	472·5	477	486	495	504	513	522

By means of the above table, taken in conjunction with the column of the opposite table headed "Equivalent Weight of Standard Silver in Troy Ounces," the intrinsic value of any coin can be easily calculated with silver at several other prices than those previously given. It will only be necessary to take the numbers representing tenths, hundredths, and thousandths of ounces in the first column, find the numbers opposite to them in the column giving the price of silver, and add these together, taking care to move the decimal point successively one, two, and three places to the left; the result will be the coin's intrinsic value in pence.

EXPLANATORY NOTES.—France, Belgium, Italy, Greece, and Switzerland constitute what is known as the "Latin" Union, and their coins are alike in weight and fineness, occasionally differing, however, in name. The same system has been in part adopted by Spain, Servia, Bulgaria, Russia, Finland, and Roumania, but they have not joined the Union. Francs and centimes of France, Belgium, and Switzerland are respectively designated lire and centissimi in Italy; drachmai and lepta in Greece; dinars and paras in Servia; peseta and centimos in Spain; leys and banis in Roumania; levas and stotinkis in Bulgaria. Similarly the Scandinavian countries, Norway, Sweden, and Denmark, employ coins of the same weight and fineness, their names being also alike. The Venezolano (of 10 decimos) of Venezuela and the sol (of 10 dineros) of Peru are alike interchangeable, as also are the peso of Chili, Columbia, and Uruguay.

In all British colonies, English money of every denomination is current. The exchange value of the money of these countries indicated by a * is determined by the rate of exchange for the day, and may be taken as approximately that given in the last column. The rate given in the daily papers generally represents the number of the standard coins (those printed in italics) that are equivalent to one sovereign. The Spanish rate is given in terms of the old dollar (= 2 escudos). The value of other silver coins is approximately determined by the market value of silver, and must therefore be sought in one of the columns headed "Intrinsic Value with Silver at per Ounce." The exchange value of the rupees depends on the rate for "India Council Bills." In all "bi-metallic" countries pure gold is taken as being worth 15½ times its weight of pure silver. This proportion corresponds to giving standard silver a constant value of 60¾*d*., as in the last column of the table.

HAY AND STRAW.

Truss of Straw, 36 lb.
Truss of Old Hay, 56 lb.
Truss of New Hay (to September 1st), 60 lb.
Load, 36 Trusses = Straw, 11 cwt. 2 qrs. 8 lb.; Old Hay, 18 cwt.; New Hay, 19 cwt. 1 qr. 4 lb.

WOOL.

		cwt.	qr.	lb.
7 Pounds	= 1 Clove	0	0	7
2 Cloves	= 1 Stone	0	0	14
2 Stones	= 1 Tod	0	1	0
6½ Tods	= 1 Wey	1	2	14
12 Sacks	= 1 Last	39	0	0

The Pack weighs 240 lb.

Cotton Wool, Bale variable; U.S.A. and Egyptian, about 450 lb.; East Indian, 380 lb.; Brazil, 180 lb.

MEASURES OF LENGTH.

	In.	Ft.	Ys.	Pls.	Ch.	Fs.
Foot	12	1				
Yard	36	3	1			
Rod, pole, or perch	198	16½	5½	1		
Chain	792	66	22	4	1	
Furlong	7,920	660	220	40	10	
Mile	63,360	5,280	1,760	320	80	8

Mile, Geographical, 6,082·66 feet.

PARTICULAR MEASURES OF LENGTH.

A point, $\frac{1}{72}$ of an inch.
A line, $\frac{1}{12}$ of an inch.
A palm, 3 inches.
A hand, 4 inches.
A link, 7·92 inches.
12 lines, 1 inch.
A cubit, 18 inches.
A pace, military, 2ft. 6in.
A pace, geometrical, 5ft.
A fathom, 6 feet.
A cable's length, 120 fathoms.
A league, 3 miles.
Admiralty knot, 6,080 ft.
A degree, 69⅛ miles = 60 nautical knots or geographical miles.

SQUARE OR SURFACE MEASURE.

	In.	Ft.	Ys.	Pls.	Ch.	R.
Square foot	144	1				
Square yard	1,296	9	1			
Rod, pole, or perch	39,204	272¼	30¼	1		
Square chain	627,264	4,356	484	16	1	
Rood	1,568,160	10,890	1,210	40	2½	1
Acre	6,272,640	43,560	4,840	160	10	4

A square mile contains 640 acres = 2,560 roods, 6,400 chains, 102,400 rods, poles, or perches, or 3,097,600 square yards.

APOTHECARIES' WEIGHTS AND MEASURES, BY WHICH MEDICINES ARE COMPOUNDED.

20 Grains	= 1 Scruple ℈	= 20 grs.
3 Scruples	= 1 Drachm ʒ	= 60 ,,
8 Drachms	= 1 Ounce ℥	= * 480 ,,
12 Ounces	= 1 Pound ℔	= *5760 ,,

* The Avoirdupois oz. of 437½ grains, and the lb. of 7,000 grains are the weights named in the London Pharmacopœia, and the drugs are purchased by Avoirdupois weight.

FLUID MEASURE.

		Marked
60 Minims ♏	= 1 Fluid Drachm	f ʒ
8 Drachms	= 1 Ounce	f ℥
20 Ounces	= 1 Pint	O
8 Pints	= 1 Gallon	gal.

AVOIRDUPOIS.

27⅓ Grains	= 1 Drachm	= 27·34375	Grns.
16 Drachms	= 1 Ounce (oz.)	= 437·5	Grns.
16 Ounces	= 1 Pound (lb.)	= 7000	Grns.
28 Pounds	= 1 Quarter (qr.).		
4 Quarters	= 1 Hundredweight (cwt.),	112 lb.	
20 Cwt.	= 1 Ton, 2,240 lb.		

Avoirdupois weight is used in almost all commercial transactions and common dealings, but in addition to the above there are special weights for various articles, the chief of which are:—

A Stone of Butcher's Meat	=	8 lbs.
A Stone, Horseman's weight	=	14 ,,
A Firkin of Butter	=	56 ,,
A Firkin of Soft Soap	=	64 ,,
A Box of Fish, about	=	90 ,,
A Quintal or Cental	=	100 ,,
A Barrel of Gunpowder	=	100 ,,
A Barrel of Raisins	=	112 ,,
A Seam of Glass, 24 stones	=	120 ,,
A Barrel of Butter—4 firkins	=	224 ,,
A Barrel (or pack) of Soft Soap	=	256 ,,
A Fodder of Lead, London & Hull	=	19½ cwt.
,, ,, Derby	=	22½ ,,
,, ,, Newcastle	=	21½ ,,

A Sack—Potatoes, 168 lbs.; Flour, 280 lbs.; Coals, 224 lbs.; a ton of Coals 10 sacks.
A Ream of Paper, 20 quires.
A Printer's Ream, 516 sheets.

TROY WEIGHT.

3·17 Grains	= 1 Carat.	
24 Grains	= 1 Pennyweight (dwt.).	
20 Pennyweights	= 1 Ounce	480 grs.
12 Ounces	= 1 Pound	5,760 ,,

Troy is the weight used by goldsmiths and jewellers. The grains Troy, Apothecaries, and Avoirdupois are equal, and the same in England, France, the United States, Holland, and in most other countries; but the carat varies: in France it is 3·18 grs., in Holland 3·0 grs., and in the U. S. A. 3·2. The jewellery ounce is divided into 151½ carats and 600 pearl grains.

The oz. Troy and Apothecaries = 1·0971 oz. avoirdupois; but the lb. Troy and Apothecaries = only 0·8228 lb. avoirdupois, and 175 lb. Troy and Apothecaries = 144 lb. avoirdupois.

Standard gold consists of 22 parts pure gold alloyed with 2 parts of copper or other metal, and according to the quantity of alloy is called 9, 12, 15, or 18 carat, *i.e.*, that quantity of pure gold out of the twenty-four. Standard silver is invariably of one fineness, viz., 11 oz. 2 dwt. fine to 18 dwt. alloy. One lb. of silver is coined into 66 shillings.

CUBIC OR SOLID MEASURE.

1728 Cubic Inches	= 1 Cubic Foot.
27 Cubic Feet	= 1 Cubic Yard.
40 Do. of Rough, or 50 Do. of Hewn Timber	= 1 Ton or Load.
42 Cubic Feet of Timber	= 1 Shipping Ton.
108 Cubic Feet	= 1 Stack of Wood.
128 Cubic Feet	= 1 Cord of Wood.
40 Cubic Ft. merchandise	= 1 Ton Shipping.

CARPENTERS' BRICKLAYERS' AND BUILDERS' MEASUREMENTS.

Stock bricks	8¾ inches	× 4¼ × 2¾
Welsh fire bricks	9 ,,	× 4½ × 2¾
Dutch clinkers	9¼ ,,	× 3 × 1½

A rod of brickwork = 306 cubic feet or 11⅓ cubic yards, and contains about 4,500 bricks with about 75 cubic feet of mortar.

SIZES OF SLATES.

	in. in.		in. in.
Princesses	24 × 14	Ladies	16 × 8
Duchesses	24 × 12	Ditto	15 × 8
Marchionesses	22 × 12	Ditto	14 × 12
Countesses	20 × 10	Ditto	14 × 8
Viscountesses	18 × 10	Plantations	13 × 11
Ditto	18 × 9	Doubles	13 × 18
Ladies	18 × 10	Ditto	12 × 20

A TON WEIGHT OF THE FOLLOWING WILL

	AVERAGE IN CUBIC FEET		
Earth	21	Pit Sand	22
Clay	18	River ditto	19
Chalk	14	Marl	18
Thames ballast	20	Shingle	23
Coarse gravel	19	Night soil	18

WATER.

1 cubic inch	=	·0361 lb.
1 gallon	=	10·0000 ,,
1 cubic foot	=	62·3210 ,,
1 ditto	=	6·2321 gallons.
35·943 cubic feet	=	1 ton.

Cistern, 1 cubic foot, is equal to about 6¼ gallons, or 62·321 lb. A cistern 4 feet by 2½ and 3 deep will hold about 187 gallons, and weigh nearly 16 cwt. in addition to its own weight.

A cubic foot of pure gold weighs 1,210 lb., pure silver 655 lb., cast iron 450 lb., copper 550 lb., lead 710 lb., pure platinum 1,220 lb., tin 456 lb.

The gallon is = 277¼ cubic inches, = 0·16 cubic feet, = 10 lb. distilled water.

LIQUID MEASURE.

	Gals.	Qts.	Pts.
Four Gills, one Pint	..	..	1
Two Pints 1 Quart	..	1	2
Four Quarts 1 Gallon	1	4	8
Firkin or Quarter Barrel	9	36	72
Kilderkin or Half Barrel	18	72	144
Barrel	36	144	288
Hogshead of Ale (1½ barrel)	54	216	432
Puncheon	72	288	576
Butt of Ale (3 barrels)	108	432	864

Practically, the only measures in use are gallons and quarts, the others are merely nominal; *e.g.*, the hogshead of 54 gallons, *old measure*, contains but 52 gallons 1 quart, 1 pint, and 3·55 gills imperial measure, and of wine six nominal quart bottles go to the gallon. Of imported wines the following are the usual measurements:

Pipe of Port or Masdeu	=	115 Gallons.
,, Teneriffe	=	100 ,,
,, Marsala	=	93 ,,
,, Madeira and Cape	=	92 ,,
Butt of Lisbon and Bucellas	=	117 ,,
,, Sherry and Tent	=	108 ,,
Aum of Hock and Rhenish	=	30 ,,
Hogshead of Claret	=	46 ,,

DRY OR CORN MEASURE.

4 Quarts	=	1 Gallon.
2 Gallons	=	1 Peck.
4 Pecks	=	1 Bushel.
4 Bushels, 1 Sack, or	=	1 Coomb.
8 Bushels, or two coombs	=	1 Quarter.
5 Quarters	=	1 Load.
10 Quarters	=	1 Last.

Boll of Meal = 140 lb.; 2 Bolls = 1 Sack.

Coals were formerly sold by measure, 3 bushels = 1 sack, 12 sacks = 1 chaldron. Coke, apples, potatoes, and some other goods are still sold by the sack of three bushels.

MEASURES OF TIME.

60 Seconds	=	1 Minute.
60 Minutes	=	1 Hour.
24 Hours	=	1 Day.
7 Days	=	1 Week.
28 Days	=	1 Lunar Month.
28, 29, 30, or 31 Days	=	1 Calendar Month.
12 Calendar Months	=	1 Year.
365 Days	=	1 Common Year.
366 Days	=	1 Leap Year.

ANGULAR MEASURE.

60 Seconds	=	1 Minute.
60 Minutes	=	1 Degree.
30 Degrees	=	1 Sign.
90 Degrees	=	1 Quadrant.
4 Quadrants, or 360°	=	1 Circumference, or Great Circle.

THERMOMETER.

Comparison between the Scales of Fahrenheit, Réaumur, and the Centigrade.

Zero Fahrenheit Corresponds with *minus* 17·78 Centigrade and *minus* 14·22 Réaumur.

DIVIDENDS are paid in one of the following modes:—

I. To the Stockholders personally, or to their attorneys, at the Bank of England. [Stockholders may arrange for the receipt of their dividends, free of charge, at any of the country branches, on application to the agent.]

II. By transmission of dividend-warrants by post, at the risk of the stockholder, under the following regulations:—

1. Any stockholder residing within the United Kingdom who desires to have his dividend-warrant sent to his address by post, must fill up a form of application, to be obtained at the Bank, or at any of its branches, and for English Government Stocks at any Money Order Office.

2. In the case of joint accounts, the application must be signed by all the members of the account, directing the warrant to be sent to one of them at a given address.

TRANSFER DAYS, any day but Saturday, from 11 to 3; for buying and selling, 11 to 1; for accepting, 9.30 to 4. Dividends are payable from 9 to 4; on Saturdays, 9 to 2. Transfers made on Saturdays are charged a fee of 2s. 6d. For Broker's charges, see p. 375. Bank Stock Transfer books are closed for about Three weeks before payment of dividend.

GENERAL BANK HOLIDAYS.—England and Ireland: Good Friday, Easter Monday, Whit Monday, First Monday in August, Christmas Day and following day, or if that be Sunday, then the Bank is closed on Monday. In Scotland: New Year's Day, Good Friday, First Monday in May, First Monday in August, and Christmas Day.

All articles upon which duties are levied by the Board of Inland Revenue are charged with similar duties if imported from abroad.

HOURS AT SOMERSET HOUSE.

Inland Revenue Office, 10 to 4.

Receiver-General's Office. No money received after 3 (Saturdays, 2).

Stamp Office. Stamps issued from 10 to 3 (Saturdays 10 to 2).

Impressed Stamps, 9 to 3 (Saturdays 9 to 2).

GENERAL REGISTER OFFICE, SOMERSET HOUSE.

	£	s.	d.
Fee for licensing place for public worship	0	2	6
Fee for licence to solemnize marriage in registered place of worship	3	0	0
Search fee, registration of birth, for five years	0	1	0
Copy of certificate of birth	0	2	7

COMPANIES' ACT, 1862.

FEES TO BE PAID BY STAMPS.

On registration, with a capital of £2,000, £2; £3,000, £3; £4,000, £4; £5,000, £5.

Five shillings extra per £1,000 above £5,000; 1s. extra per £1,000 above £100,000; but no fee higher than £50.

Deed stamp 10s. to be put both upon Memorandum and Articles.

INTEREST TABLE.

The following is a simple method of calculating interest on any given sum for any number of days, at five per cent.:—

Multiply POUNDS by the number of days for which it is required to ascertain the interest; this sum, divided by 365, will give the interest in shillings at five per cent.

Example.—Wanted to ascertain the interest on £45 for 83 days:—£45 × 83 ÷ 365 = 10·85 shillings, 10s. 10d. Or the interest on £250 for 73 days at the same rate:—

```
      250
       73
     ----
      750
     1750
  365)18250(50s. = £2 10.
      1825
```

If any other rate is required, it is easily calculated by adding to or deducting from the 5 per cent. product:—

2½ per cent. is one-half.
3 per cent. is six-tenths.
3½ per cent. is seven-tenths.
4 per cent. is four-fifths.
6 per cent. is six-fifths.
7½ per cent. is one-half more.

Thus, 5 per cent. upon £60 for 10 months would be £2 10s.; 2½ per cent., £1 5s.; at 3 per cent., 10s.; at £3½ per cent., £1 15s.; at 4 per cent., £2. If the rate of interest be more than 5 per cent., then the addition must be added. Thus, to reckon 6¼ per cent., add one fourth; for 7½ per cent., one-half. Bankers and money-dealers calculate the Interest for every day, and have volumes of tables constructed specially for the purpose, the 5 per cent. tables alone extending to nearly 400 pages.

Agreement for lease not exceeding 35 years, same as actual lease.

LEGACY AND SUCCESSION DUTIES: — *Also see "Probate Duty."*

If the deceased died on or after the 1st June, 1881, every pecuniary Legacy or Residue, or share of Residue, although not of the amount or value of £20, is chargeable with Duty by the 44 Vict. cap. 12, sec. 42.

(Except where the whole personal estate does not exceed £300, and a stamp duty of 30s. has been paid on the affidavit. In such cases no legacy duty whatever is payable: 44 Vict. c. 12, sec. 36. No succession duty is payable where the principal value of the whole succession does not amount to £100, or where the value of the individual succession as calculated by the Act is less than £20: 16 & 17 Vict. c. 51, sec. 13.)

Rates of duties payable on legacies, annuities, residues, and successions:—

To Children of the Deceased, or their Descendants, or to the Father or Mother or other Lineal Ancestor of the Deceased (see below).....£1 per cent.

To Brothers and Sisters of the Deceased, or their Descendants .....£3 per cent.

To brothers and Sisters of the Father or Mother of the Deceased, or their Descendants.....£5 per cent.

To Brothers and Sisters of the Grandfather or Grandmother of the Deceased, or their Descendants .....£6 per cent.

To any Person in any other Degree of collateral Consanguinity, or to a Stranger in Blood to the Deceased.....£10 per cent.

The Husband or Wife is not chargeable with Duty; and the Husband or Wife of a relation is chargeable with duty at the lower rate.

(In cases where the grant of probate or administration has been obtained on or after the 1st June, 1881, the duty at the rate of 1 per cent. is not payable upon legacies or residue or successions satisfied out of, or consisting of, estate and effects according to the value whereof stamp duty shall have been paid on the affidavit or inventory or account in conformity with the 44 Vict. c. 12. Legacies, residues, and successions satisfied out of, or consisting of, estate and effects on which stamp duty is *not* payable, as, for example, foreign property and real estate, are still liable to the duty at the rate of 1 per cent.)

Penalties.—Persons paying or receiving any Legacy, Residue, or Share of Residue liable to Duty, without taking or signing the proper Receipt for the same, are subject to a Penalty of £10 per cent. on the amount or value of such Legacy, Residue, or Share of Residue.

Persons not giving notice of a succession, or not delivering an account, are subject to a Penalty of £10 per cent. upon duty calculated at £1 per cent. for every month of delay.

PROBATE AND ACCOUNT DUTY. *Also see "Legacy and Succession Duty."*—On *affidavit of value* for probate or letters of administration and *inventory* (unless a former inventory exhibited before 1st June, 1881) of estate in respect of which probate or letters of administration granted or inventory exhibited on and after 1st June, 1881, except as hereafter mentioned, and on an *account* to be delivered to Commissioners of Inland Revenue under 44 Vict. c. 12, s. 38, on death of person dying on or after 1st June, 1881, of (1) donationes mortis causâ, (2) beneficial interest in property accruing by survivorship, (3) property passing under voluntary settlement, interest for life or absolute power of revocation reserved to settlor:

Where value exceeds £100 and not £500, £1 for each £50 or fraction of £50.

Where value exceeds £500 and not £1,000, £1 5s. for each £50 or fraction of £50.

Where value exceeds £1,000, £3 for each £100 or fraction of £100.

The value of estate of person dying domiciled in United Kingdom may be ascertained by deduction of debts due to persons resident in United Kingdom, and funeral expenses.

The legacy and succession duties at one per cent. are not payable on assets covered by the stamp on the *affidavit inventory* or *account*.

On *affidavit of value* or *inventory* where gross value of personal estate in United Kingdom or abroad of person dying on or after 1st June, 1881, does not exceed £300:

A fixed duty of 30s., which satisfies legacy and succession duties on property to which the *affidavit* or *inventory* relates.

The stamp duty of 5s. per cent. paid on deed of voluntary settlement of property included in an *account* will be returned, on production of deed, to person delivering the account.

Heavy penalties are imposed for not paying probate and account duties within prescribed time.

Exemptions.—Affidavit or inventory of estate under £100 of person dying after 25 July, 1864, and of estate of any common seaman, marine, or soldier slain or dying in Her Majesty's service.

For probate and inventory duty payable on grants of probate and letters of administration, and on inventories before 1st June, 1881, see 55 Geo. III. c. 184, schedule part 3, and 43 Vict. c. 14, schedule.

SPOILED STAMPS.

THE hours of attendance for the allowance of spoiled stamps at Somerset House are from 11 to 3 on Monday, Tuesday, Wednesday, Thursday, and Friday, and from 10 to 1 on Saturday. The hours of attendance at Nos. 1 & 2, Great Winchester Street Buildings, London Wall, for the allowance of sea policy and general spoiled stamps are from 11 to 3 on Monday, Wednesday, and Friday.

DEEDS STAMPED AFTER EXECUTION.

REGULATIONS under which the Commissioners of Inland Revenue as a general rule allow deeds and other instruments to be stamped after execution.

WITHOUT PENALTY, IN PAYMENT OF THE DUTY ONLY :—

Agreements under hand only, liable to the duty of 6*d.*—Appraisements.—Attested copies, within 14 days of *first* execution.

Life policies, within one month of *first* execution.

Deeds and instruments not otherwise excepted, within two months of *first* execution.

NOTE.—Where the deed or instrument has been wholly executed *abroad*, the period within which it may be stamped begins to reckon from the date of its arrival in this country.

WITH PENALTY IN ADDITION TO PAYMENT OF THE DUTY :—

Articles of clerkship.

Bills of exchange written upon stamps of sufficient amount but of improper denomination.

Charter-parties. Receipts. Within certain limits of time.—*Vide* Table of Penalties.

Contract notes. Delivery orders.

Letters of allotment. Scrip certificates.

Share warrants. Warrants for goods.

INSTRUMENTS WHICH CANNOT BE LEGALLY STAMPED AFTER EXECUTION :—

Bills of exchange (except as before mentioned).

Bills of lading.

Marine policies executed in the United Kingdom.

Proxies. Voting papers.

TABLE OF PENALTIES USUALLY ENFORCED :—

	£	s.	d.
Agreements under hand only. Attested copies or extracts: after the expiration of 14 days from their first execution	10	0	0
Charter-parties, within 7 days from their first execution	0	4	6
Charter-parties, after the expiration of 7 days, but within one month ..	10	0	0
Receipts, within 14 days after they have been given	5	0	0
Receipts, after 14 days, but within one month (beyond this period receipts cannot be stamped under any conditions)	10	0	0
Other instruments not enumerated, excepting those which cannot be legally stamped after execution ..	10	0	0

All applications for the remission, mitigation, or return of penalties, must be made by memorial, addressed to the Commissioners of Inland Revenue, Somerset House, and supported by statutory declaration, such declaration being exempt from stamp duty.

RATES OF INLAND POSTAGE.

INLAND LETTERS or Packets sent prepaid to or from any part of the United Kingdom, including the Orkney and Shetland Islands, the Channel Islands, Isle of Man, &c., are charged as follows:

LETTERS, BOOKS, AND PARCELS—

Weight not exceeding		Letter Post.	Book Post.	Parcel Post.		
				Weight.	Charge.	
lb.	oz.	d.	d.	lbs.	s.	d.
0	1	1	½	Not ex. 1	0	3

0	4	2	1	,, 3	0	6
0	6	2½	1½	,, 4	0	7½
0	8	3	2	,, 5	0	9
0	10	3½	2½	,, 6	0	10½
0	12	4	3	,, 7	1	0
0	14	And ½d or every addi-tional two ozs.	And ½d. for every addi-tional two ozs.	,, 8	1	1½
1	0			,, 9	1	3
1	2			,, 10	1	4½
1	4			,, 11	1	6

If the postage be not paid in advance, *double the amount* will be demanded on delivery; and if the prepaid postage be insufficient, *double the amount of the deficiency* will be charged.

No letter or packet may be more than 18 inches in length, 9 in width, or 6 in depth, unless it be sent to or from a Government office. The weight is unlimited.

LONDON POSTAL ARRANGEMENTS.

DISTRICTS.—For the purpose of facilitating the collection and delivery of letters, the Metropolis is divided into eight districts, marked:—

East Central (E.C.)	South Eastern (S.E.)
Eastern (E.)	South Western (S.W.)
Northern (N.)	Western (W.)
North Western (N.W.)	West Central (W.C.)

Of these the E.C., comprising the whole of the City, the W.C., the district between Temple Bar and Charing Cross, and the S.W., containing nearly all the Government Offices, are the most important. In the E.C., or City district, there are twelve deliveries daily. By appending the initials the sorting of letters is facilitated, and frequently two or more hours saved in the delivery. In the other districts there are from six to eleven collections and deliveries. At all district offices there is a special box in which London letters should be posted. Letters properly directed, and properly posted, should therefore be delivered within from two to four hours, and those posted at night delivered early next morning.

FOR THE COUNTRY AND ABROAD.—Letters and cards to go the same evening should be posted at Chief District offices, Branch offices, Receiving houses, and Pillar boxes, before 6. In suburban places the collections are made from half an hour to an hour earlier.

Letters for the early provincial day mails are collected at the General Post Office at 4.15, 5.45, 6.15, 7.0, and 7.45; for Scotland and Ireland at 6.15; and for the Continent at 7.15.

LATE LETTERS.—Inland letters bearing an extra ½*d.* stamp, if posted before 7 p.m. at the town Branch offices and Receiving houses, are forwarded by the night mails. At certain District offices the hour for posting with this late fee is extended when the letters are to go from the railways in their immediate neighbourhoods. Letters having an extra ½*d.* stamp may also be posted at the sorting carriage or platform barrier at the various railway termini up to the time of departure of the train bearing the mails, varying from 8.30 to 9.45.

LATE POSTING.—Letters for the country posted in London or the London districts too late for the ordinary evening mails, but in time for the last evening collections, are delivered next morning if for places within the range of the midnight despatches. These places, which number over 250, mostly within 150 miles of London, receive on Sundays the letters posted in London as late as 9 o'clock the previous night.

LATE FOREIGN LETTERS, with an extra 1*d.* stamp may be posted till 7 o'clock at Lombard Street, Gracechurch Street, Mark Lane, Eastcheap, Leadenhall Street, Throgmorton Street, Fleet Street, Ludgate Circus, and St. Martin's le-Grand; with an extra 2*d.* at the latter office till 7.15, or till 7.30 with an extra 3*d.* At the railway termini the late-letter fee is 4*d.* for the Continent, and 2*d.* for the United States, Canada, and the Cape.

RETURNED AND MISSING LETTERS.—Returned inland letters are disposed of on the day they reach the office. Every letter containing the address of the writer is returned to such writer; but, when there is no address, and the letter does not contain anything of value, it is destroyed, record being kept of only such as contain something of value. Undelivered foreign letters are returned, unopened, at stated periods to the countries whence received. The Returned Letter office is in Telegraph Street, Moorgate Street, and inquiries for missing letters should be made at the Secretary's office, in the new building, St. Martin's-le-Grand.

COMPLAINTS of irregularities and non-delivery should be addressed to the Secretary, General Post Office, E.C.

POSTAGE STAMPS (used also for receipts, telegrams, and certain Inland Revenue duties) are sold of the respective values of ½*d.*, 1*d.*, 1½*d.*, 2*d.*, 2½*d.*, 3*d.*, 4*d.*, 5*d.*, 6*d.*, 9*d.*, 1*s.*, 2*s.* 6*d.*, 5*s.*, 10*s.*, and 20*s.* These may be purchased at any office during the hours that attendance is given for telegraph business.

EMBOSSED PENNY ENVELOPES may be obtained of the following sizes:—**A**, $4\frac{3}{4} \times 3\frac{1}{16}$, in packets of 24 for 2*s.* 4*d.*; **B**, $5\frac{1}{4} \times 3\frac{7}{16}$; **C**, $5\frac{1}{4} \times 3$; and **D**, $4\frac{3}{4} \times 2\frac{13}{16}$, in packets of 24 for 2*s.* 2*d.*; a cheaper quality (Commercial), $5\frac{3}{8} \times 3\frac{3}{16}$, being sold in packets of 20 for 1*s.* 9*d.*; but all may be had in smaller numbers or singly.

Embossed stamps cut from an envelope are not available for postage.

REGISTRATION.—The fee for registering a letter, newspaper, or book packet is 2*d.* in addition to the postage. These must be handed to an agent of the Post Office, and a receipt taken. The payment of the registration fee effects an insurance on the packet against loss or damage up to £2; a further 1*d.* up to £5, or 2*d.* extra up to £10.

Registered letter envelopes, for foreign and inland letters, bearing a twopenny stamp embossed on the flap for the payment of the regis-

tration fee, are of five sizes, and are sold at **F**, 3¼ ins. × 3¼ ins., **G**, 6 ins. × 3¾ ins., 2¼*d.* each, or 12 for 2*s.* 2½*d.*; **H**, 8 ins. × 5 ins., **H2**, 9 ins. × 4 ins., 2¾*d.* each, or 12 for 2*s.* 7*d.*; **I**, 10 ins. × 7½ ins., **K**, 11½ ins. × 6 ins., 3*d.* each, or 12 for 2*s.* 10*d.*

Post Cards impressed with the halfpenny stamp, for transmission between places in the United Kingdom, are sold at the rate of 6 for 3½*d.*, or 11*s.* 8*d.* per parcel of 240; a thicker quality being 6 for 4*d.*, or 6*s.* 8*d.* per parcel of 120. Nothing whatever, not even one line of a newspaper cutting may be attached. Reply Post Cards may be had at double these rates.

Foreign Post Cards, for transmission to the Colonies and to all countries in the Postal Union, are sold at the rate of 1*d.*, 1½*d.*, and 2*d.* each. Reply Cards are also issued at double these rates.

Newspapers.—A prepaid postage of one halfpenny is charged for the inland transmission of each daily or weekly *registered* newspaper, the weight being disregarded; but a packet of several newspapers is not charged higher than the book-post rate of one halfpenny for every 2 oz. Newspapers posted unpaid are charged double the book-rate. No packet must exceed two feet in length, one foot in width or depth, or 14 lbs. in weight. The newspaper must contain no writing of the nature of a letter. Wrappers bearing a halfpenny stamp may be had singly at ¾*d.*, 2 for 1¼*d.*, 3 for 1¾*d.*, 4 for 2½*d.*, 5 for 3*d.*, 6 for 3½*d.*, then 7 for every 4*d.*; 22*s.* 10*d.* per parcel of 480: or with a penny stamp, singly 1¼*d.*, 2 for 2¼*d.*, 3 for 3¼*d.*, 4 for 4¼*d.*, 5 for 5¼*d.*, 6 for 6½*d.*, 7 for 7½*d.*, then 8 for every 8½*d.*; 21*s.* 3*d.* per parcel of 240.

Newspapers for abroad must be posted within eight days of publication. If posted after eight days, book postage rates must be paid.

Book Post.—The prepaid postage for a book or packet of books, paper, printed matter, manuscript, circulars, or photographs (when not on glass, or in cases containing glass, or any like substance), including binding and mounting, is one halfpenny for every 2 oz., or fraction of that weight. Under this head are included circulars produced in identical terms by any mechanical process. No packet must exceed 5 lbs. in weight, or 18 inches in length, or 6 in depth, or 9 in width, except to or from a Government Office.

Inland Parcel Post.—Subject to certain regulations *prepaid* parcels up to 11 lbs. may be sent between places in the United Kingdom at the rates shown in opposite page. Compensation to the amount of £1 can be claimed for loss or damage, or of £5 and £10 by the respective payments of 1*d.* or 2*d.* as an insurance fee. No parcel may exceed 3 ft. 6 in. in length, or with length and girth combined, more than 6 ft.

The parcel should be distinctly marked in the left-hand top corner "Parcel Post," and handed across the counter of the receiving houses or given to the rural postman, who, although the limit of weight has been extended to 11 lbs., must not accept more than 7 lbs. It must not be posted in a letter-box, and the postage must be prepaid by stamps, affixed by the sender. Money is received at the principal London offices when the postage of a number of parcels amounts to 20*s.*, and in certain large provincial towns when it amounts to £5.

The regulations are very numerous: generally they apply to infractions of the above very simple directions, or to parcels left at Post Offices till called for, such as are insufficiently directed or packed, and those that contain forbidden articles. Among the latter are letters, packets, or parcels intended for any other address than that on the parcel itself! Parcels for the Channel Islands are subject to special regulations, but those for the Isle of Man are treated as inland parcels.

No Parcel Post business is transacted on Sundays or holidays.

Foreign and Colonial Parcel Post.—The rules and regulations to be observed are similar to those relating to inland parcels, with the addition that every parcel must have a Customs declaration respecting the contents. This must be on a form obtainable at any Post Office: no duties are to be paid; they will be collected on delivery. To Gibraltar neither arms nor ammunition may be sent; nor may opium be sent to India, Hong Kong, or the Straits Settlements. The charges to British possessions are:—

		Per lb.	Additional.
India	1st lb.	1*s.*	1*s.*
Hong Kong and China	,,	10*d.*	10*d.*
*Cape of Good Hope	,,	1*s.*	1*s.*
Other places in Africa	,,	1*s.* 4*d.*	1*s.* 4*d.*
Straits Settlements	,,	9*d.*	9*d.*
*Ceylon	,,	9*d.*	9*d.*
*Labuan	,,	11*d.*	11*d.*
*Malta	,,	8*d.*	6*d.*
Australia	1st 2 lb.	2*s.*	1*s.*
Gibraltar	1st lb.	8*d.*	6*d.*
West Indies	,,	7*d.* to 9*d.*	same rate.

The limit of weight is 11 lbs., except to the places marked *, to which it is 7 lbs.

Continental rates:—

Austro-Hungary	3 lbs.,	1*s.* 5½*d.*;	7 lbs.,	1*s.* 11½*d.*
Belgium	7 ,,	1*s.* 8*d.*;	11 ,,	2*s.* 2½*d.*
Constantinople	3 ,,	1*s.* 6*d.*	7 ,,	2*s.* 6*d.*
			11 ,,	3*s.* 6*d.*
Denmark	3 ,,	1*s.* 5*d.*;	7 ,,	2*s.* 0*d.*
Egypt	1 ,,	1*s.* 3*d.*;	pr. lb. (to 11 lb.)	7½*d.*
Germany	3 ,,	1*s.* 0*d.*;	7 ,,	1*s.* 7*d.*
,, *viâ* Belgium	3 ,,	1*s.* 4*d.*;	7 ,,	1*s.* 9*d.*
Holland	3 ,,	1*s.* 0*d.*;	7 ,,	1*s.* 8*d.*
Norway	3 ,,	0*s.* 10½*d.*;	7 ,,	1*s.* 5½*d.*
Sweden	3 ,,	1*s.* 2½*d.*;	7 ,,	2*s.* 3½*d.*
Switzerland	3 ,,	1*s.* 5*d.*;	7 ,,	2*s.* 0*d.*
,, *viâ* Belgium	3 ,,	1*s.* 9*d.*;	7 ,,	2*s.* 2*d.*

Parcels for the Cape, Denmark, Germany, Holland, Jamaica, Norway, Sweden, and Switzerland must not contain any letters.

To the British possessions and Egypt the dimensions are limited to 3 feet 6 inches in length, or length and girth combined, 6 feet; to continental places in Europe, 2 feet in any direction; to Jamaica, 2 feet in length and 4 feet in girth.

Money Orders, Inland.—The highest amount granted in one order is limited to £10. The commission charged is:—

For sums not above 20*s.* ..... 2*d.*

Not above £2	3*d.*	Not above £7	5*d.*
,, ,, £4	4*d.*	,, ,, £10	6*d.*

The rules and regulations respecting lost or lapsed orders will be found on the forms issued.

Money Orders, Foreign.—These are now granted between the United Kingdom and the

following places. For sums not exceeding £2, 6d.; £5, 1s.; £7, 1s. 6d.; £10, 2s.

Aden	Gambia	Ningpo
Amoy	*German Emp.	North Borneo

Falkland Islds.	New Brunswick	Zanzibar
Foochow	Newfoundland	
France	New S. Wales	
	New Zealand	

Orders issued for the places marked thus * are retained by the remitter.

Postal Orders.—Unlike money orders, they are issued for fixed sums; for those of 1s. and 1s. 6d. at a charge of ½d.; of 2s., 2s. 6d., 3s., 3s. 6d., 4s., 4s. 6d., 5s., 7s. 6d., 10s., and 10s. 6d., 1d.; on those of 15s., and 20s., 1½d. These are sold and paid between 8 a.m. and 8 p.m. They must be presented for payment within 3 months from last day of the month of issue, or a fresh commission will be charged. Stamps to the amount of 5d. may be affixed on the *face* of an order, so that practically any odd sum may be transmitted by means of Postal Orders. They are not only payable at any office in the United Kingdom, but may also be cashed at Malta, Gibraltar, and Constantinople. Most money changers on the Continent will also cash them.

Foreign Mails.—Mails are despatched from London to the following countries every evening and every morning except Sunday:—

Austro-Hungary.	Holland.	Poland.
Belgium.	Ibraila.	Russia.
Bulgaria.	Italy.	Spain.
Denmark.	Luxemburg.	Sweden.
France.	Montenegro.	Switzerland.
Galatz.	Norway.	Tangier.
Germany.	Persia.	Varna.
Gibraltar.		

To Canada and the United States letters are despatched every Tuesday, Thursday, and Saturday evening.

To the West Indies, alternate Thursday morning, and various other days.

To Australia, every Friday evening, and various other days.

India, every Friday evening.

To China, Japan, and Ceylon, Wednesday and Friday evening, and various other days.

To Portugal and Servia, every morning.

To Egypt, Tuesday and Friday evening; to Cyprus, Friday evening, and various other days; to Greece, Thursday and Sunday evening; to Constantinople, Thursday morning and Saturday evening; to Malta, Thursday morning, and various other days.

To Cape Colony, every Thursday evening; to Mexico, Tuesday, Thursday, and Saturday evening, and various other days.

To other parts of the world, the list of places and the rates are too numerous for insertion; particulars may be obtained at every receiving house.

Foreign Postage.—The countries comprised within the General Postal Union are:—

LIST A.—Letters, 2½d. per half-oz.; Cards, 1d.; Newspapers, ½d. per 2 oz.; Packet of printed paper ½d. per 2 oz.; Patterns, 1d. for 4 oz.

TELEGRAMS.—Telegrams may be sent to all parts of the United Kingdom at the rate of 6*d.* for the first twelve words, and one halfpenny for each additional word, stamps in payment to be affixed to the form by the sender. The address of the receiver is charged for, but not that of the sender when written on the back of the telegram form. Five figures are counted as one word. The charge includes delivery within one mile of the office—beyond that limit the charge is 6*d.* per mile for the first three miles; if three or more miles, at the rate of 1*s.* per mile from the office door.

SUNDAY TELEGRAMS. — In most provincial towns the Telegraph Offices are open from 7 or 8 to 10 a.m., and again from 5 to 6 p.m.; in Scotland from 8 to 10 a.m.; and in Ireland from 9 to 10 a.m. and from 5 to 6 p.m. In London the following offices are always open:—Central Telegraph Station; Great Northern Station, King's Cross; London Bridge, Paddington, St. Pancras, and Victoria (L. C. & D.) Stations; also at Moorgate Street Buildings and the office in West Strand. The offices at Birmingham, Bradford, Brighton (except between midnight Saturday and 7 a.m. Sunday), Bristol, Cardiff Docks, Derby, Exeter, Hull, Hurst Castle, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Plymouth, Portsmouth, Sheffield, and Southampton; as also are those of Aberdeen, Dundee, Edinburgh, Glasgow, and Inverness, in Scotland; and Belfast, Cork, Dublin, and Queenstown in Ireland.

FOREIGN TELEGRAMS are subject to a code of 24 rules, too lengthy to be transcribed. The charges vary from 3*d.* a word to Belgium, 2½*d.* to France, 3*d.* to Germany and Holland, 4*d.* to Algeria, Denmark, and Norway, 4½*d.* to Austria, Italy, and Spain, 5½*d.* to Gibraltar and Portugal, to 10*s.* 7*d.* to New Zealand, and 14*s.* 7*d.* to Berbice; our own Colonies and possessions being charged generally at about the highest rates.

SUNDAYS AND HOLIDAYS.—At all offices open on Sunday postage stamps are sold, and letters may be registered during the time such offices are open (viz., from 9 to 10 a.m., and one other hour at least, beginning with the commencement of the delivery. If these hours coincide either wholly or in part, additional time is taken so as to complete two hours). The same regulation applies to CHRISTMAS DAY and GOOD FRIDAY. The hours at which telegraph business is attended to are, as a rule, from 8 to 10 a.m.; but no Money Order, Savings Bank, Insurance or Annuity Business is transacted on these days, nor in Scotland on Sacramental Fast Days.

BANK HOLIDAYS AND FAST DAYS.—Where Bank Holidays are observed as public holidays, the public counters of the offices will be closed at 12 at noon except for telegraph business, the reception of parcels, the sale of postage stamps, and the registration of letters. At no provincial towns in England or Ireland is there more than one delivery of letters on Sunday, Christmas Day, or Good Friday; nor in Scotland on Sunday or the Sacramental Fast Days; and any person is at liberty to prevent even this delivery so far as relates to himself.

In London, the holiday arrangements are of an exceptional character, and due notice of them is given by means of bills at the various offices.

SMALL INVESTMENTS IN GOVERNMENT STOCKS.—Any depositor in the Post Office Savings Bank may invest, at any Post Office in the United Kingdom at which there is a savings bank, small sums in one of the Government 3 per cent. stocks, or in 2¾ and 2½ per cent. stock. The sums so invested must not be less than £10, and must not exceed £100 in any one year ending Dec. 31st, and the aggregate amount held by any one investor must not exceed £300. The following charges are made for the purchase of stock, and these sums include all expenses connected with the subsequent collection of dividends:—

On stock not exceeding £25		9*d.*
Exceeding £25, but not exceeding £50		1*s.* 3*d.*
,, £50 ,, ,, ,, £75		1*s.* 9*d.*
,, £75 ,, ,, ,, £100		2*s.* 3*d.*

The charges on the sale of stock are at the same rates up to £100; for £200 it is 2*s.* 9*d.*, and for £300, 3*s.* 3*d.* The investment is at the current price of the day on which it is made, and a certificate thereof is sent to the investor by post. Similar arrangements are made for sales of stock: the dividends will be collected by the Post Office and placed to the credit of the investor.

Any person having invested £50 or more may, on application to the Post Office, obtain a stock certificate for £50 or any multiple of £50. These certificates will have coupons for dividends annexed, payable at the Bank of England to bearer.

Facilities similar to those just described for investments of small sums in Government stocks will be granted by the trustee savings banks.

The depositor's book must in every case be sent with an application for investment or sale of stock, or for a stock certificate. A cover for the purpose may be obtained at any Post Office Savings Bank.

Any further information can be obtained on application to the Controller, Savings Bank Department, 144A, Queen Victoria Street, London, E.C., and at almost all receiving houses.

APPROXIMATE TIME OCCUPIED IN DAYS AND HOURS IN PASSING FROM LONDON TO CERTAIN IMPORTANT PLACES IN THE WORLD.

BRADBURY, AGNEW, & CO., PRINTERS, WHITEFRIARS.

THE BRITISH EMPIRE IN INDIA extends over a territory larger than the Continent of Europe without Russia. Reckoning the area not yet surveyed, or perfectly defined, of the recently annexed province of Upper Burmah at 140,000 square miles, and its population at 3,500,000, the Indian Empire extends over an area of 1,525,540 square miles, and has a population of 257 millions. From Peshawar, the northern frontier station, to Cape Comorin the distance is 1,900 miles, and the same distance separates Kurrachee, the port of Sind, from Sudiya, the frontier-post on the eastern border of Assam. The Province of Burmah, including the country hitherto called Independent Burmah, which was annexed to our Asiatic dominion early in 1886, lies to the east of the Bay of Bengal, and forms no part of the Indian Peninsula. Excluding this province, then, we may broadly divide the country, for geographical purposes, into three sections, viz.:—the Himalayan region, the northern river-plains, and the southern table-land. The first of these includes the mountain-range of the Himalayas and their offshoots to the southward. This region, considered as the natural northern boundary of India, may be described as consisting of two giant mountain-ranges running from north-west to south-east, with a series of great valleys beyond. The southern range, which rises precipitously from the belt of swampy land lying to the north of the Ganges and parallel to its course, springs up to a height of 20,000 feet above the plain, and culminates in the three loftiest peaks yet measured on the globe—Mount Everest, 29,002 feet; Kunchin-Junga, 28,176 feet; and Dwhalagiri, over 27,000 feet. The Himalayas, however, are not only a rampart of defence, but also serve to collect and store up a supply of water for the tropical plains below them. The sides of the Himalayas afford an admirable simultaneous representation of the various natural belts of the earth's surface, being divided into the tropical, the temperate, and the arctic zones as the upward journey is taken from the plains below. The vegetation of the Himalayan region includes such varied species as the tree-fern, the deodar or native cedar, numerous rhododendrons, the ilex, orchids, barley, oats, millet, and many common vegetables of domestic use. In the way of trade this region produces large quantities of timber, charcoal, barley, millet, and honey. The fauna are no less varied than the flora, and include the bison, musk-deer, yak, wild sheep and goat, bear and ounce, eagles, partridges, and a large number of pheasants. The native tribes afford examples of both the Aryan and the Turanian races, together with an intermingling of the two. The northern river-plains, lying at the foot of the Himalayas, and stretching from sea to sea, comprehend the rich alluvial plains watered by the Indus, the Ganges, the Lower Brahmapootra, and their tributaries. At no great distance from each other, four rivers take their rise in the Himalayas. Of these, two are on the north side of the mountains—the Indus, which flows westward, and the Brahmapootra, which flows eastward; the other two, on the southern slope, are the Sutlej, which, after flowing west and south-west for 900 miles and collecting to itself various other waters, joins the Indus; and the Ganges, which, during a south-east and easterly journey of nearly 1,600 miles, drains almost the whole of the Bengal plain. Meanwhile, the Brahmapootra, which runs close along by the mountains on their northern side, having reached the eastern extremity of the Himalayas, turns sharply to the south, then to the west, and finally joins the Ganges, the two rivers discharging themselves together into the Bay of Bengal. The Indus is 1,800 miles long; the Brahmapootra nearly 1,500 miles long. It will be seen from this that the Himalayas send to India the water gathered on both their northern and southern slopes: this result is due to the peculiar *lie* of the land, and this it is which has not only given great abundance and wealth to the country, but has also made it the prey of the spoiler and invader for many centuries. The richest, the most populous, and the most prosperous part of India is to be found in the basins of these three great river-systems, which include in the aggregate an area of 1,125,000 square miles. Each of these rivers is of inestimable value to the country it drains, but particularly is this so with the Ganges. The Ganges is not only the great highway of Bengal, it is also the water-carrier and the fertilizer; without it, traffic, where not impossible, would be enormously dear, and the province almost a desert. There are three harvests in Lower Bengal each year: pease, pulses, and various oil-seeds are reaped in April and May, the early rice crop in September, and the great rice crop two or three months later. The chief vegetable products of N.W. Bengal are the mango, the banyan, the wild cotton-tree, and the tamarind: while the delta region gives rice, the bamboo, and a large variety of palms (cocoa-nut, date, areca, &c.). In the north, again, we also find wheat, Indian corn, millet, and barley; while to the south, indigo, cotton, sugar-cane, tobacco, and many different dyes, drugs, and spices are also produced. These include the aloe, castor-oil tree, resins, and gums; but there are also grown the melon, pumpkin, tea-plant, yams, the opium poppy, the mulberry, and jute. Just as the Himalayas on the north and the Suleiman

Mountains on the north-west form natural barriers of defence for Hindustan, so do the Vindhya Mountains, running almost due east and west from the head of the Gulf of Cambay, form a firm southern boundary to the river-plains of the north. Southern India, or the Deccan, is a plateau of triangular shape and very old geological formation, bounded on two sides by the Malabar and Coromandel coasts, which converge at Cape Comorin, and on the third by the Vindhya Mountains, north of the Nerbudda river. The Eastern and Western Ghauts all but complete the triangle of mountain ranges with which this region is surrounded. As the W. Ghauts lie so close to the coast, and afford no exit for the waters of rivers, we find no streams on the Malabar coast; all the rivers—and they are both numerous and of great size—flow eastwards, and passing through gaps or defiles in the E. Ghauts, discharge their waters into the Bay of Bengal. The four chief rivers are the Mahanuddy, in the extreme N.E. (520 m.), the Godavery (900 m.), the Kristna (800 m.), and the Cauvery (472 m.); in the extreme N.W., too, south of the Vindhyas, and parallel to them, but north of the W. Ghauts, we find the Nerbudda and the Tapty. The division line of the basins of these last two rivers is sharply defined by the Sautpoora Mountains, which lie between them. The physical geography of S. India has given it much of its history: the S.W. coast, shut in by the mountains, is very primitive and moves slowly; the S.E., open and easy of access both from within and without, has advanced with rapid strides in commerce and all other civilizing influences. The mountain slopes of this region, those of the W. Ghauts in particular, are still covered with the splendid vegetation of primeval forests of the tropics: teak, ebony, iron-wood, and Indian mahogany abound, so also do the jackwood, blackwood, sandalwood, and the ubiquitous bamboo. Coffee is now largely cultivated there, and tea and cinchona are also grown. The elephant, tiger, bison, leopard, deer, sheep, and various smaller game afford limitless sport to the hunter. In the valleys and on the higher plains many crops are raised in profusion, chiefly the same as those grown in the lower basin of the Ganges. The southern table-land has in past times furnished considerable supplies of different minerals, including gold: those found and worked now are mainly lime, coal, and iron. Three-fifths of this great Empire are under the direct rule of the British Government, and are divided for administrative purposes into eight Provinces—viz., Bengal, the North-Western Provinces and Oudh, the Punjaub, the Central Provinces, Burmah, Assam, Madras, and Bombay. The remaining two-fifths are made up of a large number of Native States, whose chiefs, excepting those of Nepaul and Bhotan in the north, acknowledge the suzerainty of Her Imperial Majesty, KAISAR-I-HIND. Her Majesty's representative is styled the Viceroy and Governor-General, his relations with the Home Government being regulated by Act 21 & 22 Vict. c. 106, which substituted the authority of a Secretary of State for India, aided by a Council of fifteen members, for that of the East India Company and the Board of Control.

For the knowledge we possess of the period that preceded the commencement of connected history in India we are chiefly indebted to the sacred books of the Hindoos, the accounts of Greek and Chinese writers, the records of inscriptions and coins, and the evidences of race and language. The existence of various races in India speaking languages not cognate, proves that the country has been subject to successive invasions in remote ages. The first of which we possess direct evidence is that of the ARYANS, whose Hindoo descendants still number three-fourths of the inhabitants of the country. The *Vedas*, which are the most ancient and venerated of their sacred writings, and are written in Sanskrit of the earliest type, are supposed to date from 1400 B.C. In the early Vedas all classification and ranking of the gods is absolutely wanting; something of the kind, however, is done in the Upanishads, which form a kind of commentary on the Vedas, and make some attempt to solve the problems of creation, the nature of the Deity, and the human soul. The Upanishads, in fact, founded admittedly on the Vedas, contain the germs of those great systems of Hindoo philosophy which, in their later development, brought about the separation of the creed of the vulgar from that of the educated. The *Mahabhárata* and *Rámáyana* are epic poems of later date, abounding in extravagant myths, from which, however, the learned have succeeded in gaining a general knowledge of the habits and condition of the people and of the course of events during the dark period of Aryan conquest. It is supposed that about 2000 B.C. a branch of the Indo-European race, by whom Europe had already been colonized, descended from those plains of Central Asia which lie to the N.W. of India and settled in the Punjaub. They were a pastoral and agricultural people; their form of government was patriarchal, and the offices of prince and priest were united in the same person. Their conquest seems to have been confined to the Punjaub for some centuries before they again advanced southwards to the Valley of the Ganges. The condition of the people, as well as the progress of their wars with the older inhabitants of the country, can be clearly traced in the sacred poems. It appears that when Oudh and Bengal had been subdued, the deified hero Ráma effected the conquest of Southern India, and afterwards that of Ceylon. By this time a great change had come over the Aryan invaders. Their primitive simplicity had disappeared. Patriarchs had become luxurious princes, whose priestly duties were deputed to the sect of Brahmans; and at the time the *Laws of Manu*, a digest of the customary laws current probably about the 5th cen-

tury B.C., were compiled, this caste had succeeded in establishing its superiority over the Kshetriyas, or military caste, to whom it had been at first subordinate. The *Laws of Manu* give a good idea of Indian society from about 800 B.C. down to the time they were put together in their present form, and in them we first find mention made of the existence of caste and village communities. In the seventh century B.C. a new religion arose, called Buddhism. Its founder was Sákya Muni, or Gautáma, a prince of the Kshetriya caste, who took the name of Buddha, the "awakened," and died at a great age in 543 B.C. His tenets are contained in the *Tripitaka*, the Buddhist gospel. Either from internal dissensions of its own, or from persecution without, Buddhism became practically extinct in India before the twelfth century, though it still flourishes not only in China and Japan, but also in Nepaul and Ceylon. Buddhism was, in India itself, mainly a social reform, a revolt against the pride of caste and the exclusiveness of the Brahman priesthood. Its decline in India was accompanied by a revival of Brahmanism, much modified, and by the rise of the new sect of the Jains (A.D. 600), whose religion was a combination of Buddhism and Brahmanism. The followers of this creed, who include two distinct sects, are still very numerous in Gujerat, and may be found in many parts of India.

With Alexander's invasion (327 B.C.) we reach the first landmark in the political history of India. Herodotus tells us that the twentieth satrapy of Persia had previously included part of the north-west of India. Alexander himself did not penetrate beyond the tributaries of the Indus, though he sailed down the river; his Indian possessions fell to Seleucus, whose ambassador, Megasthenes, has left an account of the country under the rule of Chandragupta, the Greek Sandracottus. Asoka (B.C. 260-220), the grandson of that monarch, whose edicts throw light upon this period, was the great patron of Buddhism, which became for a time the State religion throughout the greater part of India. Our last contributors to a knowledge of India before the period of authentic history are the Buddhist pilgrims from China, who visited the country between the fifth and tenth centuries. The accounts of Greek and Chinese writers corroborate the evidence contained in the *Laws of Manu*, and testify to the prosperous condition of the country, and to the people being brave, truthful, and averse to litigation.

So early as A.D. 664 Arabs began to make predatory expeditions against Gujerat and Sind. The conquest of Persia, towards the middle of the seventh century, at length brought the successors of Mahomet to the Indus, and in the N.W. regions they made some temporary acquisitions during the ensuing hundred years. It was, however, more than two centuries later before the foundations of a durable Mohammedan empire were laid. It was in the year 999 that Mahmud declared the independence of the kingdom of Ghaznee in Afghanistan—a proceeding which he followed up by at least twelve expeditions into India, one of which carried him beyond the Jumna, and another ended in the occupation of Gujerat. Later, in 1024, he conquered and annexed to his kingdom the provinces of Lahore and Mooltan, and the succeeding dynasties of Afghan kings held power in India for 500 years. The Mohammedan advance, however, was gradual, for it was not till 1206 that Delhi was taken, and the greater part of Hindustan annexed by Kutb-ud-din, with whose memory is connected the Kutb Minar, near Delhi; and the first Mohammedan invasion of the Deccan took place in 1294.

From this time onward the history of India is the history of invasion, dynasty following dynasty, while the Mongol hordes again and again swept into the country. At length, during the reign of the last monarch of the Toghlak line, the famous Tamerlane burst into India at the head of a mighty host, and captured and sacked Delhi in 1398: he left behind him Khizr Khan, who thenceforward held the reins of power. A period of misrule, tyranny, and anarchy ensued, and fittingly paved the way for the total conquest of the country by the Mogul emperors.

THE MOGUL EMPIRE.—The Mongols, or Moguls, a Mohammedan Power, after overrunning Central and Western Asia, arrived in 1219, under Genghis Khan, on the frontiers of India, and, as has been stated, again and again invaded that country. In 1398, during the invasion of Tamerlane, or Teimur, a great part of Hindustan was laid waste. In 1526 *Sultan Baber*, a descendant of both these Tartar chiefs, overthrew the last of the Afghan kings at Panipat, and founded the MOGUL EMPIRE. *Humayoon* (1530–56) lost the whole of the territory conquered by Baber, but recovered a portion of it shortly before his death. *Akbar*, his son (1556–1605), being a minor, the Government was for five years under a regency, but it was a much longer time before his numerous opponents were subdued and an Empire firmly established, embracing Cabul, Candahar, all Hindustan, and a portion of the Deccan. Akbar followed up his conquests by important financial reforms; he was tolerant in religion, and just to all classes of his subjects. Among the great men whom he drew around him were Raja Toda Mal, his able finance minister; Abul Fazl, the historian of his reign; and Faiz, the poet; nor should we overlook Bairam Khan, Akbar's faithful guardian in his youth. *Jehangir* (1605–28) received in 1615 an embassy despatched by James I., under the conduct of Sir Thomas Roe. His empress was the famous Nur Mehal. Under *Shah Jehan* (1628–58) the Mogul Empire reached its zenith. Many public works and grand buildings testify to his magnificence and taste, amongst others the Taj Mahal at Agra, which is said to have been the work of a French architect—Austin of Bordeaux. The close of *Shah Jehan's* reign was embittered by the rivalries of his four sons. *Aurangzeb* (1658–1707) defeated his brothers and put them to death; his father he kept a prisoner for the rest of his life. *Aurangzeb* had great ability and courage, and was a master of dissimulation; but bigotry and distrust were the bane of his policy, and the decline of the Mogul Empire dates from his reign. Four sons disputed the right of succession: at last Bahadur Shah gained the coveted crown, but only for five years. Dying in 1712, he was succeeded by his son, Jehundar Shah, who was cruelly murdered by one Farokshir (a great-grandson of the famous Aurangzeb), who seized on the crown. He in turn was himself put to death six years later, and Muhammad Shah, grandson of Bahadur, came to the throne. The viceroys of his own appointment grew uneasy and rebellious, and all unconsciously aided in the growth of the Mahratta power. One of them refused

his aid to his sovereign, and the Mahrattas in consequence subdued the Deccan. In 1738, to avenge an alleged insult, Nadir Shah of Persia invaded India, captured Delhi, and gave the city over to the mercy of his terrible followers, who are said to have slain more than 100,000 of the inhabitants, and to have levied as contribution and carried off as plunder, treasure equal to more than £50,000,000 sterling. In spite of this enormous sacrifice, peace was only obtained by giving up to the conqueror all the country west of the Indus. On the death of Muhammad, in 1748, the country was fast going to decay—it was, in fact, only waiting for a fresh conqueror. The Mahrattas were there ready for the work to be done. About 1724 the Deccan, Oudh, and Bengal became practically independent under Nizam-ul-Mulk (ancestor of the present Nizam), Sadat Khan, and Aliverdi Khan respectively.

THE MAHRATTAS.—Simultaneously with the decline of the Moguls rose the power of the Mahrattas. They were Hindoos, and the country from which they came may be roughly described by drawing two lines from Nagpur to Surat and Goa on the west coast. The founder of their power was Sivaji (1627–1680), a chieftain of the family of Bhonslah. Balaji Vishvanath (1712–1720), Peishwa, or Prime Minister, succeeded in making that office of paramount importance and hereditary in his family; Sivaji's descendants thenceforth holding a merely nominal position as Rajas of Satara. Under the Peishwas, aided by Scindia, Holkar, and the Gaekwar, who formed independent States about this time, the Mahrattas rapidly extended their territory and influence. In 1760 Delhi was in their hands, and though they suffered a disastrous defeat at Panipat in 1761, at the hands of Ahmed Shah, the Afghan invader, they remained for some time the first Power in India, and were the most dangerous opponents of the English. Like the Pindaris, a horde of freebooters who followed in their train, they were a scourge to the country, and it was fortunate for India that the empire at which they had but too successfully aimed was nothing more than a shadow of its former self. The various native states within its bounds were fated very soon to bend before the superior sway of European adventurers, who, either from love of adventure or thoughts of gain, were journeying towards its shores. It was not until both Pindaris and Mahrattas were overthrown, in 1818, that India enjoyed the blessings of internal peace.

EUROPEAN ADVENTURE.—The discovery by Vasco di Gama of the route to India by the Cape of Good Hope, in 1498, gave the Portuguese, while they retained their naval supremacy, the monopoly of the Indian trade. Almost immediately they were the most favoured of all the merchants: they founded settlements all along the seaboard; they made commercial treaties in the name of the King of Portugal. The first Portuguese viceroy, Francis of Almeida (1505–1509), established numerous factories and fortresses, and took possession of Ceylon and the Maldive Islands; while his successor, Alfonso de Albuquerque, captured Goa, and extended in various places the Portuguese dominion, but notably on the Malabar and Malacca coasts. This dominion had, in 1542, practically amounted to an entire regulation of the Asiatic coast trade with Europe from the Persian Gulf to Japan, and for nearly sixty years afterwards the King of Portugal was the virtual suzerain of the southern coast of Asia. When the Portuguese crown fell into weak hands the power abroad of the country began to decline, and it was almost annulled in 1580, when the crowns of Spain and Portugal were united under Philip II. The Spaniards neglected the eastern colonies and settlements. When the Portuguese had brought the exports of India to Lisbon they were well content with the result; the Dutch might carry them thence to the other ports of Europe. But when Philip II., on account of the revolt of the United Provinces, shut the harbour of Lisbon against the Dutch, they were driven either to forego the trade or seek its origin themselves. The enterprise of the nation decided the question. Java was the first successful settlement of the Dutch in the East. Then societies were formed at home to prosecute the Indian trade; and finally, in 1602, the great East India Company was constituted with the plenary powers of a State, and the Dutch and Portuguese at length traded on equal terms. A keen rivalry ensued between the nations. The nature of the Dutch and the magnificent state of their navy at the time virtually decided the struggle in their favour. Between the years 1600 and 1663 one by one many of the Portuguese possessions fell into the hands of the Dutch. Later, in 1810, the Dutch, together with the empire they had established in the Malayan Peninsula, of which Batavia was the capital, passed under French dominion. Their eastern empire was then attacked and conquered by the English in 1812, but it was surrendered again to the Dutch in 1816, since which date it has remained in Dutch hands.

ENGLISH DOMINION.—The first English East India Company was incorporated by Queen Elizabeth in 1600, and owed its origin to a difference with the Dutch about the price of pepper. It seems that the Dutch traders in 1599 raised the cost per pound—which had previously been about 3*s.*—to 6*s.* This measure having been adopted against English traders only, so annoyed them that, having convened a meeting of their number, they decided to form an association for the maintenance of a direct trade with India. On the 31st of December, 1600, the English East India Company was incorporated by royal charter: there were 125 shareholders, the capital was £70,000, and the official title was "The Governor and Company of Merchants of London trading to the East Indies." When voyages to India—and almost profitless voyages they proved to be—were first undertaken on the joint-stock account, the company's capital was raised to £400,000. Quarrels with the Portuguese ensued; and no footing of any kind was obtained until the year 1615, when Captain Best, with four English ships, won a great victory over the Portuguese squadron off Surat, and managed to conclude a treaty with the Emperor Jehangir. Under the terms of this treaty, King James I. sent out as ambassador Sir Thomas Roe, who was not only granted various trading concessions, but was also permitted to reside at the Court of the Great Mogul. When Charles I. was in need of money he granted a second charter to a new company. Confusion was the result; and piratical and other acts dishonourable to Europeans followed. The Protector, Cromwell, however, was equal to the crisis; the rival companies were merged into one, the famous Navigation Act was passed, a reign of order was established, and the Eng-

lish traders gained a reputation for general honesty which—in spite of individuals and solitary cases—they have ever since maintained. In 1639 the English acquired a narrow strip of land, six miles in length and one mile inland, on the coast just below Masulipatam. Having built a factory there, and surrounded it with a wall, they mounted it with guns and named it Fort St. George; fourteen years later (1653) this settlement of Madras became an independent Presidency. When, in 1662, Charles II. was married to Katharine of Braganza, a part of his dowry from Portugal was the Island of Bombay: four years afterwards it was formally made over to the English monarch, who sold all his rights over it in 1668 to the East India Company for an annual payment of £10. In 1687 the factory at Surat was given up by the company, and Bombay was made the seat of the Western Presidency. Although in 1634 the company had obtained certain treaty rights concerning Bengal from the Mogul, and six years afterwards a factory was established at the mouth of the Ganges, yet in that part of the country they held no territorial possessions as in Bombay and Madras; and the Nabob of Bengal in 1696—presumably to mark his sense of the company's position and privileges—ordered all the English factories to be confiscated. The merchants retreated before the tyrant's advance, and lower down the river, amid swamp and jungle, they laid the foundations of Fort William, afterwards destined to develop into the modern city of Calcutta. The incorporation of another rival company took place about this time—the "Scotch East India Company," with a capital of two millions sterling. The competition resulted in over-trading; the home markets were glutted with all kinds of Indian produce, and the English manufacturers were loud in their complaints. The prudence and tact of Lord Godolphin effected a compromise in 1708, and the whole of the English companies were at last amalgamated under the charter granted by Queen Anne to "The United Company of Merchants trading to the East Indies." The rival companies of England and France came into collision in 1746, and had Dupleix received proper support from home, he might have succeeded in founding a French Empire in India. The first reverses of the English were retrieved by *Clive*, whose gallant defence of Arcot (1751) was followed up by a series of brilliant movements, culminating in the capture of Pondicherry in 1761, which completed the ruin of the French. The tragedy of the Black Hole of Calcutta (1756) summoned Clive from Madras, and the victory of Plassey in the following year laid at his feet the provinces of Bengal, Behar, and Orissa. He finally left India in 1767, his last act being to reform the services, in which great abuses existed. After three years of misrule, *Warren Hastings* was appointed President of Calcutta in 1772, and became Governor-General in 1774, on the creation of that office. He greatly increased the power and territory of the Company, notwithstanding the opposition of a hostile Council, of which Sir Philip Francis, the reputed author of *Junius*, was a member. Hastings repelled Hyder Ali's memorable invasion of the Carnatic (1780), and defeated the triple alliance of the Nizam, the Mahrattas, and Hyder Ali. In so doing he probably saved British India. The first reign of *Lord Cornwallis* (1786–93) was marked by the complete reform he effected in the Company's Civil Service, and by the introduction of the Permanent Settlement of the Land Revenue in Bengal. The events of the administration of the *Marquis Wellesley* (1798–1805) were numerous and important. Mysore in 1760 had been seized by Hyder Ali, a Mussulman adventurer, and a powerful and inveterate enemy to the English. He was succeeded by his son, Tippoo Sultan, who resembled him in courage. *Lord Wellesley* saw the necessity of crushing this dangerous Power, and the Fourth Mysore War ended in the capture of Seringapatam (1799), the death of Tippoo, and the restoration of Mysore to the rightful Hindoo sovereign. The Treaty of Bassein (1802) broke up the Mahratta Confederacy. The campaigns of Lord Lake and Sir Arthur Wellesley, in the Second and Third Mahratta Wars, curtailed the power of Scindia and Holkar, and added to the strength and extent of the Company's dominions. Lastly, *Lord Wellesley* developed, if he did not establish, a system of subsidiary alliances with Native States, which promised to give greater security than the balance of power attempted by *Lord Wellesley's* predecessors. *Lord Minto* (1807–13) established peaceful relations with the Sikhs, Cabul, and Persia, through the mediation of Metcalfe, Mountstuart Elphinstone, and Malcolm respectively, and extended British influence in the Eastern Seas. Under the *Marquis of Hastings* (1814–23) the Bombay Presidency, hitherto the smallest of the three, attained its present dimensions on the annexation, in 1818, of the territory of the Peishwa, whose power had lasted a little over 100 years. In 1823 *Lord Amherst* succeeded the Marquis of Hastings, and marked his period of office by a conquest in another direction. The King of Ava had been not only guilty of great insolence to the Governor-General but was ever making encroachments on the British territory. The result was the First Burmese War, which cost us 20,000 lives and nearly £14,000,000, but gave us the fertile provinces of Aracan and Tenasserim, and, practically, Assam. While *Lord William Bentinck* was Governor-General (1828–35), Steam Communication with India was introduced, Suttee (or widow-burning) was abolished, and various measures were passed affecting education, economy, and justice. The Charter of the East India Company was in 1833 renewed for twenty years, on condition that the Company should altogether abandon its trading, and allow of the settlement of Europeans in the country. *Lord Auckland's* resolution to support Shah Shuja against Dost Mohammed brought on the First Afghan Expedition (1839–42), and the serious disaster attendant on the fatal Retreat from Cabul. This was atoned for in the administration of *Lord Ellenborough* (1842–44), which also saw the Conquest of Sind by Sir Charles Napier. *Lord Hardinge* (1844–48) conducted in person the First Sikh War, and fought a series of severely-contested battles, ending with Sobraon (1846). *Lord Dalhousie's* administration (1848–56) was fruitful in events. The Second Sikh War resulted in the submission of the Sikhs, who at Chillianwallah and Gujerat gave further proof of their bravery. The annexation of their country was followed by that of Tanjore; and the Second Burmese War deprived the King of Burmah of his seaboard provinces. Lord Dalhousie promoted the introduction of Railways and the Telegraph. His annexation policy was

much criticised at home: it proceeded on the principle that either misrule or a break in the natural succession should justify the transfer of the state to the British government, considering that the welfare of those governed should be the first consideration. In 1849 Satara, and in 1853 Jhansi, became British territory; and after the death of the last of the Mahratta Princes of Nagpur, his territory was annexed, and became the Central Provinces in 1853. In 1856, after long and painful hesitation on the part of the directorate, and after repeated warnings to the Government of Oudh—a Government marked by tyranny and oppression—that kingdom was also added to the former conquests. The proclamation was made on February 13, 1856, and the transfer took place without the shedding of blood or the striking of a single blow. *Earl Canning* (1857-62), who succeeded Lord Dalhousie, left England pledged to pursue a policy of peace. It was, however, his fate to meet the greatest crisis that has threatened the British Empire in India. A Mutiny of the native troops broke out on the 10th of May, 1857, at the station of Meerut, and spread through the whole Bengal Army. Delhi was for some months in the possession of 40,000 of the rebels, and many chiefs joined the revolt. The siege of Delhi, the massacre at Cawnpore, the relief of Lucknow, the Central India campaign of Sir Hugh Rose, and all the heroism displayed during that momentous time, will never be forgotten.

THE BRITISH INDIAN EMPIRE.—The Great Mutiny was the death-blow to the East India Company, whose glorious annals were brought to a close by a Proclamation to the Princes, Chiefs, and People of India, dated the 1st of November, 1858, announcing the resolution of Her Majesty to assume the government of the territories in India "heretofore administered in trust by the Honourable East India Company." *Lord Canning* was succeeded in 1862 by *Lord Elgin*, who, however, died November 20th, 1863. The attention of *Sir John* (*Lord*) *Lawrence* (1864-69) and of *Lord Mayo* (1869-72) was directed to the necessity for financial retrenchment, which arose chiefly from increased military expenditure. Lord Mayo was assassinated on the 8th of Feb., 1872, while on a visit to the convict settlement at Port Blair, in the Andamans. During the time of *Lord Northbrook* (1872-76), H.R.H. the Prince of Wales visited India, and received a loyal welcome from all classes. *Lord Lytton's* Viceroyalty (1876-80) was made eventful by the terrible Famine in Southern India and by the Second Afghan War. He was succeeded by the *Marquis of Ripon* (1880-84), whose peaceful rule was marked by the extension of local self-government. He, in his turn, gave place, at the end of 1884, to the *Earl of Dufferin*, under whose régime the Third Burmese War (1885) has opened up a new chapter in Indian history and added a new province—Upper Burmah—to our Indian Empire.

There have been those who have questioned the advantages India has derived from contact with Europeans and western civilization. The general good and welfare of a community are not necessarily counterbalanced by individual cases of hardship and of oppression, and there can be little doubt that the old East India Companies, with all their petty jealousies and tyrannies, not only laid the foundations of our modern empire in the East, but benefited largely both the countries with which they traded and those from which they came. It is, however, altogether beyond dispute, that English imperial rule in India is exciting an untold influence for good upon the natives. It is admitted generally that the prosperity of a country may be measured directly by considering the true expansion of its trade. Dr. W. W. Hunter, in his *Imperial Gazetteer of India*, speaking of the exports from 1700 to 1880, says:—"At the beginning of the last century, before the English became the ruling power in India, the country did not produce £1,000,000 a year of staples for exportation. During the first three-quarters of a century of our rule, the exports slowly rose to about £10,000,000 in 1834. During the half-century since that date, the old inland duties and other remaining restrictions on Indian trade have been abolished. Exports have multiplied by sixfold. In 1880, India sold to foreign nations £66,000,000 worth of strictly Indian produce which the Indian husbandman had raised, and for which he was paid. In that year the total trade of India, including exports and imports, exceeded £122,000,000. India has more to sell to the world than she requires to buy from it." That last sentence contains a concise statement of the ground on which is based the belief in the great future of our Indian Empire.

IMPERIAL LEGISLATION.—*The Regulating Act* (1773), which created the first Governor-General, created also his Council, and was the first that recognized the East India Company as a ruling body. It was followed, in 1784, by *Pitt's India Bill*, which, while leaving the Government of India nominally to the Court of Directors, in reality transferred it to a *Board of Control*, whose President represented Indian affairs in the House of Commons; and in 1788 by the *Declaratory Act*, which expressly affirmed this important fact. In 1793 the Company's Charter was renewed for 20 years, and its exclusive privileges were continued. In 1813 an Ecclesiastical Establishment was formed, and the trade to India was thrown open; in 1833 the China monopoly was likewise abandoned, and the North-West Provinces were made a separate Administration. In 1853 the Company's Charter was renewed for the last time, Bengal was put under a Lieutenant-Governor, and the Indian Civil Service was thrown open to competition. *Act 21 & 22 Vict. cap.* 106, "An Act for the Better Government of India," received the Royal Assent on the 2nd of August, 1858. By it all the territories heretofore under the Government of the East India Company were transferred to Her Majesty the Queen; and all the powers hitherto exercised by the East India Company, or by the Board of Control, were vested in the Secretary of State for India. It was not till 1877, however, that Her Majesty formally assumed the title of EMPRESS OF INDIA.

THE Viceroy and Governor-General is supreme, but he is assisted by a Council of six members besides the Commander-in-Chief. This body forms the SUPREME GOVERNMENT IN INDIA, which passes in review the entire administration in six separate departments—Finance and Commerce, Foreign, Military, Public Works, Home, and the Department of Revenue and Agriculture. Each department is under the charge of a Secretary, and is also the special care of a member of the Supreme Council, who has authority to deal with affairs of routine and minor importance, and to select what is worthy of the consideration of the Governor-General and his collective Council. The Governor-General specially superintends the political business of the Foreign Office. The *Department of Finance and Commerce* looks to questions of Finance, to Stamps, Excise, the Post Office, and anything involving a permanent charge on the State; also to questions bearing on the commerce of the country. The most important subjects coming under the attention of the *Department of Revenue and Agriculture* are the Land Revenue, Opium, Salt, Forests, Abkari or Excise, and the agricultural development of the country. The *Home Department* deals with the Educational, Medical, Ecclesiastical, Judicial, Police, and other matters, and has charge of the penal settlements of Port Blair and Nicobar. The *Foreign Department* conducts our relations with Afghanistan, Nepaul, and other conterminous countries, and corresponds with the Political Agents of the numerous semi-independent Native States of Rajputana and Central India, with the Commissioner of Mysore, and the Resident of Hyderabad. The Marine Service, as well as the Army, is under the *Military Department*. The Legal Member takes charge of Government Bills in the *Legislative Council*, which consists of twelve members (besides the seven members of the Executive Council), of whom one half must be unconnected with the public service. As only Bengal, Madras, and Bombay possess Councils of their own, the Supreme Council of India legislates for those Provinces which are unprovided with local Councils, or on matters of exceptional importance affecting the Empire.

The Government of India is debited with the cost of the Army for all India, excepting Madras and Bombay, with the interest on debt, and, generally, with all *Imperial* as distinguished from *Provincial* expenditure. The excess of expenditure over receipts is balanced by the aggregate surplus of all the Provinces.

THE SUPREME GOVERNMENT, CALCUTTA.

Viceroy and Governor-General (Rs. 20,833 *per mensem*), His Excellency the Right Honourable the Earl of Dufferin, K.P., G.C.B., G.M.S.I., G.C.M.G., C.I.E.

Private Secretary, D. Mackenzie Wallace.

Assistant Private Secretary, D. Panioty, C.I.E.

Military Secretary, Major Lord William L. de la Poer Beresford, C.I.E., VC., 9th Lancers.

Aides-de-Camp, Major Harry Cooper, Loyal North Lancashire Regt.; Major F. T. R. Hamilton, Norfolk Regt.; Lieut. Lord Herbrand A. Russell, Grenadier Guards; Lieut. A. G. Balfour, Highland L. I.; Capt. Leonard Gordon, K. O. Borderers; Lieut. Viscount Clandeboye, 17th Lancers (*extra*); Lieut. L. G. F. Gordon, R.A. (*extra*).

Native Aides-de-Camp, Ressaldar Mahomed Afzul Khan, C.S.I., Khan Bahadur, 11th Bengal Cavalry; and Ressaldar-Major Gopal Singh Bahadur, 2nd Central Indian Horse.

Medical Attendant, Surgeon John Findlay, M.D.

COUNCIL OF THE GOVERNOR-GENERAL.

Extraordinary Member, H.E. General Sir Frederick Sleigh Roberts, Bart., G.C.B., C.I.E., R.A., VC., Commander-in-Chief.

Ordinary Members (5), The Hon'bles Sir Steuart Colvin Bayley, K.C.S.I., C.I.E.; Sir Theodore Cracraft Hope, K.C.S.I., C.I.E.; Sir Auckland Colvin, K.C.M.G., C.I.E.; Major-Gen. George Tomkyns Chesney, R.E., C.I.E.; Andrew Richard Scoble, Q.C., C.I.E.

Extraordinary Members, the Governors of the other Presidencies when the Council shall assemble within their territory.

Additional Members for Making Laws and Regulations, The Hon'bles W. W. Hunter, C.S.I., C.I.E., LL.D.; Col. W. G. Davies, C.I.E.; J. W. Quinton, Synd Ameer Hossein, —— Steel, —— Mandlik, Peary Mohun Mookerjee, Wm. Southey Whiteside, Rana Shankar Baksh Sing.

Secretary to Council, Dennis Fitzpatrick.

SECRETARIES TO THE GOVERNMENT OF INDIA.

HOME.—Alexander Mackenzie, C.S.I.

REVENUE AND AGRICULTURE.—Sir Edwd. C. Buck.

FINANCE AND COMMERCE.—David M. Barbour.

FOREIGN.—Henry Mortimer Durand, C.S.I.

MILITARY.—Col. Edwin Henry H. Collen, B.S.C.

PUBLIC WORKS.—Col. Wm. S. Trevor, R.E., VC.

LEGISLATIVE.—Dennis Fitzpatrick.

Agents to Gov.-Gen. (Rs. 4,000): *Central India*, Sir Lepel H. Griffin, K.C.S.I.; *Rajputana*, Col. Sir E. R. C. Bradford, K.C.S.I.; *Baroda*, Col. James Cavan Berkeley; *Baluchistan*, Col. Sir Oliver B. C. St. John, K.C.S.I., R.E. (Rs. 2,500).

Residents: Hyderabad (Rs. 4,000), John Graham Cordery; *Mysore* (Rs. 4,000), James Broadwood Lyall; *Cashmere*, ; *Nepaul*, Chas. E. R. Girdlestone.

Polit. Residents: Persian Gulf, Col. E. C. Ross, C.S.I.; *Aden*, Brigadier-Gen. A. G. F. Hogg, C.B.

Political Agent and Consul-General, Bagdad, Colonel William Tweedie, C.S.I.

MILITARY ESTABLISHMENT.

COMMANDER-IN-CHIEF IN INDIA (Rs. 8,333), H.E. General Sir Frederick Sleigh Roberts, Bart., G.C.B., R.A., VC.; appointed 28th Nov., 1885.

Military Secretary, Colonel Reginald Pole-Carew.

Adjutant-Gen., Major-Gen. Sir Thomas Durand Baker, K.C.B.

Quart.-Mast.-Gen., Major-Gen. Edward Francis Chapman, C.B., R.A.

GENERAL OFFICERS COMMANDING DIVISIONS.

Maj.-Gen. Martin Dillon, C.B., C.S.I., Oudh.

Maj.-Gen. John Irvine Murray, C.B., Lahore.

Maj.-Gen. Sir Charles James Stanley Gough, K.C.B., VC., Allahabad.

Maj.-Gen. David MacFarlan, R.A., Sirhind.

Maj.-Gen. Sir George Richards Greaves, K.C.B., Meerut.

Brig.-Gen. John Withers McQueen, C.B., Punjaub Frontier Force.

COMMANDER-IN-CHIEF, MADRAS (Rs. 5,833), H.E. Lt.-Gen. Sir Charles G. Arbuthnot, K.C.B., R.A.
Adj.-Gen., Brig.-Gen. Wm. Kidston Elles, C.B.
Military Sec., Major F. W. Hemming, 5th D. G.
Quartermaster-Gen.,

GENERAL OFFICERS COMMANDING DIVISIONS.

Lt.-Gen. Hugh Rowlands, C.B., VC, Bangalore.
Maj.-Gen. Benjamin Lumsden Gordon, C.B., R.A. (*temporary*), British Burmah.
Maj.-Gen. William Anthony Gib, C.B., Hyderabad Subsidiary Force.
Maj.-Gen. Sir George Stewart White, K.C.B., VC, Upper Burmah.
Brig.-Gen. Richard Charles Stewart, Hyderabad Contingent.

COMMANDER-IN-CHIEF, BOMBAY.—H.E. Lt.-Gen. H.R.H. Duke of Connaught, K.G.
Military Secretary,
Adj.-Gen., Brig.-Gen. Charles B. Knowles, C.B.
Quartermaster-General, Lt.-Col. F. J. S. Adam, Bo. S.C. (*officiating*).

GENERAL OFFICERS COMMANDING DIVISIONS.

Maj.-Gen. Alexander Carnegy, Bo. S.C., Ahmedabad.
Maj.-Gen. Robert Rollo Gillespie, C.B., Mhow.
Maj.-Gen. Frederick Richard Solly-Flood, C.B., Poona.

ECCLESIASTICAL.

Bp. of Calcutta, Rt. Rev. Edw. R. Johnson, D.D.
Bp. of Madras, Rt. Rev. Frederick Gell, D.D.
Bp. of Bombay, Rt. Rev. Louis G. Mylne, D.D.
Bp. of Lahore, Rt. Rev. Thos. Valpy French, D.D.
Bp. of Rangoon, Rt. Rev. John M. Strachan, D.D.
Bp. of Bombay (Rom. Cath.), Right Rev. J. G. L. Meurin, D.D.

PROVINCES OF BRITISH INDIA.

The term "Presidency," which is applied to the Provinces or Governments of Bengal, Madras, and Bombay, is no longer correct, and in the case of Bengal is misleading. The expression is a relic of the time when the three settlements of Fort William, Fort St. George, and Bombay were each under the authority of a President, and comprised nearly the whole of the British possessions in India. Its use now frequently leads to the mistaken notion that British India is still divided into *three* Presidencies; whereas it comprises *nine* separate Provinces, each under its own civil government, but subordinate to the Supreme Government.

(1) BENGAL (Pop. 66,691,456)* was placed under a Lieutenant-Governor in 1854, having previously been part of the charge of the Governor-General. It occupies the Valley of the Ganges eastward of Benares, and extends from the Himalayas to the mouth of the Mahanuddy. For the most part the province is a great alluvial plain, producing rice, and is the most populous and productive in all British India. Orissa and Chota Nagpur, to the west and south-west, are ill watered and liable to drought. The chief products, besides rice, are opium, indigo, and jute. *Chief City*, CALCUTTA (pop. 433,514, and Suburbs 383,079).

Lieutenant-Governor (Rs. 8,333), Hon. Sir Aug. Rivers Thompson, K.C.S.I. (24 April, 1882).
Private Secretary, F. C. Barnes (Rs. 1,200).
Aide-de-Camp, Capt. W. C. W. Rawlinson, Linc. R.

COUNCIL OF THE LIEUT.-GOVERNOR FOR MAKING LAWS AND REGULATIONS.

The Lieut.-Governor (*President*), The Hon'bles G. C. Paul, C.I.E.; H. J. Reynolds, C.S.I.; Col. Salisbury T. Trevor, R.E.; Abdul Jubbar, A. P. Macdonnell, Rai Joyprokash Lall Bahadur, C. B. Garrett, G. Irving, Bau Behari Kapur, D. Cruickshank, Ananda Mohun Bose (*barrister*), H. L. Harrison.

SECRETARIES TO GOVERNMENT.

Chief Secretary, Frederick Barnes Peacock.
General and Revenue, A. P. MacDonnell, M.A.
Financial, Colman P. Louis Macaulay, M.A.
Public Works, Col. Salisbury T. Trevor, R.E.

HIGH COURT OF JUDICATURE.

Chief Justice, Hon. Sir Wm. C. Petheram, Kt., Q.C.
Puisne Judges, The Hons. Romesh Chunder Mitter, H. S. Cunningham, H. T. Prinsep, Arthur Wilson, L. R. Tottenham, C. D. Field, LL.D.; J. F. Norris, Q.C.; J. Q. Pigot, J. O'Kinealy, Wm. Macpherson, Ernest J. Trevelyan, Chunder Madhub Ghose, Henry Beverley.
Advocate-General, Gregory Chas. Paul, C.I.E., B.A.

(2) The NORTH-WEST PROVINCES and OUDH (pop. 44,107,869), about equal in area to Great Britain, form the upper part of the great plain of the Ganges to the west of Bengal, lying between the Himalayan Mountains and the hilly border of the central plateau. The North-West Provinces were separated from Bengal in 1835. OUDH, equal in size to Holland and Belgium, was annexed in 1856 and placed under a Chief Commissioner, but since 1877 the offices of Lieutenant-Governor of the North-West Provinces and Chief Commissioner of Oudh have been combined in the same person. The *chief City* of the North-West Provinces is ALLAHABAD (pop. 148,547); that of Oudh is LUCKNOW (pop. 261,303).

Lieut.-Gov. (Rs. 8,333), Hon. Sir Alfred Comyns Lyall, K.C.B. (17 April, 1882).
Private Secretary, John O. Miller.
A.-de-C., Maj. Sir G. A. de H. Larpent, Bart.
Chief Sec. to Govt., Jas. Robert Reid (Rs. 3,000).

HIGH COURT OF JUDICATURE.

Chief Justice (Rs. 5,000), Sir John Edge, Kt., Q.C.
Puisne Judges (Rs. 3,750), The Hons. Douglas Straight, Richard C. Oldfield, M. Broadhurst, and William Tyrrell.

(3) The PUNJAUB occupies the north-western angle of the great northern plain of India, and receives its name from the "Five Rivers" which, descending from the Himalayas, cross the plain and unite in the Indus. It was annexed in 1849, and up to 1853 was administered by a Board of Administration. This Board was then superseded by a Chief Commissioner, who in 1859 was raised to the rank of Lieutenant-Governor. The division of Delhi was at the same time transferred to the Province from the North-West Provinces. Besides the territory under British administration, which is about as large as the Kingdom of Italy, there is an area of one-third that size belonging to 34 Feudatory Native States, with a population of nearly 4 millions, a revenue of £1,600,000, and an armed force of 50,000 men. Thirdly, there are the frontier tribes, split up into numerous clans with

* The populations of the separate provinces are taken from the census returns of 1881.

divergent interests, whose military force is estimated at 130,000 men. The *chief City* is LAHORE (pop. 149,369).

Lieut.-Governor (Rs. 8,333), Hon. Sir Chas. U. Aitchison, K.C.S.I. (4 April, 1882).
Private Sec. & A.-de-C., Lt. J. R. Dunlop Smith.
A.-de-C., Lieut. William Annesley B. Dennys.
Secretary to Govt., William Mackworth Young.
Judge of Chief Court, J. Tremlett.

(4) The CENTRAL PROVINCES were formed in 1861, out of territory taken from the North-West Provinces and Madras. A large proportion of the aboriginal races of India are to be found in these Provinces, which have been opened up lately. The traffic that passes through Jubbulpur is larger than that of any city in India except Bombay. *Chief City*, NAGPOOR.

Chief Comm. (Rs. 4,166), C. H. T. Crosthwaite.
Secy. to Chief Com. (Rs. 2,000), Lindsay Neill.

(5) The Province of BURMAH, divided into Lower and Upper Burmah, is situated wholly to the east of the old province of British Burmah (pop. 3,736,771), occupies a long narrow strip of territory on the eastern shore of the Bay. Tenasserim and Arakan were annexed after the First Burmese War in 1826, and Pegu after the Second Burmese War in 1852. The valley and delta of the Irrawaddy are extremely fertile, but owing to the want of roads in past times the province is thinly peopled. This want is now being remedied, as during the ten years from 1874 to 1884 the road mileage has increased from 850 to 2,530, in addition to which 327 miles of railway have been opened. The *chief City* of the old province is RANGOON (pop. 134,176).

UPPER BURMAH has, since the 26th of February, 1886, been annexed to the Indian Empire. King Theebaw, the reigning monarch, has been deposed and pensioned, and the country placed under the Chief Commissioner of Burmah and his assistants. Its area is about 140,000 square miles; its population has not yet been determined, but is estimated at 3,500,000. The chief town is MANDALAY, situated near the banks of the Irrawaddy, and about 28 miles north-west from Amarapoora. The River Irrawaddy is navigable as far as the frontier town of Bhamo, 900 miles from its mouth, for steamers of five feet draught. The country is mountainous, and mainly forest-clad; the river valleys are narrow, but fertile. The chief natural productions of the country are gold, silver, precious stones, iron, lead, tin; teak-wood, rice, sugar-cane, tobacco, cotton, and a variety of tropical fruits. The exports of manufactured goods consist mainly of cotton and silk stuffs, saltpetre, glass, powder, porcelain, and marble images. The inhabitants—of the common Indo-Chinese stock—belong to numerous different tribes, who are distinguished by a variety of manners, languages, and religions. The most general religion is some form of Buddhism, of which the deity is known by the people as Gautama.

The number of military and police stationed in Burmah in July, 1886, was 32,720. The revenue of Upper Burmah for 1886-87 is estimated at £665,000, and the expenditure at £775,000. Its frontier trade is estimated at £1,100,000, of which £700,000 represents imports.

Chief Commr. (Rs. 4,166), Sir C. E. Bernard, K.C.S.I.
Secy. to Chief Com. (Rs. 2,000), E. S. Symes, C.I.E.

(6) ASSAM (pop. 14,881,426), ceded by Burmah in 1825, formed part of Bengal until 1874. A range of mountains divides the province into the Surma and Brahmapootra Valleys. The *chief City* of the Brahmapootra Valley is GAWHATI (pop. 11,695), and of the Surma Valley SYLHET (pop. 14,400). The revenue is comparatively small. Cachar, Sylhet, Sibsagar, and Zakhimpur are the most important tea-producing districts in India.

Chief Comm. (Rs. 4,166), Charles A. Elliott, C.S.I.
Sec. to Cf. Comm. (Rs. 1,776), Chas. J. Lyall, C.I.E.

The preceding six Administrations are in closer connection with the Governor-General in Council than the two older Governments of Madras and Bombay, which retain to a certain degree the independence they acquired when communication with the Governor-General was difficult. On important questions the Governors of Madras and Bombay address the Secretary of State through the Government of India, but on minor matters they communicate with him direct.

(7) MADRAS (pop. 30,688,504) was the scene of our struggle with the French, whose principal settlement, Pondicherry, is 90 miles south of the city of Madras. Though the most important of the three Presidencies until Clive's conquest of Bengal, it was small in extent till 1801, when the annexation of the Carnatic raised it to nearly its present dimensions. It is larger than Great Britain and Ireland together. With a coast-line of 1,730 miles the province has not one good natural harbour. The Governor of Madras is assisted by a Council of three members, and by a Legislative Council. The *chief City* is MADRAS (pop. 405,848).

Governor (Rs. 10,000), The Right Hon. Robert Bourke, C.I.E. (gazetted 4th Sept. 1886).
Priv. Sec., John D. Rees (Rs. 1,500).
Mil. Sec., Maj. J. A. Stewart-Mackenzie (Rs. 1,000).
Aides-de-Camp, Captain W. H. Wyndham-Quin, 16th Lancers; Lieut. G. F. Wingfield, 7th Hussars; Subadar-Major Usman Khan, Sirdar Bahadur.

COUNCIL OF THE GOVERNOR.

The Commander-in-Chief; The Hons. Henry Edward Sullivan, C.S.I., and Chas. G. Master.
Additional Members for Making Laws and Regulations, The Hons. R. Wellesley Barlow, E. F. Webster, P. O'Sullivan (*Adv.-Gen.*), S. Subrahmanya Aiyar, John Alexander Boyson, Tumalapalli Rama Rao, Mir Humayun Jah Bahadur, C.I.E.; Pasupati Ananda Gajapati Raz, Maharaja of Vizianagram.

SECRETARIES TO GOVERNMENT.

Chief Secretary, Edmund Forster Webster.
Revenue Dept., Henry Edward Stokes, B.A.
Military Dept., Lt.-Col. A. R. Kenney-Herbert.
Public Works Dept., Col. John O. Hasted, R.E.

HIGH COURT OF JUDICATURE.

Chief Justice, Hon. Sir A. J. H. Collins, Kt., Q.C.
Judges, Hons. James Kernan, Q.C.; T. Muthuswami Aiyár, C.I.E.; Philip Perceval Hutchins, Francis Brandt, Geo. Arthur Parker (*acting*).

(8) BOMBAY.—The Island of BOMBAY was part of the dowry of the Infanta of Portugal (1661), and was made over by Charles II. to the East India Company in 1668. The Province (pop. 16,489,274) is 1,050 miles in length, and has many fine natural harbours, Bombay and Kurrachee being by far the

most important. It is about equal in size to Germany: Native States occupying one-third; Sind, conquered in 1843, a non-regulation province, one-fourth; and Bombay proper, once the territory of the Peishwa, the remaining 82,000 square miles. The greater portion of the people (76 per cent.) are Hindoos, and 17 per cent. are Mohammedans. The Governor, as in Madras, is assisted by a Council of three members, and by a Legislative Council. The *chief City*, BOMBAY (pop. 773,196), is yearly rising in importance as the chief commercial port of India. It is, after London, the most populous city in the British Empire.

Governor (Rs.10,000), Rt. Hon. Lord Reay, LL.D., C.I.E.

Private Sec. (Rs. 1,500), James Monteath, M.A.

Mil. Sec., Lt.-Col. Hon. N. G. Lyttelton, R. Brig.

Aides-de-Camp, Lieut. Bruce M. Hamilton, 2nd E. Yorks. Regt.; Lieut. A. Phayre, Bombay S.C.; Lieut. L. Herbert, Central India Horse (*extra*); Ressaldar Roop Sing, 2nd Bombay Lancers.

COUNCIL OF THE GOVERNOR.

The Commander-in-Chief (Rs.5,833); Hons. J. B. Peile, C.S.I.; Maxwell Melvill, C.S.I. (Rs. 5,120).

Additional Members for making Laws and Regulations, The Hons. M. H. Starling, B.A., LL.B. (*Advocate-General*); Kashinath T. Telang, C.I.E.; F. Forbes Adam, James Richard Naylor, Rao Bahadur Mahadeo G. Ranade, Dadabhai Naoroji, Dayaram Jethmal, Khan Bahadur Kazi Shahbudin, C.I.E.; Rao Bahadur Mahadev Vassudev Barve, C.I.E.

Secretary to Council, Herbert Batty.

SECRETARIES TO GOVERNMENT.

Chief Secretary, Revenue, Financial, and General, James B. Richey, C.S.I.

Political, Secret, Judicial, and Financial, Sir William Wedderburn, Bart.

Military, Marine, & Eccles., Brig.-Gen. Michael W. Willoughby, C.S.I.

Public Works, Maj.-Gen. Wm. West Goodfellow, C.B., R.E.

HIGH COURT OF JUDICATURE.

Chief Justice (Rs. 5,000), The Hon. Sir Charles Sargent, Knt.

Judges (Rs. 3,750), Hons. Lyttelton H. Bayley; Raymond West, LL.D.; John Scott; Nanabhai Haridas; Herbert Mills Birdwood; C. F. Farran; John Jardine.

Berar (pop. 2,672,673), which lies to the north of Hyderabad, was placed in our hands by the Nizam in 1853, in payment of arrears due to the British Government. The province is fertile, and yields the finest cotton grown in India. It forms part of the charge of the British Resident at Hyderabad. The surplus revenues, after defraying the cost of administration, go to the Nizam's Government. *Chief City*, ELLICHPOOR.

The city of *Goa*, capital of the territory of the same name, and indeed of all the Portuguese possessions east of the Cape of Good Hope, is situated on the Malabar coast, about 265 miles S.S.E. of Bombay. Old Goa, five or six miles inland, is fast falling to decay, and New Goa, or Panjim, at the head of the harbour, a walled and strongly fortified city, is now the centre of trade and government. The principal imports are piece goods, ivory, raw silk, sugar, woollens, &c.; the principal exports are hemp, cowries, betel-nut, toys, &c. The whole territory, 60 miles long by 30 miles broad, contains an area of 1,080 square miles, and a population of 420,868. The other Portuguese possessions in India are Damaun (pop. of town, 6,000; pop. of territory, 47,798, area 384 square miles), to the north of Bombay; and Diu, a town and fort on an island off the Gujerat coast (pop. 12,636, area 52 square miles).

Pondicherry, the capital of the French possessions in Hindustan, is on the Coromandel coast, 85 miles S. by W. from Madras. The fortifications were once strong, but in the war with England they were destroyed, and a clause in the Treaty of Paris forbids their rebuilding and the garrisoning of the place by a native French force. Rice, indigo, tobacco, betel, and cotton are raised in the district (113 square miles) belonging to the city, but there is no harbour to the place, and trade is declining rapidly. The imports consist of lace, fancy goods, furniture, and jewellery. Population of the town, about 30,000. The population of the whole district in 1886 was 156,094. Chandernagore, on the banks of the Hooghly, 17 miles north of Calcutta (pop. in 1877, 22,539); Karical, in the Cauvery delta (area 52 square miles, pop. 92,516); Yanaon, in the Godavery delta (area 5 square miles, pop. 5,460); and Mahee, a small town (pop. 8,492) on the opposite coast of India, are also French possessions.

The *Andamans*, a chain of islands in the eastern part of the Bay of Bengal, are of volcanic origin, covered with a luxuriant vegetation, and inhabited by a diminutive race of savages. Since 1858 these islands have been used as a penal settlement by the British Government of India, Port Blair on S. Andaman constituting the civilized portion. Coffee, rice, and nutmegs have been cultivated with much success, the jungle has been cleared away in many places, and pasturage for numerous cattle has thus been obtained. The Aborigines in the neighbourhood of the port are already improving in the civilized arts. (Area 880 square miles, pop. 14,628.)

The *Nicobar Islands* lie almost due south of the Andamans and to the north-west of Sumatra. They formerly belonged to Denmark, but were first occupied by the British in 1869. They consist of two groups, of which the largest members are Great Nicobar (30 miles by 12 miles) and Camorta; and the principal produce consists of cocoanut palms (which are carefully cultivated by the natives, and supply them with the greater part of their sustenance), teak, plantains, and pineapples. The climate is very unhealthy for foreigners, and in the last century the Danes twice founded settlements on the islands, but were compelled each time to abandon them. Population, about 6,000.

NATIVE STATES OF INDIA.

The Native States of India cover an area of about 500,000 square miles. They contain a population of about 55 millions, and their united military forces are estimated at more than 300,000 men. The gross revenues of the chiefs come to about 16 millions sterling, and an annual tribute of £700,000 is paid to the British Government. The States vary greatly in size and importance. Hyderabad, for instance, is as large as the kingdom of Italy, and the Nizam enjoys a gross revenue of more than £3,000,000. On the other hand, in Kattywar and elsewhere, where family custom has led to minute subdivision, there are many chiefs of a single village,

and between these two extremes there are States of every grade. Although, therefore, the number of Native States, large and small, amounts to as many as 800, only about 200 are of any importance. They may be classed under fourteen heads: 1. The Indo-Chinese group of States, and the numerous Hill Tribes of the North-East Frontier. 2. The aboriginal Gond and Kole tribes in Chota Nagpur, Orissa, the Central Provinces, and the Jaipur Agency. 3. The Himalayan Hill States, west of Nepaul (including Cashmere). 4. The numerous Afghan and Belooch tribes of the North-West Frontier, inhabiting the mountains from the north of Peshawar to the base of the Suleiman range, a distance of 800 miles. 5. The Sikh States, in the Sirhind plain, south of the Sutlej. 6. The three Northern Mohammedan States of Khair in Sind, Bhawalpur to the north-east of it, and Rampur, from which Warren Hastings expelled the Rohillas in 1774. 7. The ancient sovereignties of Rajputana, lying to the south of the Punjaub, and between Sind and the North-West Provinces. 8. The States of Central India, lying to the north of the Nerbudda, and to the south and east of Rajputana. 9. Gujerat, and the numerous petty chiefships of Kutch and Kattywar. 10. The Southern Mahratta States. 11. Baroda. 12. Hyderabad. 13. Mysore. 14. The Malayalim States of Travancore and Cochin, lying together in the far south.

The Nizam of *Hyderabad*, on the attainment of his majority, was installed in the presence of the Viceroy, on February 5th, 1884. *Cashmere* was granted to Gholab Sing by Lord Hardinge, after the First Punjaub War. His son and successor, Runbir Sing, died on Sept. 12, 1885, and was succeeded by the present Maharaja, Pertab Sing. Cashmere commands important trade routes to Central Asia, and is renowned for the beauty of its scenery and the excellence of its climate. Of the Sikh States the most important is *Patiala*. *Rajputana* measures some 460 miles from north to south, and 530 miles in breadth; it has a population of about 10¼ millions. The largest of the eighteen principalities is *Jodhpur*, but the most important are *Oudipur* and *Jaipur*. The Rajput dynasties are very ancient. They offered the most obstinate resistance to the Mohammedan invaders, but were finally conquered by Sultan Baber, at the Battle of Sikri, near Agra, in 1527. The Governor-General's Agent, whose headquarters are at Ajmir, has under him a staff of twenty officers, who are distributed among the States to overlook the administration, and give advice when it is needed or asked for. The military forces of these States are set down at 70,000 men. The *Central India States*, which are one-third less in extent than Rajputana, are split up into nearly four times as many States. The two most important are *Gwalior* and *Indore*, which include between them one half of the whole area. Scindia has an admirably-equipped army of more than 20,000 men. The historic fortress of Gwalior, which had been held by the British since the Mutiny, was given back to Scindia in 1886. The opium grown in Malwa is a valuable source of revenue to the Maharaja of Indore and to the British Government. *Bhopal*, the principal Mohammedan State in India, has for three generations prospered under female rule. In 1881 the reigning Gaekwar of *Baroda* was deposed, but the native administration was continued under an adopted heir. In 1881 the province of *Mysore*, which had been administered by the British Government since 1834, was restored to the Maharaja Chamrajendra Wadiar Bahadur on his attaining his majority. The revenue slightly exceeds £1,000,000, and the tribute to the British Government is £250,000.

NATIVE PRINCES.

The most important of the Native Princes are:—

Princes.	Sq. M.	Pop. 1881.	Revenue.
			£
Nizam of Hyderabad	81,807	9,845,594	3,000,000
Maharaja of Gwalior .	29,067	3,115,857	1,200,000

Begum of Bhopal	6,874	954,901	268,000

INDIAN APPOINTMENTS.

The civil administration of British India is recruited from four sources—1. Competitive examination in England; 2. The Indian Staff Corps; 3. The patronage of the Secretary of State; 4. The patronage of the local Governments. The examination of candidates for appointments in the Covenanted Civil Service of India is held annually in London, in June, the number of appointments varying with the requirements of the local Governments. The average number is from 30 to 40. After the competitive examination, and before proceeding to India, selected candidates undergo two years' probation, and are required to pass periodical examinations in special subjects of study. The limit of age for candidates is from 17 to 19 on the 1st of January of the year in which the examination is held; application for admission to the examination must be made before the 1st of April. To encourage candidates to receive a University training, an allowance of £150 per annum is given to all who pass their two years' probation in residence at some University approved by the Secretary of State, and an additional bonus of £150 is granted to any student who, after residing a third year at the University, obtains a degree in honours at Oxford or Cambridge. Within a certain time of the candidate's arrival in India he must elect to serve in the executive or the judicial branch of the administration, the summit of the profession in one branch being the Lieutenant-Governorship of a Province, in the other a Judgeship of the High Court. The salary of a covenanted civil servant commences at Rs. 4,800 a year. The number of covenanted civilians in all India is rather under 960. The Native Army absorbs the larger proportion of the Staff Corps; but out of a total of about 3,000 officers some 380 are attached to the Police or the Public Works Department, or are in Civil or Political departments, the political branch being the most sought after. Applicants for the Staff

Corps must have completed one years' regimental duty and be under 25 years of age, and must have less than four years' service. There is a term of probation of eighteen months, which must be passed with native troops. A Lieutenant's Staff Corps pay commences at Rs. 2,700 a year. The patronage of the Secretary of State is very small, and is chiefly dependent on the uncertain requirements of the Government of India in the Ecclesiastical, Judicial, or Educational Departments. The Local Governments have many appointments in their gift, but no one who is not a native, a covenanted civilian, or an officer of the Staff Corps can be appointed to a post over Rs. 200 a month without the sanction of the Government of India—the departments excepted from this rule being: *Opium, Salt, Customs, Survey, Mint, Public Works Department, Police.* The *Public Works Department* is recruited from the Royal Indian Engineering College at Cooper's Hill, from the corps of Royal Engineers, and, in respect to natives, from the Civil Engineering colleges in India. About 60 candidates, between the ages of 17 and 21 on the 1st July of the year of admission, are admitted each year to the college at Cooper's Hill, candidates receiving preference according to dates of application for admission. After a three years' course of study, during which the annual charge is £180, the students undergo a competition, and the highest obtain appointments in India (commencing at Rs. 4,200 a year), the number of these being about fifteen. Candidates for the *Telegraph Department* enter the college in the same manner, but their competitive examination is at the end of two years, and the number of appointments is two annually. The commencing salary is Rs. 3,000 a year. The *Forest Department* of India, in which the pay also begins at Rs. 3,000 a year, is recruited from this country: there will be an examination in June, 1887, for ten vacancies, the limits of age being 17 and 21 on the 1st of June, 1887, applications to be made before 1st May, 1887. Successful candidates will undergo a two-years and two-months' special course, during which an annual charge of £180 will be made for each student, and of which the first twenty-two months will be at Cooper's Hill, and four months with some English or Continental Forest Establishment. Examinations for the *Medical Service* take place in February and August; the unusually large number of twenty-five appointments being offered for competition in February next. Candidates must be between the ages of 21 and 28 at the date of examination, and must possess a diploma in, or licence to practise, surgery, as well as a degree in, or licence to practise, medicine. Successful candidates will be required to attend a four months' course at the Army Medical School at Netley, during which period they will receive an allowance to cover cost of maintenance.

The *Ecclesiastical Establishment* in India consists of the Bishops of Calcutta, Madras, Bombay, Lahore, and Rangoon (whose names will be found at page 384), and 160 Chaplains. Certain allowances are also paid from Indian revenues to other clergymen, and to priests and ministers of other denominations when ministering to British regiments.

THE FINANCES OF INDIA FOR THE YEARS ENDED 31ST MARCH, 1884 and 1885.*

The figures are conventional, sterling £1=10 Rupees.

The following is a Table of Revenue and Expenditure, up to 1885, in each decade since 1839-40, and for the year 1884-85, together with the totals of all the years between those dates, the values being stated approximately at the conventional rate of £1=Rs. 10. It should be borne in mind that the area of British territory in India has risen since 1840 from 616,000 to 868,000 square miles :—

England.....	£256,954	£14,239,682
Total	£70,615,860	£70,765,595

The INDIAN DEBT on the 31st March, 1886, stood at £166,931,000, as compared with £162,454,748 in the previous year. Of the latter sum, £93,183,660 was held in India, and £69,271,088 in England. The total charge for interest on debt in 1884–85 was £7,466,185. In the preceding statement of expenditure £4,137,065 of this total is charged under Interest on Debt (excl. Railways and Irrigation Works), £2,397,116 is charged under Railway Revenue Account, and £932,004 under Irrigation.

THE OPIUM REVENUE.—The growth of the poppy in *British India* is strictly confined to the districts of Behar and Benares in Bengal, and its manufacture has been a Government monopoly for more than a hundred years. The cultivators undertake to deliver the whole of the produce at the contract price of Rs. 4·8 and Rs. 5 per seer (2 lbs.), and when the crop is ripe the juice is collected and sent to the Government Agencies at Ghazipur and Patna. Here it is dried to a certain consistency, and packed in chests containing about 130 lbs. each. It is then sent down to Calcutta, disposed of by auction at monthly sales, and exported. In the year ending 31st March, 1885, 46,698 chests were thus sold for £6,277,111, at a rate slightly exceeding Rs. 1,295 per chest. Deducting £2,960,939 for cost of cultivation and manufacture, the net profit from this Bengal "export" or "provision" opium was £3,316,172. In addition to this, 5,552 chests of Bengal opium were issued to the Excise Department to meet the consumption in India itself. The number of chests of Bengal opium in reserve for export on 31st March, 1885, was 55,790; 2,599 chests were also in store for the Excise Department.

A large quantity of opium, amounting in 1884–85 to 39,039 chests, is also exported from Bombay, the whole of which is grown in the Native States of Central India, and goes by the name of Malwa Opium, because that district supplies the greater part of it. A duty of Rs. 650, Rs. 675, or Rs. 700 per chest, according as the opium comes from Malwa, Ajmere, or Ahmedabad, is levied upon it when it enters British territory, and the receipts from this source in 1884–85 amounted to £2,539,358, which was almost entirely clear gain to the Government, the cost of collecting the duty being insignificant. The total net revenue from the two sources—Bengal and the Native States—was £5,849,829.

Nearly the whole of this opium is exported to China, and according to a calculation of the British Inspector-General of Customs, is consumed by one million persons, or at the most 0·33 per cent. of the population. This quantity of opium pays the Chinese Government about £1,920,000, and is sold to the consumer for £15,400,000, which is equal, according to the calculation above referred to, to the expenditure of £42,192 daily by 1,023,000 persons, or about 9·9 annas by each individual.

GROSS AMOUNT OF THE REVENUE AND EXPENDITURE (excluding Capital Expenditure on Public Works not charged to Revenue) IN INDIA AND IN ENGLAND, SHOWING SURPLUS OR DEFICIENCY IN EACH OF THE UNDER-MENTIONED OFFICIAL YEARS.

(*Throughout this statement £1 represents 10 Rupees, or their equivalent, whether the transactions have taken place in England or in India.*)

TRADE OF INDIA IN 1885-86.

The foreign trade continued to be depressed. It was, however, slightly larger than in 1884-85, amounting to Rs. 1'52'20'50'590, as compared with Rs. 1'52'11'60'171. But although more than 7½ per cent. below the value of the trade in 1883-84, it was larger than the trade of any other year, and Rs. 58'38'00'000 more than in 1873-74. In the years from 1875-76 to 1884-85 imports of merchandise had risen Rs. 18'40'00'000, and exports Rs. 26'80'00'000. The proportion per head of the population is, however, less than 6 rupees against £17 10*s.* in the United Kingdom.

The average annual excess of exports over imports in the last seven years has been 17'50 lacs. The import trade however is increasing, as it should, somewhat faster than the exports. The actual figures for 1885-86 are: imports of merchandise, 51'81 lacs; of treasure, 15'48 lacs; total 67'28 lacs: exports of merchandise, 84'92 lacs; of treasure, 1'11 lacs; total 83'80 lacs; making a grand total of 152'20 lacs.

All imports are now free, excepting arms and ammunition, opium, liquors, and salt. It was thought that the entire removal of the duty on cotton manufactures might be detrimental to Indian manufactures, but it has not been so. On the contrary, the value of Indian cotton yarn and piece goods exported has increased from Rs. 74'09'593 in 1876 to Rs. 3'56'87'405 in 1885-86. The business is, however, said to be no longer profitable.

The total values of the imports and exports respectively of merchandise for the several provinces of British India were as follows for the year ending March 31st, 1886:—Bombay, Rs. 22'01'43'302, Rs. 31'29'83'576; Bengal, Rs. 19'98'56'394, Rs. 33'11'20'692; Madras, Rs. 4'25'03'569, Rs. 8'26'44'123; British Burmah, Rs. 3'41'98'154, Rs. 6'78'03'690; Sind, Rs. 2'14'14'386, Rs. 4'37'26'320. The value of the treasure imported and exported was Rs. 16'58'60'384, of which Bombay contributed Rs. 13'38'21'432, and Calcutta Rs. 2'73'72'339.

Imports of gold have declined in 1885-86 from Rs. 4'67'19'365 to Rs. 2'76'29'347; the net result for the last five years having been an import of 22'67 lacs, a sure sign of prosperity, because, not being used for coinage, it is an article of merchandise, and is almost entirely converted into ornament, in accordance with the Eastern method of investing savings.

The net imports of silver in the last six years has been 38'12 lacs, of which seven-eighths came from England, Italy, and China.

The bills and telegraphic transfers sold by the Secretary of State on India during the year amounted to Rs. 13'53'25'000, realizing £10,292,692 (true sterling), the average rate being 1*s.* 6'254*d.* This sum represents a portion of the excess of exports from India over imports, as well as the cost of the home charges. To obviate the necessity for a double remittance of specie, an exchange is effected; the merchants purchase the Bills of the Council of India in London in sterling money, and receive the equivalent in rupees in India from the Government Treasuries at Calcutta, Madras, and Bombay.

The total number of vessels which entered and cleared at Indian ports from and to foreign countries in 1885-86 was 10,562, with a tonnage of 7,294,589, as compared with 10,338 vessels with a tonnage of 6,649,770 in 1884-85. The size of vessels trading to India is constantly increasing. The percentage of steam tonnage passing the Suez Canal further declined in 1886 from 65 to 64; 79'1 per cent. of the total tonnage of the year was British.

The following statement exhibits the principal articles of the foreign trade of India, the figures being those of 1885-86:—

Imports.	Lacs Rs.	Exports.	Lacs Rs.
Cotton manfs.	20,59'7	Cotton	10,77'7
Metals	4,76'7	Opium	10,73'6
Cotton twist..	3,17'2	Rice..	9,16'7
Railway plant	2,01'8	Seeds	8,77'4
Silk(raw&man.)	1,66'6	Wheat	8,00'2
Sugar (refined)	1,45'6	Jute(raw&man.)	5,34'0
Coal, &c... ..	1,30.8	Hides	5,33'5
Liquors	1,29'6	Tea	4,30'6
Woollen Goods	1,24'7	Indigo	3,78'3
Provisions ..	1,19'2	Cotton twist..	2,75'5
Machinery ..	99'1	Coffee	1,34'8
Apparel	93'2	Wool(raw&man.)	90'3
Chemicals, Drugs, &c.	86'2	Cotton goods..	81'3
Oils	85'2	Silk(raw&man.)	64'3
Hardware & Cutlery ..	77'7	Lac	58'3
Spices	71'9	Teakwood ..	55'0
Salt	59'6	Sugar	52'5
Glass	50'5		

The foreign sea-going trade of India in 1885-86 was distributed in the following order:—

Countries.	Merchandise and Treasure. Imports and Exports.	Percentage on Total Trade of India.
	Lacs Rs.	
United Kingdom ..	84,63'9	55'61
China (Hong Kong)	13,30'5	8'74
France	7,40'8	4'87
Straits Settlements	5,39'0	3'54
China (Treaty Ports)	5,09'8	3'35
Italy	4,54'9	2'99
United States.....	4,48'3	2'95
Belgium	3,99'7	2'63
Egypt	3,55'4	2'34
Ceylon	2,90'8	1'91
Austria	2,66'8	1'75
Persia	2,10'4	1'38
Mauritius.....	2,06'2	1'35
Arabia	1,67'6	1'1
Australia (including New Zealand, &c.)	1,56'8	1'03
Aden	93'8	0'616
Zanzibar	79'8	0'524
Turkey in Asia	76'7	0'504
Holland	54'1	0'355
Malta.....	53'9	0'354
Germany	52'8	0'347
Other countries	2,05'4	1'35

Frontier Land Trade.—The registration of the trade which crosses the land frontier of British India is defective, but constant efforts are made to render it more complete and accurate. The registered figures for 1885-86 were (including

treasure)—imported 5,19·34 lacs, and exported 7,21·01 lacs—as follows:—

Principal Countries.	Imports.	Exports.
	Lacs.	Lacs.
Baluchistan and Southern Afghanistan	10·6	316·4
Cabul, Tirah, and Bajaur	23·	53·7
Cashmere	49·1	38·
Ladakh	3·7	3·4
Nepaul	1,40·6	95·7
Sikkim and Thibet	6·8	2·7
Total of all countries, including Upper Burmah	5,19·3	7,21·0
Excess of exports	2·01·7	

In these totals the trade between Lower and Upper Burmah has been included, though part of the year the latter was a British province. The trade between Upper Burmah and China is estimated at 1·10 lacs, of which 70 lacs represent imports.

The following is a list of the frontier provinces of British India and the foreign countries adjoining them with which they have trade relations:—

Sind.—Lus Bela, Khelat, Khorasan, Kandahar, Pishin, Girishk, Ghuzni, and Cabul to a small extent.

Punjaub.—Sewestan, Tirah, Bajaur, Cashmere, Ladakh, Cabul, portion of Thibet.

North-West Provinces & Oudh.—Thibet, Nepaul.

Bengal.—Nepaul, Bhutan, and Sikkim.

Assam.—Towang, Bhutan, Duffla and Aka Hills, Naga and Mishmi Hills, Manipur, Lushai Hills, and Hill Tipperah.

Burmah.—China, Karennee, Shan States, Zimmay, and Siam.

In 1885–86 the imports declined 6 per cent., while the exports increased 18 per cent., but almost the whole of this increase consisted of railway stores for the Sind-Peshin Railway.

The export trade through Afghanistan is much checked by the restrictive policy adopted by the Russian Government towards British Indian trade.

AREA AND POPULATION OF BRITISH INDIA ACCORDING TO CENSUS OF 1881.

Provinces, etc., under the Administration of:	Area in Square Miles.	Number of Towns and Villages.	Population.	Number per Square Mile.

* Excluding Aborigines, estimated at 6,000.

† The province of Upper Burmah recently annexed is estimated to have an area of 140,000 square miles and a population of 3½ millions.

In India, including the Native States, there were (1881) nearly 254 millions of inhabitants, 188 millions being Hindoos, and 50 millions Mohammedans. Of 130 million males, 51 millions are dependent on agricultural pursuits, 13½ millions on various industries; 7¼ millions are labourers, and 2 millions are in domestic service. There are 714,759 villages, townships, &c. (544,856 being in British Territory, and 169,903 in the Native States), nearly half of these being villages with less than 200 inhabitants. The average number of inhabitants is 229 per square mile (varying between more than 442 in Bengal to less than 43 in British Burmah). There are 53 towns with a population of more than 50,000, the seven largest being—Bombay, 773,196; Calcutta, 816,593; Madras, 405,848; Lucknow, 261,303; Benares, 199,700; Delhi, 173,393; Patna, 170,654. The

largest town among the Native States is Haidarabad, with a population of 354,962. The total number of British-born subjects in 1881 was 89,798 (76,188 males, 13,610 females).

DISTRIBUTION OF THE RELIGIOUS DENOMINATIONS of the POPULATION of INDIA under EDUCATION, according to the Census of 1881.

Religions.	Males.					Females.				
	Under Instruction.	Not under Instruction, and able to Read and Write.	Not under Instruction, and unable to Read and Write.	Unspecified.	Total Males.	Under Instruction.	Not under Instrctn. and able to Read and Write.	Not under Instruction and unable to Read and Write.	Unspecified.	Total Females.

Note.—Difference in totals of Males and Females in this Table, as compared with grand total in Tables above, arises from the population of Aden and Andaman Islands not being included in these columns.

RAILWAYS.—The number of miles open for traffic on 31st March, 1886, was 12,376; in addition there were 3,767 miles of line then under construction, or already sanctioned for construction. The total amount of capital expended on Railways (including steamboat services and ferries) up to 31st December, 1885, was (at the conventional rate of Rs. 10 = £1) £161,917,840 (£71,032,838 by Guaranteed Companies, £82,255,391 on State lines, including the purchased lines, £3,808,232 on assisted companies' lines, and £4,821,379 on Native State lines). The net receipts up to 31st December, 1885, were £9,126,331, or a return of £5·64 per cent. on the capital sunk, against £7,910,068, or a return of £5·27 per cent., in 1884; the number of passengers increased from less than 74 to nearly 81 millions, while the goods traffic increased from considerably below 17 million tons to very nearly 19 million tons. The length of *telegraph* lines in India on 31st March, 1885, was 25,387 miles, constructed at a cost of £3,537,992.

The ARMY in India numbered in 1884–85 about 189,000 officers and men (European 63,000, Native 126,000). A considerable addition to the Native Army was sanctioned in 1885, viz., Cavalry, 5,000; Goorkha regiments, 5,000; and general Native Infantry, 10,000 to 12,000. An addition of 10,000 to the European Army has also been required. For police duties and frontier service this force is supplemented by about 144,000 Native Police, officered mainly by Europeans.

The military operations of importance during the years 1884–85 and 1885–86 were the expedition to the Zhob Valley, on the North-west Frontier, to punish the Kakar and Musakhel tribes for their raids on British territory; the Indian expeditionary force that was despatched to Suakim to co-operate with the British Army there; and the war in Burmah, which lasted less than two months from the time the frontier was crossed to the date of the capture of Mandalay, the surrender of King Theebaw, and the annexation of his kingdom.

The area of FORESTS, either belonging to the state or to some extent protected by it, and contributing towards its revenue, amounted, in 1884-85, to over 80,000 square miles, or nearly 10 per cent. of the area of British India.

EDUCATION has made steady progress of late years. The number of educational institutions in 1884–85 was 141,137, and the number of students was 3,437,553, as compared with 60,827 schools and 1,816,124 students in 1877–78. Of the institutions, 15,297 were maintained by the State, and 77,688 aided by grants. The remainder were private and unaided. The policy of the Government aims principally at improving and extending elementary education. There are four Universities in India, founded on the model of the University of London, viz., those of Calcutta, Madras, and Bombay, and the Punjaub University.

The INDIAN MUNICIPALITIES began for the most part in 1884–85 to enjoy the more popular system of representation granted to them by Lord Ripon's measures of Local Self Government. The result appears to have been successful. The number of Municipalities in India is now 749; Bombay and the Punjaub claiming the largest shares. Their taxation, spread over a population within municipal limits of 14,271,174, gives an average of 2*s.* 6*d.* a head. In several provinces local self-government by means of representative District Boards has also been largely introduced for rural districts.

LEGISLATION IN INDIA IN 1886.

The only legislative measure of first importance passed during the year 1886 was the Income Tax Act, which came into force from the 1st April, 1886. Besides repealing the Acts under which the Licence Tax was levied, this Act imposes a tax on all incomes derived from sources other than agriculture at the rate of 5 pies in the Rupee (nearly 3 p. c.). Incomes between Rs. 500 and Rs. 2,000 a year, however, only pay at the rate of 4 pies in the Rupee (rather over 2 p. c.), and incomes under Rs. 500 a year are altogether exempt. Interest on Stock notes, and incomes derived from property devoted solely to religious and charitable purposes, and profits of shipping companies having their centre outside of India, are also exempt.

THE following accounts of the different British Colonies and Possessions have been revised by the Local Governments, to whom the Editor begs to return his warmest thanks. They will frequently be found to differ from statistics prepared and published by authority in this country, especially the Values of Imports and Exports, the mode of valuation in the Colonies being different from that adopted by the British Custom-house authorities.

ADEN.

Aden consists of a peninsula and town on the south coast of the province of Yemen, in Arabia Felix, situate in lat. 12° 47′ N. and long. 45° 10′ E. The British possessions include the main peninsula and the opposite peninsula of Little Aden, together with a strip of territory recently purchased, extending for about 3 miles inland—the total area being about 70 square miles. The peninsula, which is fortified, was captured by the British in 1839: it is of volcanic origin, and the hills attain an altitude of 1,775 feet. The town is on the north-east side of the peninsula, in a deep hollow formed by the crater of an extinct volcano, and surrounded on all sides by high naked rocks. Large numbers of wells are found in various parts of the neighbourhood, but the water is of very limited quantity, and has a brackish, unpleasant taste. The climate is dependent to a large extent upon the monsoons, and is not considered unhealthy in spite of its extreme heat. The harbour on the west side of the isthmus is regarded as the best in Arabia: there is a second harbour on the east side of the isthmus.

The Island of PERIM, at the entrance of the Red Sea (lat. 12° 40′ N., long. 43° 23′ E.), which is garrisoned by fifty native infantry, is a dependency of Aden, and was first occupied by the British for the purpose of building a lighthouse upon it. The population of Aden in 1881, including troops and followers, was 35,165. It forms one of the links in the chain of British fortified coaling positions on the Eastern highway. The city itself is ancient, and was formerly very celebrated. The enormous trade which it maintained with China and India during the eleventh, twelfth, and thirteenth centuries helped greatly to make it the *entrepôt* of the riches of the East. The discovery of the passage round the Cape put an end to its importance and ruined its trade. In 1839 it came into the hands of the British; it was then a wretched place, with a population of 600; now it is not only of special military value as commanding the Red Sea, but also commercially as a centre of trade with the surrounding countries. The harbour is visited annually by upwards of 1,500 vessels. The value of the sea imports in 1882–83 was £2,014,580, and the exports aggregated £1,448,890. There is also a land import trade to the value of £201,428, and the exports to the interior in 1882–83 amounted to £79,480. The principal articles of import from the West are coals, cotton piece-goods, &c., and silk. The exports, which are all received from the neighbouring countries, consist of Arabian and African coffee, African dyes, feathers, gums, and hides; Red Sea mother-o'-pearl, Zanzibar spices, Mauritius sugar, and Indian tobacco. Nothing is manufactured in Aden except water and salt. About 56° E. long., east-north-east from Aden, is the well-known group called the Kooria Mooria Islands, which were ceded to the English government in 1854 by the Sultan of Muscat. They are famous by reason of the abundance of guano found upon them.

Aden is subject to the Government of Bombay, and a small amount of revenue is obtained from stamps, excise, opium, salt, and arms. Local taxes are raised for municipal purposes. The average annual expenditure is about £133,333, the receipts seldom reaching £83,300.

The Settlement is presided over by a political Resident, who combines the duties of military commandant and civil governor.

SOCOTRA,

an island in the Arabian Sea, 150 miles E.N.E. of Cape Guardafui, the eastern extremity of Africa, in the direct line of communication with India. Its length east and west is about 138 miles, with an extreme breadth of about 40 miles; the area is computed at 3,000 square miles. Socotra is subject to the Sultan of Keshin, a small territory on the opposite Arabian coast. After various attempts, since 1500, by the British and other European nations to obtain possession of the island, a treaty was signed in January, 1876, by which, for a small subsidy, the Sultan engaged never to cede Socotra to any foreign Power, nor to allow any settlement to be made on it without the consent of the British Government. [It was annexed by Brig.-Gen. Hogg, October 30, 1886.] The shores are mostly bold and rocky, but on the north there are several bays that afford fairly good shelter to vessels. The only fertile parts of the island are in the east and north; the leading natural production being aloes, said to be the finest in the world. The inhabitants number about 4,000, and are a mongrel race of aborigines and Bedouin Arabs: in their habits they are almost entirely nomadic.

Resident (at Aden), Brig.-Gen. A. G. F. Hogg.

CEYLON,

an island in the Indian Ocean, to the south-east of the peninsula of Hindustan, is situated between 5° 53′—9° 51′ N. lat. and 79° 42′—81° 55′ E. long.; its area is about 24,702 square miles, or one-sixth less than that of Ireland. Its greatest length is, from north to south, 266 miles; and greatest width 140 miles from east to west. In 1505 the Portuguese formed settlements on the island, but 150 years later were dispossessed by the Dutch. In 1795 the British took possession of the Dutch settlements on the island, and annexed them to the Presidency of Madras; but six years after, in 1801, Ceylon was erected into a separate Crown colony. At the end of 1885 it

contained a population of 2,825,090, of whom the most numerous are the Singhalese, descendants of colonists from the Valley of the Ganges, who first settled in the island B.C. 543. The proportion of Europeans to natives is less than two per thousand, the distribution being as follows:—Singhalese, 1,920,000; Tamils, 687,000; Moormen, 182,000; other native races, 13,000; burghers (natives of European descent), 18,000; Europeans, 5,000. The climate, although purely tropical, is healthy; there are no extremes of temperature, and throughout the low country the thermometer varies little in the course of the year, the mean temperature at Colombo being nearly 81° F. The coolest months are December and January; the hottest are March, April, and May. In June, 1886, there were 177 miles of railway open, and 40 more projected; post-offices numbered 122, and there were 1,151 miles of telegraph wires. The chief articles of export are coffee, tea, cinchona, cardamoms, cinnamon, cacao, coir-stuff, copperah, cocoanut-oil, plumbago, and tobacco. Ceylon is still a land of pearls and precious stones, and the pearl fishery alone is sometimes a really valuable source of revenue, the Government share in 1881 being £59,900. The manufacture of salt remains a government monopoly, yielding a profit of from £80,000 to £90,000 per annum. The staple production of the island is coffee, of which in 1875 (the year of maximum prosperity) nearly 1,000,000 cwts.—valued at £5,000,000—were exported. Since 1877 more than 100,000 acres have been planted with tea, and the export has risen already from 2,105 lbs. to 9,000,000 lbs. Cacao is fast becoming an important item; so, too, are india-rubber, tapioca, and vanilla. The export of cinnamon was for long a government monopoly, but all restrictions, both as to growth and export, having been removed, the amount exported in 1883 exceeded 2,335,000 lbs. About one-fifth of the island is under cultivation, and the leading areas were (1884) as follows:—Rice, 600,000 acres; coffee, nearly 300,000 acres; cocoa-nuts, 560,000 acres; cinchona, 33,000 acres; cinnamon, 35,000 acres; and various palms, 60,000 acres. The returns of live stock for the same year run thus:—Horned cattle, 963,896; horses, 3,683; goats, 82,341; sheep, 53,757. Among the more important native industries are gold, silver, ivory and tortoise-shell work, pottery, mats, fans, and wood-carving.

Public revenue, 1885	*£1,182,301
Public expenditure, 1885	1,261,121

The Government is administered by a Governor, aided by an Executive Council of five members and a Legislative Council of fifteen, including the Executive Council.

The COCOS or KEELING ISLANDS, situated in the Bay of Bengal, between 11° 50′ and 12° 45′ N. lat., 96° 50′ E. long., are included within the colony. The MALDIVE ARCHIPELAGO also, to the S.W. of Ceylon, a few degrees north of the equator, is tributary to the government of that island, to which the Sultan sends an annual embassy.

STRAITS SETTLEMENTS.

These Settlements (so called from their situation in the Straits of Malacca), comprising Singapore, Penang (known officially as Prince of Wales Island), with Province Wellesley and the Dindings, and Malacca, have an entire area of about 1,385 square miles, with a population in 1881 of 423,384. The great bulk of the population consists of Chinese and Malays in almost equal numbers, the former amounting to 174,327, and the latter to 174,326. There were in addition 40,332 natives of India, 3,499 Europeans, the remainder being composed mostly of Arabs, Javanese, Bugis, and other eastern races.

SINGAPORE is an island situated off the southern extremity of the Malay peninsula, from which it is separated by a narrow strait about three-quarters of a mile in width; its length is about 27 miles, and its breadth 14 miles; it comprises an area of 206 square miles, and a population of 155,000. It was purchased by Sir Stamford Raffles in 1819. The seat of Government, for all the settlements, is the town of Singapore, situate in lat. 1° 16′ N. and long. 103° 53′ E., with 139,208 inhabitants in 1881. It is a great commercial and shipping emporium. For its defence several batteries to carry heavy guns have been constructed, at a cost of nearly £100,000, paid by the colony, for which the Imperial Government has engaged to furnish guns. The number of ships entering in 1884, exclusive of native craft, was 2,951, with a tonnage of 2,288,118, and crews numbering 116,237. The total for the whole colony was 5,848, with a tonnage of 3,634,174; cleared 5,759, tonnage, 3,576,493. The total native craft entered at all three ports during the same year was 9,417 (tonnage, 266,594), with crews numbering 70,732. The climate is well suited for Europeans. There are excellent docks. It is a free port; no duties are levied upon anything; the opium and spirit trades are farmed out to Chinese. There are many wealthy and intelligent Chinese merchants in the Colony.

MALACCA, the largest of the Settlements, situated on the western coast of the peninsula, between Singapore and Penang, comprises an area of about 659 square miles. It is one of the oldest European settlements in the East, having been taken possession of by the Portuguese in

* These amounts of money are reckoned on the nominal value of a rupee, viz., 2s., but as the rupee varies in value from 1s. 5d. to 1s. 11d., the sterling equivalent of any payment made in rupees must fluctuate with the rate of exchange. The various amounts in Ceylon and in other parts paid in rupees may therefore be regarded as being generally one-sixth less than the amounts given in this list.

1511, and held by them till 1641, when the Dutch drove them out. In 1795 it was captured by the English, and finally became a British possession, in pursuance of the treaty with Holland, 17th March, 1824. The population in 1881 was 93,579.
Resident Councillor, Hon. D. F. A. Hervey.

PENANG, OR PRINCE OF WALES ISLAND, about 15 miles long and 9 broad, is situated off the west coast of the Malay peninsula, in lat. 5° 18′ N., long. 100° 4′ E., and was ceded to the Government of India in 1786 by the Raja of the neighbouring territory, Kědah. Area, 107 square miles; population, including Wellesley, in 1881, 190,597.

PROVINCE WELLESLEY, on the mainland, opposite Penang, is a strip of coast about 45 miles in length with an area of 270 square miles, ceded by the Raja of Kědah in 1800, with some land S. of the Krian river acquired more recently. The province is in a high state of cultivation as compared with the neighbouring territory.
Resident Councillor, Hon. C. J. Irving, C.M.G.

The exports comprise—gutta-percha, gambier pepper, india-rubber, horns, hides, canes, sugar, rice, sago, tapioca, spices, dye-stuffs, tea, coffee, tobacco, gums, tin, &c. The climate of the colony is almost uniform throughout the year, and foliage is perennial. The maximum and minimum morning temperatures during 1884 were:—Singapore, 84·4°, 79·1°; Penang, 84·9°, 79·9°. The year's rainfall amounted in Singapore to 82·51 inches, and in Penang to 87·56 inches on the plain, and to 115·95 inches on the hills. The barometrical readings show the greatest variation in the year to be no more than ·137 inch.

Public revenue in 1885	£628,530
Public expenditure in 1885	643,773
Total value of imports, 1885.....	18,636,695
Total value of exports, 1885.....	16,922,234
Imports from United Kingdom, 1885	2,524,735
Exports to United Kingdom, 1885..	4,442,166

The Government consists of a Governor, assisted by an Executive Council of 9 members, and a Legislative Council of 11 official and 7 unofficial members, nominated by the Crown, the Resident Councillor of Penang and Malacca having seats in both Councils. The law of the colony is the common and statute law of England as it was in 1826, qualified by Indian Acts until 1867, and since then by local ordinance. The Supreme Court consists of the Chief Justice and three puisne judges, and constitutes also a court of appeal from which there is yet another appeal in certain cases, viz., to the Privy Council. There is also in Singapore and Penang a Vice-Admiralty Court, and in each settlement there are ordinary magistrates' courts, together with a Court of Requests, the last named being presided over by commissioners.

SINGAPORE.

Governor, Sir Fredk. A. Weld, G.C.M.G. ..$28,500
Colonial Secretary, Hn. A. F. Dickson, C.M.G. 9,000

PENANG.

Resident Councillor, Hon. C. J. Irving, C.M.G. $8,400
First Magistrate, C. W. S. Kynnersley.... 4,800
Dep. Col. Eng., Capt. M. A. Cameron, R.E. 4,200

MALACCA.

Resident Councillor, Hon. D. F. A. Hervey $6,480
Magistrate, H. Arthur O'Brien..... 3,600

Closely connected with the Straits Settlements are the native protected States of:—

PERAK.—*Brit. Res.*, Sir Hugh Low, K.C.M.G. $12,000
Assistant do., C. V. Creagh 5,400
SELANGOR.—*Brit. Res.*, Frank A. Swettenham, C.M.G. 6,480
SUNGAI UJONG.—*Brit. Res.*, W. B. F. Paul 5,208

These three states extend from the border of Province Wellesley to that of Malacca, and are governed by their native rulers with the assistance of the British Resident in each case, who is directly subject to the governor of the Straits Settlements. Perak has an area of 7,949 square miles, and a population of 118,000; the chief industry is mining, but tapioca, pepper, rice, sugar, coffee, and tea have been cultivated with success. Selangor, with an area of 3,000 square miles, and a population of 46,568, lies immediately south of Perak, and, like that state, depends largely for its prosperity upon its tin-mining. The revenue in 1883 had increased to £75,110, and a railway, 22 miles long, was opened in July, 1886. Sungai Ujong (660 sq. m.) is to the south of Selangor and north-west of Malacca. The population is about 14,000, and the revenue for 1884 was £20,196.

HONG KONG ("FRAGRANT STREAMS"),

an island situate off the south-eastern coast of China, at the mouth of the Canton River, in 22° 10′—22° 17′ N. lat. and 114° 6′—114° 18′ E. long. It is about eleven miles long and from two to five miles wide, and comprises, with Kowloon, an area of 32 square miles, and a population in 1886 of 180,000, of whom 8,465 were whites, 1,632 Indians, and 168,958 Chinese (including about 45,000 British-born Chinese). It is separated from the mainland of China by a narrow strait (Ly-ec-moon Pass). The opposite peninsula, Kowloon, was ceded to Great Britain in October, 1860, and now forms part of the colony. The colony—which is described as exceedingly beautiful, possessing one of the finest harbours in the world, surrounded by picturesque hills rising between 1,000 and 4,000 feet high—was first taken possession of by Great Britain in January, 1841, and was formally ceded by the treaty of Nankin in 1842. It is a military and naval station for the protection of our commerce, and it is the centre of trade in many kinds of produce—chiefly opium, sugar, flour, oil, amber, cotton, ivory, betel, sandal-wood, rice, tea, woollens, silks, salt, &c. It is a free port, and possesses excellent docks, capable of holding the largest vessels, and is fortified. It is calculated that, exclusive of the trade that merely passes through the harbour without breaking bulk, the actual trade of the colony amounts to over £20,000,000 sterling per annum. "In the year 1884 shipping to the extent of about 5,167,231 tons entered the port: this tonnage is greater than that which entered the port of London in the year that Hong Kong was acquired." During the winter months, that is from October to Feb-

ruary, the climate is bracing and invigorating, and the thermometer ranges from a minimum of 37° in January to a maximum of 85° in October. By the end of May the south-west monsoon has set in, and brings with it heavy rains, the average annual fall being 85 in., of which not less than 70 in. are received between May and September. The capital city is Victoria, with a population of more than 40,000: it is in the north of the island, on the south side of a splendid harbour with an area of ten square miles, and enjoys considerable trade.

Public revenue in 1886	*$1,274,973
Public expenditure in 1886.....	1,152,382
Imports from United Kingdom, 1885..	£4,062,182
Exports to United Kingdom, 1885	968,414

The colony is a Crown colony, and its Government is administered by a Governor, aided by an Executive Council of seven members, together with a Legislative Council of twelve members. Much encouragement is given by the government to education in the colony, and the Chinese are fully alive to the advantages arising therefrom. In 1884 there were 90 schools subject to government supervision, attended by 5,885 pupils—returns which show an increase of 51 schools and 3,222 scholars during the preceding decade. There were also 100 private schools attended by 2,000 pupils. The public schools may be denominational in themselves, but the government inspection recognizes secular subjects only. The total outlay on education by government in 1884 was 33,650 dollars (£7,000) for 5,882 children, giving an average capitation of 5·71 dollars, exclusive of buildings, repairs, and the inspectoral staff.

CYPRUS,

an island of the Levant, situated at the eastern end of the Mediterranean Sea, between N. lat. 34° 30′ and 35° 41′, E. long. 32° 15′ and 34° 35′; about 45 miles distant from the nearest point of Asia Minor, and 60 miles from its N.E. extremity to the port of Latakia on the Syrian coast, with which it is connected by a submarine telegraph cable: the distance to Port Said, at the entrance of the Suez Canal, is 238 miles. The larger part of the island is an irregular parallelogram, 100 miles in length, with an average breadth of 50 miles, extended N.E. by a narrow hornlike projection 40 miles long. The area is calculated to be about 3,584 square miles, with a population in 1881 of 186,173 persons, of whom about one-fourth are Mohammedans, the remainder mostly members of the Orthodox Greek Church. Roman Catholics, the Church of England, Presbyterians, Wesleyans, and Maronites are also represented; and the whole population is spread over the six districts of the island as follows:—Nicosia, 56,312; Famagusta, 38,207; Larnaka, 20,766; Limassol, 29,248; Papho, 28,424; Kyrenia, 13,216. In ancient times Cyprus is said to have had not less than 3,000,000 inhabitants; but during the reigns of Cæsar Augustus and Vespasian the island suffered very greatly from earthquakes, and from that time it has gradually declined in prosperity. The principal productions are cotton of fine quality, rough strong wine, the best of which is produced near Limassol, grain of various kinds, carobs (or locust-beans), and several kinds of fruits. The fertility of the soil has for centuries been proverbial; and in the rich plain of the Messoria a good year will give an average yield of 40 bushels of barley or 25 bushels of wheat, whilst the best wheats and barleys (those of Lefca) weigh 62 lbs. and 47 lbs. to the bushel respectively. In 1884 the wine exported amounted to 1,500,000 gallons, and more than two-thirds of this quantity went to Egypt and Turkey. Further returns of goods exported from Cyprus are for the same year:—Carobs, 30,000 tons; cotton, 1,400,000 lbs. Among the best of the fruits produced may be mentioned grapes, pomegranates, figs, oranges, lemons, apricots, melons, cherries, and almonds. The climate varies in different localities. In the plains the summer heat is very great, but is tempered by cool sea-breezes; the hottest months are July, August, and September. The winter is short and cold; snow, however, being of rare occurrence, except on the highest peaks. On the hottest day of 1884, the maximum reading of the thermometer varied from 95° to 108° in different parts of the island; on the coldest day of the same year, the corresponding minimum readings were 21° and 40°. The rainfall is in general extremely low, ranging in a good year from 16 to 21 inches during the winter months. Fevers are prevalent during the warm months after a rainy season, but are seldom fatal; the cause of unhealthiness is in many places quite local, and may be easily removed. Cyprus was in olden time famous for its mineral wealth, its copper being superior to any other: the mines were for many years abandoned, but are again being worked by an English firm. Its ancient silver mines, too, were famous, and their sites are distinctly marked by mounds of scoriæ; and the first-known mention of asbestos is in connection with this island. Sandstone, marble, granite, limestone, lead, terra umbra, and salt (a government monopoly) are also worked at the present day. Large quantities of salt are obtained from salt lakes near Larnaka and Limassol. The chief exports are cotton, wine, salt, locust-beans, wheat, barley, wool, silk, spirits, sponges, and raisins. It is estimated that only one-third of the cultivable land is brought under agriculture in any one year. Corn and cotton mills, quarries, tanneries, and distilleries give employment to a considerable portion of the inhabitants; in 1884 there were at work 12 steam-mills, 280 water-mills, 60 quarries and pits. In the same period the total number of vessels entered was 1,314 (tonnage, 187,989), while those cleared amounted to 1,314 (tonnage, 186,826). There are moreover on the island a number of schools, and the government grant in 1884, exclusive of building grants, was £3,000.

* Reckoning the dollar at the local rate of 4s. 2d., the Revenue for 1886 amounts to £265,619, and the expenditure to £240,080.

Cyprus still forms part of the Ottoman Empire, but by virtue of a treaty made between England and the Porte, dated 4th June, 1878, the Government is administered by England for so long a time as Batoum and Kars may be kept by Russia. In many respects this occupation will prove useful to the surrounding countries. The inhabitants have been granted a political franchise, every man paying direct taxes having a vote. The island is administered, under the Colonial Office, by a High Commissioner, assisted by a legislative council composed of eighteen members. The island is divided into three electoral districts, each returning three Christian and one Mohammedan members. The house of Legislature is made up by the addition of six official members. In 1883 the Courts of Law were reorganized: the island was divided for administrative and legal purposes into the six districts mentioned above, in each of which the government is represented by a commissioner; and six district courts were formed, each presided over by an English barrister, and having one Christian and one Mohammedan judge.

The subsidy paid to the Sublime Porte yearly is £87,868 for revenue, £5,000 in compensation for State lands, and 4,166,220 okes of salt (an oke=2·83 lbs.). This tribute is not actually paid to the Sultan, but is retained as part payment of the loss sustained by England and France in paying the deficiency on the Guaranteed Turkish Loan of 1855, of £5,000,000. That loan requires £160,000 annually for interest, without providing for any sinking fund; of this amount £70,000 is obtained from Egypt, and the remaining £90,000 has to be paid by England and France, for which purpose the tribute from Cyprus comes in. The improved state of trade since the time of the British occupation can be seen by the following:—

	Imports.	*Exports.*
1878	£177,651	£157,328
1879	208,407	222,218
1880	272,663	209,905
1881	296,868	266,610
1882	333,512	276,129
1883-84	344,183	290,210
1884-85	304,375	287,521

The amount of trade between the United Kingdom and the Island has risen from £79,211 (*Imp. and Exp.*) in 1879 to £160,182 in 1884–85.

The capital is Nikosia (Lefkosia), near the centre of the island, with a population of 11,536; the other towns are Larnaka, population 7,833, Limassol, 6,006, Famagusta, Kyrenia, and Ktima.

Public revenue, 1884–85	£172,072

BRITISH NORTH BORNEO.

British North Borneo includes the northern part of that island, from Sipitong on the west coast, to Siboko River on the east coast, including all the islands within three leagues of the coast, embracing an area (including recent cessions) of 31,000 square miles, with an estimated population of 150,000. This country was ceded to a company on December 29th, 1877, and January 28th, 1878, by the Sultans of Brunei and Sulu, together with full sovereign rights, the whole being subsequently transferred to the British North Borneo Company, to whom a royal charter was granted 1st November, 1881. The territory ceded has a coast line of some 600 miles, with many excellent harbours. Among the wild animals are the rhinoceros, the elephant, the crocodile, the orang-outang and other monkeys, the buffalo, deer, and pig. Soil upon which rice, sago, sugar-cane, coffee, cocoa, gambier pepper, tea, tobacco, hemp, cinchona, and other tropical products may be cultivated abounds, and already many thousand acres of land have been taken up by agricultural companies around Sandakan Bay. There is a promising pearl-fishery off the coast; and gold and traces of tin have been found in some of the rivers. Diamonds, iron, copper, antimony, quicksilver, and cinnabar are also obtained in the colony. The inhabitants are Mohammedan Malays, with an infusion of Chinese and Arab blood on the coast, and various aboriginal tribes resembling Dyaks in the interior. Slavery exists, but in a mild type, and is gradually being eradicated by the Company's government. The country produces tobacco, sago, gutta-percha, india-rubber, bees-wax, birds'-nests, camphor, gums, timber, coal, and gold. The revenue is derived from an opium and other farms, sales of land, royalties on exports, and duties. The principal places are Gaya on the west coast, Kudat in the north, and Elopura, or Sandakan Bay, on the east, where a newspaper, the 'British North Borneo Herald,' is published.

The Government is administered by a Governor, assisted by a Council and by residents of districts: the mode of government adopted is similar to that of a British colony, with modifications to meet native customs.

Revenue, 1885 (estim.), $110,443; 1886 (estim.)..... $129,000
Expenditure, 1885 (estim.), $202,075; 1886 (estim.) 213,300

LABUAN,

an island of the Malayan Archipelago, situated about six miles off the north-west coast of Borneo, in 5° 16′ N. lat. and 115° 15′ E. long., comprising an area of 31 square miles, and possessing a population of nearly 6,000 inhabitants, made up of Kandyans, Malays, Borneans, Klings, Bengalese, and (in 1884) 19 Europeans. It was ceded to Great Britain by the Sultan of Borneo in 1847, being at that time uninhabited; and a British settlement was established in 1848, the first Governor being the late Sir James Brooke. The island has a fine harbour, and possesses

extensive coal-measures, but the mines have not yet been developed, although the coal is said to be superior to that of Australia.

The trade of Labuan consists in the exchange of cloth, rice, crockery, ironware, &c., for the produce of Borneo and the neighbouring islands (gutta-percha, india-rubber, birds' nests, canes, bêche-de-mer, wax, &c.), and in the manufacture of sago flour from raw sago imported from the coast of Borneo. The sago flour and jungle produce are exported chiefly to Singapore for the European and Chinese markets. There are only about 1,000 acres under crop, but cattle are reared with considerable success, and it is estimated that in 1884 the colony possessed 2,500 cattle, 400 goats, 140 buffaloes, 20 ponies, and 10 sheep. Victoria Harbour, in the south-east, is the principal inlet, and affords good anchorage.

Imports, 1884	£84,869
Exports, 1884	85,741
Revenue, 1885	4,491
Expenditure, 1885	4,589

The Government is administered by a Governor, who is assisted by a nominated Council.

Governor, (vacant) £800
,, *Acting*, Peter Leys (receives £300 and allowances as Her Majesty's Consul-General at Brunei).
Private Sec., (vacant) 100
Colonial Sec. and Auditor, (vacant) 500

SARAWAK.

Raja, H.H. Charles Johnson Brooke, *born* 3 June, 1829; *suc.* 1868; *m.* 1869.
Heir, Charles Vyner Brooke, *b.* 26 Sept., 1874.

The Sarawak territory lies on the north-west coast of Borneo, with a seaboard of 380 miles, an area of about 30,000 square miles, and a population of about 240,000, composed of various races. The Government of this district was obtained in 1842 from the Sultan of Borneo by the late Sir James Brooke, who became well known as Raja Brooke of Sarawak, and was uncle of the present Raja. Other concessions have been made since 1842. The country produces sago, gutta-percha, india-rubber, beeswax, birds' nests, gold, silver, diamonds, antimony, quicksilver, tobacco, rice, rattans, opium, coal, and gambier pepper.

Revenue, 1884, $276,269. Expenditure..$289,292
Imports, 1884, total 1,721,221
Exports, 1884, total 1,614,439

Consul, Peter Leys (Brunei) £300

BORNEO.

Sultan, His Highness Hasim Jalilal Alam Akamaldin, of Borneo, *suc.* May, 1885.

Next to Australia and New Guinea, this is supposed to be the largest island in the world. It was discovered by the Portuguese in 1521, and is situated in the Eastern Archipelago, extending from lat. 7° 4′ N. to 4° 10′ S., and from long. 108° 50′ to 119° 20′ E. It is about 850 miles in length and 600 in breadth, and contains an area of 280,000 square miles, divided by the equatorial line into two nearly equal portions. The population is probably about 1,846,000, consisting chiefly of Dyaks, Malays, Kyans, Papus or Negritos, Chinese, and Bugis (the aboriginal Celebes). Rather more than two-thirds of the island is included within the Dutch possessions in the East Indies, the remainder belonging to the Sultan of Brunei, the Rajah of Sarawak, and the British North Borneo Company. The British Colony of Labuan, which formerly belonged to Borneo, is situate in close proximity to the N.W. coast. The mineral kingdom includes gold, silver, diamonds, antimony, quicksilver, iron, tin, and coal, the latter abundant. The principal imports are opium, tea, cottons, cloths, hardware, brass, iron, &c.; exports, sago, beeswax, edible birds' nests, camphor, hides, rattans, tortoiseshell, trepang, cinnabar, antimony, coal, diamonds, and gold. At present there is but little direct trading with the U. K., the chief business being done with the colonies of Singapore, Hong Kong, and Labuan.

Imports from United Kingdom, 1884 ..... £235
Exports to United Kingdom, Official Report *nil.*

Consul-General at Brunei, Peter Leys £300

PORT HAMILTON.

Port Hamilton, a British naval station, occupied in 1884, is formed of three islands lying about 38 miles from the mainland of Corea, and commands the strait leading from the Yellow Sea into the Sea of Japan. Sodo, the largest of these islands, is about 3½ miles long, 1 mile broad, and 650 feet in height. Sunhodo is only half that size, but rises 783 feet. The third, or Observatory island, is small. The harbour enclosed by these islands is 2 miles long, more than a mile broad, and from 9 to 12 fathoms in depth. It is well sheltered and easily defended. The population numbers 2,000 souls, wholly devoted to the cultivation of millet.

COREA.

Corea is an Asiatic kingdom consisting mainly of a peninsula lying to the north-east of China; it is confined between 33° and 43° N. lat. and 124° and 130° E. long., and measures 600 m. from north to south, and 135 m. from east to west. The Chinese, to whom the territory is nominally tributary, call it Kas-li; the population is vaguely reckoned at something more than 9,000,000, and the area at 91,430 square miles. The capital is Kingki-tao, or Seul. In the north the only grain grown is barley; but the southern part is of great fertility, and produces wheat, cotton, rice, millet, and hemp. Rice of an inferior quality, pea-cotton, and tobacco are also cultivated; and the medicinal ginseng root is an important commercial item. Gold, lead, iron, and coal are worked in various parts of the mountain cordillera that forms the physical backbone of the country. Stags, foxes, wolves, and sables abound; and the royal tiger and panther are so numerous that their skins form a leading article of foreign commerce. The manufactures of Corea include hemp, cotton and grass tissues, silks of moderate fineness, pottery and porcelain, arms (sabres, poignards, and matchlocks), and paper. The country is governed by a king, whose governmental constitution is similar to that of China; and the prevailing religion is Buddhism. Confucius also has many followers, though Christianity, which was originally introduced by way of Japan, is now extinct. Fusan, Gen-san, and Nin-sen are the ports open to foreign commerce, and England occupies Port Hamilton, just off the south coast.

British Consul-General, Wm. George Aston,
Vice-Consul, William Richard Carles.

THE British possessions in North America include the whole of the northern part of that continent, excepting Alaska, and the small islands of St. Pierre and Miquelon, in the Gulf of St. Lawrence, and extend from the United States boundary to the Arctic Ocean. From a physical point of view the whole region may be divided into an eastern and a western division, the Red River Valley, in long. 97°, forming the separating line. The eastern division comprises three areas, presenting radically distinct aspects:—(1) The south-eastern area, bounded by the line of the Gulf and River St. Lawrence, from Belle Isle to Quebec, thence by a line running directly south to Lake Champlain, which is generally hilly, and sometimes mountainous, with many fine stretches of agricultural and pastoral lands. (2) The southern and western area, presenting, in the main, a broad, level, and slightly undulating expanse of generally fertile country, with occasional step-like ridges or rocky escarpments. The main hydrographical feature is the chain of lakes, with an area of 150,000 square miles, contributing to the great river system of the St. Lawrence. (3) The northern area, embracing nearly two-thirds of the Dominion, with an average elevation of 1,000 feet above the level of the sea, pre-eminently a region of waterways, and including the great Laurentian mountain range. In this area are found the other great river systems, the Nelson and the Mackenzie. The western division referred to is divided into two divisions, equally distinct in character. The first stretches from the Red River Valley to the Rocky Mountains. Here, between lat. 49° and 54°, is the great Prairie Region, rising to the west in three terrace-like elevations, the lowest of which is 700 feet, and the third about 3,000 feet above the level of the sea. North of the 54th parallel the country passes again into forest. The second division, from the western edge of the Prairie to the Pacific coast, is a distance of 400 miles, and contains the Rocky Mountains and the Gold and Cascade Ranges, whose summits are from 4,000 to 9,000 feet high, the country being on the whole densely wooded. The climate in the eastern and central portions of the Dominion presents greater extremes of cold and heat than in corresponding latitudes in Europe. Spring, summer, and autumn are of about seven to eight months' duration, and the winter four to five months. In the south-western portion of the Prairie Region and the southern portions of the Pacific slope the climate is milder than in other parts of the country. The soil is generally fertile, and all the products of the temperate zone are cultivated.

The Dominion of Canada.

THE Dominion of Canada includes the various Provinces of North America formerly known as Upper and Lower Canada (now Ontario and Quebec respectively), New Brunswick, Nova Scotia, Prince Edward Island, British Columbia, and the extensive regions long under the quasi-government of the Hudson Bay Company, now styled Manitoba and the North-West Territories: in fact, the whole of British North America except Newfoundland. This territory, about as large as Europe, stretches from the Atlantic to the Pacific Ocean, and is estimated to contain a total area of 3,406,542 square miles. The total population of the Dominion approximates to 5,000,000, a number which is rapidly increasing, and, notwithstanding its diversity of origin, is fast being welded into one harmonious and homogeneous whole. The descendants of the French Colonists reside chiefly in the Province of Quebec, where out of a total population of 1,400,000 above 1,000,000 are Roman Catholics. A Religious Census of Canada was taken in 1881, and the numbers were:—Roman Catholics 1,791,982, Methodists 1,042,981, Presbyterians 676,163, and Church of England 574,810. Canada possesses an Active Militia numbering 37,000 men (including infantry, cavalry, and artillery), and a reserve estimated at 655,000.

No possession of Great Britain has made greater strides during the last twenty years than the Dominion of Canada, whether in trade, wealth, population, or aught that tends to the material prosperity of a new country. In 1871 there were in Canada 20 cities and towns of 5,000 inhabitants and upwards, having a total population of 430,043; whereas in 1881 the number was 37, and their total population 660,040. The greatest strides during that decade were made at Winnipeg, in Manitoba, where the population increased from 241 (1871) to 7,985 in 1881, and to 25,000 in 1885. The general rate of increase throughout the Dominion in the last decade was 17·3 per cent.

Canada is said to have been discovered by Sebastian Cabot in 1497. The French took possession of the country in 1525, and founded the first settlement (Quebec) in 1608. In 1759 Quebec succumbed to the British forces under General Wolfe, and in 1763 the whole

territory of Canada became a possession of Great Britain by the Treaty of Paris of that year. Nova Scotia was ceded in 1714 by the Treaty of Utrecht. British Columbia was formed into a Crown colony in 1858, having previously been a part of the Hudson Bay Territory. By the British North America Act, passed in 1867, the provinces of Canada (Ontario and Quebec), Nova Scotia, and New Brunswick were united under the title of DOMINION OF CANADA, and provision was made in the Act for the admission at any subsequent period of the other provinces and territories of British North America. In 1870 the province of Manitoba was formed, and, with the remainder of the Hudson Bay Territory, now called the North-West Territory, admitted into the Dominion. British Columbia followed in 1871, and Prince Edward Island in 1873, Newfoundland alone retaining its independence.

POLITICAL CAPITAL and Seat of Government, Ottawa. Pop. (1886) 30,344.

CIVIL ESTABLISHMENT.

Governor-General, Most Hon. the Marquis of Lansdowne, G.C.M.G. (with residence)	£10,000
Military Secretary, Capt. Henry Streatfeild, Grenadier Guards	750
Aide-de-Camp, Lieut. Hon. Henry James Anson, Highland Light Infantry	205
,, ,, Capt. Hon. Alfred John George Byng, 7th Hussars	205
Commanding the Forces (*Halifax*), Lieut.-Gen. Lord Alexander George Russell, C.B.	1,384
Commanding the Militia, Maj.-Gen. Sir Frederick Dobson Middleton, K.C.M.G., C.B.	820

The Executive Government and authority is vested in the Queen, and exercised in her name by the Governor-General, aided by a Privy Council. The legislative power is a Parliament, consisting of an Upper House, styled the Senate, and a House of Commons. The Senate must not number more than 78 until Newfoundland be admitted to the confederacy, when it may reach 82. There are at present (1886) 76 senators, distributed between the various provinces thus:—24 for *Ontario*, 22 for *Quebec*, 10 for *Nova Scotia*, 10 for *New Brunswick*, and 4 for *Prince Edward Island*; 3 for *British Columbia*, and 3 for *Manitoba*. The members of the Senate are appointed for life by the Crown on the nomination of the ministry for the time being; each nominee must be thirty years old, a resident in the province for which he is appointed, a natural-born or naturalized subject of the Queen, and the owner of a property qualification amounting to $4,000. The House of Commons is chosen every five years at longest, and consists at present of 207 members; 88 being elected for *Ontario*, 65 for *Quebec*, 21 for *Nova Scotia*, 16 for *New Brunswick*, 5 for *Manitoba*, 6 for *British Columbia*, and 6 for *Prince Edward Island*. The House of Commons is also composed of natural-born or naturalized subjects of the Queen, no property qualification is necessary, and its members are elected upon a very wide suffrage. For electoral purposes each province is divided into districts, each of which returns a member on a majority of votes taken by ballot. The members of the House themselves elect their Speaker, and twenty, including the Speaker, form a quorum. Each province has also a separate Legislature and Administration, with a Lieutenant-Governor, appointed by the Governor-General, at the head of the Executive. Justice is administered as in England by judges, police magistrates, and justices of the peace, of whom the first named are appointed by the Governor-General, for life, from among the foremost men at the bar in the several provinces. The highest court is the Supreme Court of Canada, composed of a Chief Justice and five puisne judges, and holding three sessions in the year at Ottawa. The only other Dominion Court, viz., the Exchequer Court of Canada, is presided over by the same judges, but its sittings may be held anywhere in Canada. The Provincial Courts include the Court of Chancery, Court of Queen's Bench, Court of Error and Appeal, Superior Courts, County Courts, General Sessions, and Division Courts. The duties of coroners are generally analogous to those in force in England, as are also methods of civil and criminal procedure; and trial by jury prevails everywhere throughout the Dominion.

The Queen's Privy Council.

Premier, Right Hon. Sir John Alexander Macdonald, G.C.B., D.C.L.	£1,643
Finance Min., Hon. A. W. McLelan	1,440

Puisne Judges, Hons. S. H. Strong, T. Fournier, W. A. Henry, Henri E. Taschereau, and J. W. Gwynne	each £1,440

ONTARIO, AND QUEBEC.

The area of these provinces is 337,955 (Ontario, 144,600, Quebec, 193,355) square miles (excluding the portions of the great lakes within the boundary), comprising all the basin of the St. Lawrence on the north side of that river and the great lakes, and on the south side N. of the parallel of 45°, and extends from 42° to 53° N. lat. and 57° to 90° W. long. The Province of Ontario,

formerly called Upper Canada, and the Province of Quebec, formerly Lower Canada, are separated from each other by the River Ottawa. Quebec also comprises the Isle of Anticosti and the Magdalen Islands, in the Gulf of St. Lawrence. The inhabitants of Quebec are mostly of French descent, preserving their original language, religion, and customs; those of Ontario are chiefly British.

The timber trade, the original occupation of the people, is still of great commercial value, although fast yielding to those of agriculture, dairy-farming, and cattle-raising. The fisheries are deserving of notice as an extensive branch of industry. The mineral resources of the country are scarcely yet developed; a great part, however, especially the shores of Lake Superior, is valuable for its mineral products, such as iron, zinc, lead, copper (a large supply of this mineral being also found on the banks of Lake Huron), silver, gold, cobalt, &c.; phosphate of lime and asbestos are abundant, and sandstone, limestone, slate, and marbles of nearly every imaginable colour are also found. The mineral oil, petroleum, is produced in large quantities. During the last thirty years agriculture has made vast progress, mostly in Ontario. The land is generally very fertile, and produces all the varieties of cereals, fruits, roots, &c. Cattle-raising and dairy-farming are also very important industries, and at present large exports are principally from these provinces—Montreal, Toronto, and Quebec being the great centres of distribution. These provinces contain the chief manufacturing centres of the Dominion, which are becoming very important, employing considerable capital and labour. Montreal commands a vast overland system of communication, by canal and railway, both with Canada and the Eastern and Western parts of the United States. The educational system in force in these provinces, and in fact throughout the Dominion, provides practically free instruction, and gives successful pupils the chance of acquiring the highest education at a moderate cost.

In Ontario, the returns collected by the Ontario Bureau of Industries show that the total area occupied by farms in 1883 was 10,587,688 acres, of which 7,536,880 acres were under crop. The total value of this land itself was $654,793,025, and that of the buildings, implements, and live stock upon it $306,435,570. Besides the usual farm crops there were 6,157 acres of flax, 213,846 acres of orchards and gardens, 2,098 acres of vineyards, and 2,051 acres of hops. The live stock included 10,559 thoroughbred cattle and 1,562,683 grade and native cattle. There were 471 cheese factories, and returns from 440 of them showed that 53,513,032 lbs. of cheese were made, valued at $5,589,339. The average prices per bushel of farm produce in the province during the first half of 1884 were as follows:—Fall wheat, 4*s.* 1*d.*; spring wheat, 4*s.* 2*d.*; barley, 2*s.* 6*d.*; rye, 2*s.* 6*d.*; oats, 1*s.* 9*d.*; Indian corn, 2*s.* 1*d.*; beans, 6*s.* 3*d.*; peas, 3*s.* The following figures relate to the Ontario crops in 1884:—Fall wheat, 864,551 acres, 18,479,207 bushels; spring wheat, 722,410 acres, 13,251,137 bushels; barley, 701,435 acres, 17,860,777 bushels; oats, 1,485,620 acres, 53,195,805 bushels; rye, 104,141 acres, 1,621,667 bushels; peas, 570,628 acres, 13,253,986 bushels; Indian corn, 174,834 acres; buckwheat, 65,921 acres; beans, 24,877 acres, 552,953 bushels; hay, 2,193,369 acres, 3,044,912 tons; potatoes, 168,862 acres; mangolds, 18,314 acres; carrots, 10,980 acres; turnips, 104,108 acres; pasture, 2,794,986 acres. The live stock returns for the same year were as follows:—Horses, 535,953; cattle, 1,925,670; sheep, 1,890,733; pigs, 916,158; poultry, 6,237,606. The total wool clip amounted to 6,518,918 lbs., the average weight of the fleeces being 5·55 lbs. for coarse wool and 5·12 lbs. for fine wool. The quantity of butter made in the province in 1882 was 306,567 cwt., and in 1883 only 293,252 cwt. Fruit growing is here carried on on a very extensive scale; there are vineyards and peach orchards of 50 or 60 acres in extent, and innumerable apple orchards. No less than 84 varieties of apples are cultivated, and while in 1869 the value of the export was less than £5,000, in 1881 it reached £100,000. The Ontario Agricultural College at Guelph is the only place of its kind in Canada, and supplies a general education together with a technical training in agriculture. The public cost of the College was £5,160 in 1883 and £4,506 in 1884; and the students meet part of their expenses by the labour they perform on the Experimental Farm attached to the College, the annual balance of cost for board, washing, and tuition (payable by the students' guardians) being from £10 to £15. Experimental farms are being established under the auspices of the Dominion Government in the various provinces. Free grants of land are obtainable in this province, and improved farms can also be bought at advantageous rates.

In the province of Quebec the lumber industry is still by far the most important trade, the timber exports of 1885 being of no less value than 8,798,094 dollars; the province has however been too much denuded of wood, and the provincial government has therefore found it necessary to take active steps for the preservation and replanting of forests, and for the planting of trees along highways and on farms. Despite the reckless felling that has taken place, there is yet (1883) timber enough to yield a revenue of £171,375 from the Crown lands alone. The agricultural statistics for this province are supplied by the 1881 census returns as follow:—Field products in bushels: spring wheat, 1,999,815 (nearly nine bushels per acre); winter wheat, 19,819; barley, 1,751,539; oats, 19,990,205; rye, 430,242; peas and beans, 4,170,456; buckwheat, 2,041,670; Indian corn, 888,619; potatoes, 14,873,287; turnips, 1,572,476; other roots, 2,050,904; grass and clover seed, 119,306. The hay produce of 1,495,494 acres was 1,614,906 tons, or an average of 1·08 tons per acre. The returns of live stock were:—Horses, 225,006; colts and fillies, 48,846; working oxen, 49,237; milch cows, 490,977; other horned cattle, 490,119; sheep, 889,833; swine, 329,199; and of animals killed or sold: cattle, 160,207; sheep, 436,336; swine, 333,159. There were also 2,730,546 lbs. of wool produced. Hemp, flax, and tobacco are grown, and yield abundantly; some parts are favourable for apples and plums, and Indian corn; tomatoes, grapes, and other delicate fruits are ripened in the open air. Improved farms may often be obtained in the Eastern Townships, largely occupied by settlers from Great Britain, at from £4 to £6 per acre, including dwelling-house, outbuildings, and fencing; while unimproved lands may be bought from the Government at from 20 to 60 cents per acre, and the purchase-money paid in five in-

stalments. More than 84,000 acres on eight of the great colonization roads are set apart for free grants in lots of 100 acres each. In some parts of the province, again, farm lots are offered at 30 cents per acre.

ONTARIO. Population, 1,973,228. The Government is vested in a Lieut.-Governor and Legislative Assembly composed of 88 members elected for four years (no property qualification being necessary), representing 88 electoral districts into which the province is divided, but which differ from those sending members to the Dominion Legislature. The Executive Council consists of six members, acting as the ministry of the province; the legislature meets every year at Toronto. The principal cities are Toronto, the capital of the province, with great shipping interests on the Lakes, and the chief centre of industrial and commercial activity (population, 125,000); Hamilton, the Birmingham of Canada (35,965); Ottawa, the Federal Capital, with a large lumber trade and woodenware manufactories (30,344); London (19,746), Kingston (14,093), Guelph (9,890), St. Catherine's (9,631), Brantford (9,616), Belleville (9,516), St. Thomas (8,367), and Stratford (8,239).

Emigration Agent in England, P. Byrne, Nottingham Buildings, 19, Brunswick St., Liverpool.

QUEBEC. Population, 1,359,027. The Government of this province is vested in a Lt.-Governor and a Legislative Council, consisting of 24 members appointed for life, and a Legislative Assembly of 65 members elected for five years to represent the same number of electoral districts in this province. The principal cities are Quebec, with a large export timber trade (population, 65,000), the capital of the province, and the great seaport town of Canada; and Montreal (population in 1881, 173,000), the commercial metropolis, and the principal centre of the grain export trade north of New York, situate at the confluence of the Ottawa and St. Lawrence rivers. Other important towns are Three Rivers (8,670), Levis (7,597), Hull (6,890), Sherbrooke (7,227). Ocean-going steamers ascend the St. Lawrence as far as Montreal. The tonnage of inland vessels that arrived in port in 1885 was 724,975 tons; that of sea-going vessels has increased from 391,180 tons in 1876 to 683,854 tons in 1885.

Lieut.-Gov., Hon. L. R. Masson £2,000
A.-de-C., Captain Sheppard, C.A.

NOVA SCOTIA, the most easterly province of the Dominion, is a peninsula between 43° 30′—46° N. lat. and 61°—66° 15′ W. long., and is connected with New Brunswick by a low fertile isthmus about sixteen miles wide. It comprises an area (with Cape Breton Island) of 21,731 square miles, one-fifth part of which consists of lakes, rivers, and inlets of the sea; of the whole, about 5,000,000 acres are fit for tillage, that is, nearly half the entire area, and the soil in the western half of the province, particularly in the Annapolis Valley and around the Basin of Minas, is unsurpassed for fertility, owing to the rich marine deposits left on the shore-land by the tides of the Bay of Fundy. According to the returns included in the 1881 census, the occupied land amounted to 5,396,382 acres, of which 1,880,644 acres were improved—1,859,020 acres being under crop and pasture, and 21,624 acres devoted to orchards and gardens. The live stock returns at the same date were as follows:—Horses, 46,044; colts, 11,123; working oxen, 33,275; milch cows, 137,639; other horned cattle, 154,689; sheep, 337,801; swine, 47,256. The wool sold in the year amounted to 1,142,440 lbs. The following figures represent, in bushels per acre, the average yield of crops in the western counties:—Wheat, 18; barley, 35; oats, 34; rye, 21; maize, 42; buckwheat, 33; beans, 22; turnips, 420; potatoes, 250; mangolds, 500. The average yield of hay was two tons per acre; but as much as 4 tons (1 Canadian ton = 2,000 lbs.) of Timothy grass and clover were obtained in some parts, followed by a fairly good aftermath. Fruit cultivation too is making wonderful progress; apples, which were imported into the province thirty years ago, now send to Europe a shipment of nearly 500,000 barrels of three bushels each, worth in the English market about 22s. per barrel. In 1885 the total agricultural export of the province, which is expected to largely develop, inclusive of cattle sent to Europe, potatoes to the United States, and apples shipped at Annapolis, was valued at £1,004,540. Population of the whole province (1881), 440,572. Halifax, the capital of the province, has a magnificent harbour covering 10 square miles. It is the principal winter port of Canada, and is the *entrepôt* of a large trade with the West Indies and South America. It is the principal naval station of North America, and the British Government have an extensive dockyard there. The coal deposits are extensive and of good

quality, iron-ores are plentiful, and gold mines have also been worked with profit. The principal fisheries are upon the eastern coast. In 1884 the total value of their produce was 8,736,264 dollars, a considerable increase on previous years, and specially noticeable in cod, mackerel, herring, salmon, and lobsters. The manufacturing interest is also a growing one. In order to give an impetus to farming, efforts are being used to induce the Government to establish an agricultural college and experimental farm. Improved farms of 100 to 150 acres, with house and buildings, may be obtained at from £100 to £500, whilst the government offer uncleared Crown lands at £8 16s. per 100 acres, and 1s. 10d. per acre for any additional quantity. Hunting, shooting, and fishing abound; among wild animals there are bears, foxes, moose, deer, otter, mink, sable, musquash, hares, racoons, and squirrels, and among the feathered game are the woodcock, plover, snipe, partridges, ducks, geese, curlew. CAPE BRETON ISLAND, formerly a distinct colony, now incorporated with Nova Scotia, contains an area of 3,125 square miles, with a population of 34,262 inhabitants. The chief town is Sydney, on the eastern coast, having valuable collieries in the neighbourhood.

Nova Scotia has a Provincial Government, administered by a Lieutenant-Governor, aided by an Executive Council, a Legislative Council of seventeen members, and a Legislative Assembly of thirty-seven members.

CAPITAL, Halifax. Population, 40,000. Principal towns, Dartmouth, Truro, Windsor, Sydney, and Yarmouth.

Lieut.-Governor, M. H. Richey, Q.C.	£1,800
Private Sec., Lieut.-Col. H. W. Clerke	250

Judge in Equity, Hon. Alexander James	1,000
Puisne Judges, Hons. Hugh McDonald, H. W. Smith, Robt. L. Weatherbe, Samuel G. Rigby, and J. Norman Ritchie .. ea.	800

NEW BRUNSWICK is situated between 45°—48° N. lat. and 63° 47′—69° W. long., and comprises an area of 27,322 square miles, with a population in 1881 of 321,233. It was first colonized by British subjects in 1761, and in 1783 by disbanded troops from New England. The chief industrial pursuits arise from the produce of the forests, the fisheries, and the shipbuilding trade. Coal is found; also antimony, copper, iron, manganese, and other valuable minerals in considerable quantities. With reference to the agriculture of the province, in 1881 there were 1,253,299 acres under cultivation, though the acreage of improved land was barely one-tenth part of the area suitable for agriculture. The total yield for the same year was as follows:—Wheat, 521,956 bushels; barley, 84,183 bushels; oats, 3,297,534 bushels; buckwheat, 1,587,223 bushels; potatoes, 6,961,016 bushels; and hay, 414,046 tons. The total acreage of wheat was 40,381, with an average yield of 13 bushels to the acre; of potatoes, 51,362 acres, with an average yield of 135·5 bush.; and of hay, 389,721 acres—average yield per acre 1·06 tons. The live stock returns were as follow:—Horses, 52,975; working oxen, 8,812; milch cows, 103,965; other horned cattle, 99,783; sheep, 221,163; and swine, 53,087. Free grants of land are offered, and settlement encouraged. Improved farms are obtainable at reasonable rates. The fisheries include salmon, cod, mackerel, herring, and shad, and were in 1884 of the value of 3,185,675 dollars, ranking (among those of the maritime provinces) second in importance to those of Nova Scotia. ST. JOHN is also a winter port of Canada; and new railway connections are in progress which will add to its importance and increase its trade.

The Provincial Government of New Brunswick is administered by a Lieutenant-Governor, assisted by an Executive Council, a Legislative Council of seventeen members, and a Legislative Assembly of forty-one members elected by the people.

CAPITAL, Fredericton. Pop. (1886), 6,218; chief cities, St. John (30,000), Portland (15,226), and Moncton (5,032).

Lieut.-Governor, Hon. Sir Samuel Leonard Tilley, K.C.M.G.	£1,800
Pres. of Council, Hon. T. F. Gillespie	
Attorney-Gen., Hon. A. G. Blair (*Premier*)	420

Surveyor-Gen., Hon. James Mitchell	340
Comm. Public Works, Hon. P. G. Ryan	340
Chief Justice, Hon. J. C. Allen	1,250
Judge, Vice-Admiralty, Hon. Chas. Watters.	
Puisne Judges, A. R. Wetmore, A. L. Palmer, G. E. King, J. J. Fraser, W. H. Tuck.	

MANITOBA, formerly the Red River Settlement, was formed into a distinct province in 1870, and admitted into the Confederation in the same year. It is situated in about the centre of the continent, between 49°—53° N. lat. and 90°—101° W. long. (these parallels and meridians forming its boundaries), and the Canadian Pacific Railway connecting the Atlantic and Pacific coasts, entirely through British territory, is sure to give an important impetus to the rapid development of this province. Its area is computed at 73,720 square miles, and its population is now (1886) reckoned at 130,000. The Red River intersects the province, which appears destined to become a great agricultural country. The soil is fertile and productive, emigration is invited and encouraged, and liberal grants of land are made to settlers. According to the official returns for 1884, there were 232,357 acres ploughed that year in Manitoba. The eastern group had 49,022 tons of prairie hay saved, showing an average yield of 1·45 tons per acre; the central group had 83,574 tons, average 1·91 tons; the western group had 94,507 tons, average 1·82 tons. The total amount of prairie hay and cultivated grasses saved was 233,735 tons, being an increase of more than 10,000 tons over the preceding year. The number of acres sown with wheat was 307,020, and the average yield per acre, as deduced from the threshers' returns, was 19·8 bushels, while the total yield for the entire province was 6,076,122 bushels. The acreage of barley was 40,848, the average yield per acre (furnished by the threshers) was 25·5 bushels, and the total yield 1,041,539 bushels. The corresponding figures for other crops were as follow:—Oats, 133,004 acres, total yield 4,048,217 bush., average per acre 30·44 bush.; peas, 5,342 acres, total 95 417 bush., average 18·62 bush.; flax, 5,972 acres, total 86,863 bush.,

average 14·56 bush.; potatoes, 11,267 acres, total 2,167,820 bush., average 192 bush.; turnips, 2,728 acres, total yield 1,148,756 bush.; beet, 520 acres, total 130,497 bush.; mangolds, 912 acres, total 350,743 bush.; carrots, 653 acres, total 177,221 bush. The breeding of horses is being prosecuted with much success, and in 1884 the total number in the province was 20,071; while the cattle amounted to 64,011, and the hogs to 44,901. The main line of the Canadian Pacific Railway traverses Manitoba, and there are other lines in operation. The Red and Assiniboine rivers are also navigable throughout their entire course in the province.

The Government of the Province is administered by a Lieutenant-Governor, assisted by an Executive Council of 5 members and a Legislative Assembly of 20 members.

CAPITAL, Winnipeg. Population (1886), 30,000. Principal towns, Portage la Prairie and Brandon.

NORTH-WEST TERRITORIES.—This Province comprises nearly the whole of British North America from the boundary of the United States (lat. 49° N.) to the most northerly part of the continent, and from the western shores of Hudson Bay to the Rocky Mountains. The area is calculated at 2,553,337 square miles, but it is very sparsely inhabited, the estimated population being only 56,446, of whom 25,000 are Indians. Out of this vast territory, in 1882, the Dominion Government formed, for the convenience of settlers and for postal purposes, four provisional districts named severally Assiniboia (89,700 sq. miles); Saskatchewan (106,700 square miles), Alberta (106,500 square miles), and Athabasca (105,500 square miles). The whole of this territory is stated to possess varied and great resources, over 150,000 square miles being reported favourable for stock-raising and agriculture, the former being largely followed in Alberta, where the climate is milder, owing to the influence of the winds from the Pacific Ocean. Both Assiniboia and Alberta are traversed by the Canadian Pacific Railway, and settlement is rapidly taking place along its route, and generally throughout the territory, where many other railways have been projected. It has large mineral deposits, iron, coal, and gold having been found. Coal is abundant in all districts, especially in Alberta, where mines are now being worked, and are connected by a branch line with the Canadian Pacific Railway. It is watered by some of the finest rivers on the American continent, and it is estimated that there are about 10,000 miles of navigable waters within its boundaries. The fur trade was till recently almost the sole commercial occupation of the inhabitants. In 1870 it was included in the Dominion. Free grants of 160 acres of land are given to settlers free of cost, and they can pre-empt a similar quantity in addition at from 8s. to 10s. per acre.

The Government consists of a Lieut.-Governor and a Council of 19, partly elective and partly appointed by the Privy Council of the Dominion. As soon as districts of 1,000 square miles contain a population of 1,000, exclusive of aliens and Indians, they are to be constituted electoral districts, and return a member.

CAPITAL, Regina. Population (1883), 1,000.

PRINCE EDWARD ISLAND, the last admitted province, lies in the southern part of the Gulf of St. Lawrence, between New Brunswick and Cape Breton, that is to say between 46°—47° N. lat. and 62°—64° 30′ W. long. It is about 140 miles in length, and from 4 to 34 miles in breadth; its area is 2,133 square miles (about equal to that of the English county of Norfolk), and its population (1881) 108,891. The history of the island is somewhat strange: it was discovered simultaneously with the neighbouring countries, and was first settled by the French, who held it for many years, but only as a fishing station. The English took it from them in 1745, but afterwards restored it; they seized it again, however, during the Seven Years' War (1756—1763), and compelled the greater part of the French inhabitants to leave. From that time it has remained, without intermission, in the hands of the English. By an Act passed in 1798, which came into operation 1st February, 1799, the island received its present name from Prince Edward, Duke of Kent. The island is divided into three counties (King's, Queen's, and Prince), each of which elects 10 representatives and 4 councillors. The freehold of the island was originally held by a number of absentee landlords, who were finally bought out under the Land Purchase Act of 1875. Its inhabitants are almost exclusively engaged in agriculture, considerable attention, however, being devoted to the fisheries and to the breeding of horses and sheep. The soil consists for the most part of a rich red loam, uniform in character and peculiarly suited to the growth of grasses. The rivers, too, contain extensive deposits of what is known as mussel mud, which is raised in the winter by a dredging machine worked on the ice, and afterwards used on the land as a fertiliser, where it helps largely in producing excellent crops of hay. The conditions obtaining on the island are favourable for the rearing of live stock, of which a large number are exported to other parts of the Dominion and the New England States of America. Nearly the whole of the land is now cleared, and improved farms can be bought at about 20 dollars an acre.

The Provincial Government is vested in a Lieut.-Governor and an Executive Council, a Legislative Council of 13 members, and a Legislative Assembly of 33 members, both houses being elected by the people.

CAPITAL, Charlottetown, on the shore of Hillsborough Bay, which forms a good harbour. Population, 11,485.

Georgetown, on the east coast, is also a port of considerable size, and the centre of a good ship-building trade.

British Columbia is situated on the west coast of North America, in 48° 20′ to 57° N. lat., and between it and the Rocky Mountains, and extends from 114° to 143° W. long., including Vancouver Island and Queen Charlotte Islands, incorporated with British Columbia by Act of Parliament in 1860. Vancouver Island lies between N. lat. 48° 20′—50° 55′ and W. long. 123° 10′—128° 20′. It is about 290 miles in length, with an average breadth of 50 miles; its area is estimated at 14,000 square miles, the greater part of which is at present unexplored. The country is fertile, well watered, and rich in mineral products; and the coasts have numerous good harbours. In 1859 it became a British colony, and in 1866 was united to British Columbia. Queen Charlotte Islands are a group of islands in the North Pacific Ocean, off the coast of British Columbia and North of Vancouver Island; they consist of two larger and several smaller islands, the greatest length of the two larger being about 160 miles, and the greatest breadth about 70 miles. The climate is good, and the whole group is covered with splendid forests. Minerals abound, gold-bearing quartz of a rich quality having been found, also copper and iron ores, and an excellent vein of anthracite coal. The islands were taken possession of, in the name of the British Crown, by Dixon in 1787. The total area of the province is calculated at 390,344 square miles, and contains a population estimated at 60,000. Until 1858 British Columbia formed part of the Hudson Bay Territory; but in that year large discoveries of gold were made, which, attracting a vast immigration of gold-diggers, rendered it necessary for the British Government to take measures for the maintenance of order, and the country was erected into a colony. Besides gold, the country produces magnificent timber, and good coal is present in inexhaustible quantities on the eastern coasts of Vancouver island. The yield of coal from the mines has increased from 81,000 tons in 1874 to about 500,000 in 1885, and of these three-fourths were exported. The fishing industry is also becoming very important. Salmon of excellent quality are found in the rivers. Many thousand tons of salmon are tinned and exported to England every year. The fur trade, also, is a noticeable feature, the skins exported being chiefly those of the mink, marten, sable, silver-fox, bear, beaver, sea and land otter, seal, deer, elk, and others of minor importance. Tracts of not less than 160 acres of unsurveyed or unreserved Crown lands may be purchased for one dollar per acre; and surveyed lands other than town sites and Indian settlements may be obtained at the same rate after they have been offered for sale by public auction. The Northern Pacific naval station of the Imperial Government is at Esquimalt, an extensive and commodious harbour close to Victoria, where also a large graving dock is being completed. Canada has been quick to grasp the undoubted fact that in the development of colonies an extensive railway system is a most important auxiliary, so much so indeed that during the decade 1875–84 the mileage opened for traffic was more than doubled, the increase being from 4,800 miles in 1875 to 10,773 miles in 1885. By far the most important line is the great Canadian Pacific Railway, stretching across the entire continent, not only from Montreal to Port Moody on the coast of British Columbia, but even for a few miles beyond, since its western terminus is at Coal Harbour (to be known in future as Vancouver), a total distance of about 3,000 miles. The main line, starting from Quebec, runs to Montreal, then through Ottawa, Carleton Junction, Renfrew, North Bay, Sudbury Junction, Port Arthur, Ignace, Winnipeg, Carberry, Brandon, Moosomin, Qu'Appelle, Regina, Moose Jaw, Swift Current, Maple Creek, Medicine Hat, Crowfoot, Calgary, and Stephen—the last-named on the summit of the Rocky Mountains, besides a large number of other places.*—The first through-train for the Rocky Mountains left Montreal at the end of November, 1885; and trains have been running right through from the Atlantic to the Pacific since June, 1886. Fortunately, the constructors of this gigantic work found themselves largely aided by the natural features of the land crossed; the level character of the prairie, for example, rendered cuttings and embankments unnecessary, and, with the exception of the stations, the track is single, without boundary fences, and slightly raised above the ground on either side. In the Rocky Mountains, however, the engineering difficulties were enormous, and more than 300 miles of line were cut through the solid rock; while no fewer than 25,000 men were engaged on the work as it drew near to completion. The various advantages which this line possesses over the Central Pacific Railway may easily be gathered from the following statement of facts:—(1) The highest pass reached by the former is 3,372 feet above sea-level, while the Central Pacific has to attain an elevation of 7,534 feet. (2) From Port Moody to Montreal the distance by rail is 2,895 miles; from San Francisco to New York the distance is 3,363 miles. (3) The distance from China, Japan, and the Pacific coast generally to Liverpool is from 1,000 to 1,200 miles less by the Canadian Pacific Railway than by the Central

* In addition to this great line, the following railway lines within the Dominion are all of great importance both from commercial and strategical points of view:—(1) Branch lines, reaching, in the aggregate, upwards of 1,100 miles, and radiating from Montreal, Ottawa (to Toronto and other towns), Winnipeg, Port Arthur, and the various junctions mentioned above. (2) The various branches of the Grand Trunk Railway, extending over nearly 2,600 miles, and forming a complete network of lines between the great lakes, reaching Quebec, Montreal, Lake Champlain, and other places. (3) The Intercolonial Railway, 861 miles long, skirting the right bank of the St. Lawrence and traversing the provinces of New Brunswick and Nova Scotia. (4) The Midland, the New Brunswick, the Northern, the North Shore, the South-Eastern, and other systems, extend over many hundreds of miles. On the 30th June, 1885, 812 miles were under process of construction. The survey of a route has also been completed for a line which it is proposed to make, 600 miles long, between the city of Winnipeg and Hudson's Bay. Some idea of the extent and value of the Canadian railway system may be gleaned from the following statistics for the year ended June 30, 1885:—Paid-up capital, 625,754,703 dollars; mileage in operation, 10,773; passengers carried, 9,672,599; tons of freight carried, 14,659,271; earnings, 32,227,469 dollars; working expenses, 24,015,351 dollars.

Pacific Railway. The Esquimalt and Nanaimo Railway, usually called the "Island Railway," which by a short extension will connect the capital of the Province with the valuable coal-fields at Nanaimo, is being rapidly constructed, and will be completed by the end of the present year (1886). Lines of steamers in connection with the Canadian Pacific Railway are shortly to run between India, China and Japan, and Australia, shortening the distance to East Japan 14 days and to China 10 days, the overland route across the American continent being entirely through British Territory.

The Government of the Province consists of a Lieut.-Governor and an Executive Council, together with a Legislative Assembly of 25 members, 4 of them being the Executive Council.

CAPITAL, Victoria. Population (1886), 9,000.

NEWFOUNDLAND.

THIS Island is situated between 46° 37′—51° 39′ N. lat. and 52° 35′—59° 25′ W. long., on the north-east side of the Gulf of St. Lawrence. Its area is 40,200 square miles, and in 1884, according to the census taken at the end of that year, it had a population of 193,124. The principal exports, with their respective values, for the year 1884 were: codfish (£689,916); cod and seal oils (£133,125); sealskins (£21,250); pickled herrings (£22,562); pickled salmon (£13,250); preserved lobsters (£17,166); and copper ore. The total value of the exports for the same year, which, owing to unsuccessful fishery, were much below the average, amounted to £984,710, excluding those of Labrador, £232,083. The industries of the island, fishing, agricultural, and mining, are altogether confined to the sea coast and the numerous deep bays indenting the island on three of its sides, but a railroad is in course of construction by an American company, which has obtained a charter and large concessions of lands from the local parliament; this, when carried out, will greatly develop the resources of the country. About 100 miles of line are already finished and open for traffic. A further development of the resources of the colony is anticipated as the result of an Agricultural Bill enacted during the recent session of the legislature. This Bill provides government aid for those of the poorer class who desire to commence farming operations. Newfoundland abounds in game of various descriptions, its numerous lakes and rivers teem with fish; the climate is healthy, the conception of the place as a land of perennial fog being altogether erroneous.

LABRADOR, a dependency of Newfoundland, forms the most easterly part of America, and extends from Blanc Sablon in the Straits of Belleisle on the south to Cape Chudleigh at the entrance of Hudson's Straits on the north; it possesses valuable cod, herring, trout, and salmon fisheries. There are a few Moravian missionary settlements on the coast, such as Hopedale, Nain, Okak, and Hebron. The coast is mainly frequented for the sake of the seal and cod, and when those fisheries are in progress, the population of the country (normally under 2,000) becomes raised to upwards of 50,000.

The Government of Newfoundland is at present administered by a responsible Executive Council, also by a Legislative Council not exceeding 15 members, nominated by the Crown, and a House of Assembly of 33 members, elected by the people every four years. Justice is administered by the Supreme Court of Judicature, which, originally established in 1792, was reconstituted in 1824, with a Chief Justice and two other judges, having civil and criminal jurisdiction over the whole island. The Church of England, according to the last census, numbered 69,000; the Roman Catholics, 64,000; while the Wesleyans, by far the most numerous of the Nonconforming bodies, are reckoned at 35,000. The aborigines—the famous Bethuk tribe—are now totally extinct, the last being seen alive in 1829.

BRITISH GUIANA

includes the settlements of Demerara, Essequibo, and Berbice, situate on the north coast of South America, and comprising an area estimated at about 76,000 sq. miles, with a seaboard of 280 miles, lying between 8° 40′ and 0° 40′ N. lat., and between the meridians of 56° 10′—61° 15′ W. The Essequibo River intersects the country in its entire length; the Corentyn separates it from Dutch Guiana. This territory was first partially settled by the Dutch West India Company in 1580, and was from time to time

held by Holland, France, and England. In 1781 all the possessions of Holland in S. America were captured by the British, who, within a few months, surrendered Demerara, Essequibo, and Berbice to the French. The Dutch, however, regained them, and yielded them up in 1796 to Great Britain, and the colony of British Guiana was finally surrendered to this country at the Peace of 1814. There are but two towns, properly so called, Georgetown and New Amsterdam (population, 8,124). The climate is hot, but not unhealthy, and the cultivated portion of the country, amounting to 83,000 acres, is confined to the seacoast and to a short distance from the rivers. The seasons are divided into the dry and the wet, the former lasting from the middle of February to the end of April, and from the middle of August to the end of November. The rainfall, upon which the inhabitants depend largely for drinking purposes, has varied during the last five years from a maximum of 78·63 inches in 1882, to a minimum of 55·29 inches in 1885; and the temperature ranges between 75° and 90° F. The chief product is sugar, which forms 92 per cent. of the export trade of the colony. For the growth of this the soil is exceptionally well suited, and the finest sugar in the world, known as Demerara crystal, is in its pure state the best sugar manufactured. Coffee is also good, and cotton of a fine quality is grown in very small quantities; also rum, molasses, cocoa-nuts, and timber. The returns of the leading exports for the year 1885 were as follow:—Sugar, 106,532 hhds.; rum, 28,353 puncheons; molasses, 10,349 casks; timber, 387,889 cubic feet; shingles, 3,368,700; charcoal, 49,190 barrels; cocoa-nuts, 224,732. The population of the colony was estimated, December 31, 1884, to amount to 264,061, exclusive of 349 troops in garrison and 583 seamen in port; 7,538 aborigines, however, are included. The population is composed, for the most part, of West Indians, Barbadians, Portuguese, Chinese, and East Indians. The aboriginal Indians, computed at from 7,000 to 8,000, and belonging chiefly to Arawak, Acawoy, Carib, and Warau tribes, are occupied largely in fishing, hunting, and raising crops of cassava. The principal school in British Guiana is Queen's College, a government institution; and in 1884 there were 177 elementary schools, of various religious denominations, in receipt of grants of public money. There is also an extensive postal service, and the number of letters, &c., posted within the colony reached 1,079,295 in 1884. At the end of the same year the deposits in the four savings' banks amounted to £226,791 9s. 8d. There are 250 miles of telegraph lines and seven cables, and the number of messages despatched in 1884 was 68,240; moreover, the colony has 51 post-offices, of which 36 are telegraph offices and 19 are money-order offices.

The Government, which is essentially that of the old Dutch rule, consists of a Governor and a Court of Policy of 9 members, 4 official and 5 elected, in which the Governor has two votes; also a Combined Court, composed of the Court of Policy and of 6 Financial Representatives, for the purpose of levying taxes. An elective member of the Court of Policy must be the owner of 80 acres of land in the colony, of which 40 at least must be under cultivation; while a member of the College of Electors or a Financial Representative must have a similar qualification, or possess either a house or land worth £250 annually, or an annual income of £300.

BRITISH HONDURAS.

This colony comprises about 7,562 square miles of territory in Central America, extending from 18° 29′ 5″ to 15° 53′ 55″ N. latitude, and from 89° 9′ 22″ to 88° 10′ W. longitude. Its extreme length and breadth are 174 m. and 68 m. respectively; it abuts on the Atlantic, and is bounded on the north by Yucatan and Mexico, on the west and south by Guatemala, and on the east by the Caribbean Sea. The climate is damp and hot, but by no means unhealthy, and the temperature ranges from 56° to 96°. The average lies between 75° and 80°, but this is considerably tempered by the prevailing sea-breezes. The country consists chiefly of primeval forest, with savannahs and so-called "pine-ridges," which are open sandy plains covered with a wiry grass and dotted with pine-trees, affording fair runs for cattle. The ground is level along the coast-line, and swampy, and generally flat for about ten to twenty miles inland; after which hills from 500 ft. to 4,000 ft. high succeed each other to the western boundary. The soil is exceedingly rich, and sugar canes have ratooned for twenty years without much deterioration. The manufacture of sugar is carried on in many different places; there are twenty steam mills, and forty-one worked by cattle, and 30 stills in connection with the estates. The latest satisfactory returns of the area under cultivation are those for 1883, viz., Indian corn, 8,586 acres; sugar cane, 2,884 acres; yams, fruits, &c., 2,321 acres; rice, 189 acres; coffee, 108 acres. The best description of cocoa trees grows wild in the bush. The Census (1881) gives the population at 27,452—males, 14,106; females, 13,346.

The staple products are the natural woods of the colony, viz., mahogany and logwood, but there are many other excellent furniture woods. Wood-cutting, in fact, forms the chief industry of the colony. The average annual export of mahogany, of which the cost, ready for shipment, is 40 to 50 dols. per 1,000 ft., amounts to 3,000,000 ft.; while that of logwood, costing 10 to 15 dols. per ton, reaches 17,000 tons. There are some sugar estates thriving well, and a large coffee plantation has been started, on which 30,000 trees, now bearing fruit, were planted out during 1881. Fruits, including bananas, plantains, cocoa-nuts, pineapples, oranges, and mangoes, are being rapidly and extensively grown, while inland there are extensive regions of good pasturage, and there is reason to believe that gold and other minerals will be found. In 1884 the export of mahogany was 7,527,879 cubic ft., and of logwood 15,303 tons. The other leading exports for the same year were as follow:—Sugar, 2,391 tons; rum, 22,318 gals.; cedar, 348,341 ft.; rosewood, 91 tons; fustic and ziricote, 162 tons; india-rubber, 66,379 lb.; sarsaparilla, 31,771 lb.; and 516 turtles. The value of fruit shipped is expected to reach £15,000 to £20,000. Crown lands can be purchased at 4*s.* per acre, or leased at an annual rental of 5*d.* per acre. The transit trade with neighbouring Republics is considerable. India-rubber, sarsaparilla, coffee, and other tropical products also pass through the ports of the colony.

British Honduras is governed as a Crown colony, in which the Crown has the absolute control of legislation, while the administration is carried on by public officers under the direction of the home government. The Executive Council consists of the senior officer for the time being in command of the regular troops in the colony, the Colonial Secretary, the Treasurer, the Attorney-General, and other persons appointed by the Sovereign. The Legislative Council includes the following members:—the Chief Justice, the Colonial Secretary, the Senior Officer of the regular troops (not being below the rank of major), the Treasurer, the Attorney-General, and not less than four unofficial members appointed by the Sovereign. There are twenty-five schools in the colony, the great majority of which are denominational, and, together with the teachers, in receipt of government aid.

CAPITAL, Belize. Population (1881), 5,767.

Amount of public revenue in 1885	£52,246
Amount of public expenditure in 1885	63,235
Imports from United Kingdom, 1885	107,805
Value of exports to Great Britain, 1885	230,946
Value of total imports, 1885	254,856
Value of total exports, 1885	244,280

The total goods imported in 1884 may be divided thus:—For home consumption, 975,691 dollars; for transit trade, 211,999 dollars. Of the total goods exported in the same period, 1,120,351 dollars represent the value of the produce and manufactures of the colony itself; and 466,895 dollars that of British, foreign, and other colonial produce and manufactures in course of transit through the colony.

Governor, Roger T. Goldsworthy, C.M.G.	£1,800
Colonial Sec. and Registrar, Hen. Fowler	700
Colonial Treas., W. J. McKinney (& Ho.)	550
Chief Justice, William Meigh Goodman	£1,000
Attorney-General, C. R. Hoffmeister	400

BERMUDA.

The Bermudas, or Somers Islands, are a cluster of about 100 small islands (15 or 16 only of which are inhabited, the rest being mere rocks) situated in the West of the Atlantic Ocean, in 32° 15′ N. lat. and 64° 51′ W. long., comprising an area of about 41 square miles, and containing (in 1884) an estimated population of 14,888, exclusive of army and navy. These islands derive their name from Bermudez, a Spaniard, who sighted them in 1527; but they were first colonized by Admiral Sir George Somers, who was shipwrecked here in 1609, on his way to Virginia. The nearest point of mainland is Cape Hatteras, in North Carolina, 580 miles distant. Bermuda possesses a strongly fortified dockyard, where the North American squadron refits.

The climate is renowned for its mildness and salubrity; there is practically no winter, the thermometer never falling below 40° F., and the heat in summer, pleasantly tempered by the sea breezes, is rarely higher than 85°. The soil is, on the whole, poor. Of the 12,000 acres in the whole group, not more than 2,000 acres can be called good or even fair; another 1,000 acres may, in favourable years, barely give a profit on the outlay; the remaining 9,000 are practically useless for purposes of cultivation.

The products of the island chiefly consist of onions and potatoes, a few melons and pumpkins, and arrowroot of a very fine quality. The sea abounds with fish: a few turtles are taken.

Amount of public revenue in 1885	£28,693
Amount of public expenditure in 1885	29,096
Public debt in 1884	5,284
Imports from United Kingdom, 1885	72,010
Exports to United Kingdom, 1885	4,713

The Government is vested in a Governor and Executive Council of 9 members, appointed by the Crown, who also act as a Legislative Council, and a representative House of Assembly consisting of 36 members, four of whom are elected by each of the nine parishes. There are 854 electors, whose individual qualifications are the possession of freehold property of not less value than £60. Hamilton, on the coast of Long Island, is the chief town and the seat of government.

Governor and Commander-in-Chief, Lieut.-Gen. Thomas Lionel J. Gallwey, R.E.	£2,946
Colonial Secretary, Hon. Cavendish Boyle	400
Receiver-Gen., Hon. James Tucker	500
Chief Justice, Hon. Josiah Rees	700
Assistant Judges, Hon. J. H. Trimingham Hon. E. Harvey	
Attorney-General, S. Brownlow Gray	670
Postmaster, Aubrey G. Butterfield	300
Naval Officer in Charge, Capt. J. F. G. Grant	
Inspector of Machinery, George T. Crook	
Naval Storekeeper, Hy. J. Laslett	
Engineer, William C. Hilder	

These Islands are fast becoming a winter resort for visitors from the neighbouring States of America and the Dominion of Canada. Numbers repair thither from November until April to escape the cold of America and Canada: large hotels are springing up for their accommodation. The climate during this period is most salubrious, the range of thermometer being 60° to 70°, and invalids derive great benefit from the mildness of the winter.

British Possessions in Australasia.*

AUSTRALASIA, that is Austral or Southern Asia, comprises the great island-continent of Australia, the adjacent islands of New Zealand and Tasmania, and a vast number of smaller islands, chiefly in the southern hemisphere, between the Pacific and Indian Oceans, together with a portion of the island of Papua or New Guinea.

The whole of the British Empire in this area, including Fiji and a portion of New Guinea, is estimated to contain 3,169,389 square miles, and a population of 3,223,041.

AUSTRALIA forms the main portion of Australasia, and is the largest island on the face of the globe, extending from 10° 40′ to 39° 10′ S. lat., and from 113° 15′ to 153° 35′ E. long. Its boundaries on the N. are Torres Strait, the Sea of Timor, and the islands of New Guinea (Papua) Timor, Flores, &c.; on the E., the South Pacific Ocean; on the S., Bass's Strait, Tasmania, and the South Pacific Ocean; and on the W., the Indian Ocean. Its nearest point to Asia is situated at a distance of 1,600 miles S.E. of Singapore, the extremity of the continent in this direction; the intervening space being occupied by the East Indian Archipelago, chiefly in the possession of Holland. The area of this vast island-continent is estimated at 3,030,771 square miles. The greatest dimensions are in length from E. to W. 2,400 miles, and in breadth from N. to S. 1,900 miles; it has a rapidly-increasing population, which in December, 1884, was estimated at 2,538,196. It is divided into the five colonies, New South Wales, Victoria, Queensland, South Australia, and Western Australia. There are many excellent and spacious harbours in various parts of the coast, but very few remarkable indentations; at an average distance of sixty miles a range of steep mountains runs along the E. coast, but the greater part of the shore on the N., the W., and S. is low and sandy. A large part of the interior, particularly in the west, consists of sandy and stony desert, covered with spinifex and containing numerous salt-marshes, though reaches of grass-land occur here and there. The geological formation of Australia is remarkable for its simplicity and regularity; the *strike* of the rocks is, with a single exception, coincident with the direction of the mountain-chains, from N. to S., and the tertiary formation to be found in the N., S., and W. develops in the S.E. into a gigantic tertiary plain, watered by the Darling and the Murray rivers. Nearly all round the coast, however, and in the eastern portion of the island, is a rich grazing country, admirably adapted to the rearing of sheep, of which there were over 58½ millions in 1884, or, including Tasmania and New Zealand, the total number of sheep was 74,345,954. Sheep-farming is the pre-eminent branch of industry, and it is as a wool-producing country that Australia is rising into importance. Years of drought occasionally occur, constituting the greatest impediment to the progress of the colonies, often followed by years of flood. The principal rivers are the Murray, with its tributaries, the Murrumbidgee, Lachlan, and Darling, in the S.E. part of the island, which falls into the sea on the south coast; on the east coast, the Hunter, Clarence, Brisbane, Fitzroy, and Burdekin; on the west, the Swan, Murchison, Gascoyne, Ashburton, the Fortescue, De Grey, and Fitzroy; and the Victoria, the Flinders, and Mitchell, which debouch into the Gulf of Carpentaria, on the north; but they are of little service in facilitating internal traffic. The most extensive mountain system on the Australian continent takes its rise near the S.E. point, and includes a number of ranges known by different names in different places, none of them being of any great height. The chief ranges of the system are the Australian Alps in Victoria and New South Wales, the Blue Mountains and the Liverpool Range in New South Wales, and the Craig Range in Queensland. The highest point is Mount Kosciusko (7,308 ft.), in New South Wales, which commands the view of no less an area than 7,000 square miles.

Speaking generally, it may be said that one of the most marked characteristics of the whole continent is the scarcity of rivers and fresh-water lakes. There are few rivers of any considerable size along the whole coast-line (8,000 miles); indeed, for 1,500 miles along the S. coast there is not a single watercourse. Lakes are numerous, but nearly all are salt, and even those barely merit the name, being dependent for their supplies of water upon the rivers and floods. They are more like marshes than lakes: at one time they are immense reedy swamps; at another time they are areas of submerged levels, with broad mud banks for shores that render the water absolutely unapproachable.

* It is agreeable to see that the Australians themselves are waking up to see the necessity for an atlas worthy of their great country. One portion only has yet appeared —New South Wales: it contains three or four general maps, one of New South Wales, and nineteen others, each 20×16½, of the separate counties—clearly drawn and well printed in colours. Not the least valuable portion of the volume is the introductory portion by Mr. McLean, in which he gives first an account of the geography, geology, climatology, flora and fauna of Australia generally, followed by a more specific account of the colony of New South Wales, including a topography or gazetteer of all the settled parts. Interspersed are some very good illustrations on wood and stone. The printing of the volume itself illustrates the high state of skill already attained in that part of the world. The publisher is Mr. John Sands of Sydney, and the London Agent, Mr. Stanford.

Minerals comprise gold, copper, iron, and coal in large quantities, silver, mercury, tin, zinc, &c. The settled portions are intersected by railways, already extending to 7,540 miles (including those in New Zealand and Tasmania), and with about 59,956 miles of telegraphic wire, connecting together all the principal towns in the island. Direct steam communication is established with England by means of the Peninsular and Oriental, the Orient, and other lines of steamers. "The Great South Land" is believed to have been first seen by Le Testu, a French navigator, about 1542, though the honour has been claimed by the Portuguese; and portions of the coast on the north-west and south were sighted by the Dutch and English. Practically speaking the island continent was made known to the world by Captain Cook in 1770, when he saw the land to the west of Cape Horn, and explored the whole eastern coast to Torres Strait. Subsequently Flinders sailed round it, in 1802, and gave it the name of "Australia." Following the favourable report of Cook, the first British settlement was formed at Port Jackson (Sydney) in 1788. The aborigines are rapidly becoming extinct; their number now in the settled districts of Australia is but 31,700. No proper survey has yet been made of the newly-annexed portion of New Guinea, or Papua.

STATISTICS OF AUSTRALASIA.
ALL THE COLONIES.

Gross amount of public revenue, 1885	£23,928,397
Gross amount of expenditure, 1885	24,039,776
Public debt, December 31, 1885	140,918,318
Value of total imports, 1885	63,367,791
Imports from United Kingdom, 1885	28,104,258
Value of total exports, 1885	51,553,486
Exports to United Kingdom, 1885	23,325,287
Total tonnage of vessels, exclusive of coasting trade (13,218,282 British, 1,330,184 foreign), entered and cleared	Tons. 14,548,466

NEW SOUTH WALES.

The whole of the eastern part of Australia, including the several colonies of New South Wales, Victoria, and Queensland, received the name of NEW SOUTH WALES from its first explorer, Captain James Cook, in 1770. The present colony of New South Wales originated in a penal settlement formed by the British Government, when Captain Arthur Phillip, R.N., its first Governor, arrived at Botany Bay, in H.M.S. *Sirius*, in January, 1788, with six transports and three store-ships, where they anchored, but subsequently proceeded to Port Jackson, which was found to be more suitable than Botany Bay for the new settlement: he there landed the 750 "persons" under his charge, and the British ensign was for the first time hoisted on the shores of Sydney Cove, now the capital and seat of government.

The colony is situated between 28° 10′—37° 28′ S. lat. and 141°—153° 37′ E. long., and comprises an area of 310,700 square miles—*i.e.*, more than six times the area of England, and nearly three times the size of Great Britain and Ireland—with a population in 1886 of about 1,000,000. The early history of the colony was not free from trouble. The first Governor, Capt. Phillip, remained from Jan. 26, 1788, to Dec. 10, 1792, and was succeeded by Capt. Grose, Dec. 11, 1792, to Dec. 12, 1794; Capt. Paterson, Dec. 13, 1794, to Sept. 1, 1795, when a duly appointed Governor, Capt. Hunter, R.N., arrived, and remained from 7 Sept., 1795, to 27 Sept., 1800; Capt. P. G. King followed, 28 Sept., 1800, to 12 August, 1806, when he was followed by the unfortunate Capt. Bligh, whose rule came to an abrupt termination by a general revolt, and after an interregnum of nearly two years, Major-General L. Macquarie arrived, and 1 Jan., 1810, assumed the governorship, which he retained for nearly eleven years, since which time there has been a regular succession. "Botany Bay" was for many years almost synonymous with Australia, and had a most unsavoury reputation; but with the cessation of the long European war after Waterloo, and the great distress in this country consequent upon the return of so many men discharged from the Army and Navy, attention was attracted to Australia as a centre of emigration. In 1813 the interior of the country was explored, and the great plains being found admirably adapted for sheep farming, several breeds of sheep, including the celebrated merino, were introduced, and a foundation laid for the future prosperity of the country. The agricultural progress of the colony has been truly marvellous. In the year 1792 there were but 23 head of cattle, 11 horses, 105 sheep, and 43 pigs. In March, 1886, at the time of stock-taking, there were 329,983 horses, 1,270,078 cattle, 34,551,622 sheep, and 208,697 pigs. In 1885 no fewer than 178,373,425 lbs. of wool, valued at £7,246,642, were exported.

Minerals at first attracted but little attention, but in these the country is also rich: the gold fields were discovered in 1851, and up to the end of 1884, these had produced about £35,366,612. Coals, during the same period, about £15,453,984. Copper, silver, tin, iron, antimony, asbestos, cinnabar, and kerosene shale are also found; and in small quantities, diamonds, rubies, opals, and other precious stones. The total annual value of the minerals is about £3,000,000.

Agriculture is, of course, the great industry of the Colony. About 852,000 acres, a space rather less than that of Wiltshire, are under cultivation, producing (1884-5) more than 7,780,000 bushels of wheat and other kinds of grain, with 38,695 tons of potatoes, and nearly 1,148 tons of tobacco. Sugar to the extent of 41,359,360 lb. is produced, also 555,470 gallons of wine, 3,893 gallons of brandy, and more than 8,740,000 dozens of oranges. So rich is the soil and so genial the climate, that almost every kind of fruit and vegetable may be grown. The total extent of land leased for pastoral purposes in 1885 was 217,407 square miles. At Sydney, the range of thermometer averages 61·7°, about the same as at Madrid; at Bathurst, the mean temperature is 56·8°, and on the inland plains about 70°. The country is well watered, the chief rivers being the Darling and the Lachlan,

both tributaries of the Murray, which divides the Colony from Victoria. In 1851 the south of the country was formed into the separate colony of Victoria, and in 1859, the northern portion into that of Queensland.

All religions are free, there is no establishment, and all payments are voluntary, with the exception of such as remain due under former arrangements. More than two-thirds of the people are Protestants, the greater part members of the Church of England: there are about 280,000 Roman Catholics. The See of Sydney, now Metropolitan, was erected in 1836, when it comprised the whole of Australia, but in 1847 took its present designation; the other Sees in N. S. Wales are those of Newcastle, 1847, Goulburn, 1863, Bathurst, 1869, Grafton and Armidale, 1869, and Riverina, 1885; the clergy number about 278. The head of the Roman Catholic Church is His Eminence the Cardinal Archbishop of Sydney, with bishops of Maitland, Bathurst, Armidale, and Goulburn. Presbyterians and Methodists come next, but almost every sect is represented. Education is compulsory, more than one-fifth of the entire population (218,280) attended school in 1885; the gross expenses of the Public Instruction Act and other educational payments amounted to £702,119 in the year 1885. The University of Sydney, incorporated in 1851, enjoys a deservedly high reputation; degrees granted there rank with those of Oxford and Cambridge. Of churches and chapels the total number belonging to all denominations was 1,657; but, as Defoe said nearly two centuries ago—

> "Wherever God erects a house of prayer,
> The Devil always builds a chapel there;

the number of public-houses being 3,144, or as nearly as possible two to every church.

Assisted emigration from the mother country is for the present suspended. Under the scheme formerly in operation, emigrants were selected by the Agent-General in London, Sir Saul Samuel, and his assistants, but the selection was limited to those who could afford to pay part of their passage-money—£6 for married couples, £4 single men, and £2 for single women; children under three were free, and those under fourteen paid £1. Married people must not be over 40, and unmarried persons not over 35; if above that age, £1 more was charged. The ordinary passage-money by first-class steamers being: cabin, £52 10s.; intermediate, £36 15s.; or steerage from £16. Female servants, especially such as could take part in farming and dairy operations, were much in demand. The estimated population on June 30, 1886, was 1,003,867, made up of males, 561,429, and females, 442,438, showing a preponderance of males of no less than 118,991.

The estimated number of aborigines in the colony is, full-blood, 5,689; half-castes, 2,402; total, 8,091.

"Responsible government" was established by the Constitution Act, 18 & 19 Vict. c. 54, and is vested in a Governor appointed by the Crown, and a Legislative Council consisting of 54 members. The Legislative Assembly consists of 122 members, representing 72 electoral districts: with few exceptions all natural-born or naturalized males, 21 years of age, who have resided six months in the district are entitled to the franchise. The voting is by ballot.

Railways, roads, and bridges have their several departments. There are now open (1887) 1,852 miles of railway, and 249 miles in course of construction; and in December, 1885, there were 19,864 miles of telegraph wire with 404 stations. The Post Offices numbered 1,115, the number of letters conveyed was 39,351,200; of newspapers, 25,567,400; and of packets, 3,446,800. Tramways, 35 miles, and 10 miles more in course of construction.

The trade of the country is very large: in 1885 the number of vessels which entered and cleared was 5,184, with a total tonnage of 4,133,077; the value of exports being £16,541,745, and of imports £23,465,196, together £40,006,941. The colony possesses 14 banks, with a paid-up capital of £10,512,300, and total assets £38,143,433. Of savings banks there were 291, with deposits amounting to £3,488,550. The Public Debt is heavy; in Jan. 1886, it amounted to £35,564,259, but it was mostly incurred for the construction of railways, telegraphs, and other reproductive public works.

While fully trusting to the ability and willingness of the mother country, the colony has not been altogether unmindful of defence. In March, 1886, there were enrolled in the naval and military service of the colony about 8,280 men: 1,150 artillery-men, 120 engineers, 230 members of torpedo corps; 7 regiments of infantry of an aggregate actual strength of about 5,650, and cavalry, 380. The naval brigade and naval artillery volunteers comprise about 750 officers and men. The officers and men who formed the well-known "Soudan contingent" were selected from these forces.

Sydney, the chief city and Capital (12,043 miles from London viâ the Suez Canal), stands on the shore of Port Jackson, surrounded by scenery of surpassing beauty. It extends four miles North and South by three miles East and West; and contains 130 miles of streets with about 50,000 houses, or, including suburbs, a population of about 300,000. About 800 acres have wisely been set apart for parks and open spaces: here are situated the Government buildings, Royal Mint, the University, Free Public Library, Observatory, two cathedrals, and numerous churches and chapels. The other large towns, with their populations (census 1881), are Newcastle, 15,600; Bathurst, 7,250; Goulburn, 6,900; Paramatta, 8,440; Maitland, E. and W., 7,300; and Grafton, 3,905.

Total revenue in 1885	£7,588,668
Total expenditure in 1885	7,544,594
Public debt (31st Dec.), 1885	35,564,259

[NORFOLK ISLAND, the residence of the descendants of the Mutineers of the *Bounty*, removed from Pitcairn's Island, is governmentally attached to New South Wales.]

VICTORIA.

This territory originally formed part of New South Wales (known as the Port Phillip district), from which it was severed, and erected into a separate colony, in 1851; and although one of the youngest, and, in point of area, the smallest colony on the Australian continent, is still the most populous, and probably the wealthiest. It comprises the south-east corner of Australia, at that part where its territory projects farthest into the southern latitudes: it lies between the 34th and 39th parallels of south latitude, and the 141st and 150th meridians of east longitude. Its extreme length from east to west is about 420 miles, its greatest breadth is about 260 miles, and its extent of coast line nearly 600 miles. The entire area comprises 87,884 square miles, or 56,245,760 acres, of which 2,405,157 were under cultivation in 1885-86. Its population on the 30th June, 1886, was 1,009,753, including about 12,000 Chinese and aborigines. At the census of 1881 the native Victorians numbered about 500,000; natives of other Australian colonies about 40,000; English, 147,000; Irish, 87,000; Scotch, 48,000; Chinese, 12,000; and natives of other countries about 28,000. Nearly two-thirds of the population are Protestants, while the Roman Catholics number rather more than 200,000. The Victorian aborigines at the time of the first colonization of the district, were, according to the most frustworthy estimates, about 15,000 in number; in 1851, the official return gave 2,693, while the census of 1881 showed them to be as few as 780 (460 males and 320 females). The birth-rate of Victoria for 1884 was 30·49 per 1,000; the death-rate, which is remarkably low, was 14·27 per 1,000. Victoria is the principal gold-producing colony of Australia, to which it owes its extraordinarily rapid progression: from the discovery of gold in 1851 to the end of the year 1884, the quantity raised — 53,728,000 oz., or nearly 1,624 tons, estimated at £4 per oz.—amounted in value to £214,912,000. During the year 1885 the gold produced in the colony amounted to 778,618 oz. The value of other minerals raised, consisting principally of tin and antimony, is estimated at about £850,000. From its geographical position. it enjoys a climate far more genial to Europeans than any other colony within the continent of Australia. There were 1,680 miles of railway completed at the end of 1885, all of which belonged to the Government, and 205 miles of which were laid with double lines, while 39 miles more were in course of construction. The capital cost of the railways up to the 30th June, 1885, amounted to £25,890,580, or an average of about £13,000 per mile. Of this amount £19,110,000 was raised by debentures, and the rest was paid from the general revenue. The net income, after paying all working expenses, was £860,349, equivalent to a return of 4½ per cent. on the debenture capital. Stage-coaches run to all parts of the colony, except those for which railway communication is available. There were 411 stations for electric telegraphs, extending over 3,950 miles (poles), which produced a revenue of £87,800 in 1885, the total mileage of wire being 8,055, and the telegrams transmitted numbering 1,594,296. The chief sources of income until 1862 were the customs duties and sales of public lands; but fresh sources of revenue, derivable from the railway system, from public works, a land tax, and stamp duties, have since been added. Wool, gold (including specie), and wheat, flour, and biscuit are the staple productions of the colony. In 1885 the chief exports were of the following respective values:—Wool, £6,342,887; gold, £2,010,295; wheat, flour, and biscuit, £1,769,526; and live stock, £764,968. The principal imports of the colony in 1884 were wool (from across the border), £2,575,905; sugar and molasses, £1,292,260; cottons, £946,305; woollens, £923,072; live stock, £1,336,899; gold (including specie), £1,268,615; and iron and steel (excluding railway rails, &c.), £664,945. The estimated number of sheep in 1885-86 was 10,664,598. Agriculture, although formerly neglected, has of late years much improved, wheat and oats being the two cereals chiefly cultivated. Of the 2,405,157 acres under cultivation in 1885-86, 1,020,082 were wheat crops and 215,994 oats. In 1885-86, 723,560 gallons of wine were produced, exceeding the production of the previous year by over 250,000 gallons. Manufacturing industry has made much progress in Victoria. In 1885 the manufactories of all descriptions numbered 2,813, 1,229 of which employed steam or gas engines, with an aggregate horse-power of 20,160; the number of hands employed amounted to 47,565; and the capital invested, so far as it is represented by the value of lands, buildings, machinery, and plant, to £10,907,885. The shipping statistics of the colony

furnish additional evidence of the magnitude and value of its trade. In 1884, 3,975 vessels, of an aggregate tonnage of 3,151,587 and carrying 129,034 men, entered and cleared at Victorian ports.

Actual revenue, 1885	£6,290,361
Actual expenditure, 1885	6,140,356
Public debt, 30th June, 1886	30,127,382
Total imports, 1885	18,044,604
Imports from United Kingdom, 1885	8,946,816
Total exports, 1885	15,551,758
Exports to United Kingdom, 1885	8,159,135

Melbourne, the chief city and the seat of government, also an episcopal see, is distinguished for its University, Museum, Mint, Public Gardens, Observatory, Public Library, Hospital, and other institutions: with its suburbs it contained in 1886 365,000 inhabitants, being the most populous city in the southern hemisphere. The other important towns are Ballarat, pop. 41,110; Sandhurst, pop. 36,570; and Geelong, pop. 20,890.

The Government is vested in a Governor appointed by the Crown, aided by an Executive Ministry consisting of 12 members, and a Parliament, consisting of a Legislative Council of 42 members elected for 14 provinces, and a Legislative Assembly of 86 members for 55 districts.

Governor & Com.-in-Chief, Sir Henry Brougham Loch, K.C.B.	£10,000
Private Secretary, Capt. J. W. Traill.	
A.-de-C., Lieut. Viscount Castlerosse.	
Lieut.-Governor, Sir Wm. Foster Stawell

Agent-Gen. in London, Hon. Sir Graham Berry, K.C.M.G., 8, Victoria Chambers, Victoria Street	2,500
Secretary, J. Cashel Hoey, C.M.G.	750

SOUTH AUSTRALIA.

A Legislative Act, by Royal Letters Patent, dated 6th July, 1863, rendered this name a misnomer by extending the boundaries of the colony so as to include the entire centre of the Australian continent from north to south. Thus it extends from 11° to 38° S. lat., and from 129° to 141° E. long., comprising an area of 903,690 square miles, with an estimated population, on 31st Dec., 1885, of 313,423, exclusive of aborigines. The dryness customary to the whole of the island-continent marks the character of the climate of South Australia, the average annual rainfall, calculated on a period of forty-two consecutive years, amounting to no more than 21·3 inches. It was first colonized in 1836. The Constitution of the colony was remodelled in 1856, and the present form of government substituted. The settled portion is essentially an agricultural and pastoral province, its bread-stuffs and wool constituting three-fourths of its exports. The lands purchased from the Crown, up to Dec., 1885, amounted to 9,678,791 acres, and those held upon lease for pastoral purposes numbered 129,982,300 acres in addition. The extent of land under cultivation in 1885 was 2,785,490 acres, of which wheat alone occupied 1,942,453 acres, giving a yield of 14,621,755 bushels. Oats are not, as a rule, successful; potato growing is carried on to a considerable extent, while the culture of flax and hops is also receiving attention. In 1885 the weight of native-grown wool exported was 45,367,066 lbs., of bread-stuffs, 84,591 tons, and the value of minerals £338,132. Apples and pears grow everywhere, strawberries, and raspberries do well in the hills, and oranges in many parts; the olive-oil is considered equal to any in the world, and the grape vine thrives splendidly. Vine-culture is becoming a fast-increasing branch of industry, 473,535 gallons of wine having been made in 1884. The live-stock in 1884 numbered — horses 162,420, cattle 389,726, sheep 6,696,406. The shipping returns, too, show well, and speak of prosperity. In 1884 the arrivals amounted to—British, 768,301 tons; foreign, 141,034 tons; total, 909,335 tons. The number of vessels belonging to Port Adelaide were:—steamers, 88 (in 1875, 75), of a tonnage of 10,665; sailing vessels, 220 (in 1875, 212) of a tonnage of 27,931. The places of worship provided in 1884 numbered 928, which gave 200,123 seats; while there were 727 Sunday schools, including 6,729 teachers and 57,311 scholars. The South Australian system of education is liberal, compulsory, state-aided, and secular, and its main features are similar to those which mark the present system of England. In 1884, there were 384 government schools, and 363 private schools, with 768 and 767 teachers respectively. There are also 112 country institutes, providing libraries amounting altogether to 98,688 volumes. Bank assets, £12,148,546; funds in Savings Banks, £1,571,283. Mining operations are pursued on a very extensive scale in the colony, the mineral wealth hitherto discovered consisting chiefly of copper; the Moonta, Wallaroo, and Burra Mines being the largest. So far as it is yet known, South Australia is not rich in the precious metals, but it has immense deposits of copper and iron, and some good silver-lead mines. Gold, silver, and tin have been met with in various places, but nowhere in great abundance. The story of the copper mines may be told in a line or two. The Kapunda copper mine was dis-

covered in 1842, and is still being worked; the next year the Montacute mine was found, and in about eighteen years was worked out; in 1845 the famous Burra mines were discovered and gave employment to a large population; but the new era in the colony's history was marked by the finding of the celebrated Wallaroo mines, during 1860, in Yorke's Peninsula, which yielded enormous quantities of productive ore, and brought about the usual mania. A year or two later, the famous Moonta mine was opened; and both this and the Wallaroo, after being largely worked for more than twenty years, show no signs of exhaustion. South Australia possesses a large extent of telegraphic lines, 5,291 miles having already been made. One through the centre of Australia, 2,200 miles, joins the submarine cable to England, bringing Australia into telegraphic communication with all parts of the world. There were 1,211 miles of railway open on 30th June, and 570 more in progress. The military defence of the colony is intrusted to a small force of volunteers and a rifle association, the latter, which embraces cavalry, artillery, and infantry, being under 1,500 all told. Two land batteries, one at Glanville and the other (having some heavy armaments) at Largo Bay, have been constructed to resist attacks by sea; and there is one ironclad—the *Protector*—belonging to the colony to aid the land defences.

Public revenue, 1885	£2,309,591
Public expenditure, 1885	2,454,808
Public debt, 1885	17,020,900
Total imports, 1885	5,548,403
Total exports, 1885	9,636,255
Imports from U. Kingdom, 1885	2,781,460
Exports to U. Kingdom, 1885	3,331,087

The Government is administered by a Governor and an Executive Council of 6 members, who constitute a responsible Ministry, and are required to be members of Parliament. The Parliament consists of two houses, the Legislative Council or Upper House, and the House of Assembly. Both houses have equal powers, but money bills must originate in the lower chamber. The members of the upper house are elected for nine years (one-third retiring every three years), and must be natural born subjects of the Queen (resident in South Australia for three years) or naturalized subjects (resident in the colony for five years). A property qualification gives the right of voting for the Council, but the Assembly is elected upon a basis of manhood suffrage. The law is administered by a Chief Justice, two puisne judges, a Judge for the Northern Territory only, a Commissioner of Bankruptcy, Local Courts (presided over by fifteen stipendiary magistrates), and various benches of magistrates in different parts of the country.

CAPITAL, Adelaide. Population—3rd April, 1881 (exclusive of suburbs), 37,892. (Kensington and Norwood, 10,087 additional.)

Governor, Sir William Cleaver F. Robinson, K.C.M.G.	£5,000

Assistant do., Samuel Deering	750

QUEENSLAND.

This, the most recently organized Australian colony, situated in lat. 10° 40′—29° S. and long. 138°—153° 30′ E., comprises the whole north-eastern portion of the Australian continent. It was formerly a part of New South Wales, but was separated therefrom, and erected into a distinct colony, in December, 1859.

Its eastern seaboard was discovered by Captain Cook in 1770; some years afterwards its coast was visited by Capt. Flinders; but the first attempt to explore and settle any portion of the interior was made by Oxley, the Surveyor-General of New South Wales, who, in 1823, entered the River Brisbane, and selected the site of its future capital city of that name on a spot about 20 miles from its mouth, in Moreton Bay. The subsequent settlement of the country has followed the discoveries of a series of explorers.

Queensland proper, exclusive of New Guinea, possesses an area of 668,224 square miles (*i.e.*, equal to more than 5½ times the area of the United Kingdom), of which the Government have parted with the fee simple of 11,500,000 acres only out of the total of 427,663,360 acres, but an additional area of 316,000,000 acres has been leased out for sheep and cattle runs, large tracts of recently explored country on the borders of the eastern boundary of South Australia having been taken up and stocked during the last few years. Most of the productions of both temperate and tropical countries can be cultivated with success in Queensland. Wheat, oats, and barley flourish on the downs, and are used both for grain and also for hay and green food for cattle; while a still larger area is devoted to maize, which yields an average crop of about 25 bushels per acre. Both English and sweet potatoes are cultivated; as also are coffee, cotton, oranges, peaches, pineapples, grapes, bananas, and various English fruits. In the year 1884, 32,010 tons of sugar were produced. The chief articles of export, the produce of the Colony, in 1884 were:—Wool, £1,889,504; gold, £923,010; galena, silver, and lead, £25,866; tin, £228,457; copper, £3,014; arrowroot (302,584lbs.), £5,955; pearl and tortoise-shell, £94,152; meat, fruit, fish, and eggs, £71,016; bêche-de-mer, £18,474; rum, £6,455; raw sugar, £354,429; timber, £12,254. The climate generally may be considered sub-tropical; the summer is the rainy season, and is naturally hot, but even in winter the vegetation of Queensland is not wholly arrested. At Brisbane the average temperature is 70°; the maximum reading for 1884 was 102° and the minimum 40°, whereas the corresponding figures were 105·6° and 30·2° for Melbourne, and 110° and 35° for Adelaide. These figures go to show that the colony is also well fitted for the growth of jute and other fibre-producing plants, wine, maize, wheat, arrowroot, and tobacco—also the growth of wool, which is as yet the staple production; rich gold, copper, tin, lead, quicksilver, antimony, and coal mines are found in several districts; timber

also of fine quality for cabinet making, the Moreton Bay pine and the *Dammara robusta*, together with the Cedar of Queensland, forming valuable products for export. The hard woods (*Eucalyptica*) are especially well adapted for bridge building and for railway purposes. Some of the indigenous plants possess remarkable medicinal properties, such as the *dubosia*, used as a substitute for belladonna; the *alstonia*, the bark of which produces a valuable tonic; the *Euphorbia Drummondii*, used in cases of dysentery and low fever: and the *Euphorbia pilulifera*, or asthma herb. The broad plains afford the richest pasturage. At the end of 1884, the horses numbered 253,116, and the cattle, 4,266,172. The official returns give 9,308,911 sheep, and 51,796 pigs. The population in 1884 for this vast territory was only 309,913. The males numbered 182,442, and the females 127,471.

At the present time there are 1,407 miles of railway open, with 546 more in course of construction; the length of telegraph wires is 11,636 miles, and the number of post offices 569. In 1884 there were 425 State schools in operation, with 1,161 teachers and an average daily attendance of 27,863 children; and 96 private schools, with an average attendance of 6,107; also 7 grammar schools with 566 pupils; 38 hospitals afforded relief to 9,904 patients, and six orphan asylums maintained 899 children.

Among statistics of a miscellaneous character that testify to the vigour and prosperity of the young colony are the returns of banking deposits which, on the 30th September, 1885, were £6,915,763, apart from the £1,340,255 in the hands of the Government Savings' Banks at the end of the year.

The shipping trade of Queensland is considerable, the number of vessels entered inwards during 1884 being 1,042 (tonnage, 572,124), and the number outwards 1,061 (tonnage, 579,988). The land defence of Queensland is small, and consists mainly of a volunteer force of a little over 1,000 men. This body is formed of four batteries of artillery, a company of engineers, two infantry regiments, two coast corps, and a battalion of cadets. The marine defences, including a battery at Lytton, commanding the entrance to the Brisbane River, and some torpedo works, were carried out under the supervision of Sir W. Jervoise. The colony possesses in addition a torpedo boat and two gunboats.

Amount of public revenue in 1884-85..	£2,720,656
Amount of public expenditure, 1884-85	2,819,854
Public debt, 31st December, 1884	16,419,850
Total imports, 1884	6,381,976
Imports from United Kingdom, 1884..	2,300,276
Total exports, 1884	4,673,864
Exports to United Kingdom, 1884....	1,677,042

The contour of the Queensland coast-line and the relative position of its inland parts operate against any centralization similar to that at Melbourne, Sydney, and Adelaide; hence we find numerous ports of considerable size extending along the coast, the chief of them being Brisbane (pop. nearly 50,000), Rockhampton (about 12,000), Maryborough (11,000), Townsville (10,000), Port Douglas, Mackay, Thursday Island, Cooktown, and Bundaberg. Among other places of importance are Ipswich (8,000) and Toowoomba (6,000).

The constitution was slightly altered by an Act of 1869, but is now very similar to that of the other Australian colonies, and comprises a Governor, Legislative Council, and Assembly—the former consisting of 33 members, nominated for life by the Crown, and the latter of 57 members elected by the colonists. The administration of the law is in the hands of the Supreme Court, attached to which there is a chief justice, together with three puisne judges, and in those of the inferior courts, which are constituted as in New South Wales.

Agent-Gen. in London, Hon. Sir James F. Garrick, Q.C., K.C.M.G., 1, Westminster Chambers.
Secretary, Charles S. D cken.

[On the 4th April, 1883, New Guinea was formally taken possession of by Mr. H. M. Chester, in the name of H.M. the Queen and of the Government of Queensland, at Port Moresby, which he recommends for the seat of Government. This claim has since been set aside in consequence of the Germans having annexed the islands of New Britain, New Ireland, and many others, to which they have given the name of Bismarck Archipelago. By an arrangement with the British Government the northern half of the island of Papua has been divided between the two countries; Germany taking the northern portion, this country the south. The special Commissioner over the British part of the island is John Douglas, C.M.G. (£1,500); and the Deputy Commissioner is Hugh Romilly (£700).]

WESTERN AUSTRALIA,

formerly called the "Swan River Settlement" (from the locality of the first colony on this coast), includes all that portion of the island west of 129° E. long., the most westerly point being in 113° 15′ E. long., and from 13° 45′ to 35° 5′ S. lat. Its extreme length, therefore, is, from north to south, 1,280 miles, and 800 from east to west. It embraces an area of 978,300 square miles. A very large proportion of this is heavy timber country. The jarrah, sometimes erroneously called mahogany, a tree of the Eucalyptus tribe, covers immense tracts of land in the S.W. portion of the colony: its timber is extraordinarily durable, and as it resists the white ant and the "Teredo navalis," it is admirably adapted for railway sleepers, and for piles for bridges and harbour works. The sandalwood already affords an article of export; the tuart and karri, Eucalypti of enormous size, are valuable timber trees. The "karri," which sometimes attains the height of 300 feet, is considered to be almost equal to the "jarrah." The occupied portion of the colony extends along the western coast for about 1,200 miles, by perhaps 150 in average breadth, and on Dec. 31, 1885, had an estimated population of 35,000. The average temperature at Perth (lat. 32° S.), the capital, for

the past ten years was 65°, and rainfall for the same period 33 inches, while the mean for the barometer was 30·04 inches. The climate is, in fact, one of the healthiest and most enjoyable in the world; from the northern extremity to the southern it varies considerably, in the south being like that of England, but of a higher temperature; while in the north it is hot, but tempered by cool sea-breezes, and the atmosphere is free from the moistness characteristic of tropical climates generally. There are two seasons, the wet and the dry, the former lasting from April to September. The total rainfall at Perth during 1884 was 31·96 inches, and the average of the year for 16 meteorological stations in various parts was 28·3 inches. The colony was first settled in 1829, and for many years made but little progress, notwithstanding the salubrity of the climate, which is equal to that of any part of the Australian continent. It is, however, now gaining ground. The chief products are wool, timber, pearls and pearl-shells, lead, copper, horses, and cattle. The cultivation of the land has been much retarded by want of sufficient labour; bands of fertile soil, where sandalwood and other trees grow abundantly, and which are suitable for the culture of the vine, olive, and fig, occur in the middle districts. The climate and soil are admirably adapted for silk growing and for vintage, and there are at present 687 acres of vineyards in the colony. Good wheat-growing soils also exist over large areas in the northern division, and the produce is of good quality and yield. At present there are altogether 77,278 acres under cultivation, the average yield per acre for 1885 being:—Wheat, 11·5 bushels; barley, 14·5 bushels; oats, 14·5 bushels; maize, 12·5 bushels; potatoes, 2·5 tons; and hay 1 ton. Magnetic iron, lead, copper, and zinc ores are found in large quantities, and gold has been recently discovered in the Kimberley district in the extreme north. There are 124 miles of railway open, and large schemes for the construction of several hundred miles more on the land-grant system have been initiated and are in progress. The imports chiefly consist of sugar, tea, tobacco, spirits, beer, soap, ironmongery, clothing of various kinds, &c. The exports are of wool, jarrah and karri timber, lead, copper ore—which is exceedingly rich—whale oil, guano, sandal-wood, pearls, and pearl-shells. The estimated value of the exports for 1885 was:—Wool, £248,400; timber, £67,650; sandalwood, £36,216; pearls and pearl-shells, £58,496; lead ore, £3,255; copper ore, £1,792; horses, £10,475. The stock returns of the colony gave as follows:—Horses, 34,392; cattle, 70,408; sheep, 1,702,719; goats, 4,529; and pigs, 24,200. The shipping of W. Australia is not extensive: in 1885 the vessels entered inwards numbered 232 (tonnage, 231,761); and those outwards 229 (tonnage, 236,274). During the last decade the revenue has increased from £162,189 to £323,213, and the expenditure from £179,484 to £308,849; while the value of the imports has grown in the same period from £386,037 to £650,391, and that of the exports from £397,293 to £446,692.

Amount of public revenue, 1885	£323,213
Amount of expenditure, 1885	308,849
Public debt, 1885	1,288,100
Total imports, 1885, £650,391; exports,	446,692
Imports from United Kingdom, 1885	279,937
Exports to United Kingdom, 1885	289,902

The Government is administered by a Governor appointed by the Crown, assisted by an Executive Council of five official members, also a Legislative Council of 24, of whom 4 are official, 4 are nominated by the Crown, and the rest elected for 5 years. The whole colony forms a Bishop's See, that of Perth and the Church being under the government of Convocation, a body established in 1872, and consisting of the bishop as president, all licensed clergymen, and lay communicants elected by the various parishes. The number of clergymen is 22, four of them being missionaries from the Society for the Propagation of the Gospel, and one having a special mission to the Aborigines at Gascoyne, who number about 2,000. There is also a Roman Catholic bishopric in Western Australia. About one-half of the population belong to the Church of England and one-fourth to the various Nonconforming sects, the remaining fourth to the Roman Catholic church. The educational system is compulsory and secular; and the elementary schools, which exist all over the colony, are under the management of a central board and local district boards. There are also schools assisted by different denominations and having grants-in-aid from colonial funds, as well as a school in Perth for the higher education of boys. The total expenditure on education for 1885 was £10,244.

The principal towns in the colony are:—Perth (pop. about 10,000), on the right bank of the Swan River estuary, 12 m. from Fremantle; Fremantle (5,000); Albany and Geraldton (about 1,000 each); York, Bunbury, and Guildford (from 600 to 800 each). About one-third of the whole population is to be found in Perth and Fremantle; there are, however, smaller townships scattered throughout the colony, *e.g.*, Northampton, Busselton, Bridgetown, Pinjarra, etc.

NEW ZEALAND,

a colony in the South Pacific Ocean, consisting of three islands, generally known as the Northern, Middle, and Stewart's Islands, situate about 1,200 miles E. of New South Wales, between 34° 20′—47° 20′ S. lat. and 166° 25′—178° 35′ E. long. Portions of them were explored by Tasman, under the direction of the Dutch East India Company, in 1642, and visited at various times during the 18th

century, and in 1777 by Captain Cook. The first settlement of Europeans was made in 1814, but no colonization took place until 1839. In 1841 New Zealand was, by letters patent, erected into a separate colony distinct from New South Wales. The entire area is stated at 104,403 square miles, or 66,818,160 acres (being a little smaller than Great Britain and Ireland), of which two-thirds are fitted for agriculture and grazing. The North Island comprises about 45,687 square miles; Middle Island, 57,313; Stewart's Island, 760, with only 209 inhabitants; and an adjacent group, named the Chatham Islands, containing 377 square miles.

The population of New Zealand, as ascertained by census, March, 1886, was reckoned to be 578,482. The native population (Maoris) in 1886 was estimated at 41,432 in addition, chiefly in the Northern Island. In 1840 a treaty was concluded at Waitangi with the native chiefs, whereby the sovereignty of the islands was ceded to Great Britain, while the chiefs were guaranteed the possession of their lands, forests, &c., so long as they desired to retain them; the right of pre-emption was, however, reserved to the Crown if they wished to alienate any portion. This right has since been abolished by legislation in the colony, and large areas have been sold to private individuals by the natives. Thus New Zealand became a regular colony, and the seat of government was fixed at Auckland, but was removed to Wellington in 1865.

New Zealand in many parts is very mountainous; a mountain chain traverses the west side of the South Island, culminating in Mount Cook, 12,349 feet in height. The geographical position and physical features of these islands tend naturally to render the climate greatly varied; yet it is remarkable for its salubrity, and resembles in many respects that of Great Britain, though its atmosphere is drier and more elastic. The extremes of daily temperature vary throughout the year only by an average of 20°: London is 7° colder than the North Island and 4° colder than the South Island. The mean annual temperature of the whole colony for the different seasons is:—Spring, 55°; Summer, 63°; Autumn, 57°; and Winter, 48°. The climate, in short, is admirably adapted for raising every fruit, flower, and edible that flourishes in Great Britain. Amongst the productions most peculiar to New Zealand are the Kauri pine (found only at the northern extremity of the islands), much valued for shipbuilding, from its lightness and elasticity, the resin of this tree forming also one of its most valuable exports, Kauri gum; and the native flax, considerable quantities of which are transmitted to the United Kingdom for the manufacture of ropes. Wool is largely produced, and tallow and timber are also among the principal exports of the colony. Gold has been discovered in many districts, and a rich iron ore, in the form of ironsand, has been found in Taranaki. Coal is widely distributed, and copper is met with in several localities.

The total extent of land under all kinds of crop, and of land broken up but not under crop is 3,884,057 acres, while there are 2,666,342 acres of land in sown grass not previously ploughed. The value of the principal articles of export for the year 1884 is as follows:—Wool, £3,267,527; produce, £1,891,887; gold, £988,953; Kauri gum, £342,151; tallow, £234,829; and timber, £152,471. In the same year, the live stock was estimated at:—Sheep, 14,056,266; horned cattle, 700,000; pigs, 200,083; horses, 162,000; goats, 11,223; and fowls, geese, turkeys, and ducks, more than 1,560,000. The average yield of crops per acre throughout the colony shows the fertility of its soil, viz.:—Wheat, 25·43 bushels; oats, 34·84 b.; barley, 30·37 b.; hay, 1·41 tons; and potatoes, 5·79 tons. In March, 1885, there were nearly 1,500 miles of government railway lines in working order, and 150 miles more under construction; and the colony possesses in addition 91 miles of private lines, together with an excellent coaching system. The shipping trade is also considerable, and regular lines of steamers run between the numerous ports. During 1884 the vessels entered inwards numbered 852 (tonnage, nearly 530,000); and those entered outwards 872 (tonnage, 534,000).

Amount of public revenue, 1885	£3,859,996
Public expenditure (ordinary), 1885 ..	4,282,901
[The total expenditure in 1884, out of Loans for Public Works, was £1,778,884.]	
Gross amount of public debt, 1885....	£35,790,422
Accrued Sinking Fund.....	3,217,930
Total imports, 1885.....	7,479,921
Imports from United Kingdom, 1885	5,227,551
Total exports, 1885.....	6,819,939
Exports to United Kingdom, 1885 ..	4,906,907

The General Government consists of a Governor, aided by a Ministry, a Legislative Council appointed by the Crown for life, at present consisting of 54 members, and a House of Representatives, consisting of 94 members, elected for three years. Four members are Maories elected by the natives.

The State system of education is free and secular. There are 987 district schools, with 2,447 teachers and 97,238 scholars; there are also 265 private schools, with 12,203 scholars, and, in addition, 71 village schools for the Maories. The higher education of boys and girls in the cities and large towns is carried on in 25 endowed colleges and grammar schools. The University of New Zealand has power to confer degrees. The annual postal circulation of the colony amounts to 25,000,000 letters, 14,000,000 newspapers, 1,000,000 post-cards, and above 3,000,000 book-packets, and the work is effected by a total of 967 post-offices. The telegraph wires in operation extend to 13,294 miles. The administration of the law is carried out by a Supreme Court, having a chief justice and four puisne judges, also by district judges, resident or stipendiary magistrates, and justices of the peace.

CAPITAL, Wellington, in the North Island.

The estimated population of the chief cities and towns in March, 1886, was as follows:—Wellington (and suburbs), 27,833; Auckland (and suburbs), 57,048; Dunedin (and suburbs), 45,518; Christchurch (and suburbs), 44,688; Invercargill, 6,974; Nelson, 6,764; Oamaru, 5,791; and Napier, 5,756.

Agent-General in London, Sir F. D. Bell, K.C.M.G., 7, Westminster Chambers, S.W.

TASMANIA

is an Island in the South Pacific Ocean, off the southern extremity of Australia, from which it is separated by Bass' Straits, in which are situated the Furneaux Group and King Island, included within the colony. It lies between 39° 35′—43° 41′ S. lat. and 143° 48′—148° 30′ E. long., and contains an area of 26,215 square miles, or 16,778,000 acres of land, of which, on 31st March, 1886, 417,777 were under cultivation: wheat 30,266, barley 6,833, oats 29,247, potatoes 53,521, hay 41,693. The statistics for 1885 show that 997,384 acres were leased from the Crown principally for pastoral purposes, besides numerous islands. Agricultural land in a state of nature can be selected for purchase at £1 an acre, to be paid off in yearly instalments extending over fourteen years. The estimated population, 31st December, 1885, was 133,791, and contains representatives of all the principal religious bodies; half of them are believed to belong to the Church of England, and are under a bishop and 58 clergymen. The Roman Catholic church, to which 22 per cent. of the population belong, has also a bishop in the island; and the various Nonconforming bodies have their synods, presbyteries, and conferences as in Great Britain. The aboriginals have become quite extinct, the last, a female, "Truganini," having died in 1876. This island was first discovered by Tasman, in December, 1642, and named by him "Van Diemen's" Land, in honour of his patron, the then governor of the Dutch possessions in India. It was subsequently partially explored by Captain Cook. In 1803 Lieut. Bowen was despatched from Sydney with a few soldiers and convicts to form a penal settlement, and finally fixed upon the spot where Hobart now stands. In 1825 it was severed from New South Wales and formed into a distinct colony. Transportation of criminals was abolished in 1853, and the name officially changed from Van Diemen's Land to Tasmania. The climate is fine and salubrious, and well suited to European constitutions; it is, in fact, the healthiest of the whole Australasian group. The hot winds of Australia rarely reach the island, and are never of long duration. At Hobart Town the mean annual temperature is 54·5°, the mean summer temperature being 62°, and that of winter 47°. The thermometer rarely rises as high as 100° or falls below 29°. The average rainfall for 1884 was 24 inches. The surface of the island is mountainous and covered with forests. The chief products of the colony are wool, gold, tin, and fruit; the wool is much esteemed, and commands a high price in the English markets. Tasmanian stud sheep are in great request in the other colonies, and bring high prices. The live stock of the colony is celebrated for its general superiority, and great attention is paid to its improvement; the estimated totals on March 31, 1885, were as follows:—Sheep (and lambs), 1,720,027; cattle, 128,834; horses, 27,188; and pigs, 57,303. The wheat ranks high for its quality; the yield per acre is large, and the sample heavy. The woods of Tasmania are scarcely yet fully appreciated; the sources of supply are practically inexhaustible, abounding in the most beautiful cabinet woods and the largest-size timbers, adapted for every variety of purpose. The fauna of the colony are of special interest, and include the Tasmanian devil and native tiger, and the curious duck-billed platypus; while the wombat, the wallaby, and the opossum supply valuable skins. The mineral kingdom is also well represented, and of late great attention has been directed to its development. Mines of both lode and stream tin, of great richness, are being worked in the north-western and north-eastern portions of the colony. The value of tin exported in 1885 was £357,587. Iron-ore exists in nearly every district. Gold has been found in many places; the amount raised in 1885 was £141,319. Coal, of a good quality, and in easily accessible positions, is very generally distributed over the island. Jams and green fruit to the value of £164,986 were exported in 1885. There are in all about 257 miles of railway open, the main line running from Hobart to Launceston, through the island, and 185 miles are in course of construction. There are 135 telegraph stations, with 2,071 miles of wire; a submarine cable communicating with the Universal Telegraph System; 246 post stations, and 2,465 miles of post roads. The shipping of Tasmania is considerable, in spite of the falling off in the whaling trade. On Dec. 31, 1884, the total registered shipping for the year was 27 steamers and 175 sailing vessels, with a total tonnage of 18,284. The inward entries during 1884 were 676 (tonnage, 304,574); and the outward entries 664 (tonnage, 309,624). The present military defence is purely composed of volunteers, who number 1,016 of all ranks. On the Derwent and the Tamar batteries have been constructed, and the colony possesses one or more torpedo-boats.

Education.—Primary education is administered by a Department, under which are 204 state schools. There are 68 Exhibitions from the Primary Schools and Council of Education, tenable at superior schools; four minor scholarships of £40 a year, tenable by the senior associates of arts of the year; and eight scholarships of £200 a year each, tenable by associates of arts at some British University. Several other scholarships are at the disposal of the Council, who also conduct matriculation examinations for the Universities of London, Sydney, and Melbourne.

Amount of public revenue, 1885–86	£582,825
Amount of public expenditure, 1885–86	586,755

Public debt, 31st December, 1885 .... £3,357,000
Total imports, 1885, £1,757,480; exports 1,313,693
Imports from United Kingdom, 1885 .. 491,374
Exports to United Kingdom, 1885 304,493

The Constitution of Tasmania was settled by Local Act (18 Vict., No. 17). By this Act the Legislative Council and House of Assembly are constituted "The Parliament." The former consists of 18 members, elected for six years; and the latter of 36 members, elected for five years. The Governor, who is appointed by the Crown, is aided by a Cabinet of responsible Ministers. For local purposes the island is divided into municipal, police, and road districts, which elect their own councillors and trustees.

CAPITAL, City of Hobart. Population, 29,823. The other chief town is Launceston, pop. 18,530.

Gov., Maj. Sir G. Cumine Strahan, K.C.M.G. £5,000

FIJI ISLANDS,

a group of 225 islands in the South Pacific Ocean, 1,100 miles north of New Zealand, situated in 15° 45′—21° 10′ S. lat. and 176° E.—178° W. long., extending 300 miles from east to west, and 300 north to south, 80 of which are said to be inhabited. The gross area is calculated at 4,751,360 acres. They are of volcanic origin, with lofty mountains, and well wooded. The principal are Viti Levu (Great Fiji), and Vanua Levu (Great Land), Viti Levu about 300 miles of outline, and Vanua Levu about 400. The island of Rotumah was annexed in 1881. Vegetation is remarkably luxuriant, the chief productions being the bread-fruit tree, banana, plaintain, cocoanut, sugar-cane, and arrowroot. Cotton, sugar, pearl-shells, maize, bêche-de-mer, and copra and cocoanut oil are the chief exports. Fiji was ceded by its chiefs to the British crown, and the islands were formally annexed by Sir Hercules Robinson, on Oct. 10, 1874. Sir Arthur Gordon, the first Governor, landed in the colony in June, 1875. The Governor is appointed by the Crown, and is assisted by an Executive Council, consisting of the Colonial Secretary, Attorney-General, and Receiver-General. Laws are passed by a Legislative Council, of which the Governor is president, and which contains six official and six unofficial members, all nominated by the Crown. Native administration is carried on through the chiefs under the Governor's supervision. The European population at the end of 1884 amounted to 3,513; natives, 114,891; half castes, 791; Rotumans 2,409; East Indian and Polynesian labourers, 5,840.

Public income, 1885 ..... £76,669
Public expenditure, 1885 92,209
Debt, Grant in aid from United Kingdom 115,000
Do. Loan for Reproductive Works, &c... 150,000
Do. Suva Works..... 15,000
Total imports, 1884 (from U. K. £129,836) 434,522
Do. exports, 1884 (to U. K. £41,119) .. 345,344
Total imports, 1885 294,585
Total exports, 1885 326,750

CAPITAL, Suva, in the island of Viti Levu.

Commissioner for Lands, J. Berry..... 500
Commissioner for Native Affairs, J. Blyth 450
Agent-General for Immigration, H. Anson 400

British Possessions in the West Indies.

THE West Indies are an immense number of Islands and islets, some of them mere rocks, extending from 10° to 27° North, and from 59° 30′ to 85° West. They belong chiefly to this country, Spain, France, Holland, Denmark, Sweden, and Venezuela, the main possessions of each country being as follows:—*British:* Jamaica, Turks and Caicos Is., Trinidad, Antigua, Montserrat, Nevis, St. Christopher, Dominica, and the Virgin Isles (in the Leeward Islands), Grenada, St. Vincent, Tobago, St. Lucia (in the Windward Islands), Barbados, Bermuda; all the Bahamas, and the islands off the coast of Central America. *Spanish:* Cuba, Isle de Pinos, Porto Rico, Bicque, and Culebra. *French:* Martinique, Guadaloupe, Deseada, Marie Galanta, Les Saintes, and St. Martin (the last partly Dutch). *Dutch:* St. Eustatius, Saba, Bonaire, Curaçao, Aruba. *Danish:* Santa Cruz, St. Thomas, St. John. *Swedish:* St. Bartholomew. *Venezuelan:* Coche, Cuagua, Tortuga, and Margarita. The whole of the West Indies are divided by geographers into (1) the Bahamas, (2) the Greater Antilles, and (3) the Lesser Antilles, of which the last named is subdivided into (1) the Windward Islands, (2) the Leeward Islands, and (3) the Virgin Islands. The islands lying off the coasts of South America and Central America respectively form two separate groups in addition to those already mentioned. The total area of the West Indies is probably about 95,000 square miles, of which the Greater Antilles occupy not less than 83,000 square miles. Some of the Lesser Antilles are flat, but the prevalent character of the islands is bold and mountainous. In Cuba and Hayti the highest points are more than 8,000 feet above the sea-level, and in Jamaica there are hills almost as high. Others, too, among the smaller

islands rise to between 4,000 and 5,000 feet in height, and several of them contain active volcanoes, while nearly all of them show signs of volcanic action. The climate is strictly tropical, but the surrounding seas tend to counteract the otherwise intense heats of the torrid zone. The mean yearly temperature of the larger islands is about 78°, and that of the smaller islands a little higher. Slight frosts occasionally occur in the higher regions of Cuba, but snow is never known to fall. The seasons alternate from drought to moisture, and in most parts of the archipelago there are two wet and two dry seasons. On the whole it may be said that the climate is generally healthy between the months of November and June; during the great rains, however, many diseases, in particular various fevers, are of frequent prevalence. The vegetable productions of the West Indies are both varied and abundant, the principal articles of commerce including sugar, coffee, cotton, pimento, indigo, cocoa, medicinal drugs, tobacco, maize, and guava, ginger, arnotto, aloes, sassafras, and the castor-oil tree. Of the more common fruits there are the pineapple, pomegranate, cocoa-nut, cabbage-tree, oranges, lemons, limes, citrons, the mango, shaddock, papaw, banana, and plantain. Yams, potatoes, and manioc also grow freely. The mountains in the greater islands furnish a varied abundance of timber adapted for cabinet-work, shipbuilding, and other arts, such as mahogany, cedar, lignum-vitæ, iron-wood, Indian fig, calabash, &c. The grains of England are not grown, as a rule, in the West Indies. Indian corn yields abundant crops almost everywhere, while rice, as a profitable investment, is all but confined to the Island of Trinidad. The total population of the West Indies is nearly 4,000,000, of whom above half are negroes, while the remainder are chiefly mulattoes. The southern islands of the archipelago, at the time of their discovery, were inhabited by the Caribs, a fierce and warlike race; the northern islands, by a less savage race known as the Arrowauks. Both these native Indian races, however, have been exterminated, with the exception of a few scattered families. By far the most important of the West Indies in the possession of other countries are Cuba and Hayti. Cuba is known as the "Queen of the Antilles:" it is 750 miles from east to west, from 60 to 70 miles in average breadth, and has an area of 45,870 square miles, of which about one-seventh is under cultivation or in pasture. The population is reckoned at about 1,000,000. Hayti or San Domingo is about 400 miles long from east to west, and has an extreme breadth of 150 miles. The total area of the island is about 28,250 square miles, and the official estimate of the population—probably too high—is 800,000. The republic of San Domingo occupies the eastern part of the island, and the republic of Hayti the western part. Those of the West Indies belonging to Great Britain have an area of about 13,750 square miles, and a population of nearly 1,250,000. In the early part of this century slavery existed in all the islands. Fostered by highly protective duties, they reached a very flourishing condition, and large fortunes were made. This condition was completely artificial; and when slavery was abolished, and the protective duties repealed, an entire collapse took place, and many hitherto wealthy persons were ruined. Up to that time they had been regarded as the choicest possessions of the British Crown, and a grand outlet for commerce. Even so recently as 1845, when the total value of British and Irish produce exported to India and all the other colonies amounted to but £16,857,394, the West Indies took £2,789,211, or nearly one-fifth of the whole. In 1884 the corresponding amounts were £3,394,736 and £95,812,911, or little more than one-twenty-eighth. Since their decline they have received less attention in every way than they deserve, but are now again resuming their proper position, and it may be hoped that they will once more become prosperous. Much attention is being paid to improvements in machinery, to education, and in each of the islands to the development of its natural resources.

JAMAICA,

aboriginally Xaymaca, or Land of Wood and Water—an island situate in the Caribbean Sea, about 90 miles to the south of Cuba, within 17° 43′—18° 32′ North lat. and 76° 11′—78° 21′ W. long. It is the largest and the most valuable of the British West Indian Islands, being 144 miles in length and 49 in extreme breadth, containing an area of 4,193 square miles, and a population, in April, 1881, of 580,804, showing an increase during the previous decade of 73,650, and including whites, 14,432; coloured, 109,946; blacks, 444,186, and a number of Coolies and Chinese. The climate is healthy, in spite of the unenviable reputation it enjoys: there are two rainy seasons and two dry, and, in the plateaux, which resemble generally the South of Europe, the thermometrical readings are confined between 60° and 90°. It was discovered in May, 1494, by Columbus, who called it St. Jago. It was taken possession of by the Spaniards in 1509; but in 1655 a British expedition, sent out by Oliver Cromwell, under Penn and Venables, attacked the island, which capitulated after a trifling resistance. In 1670 it was formally ceded to England by the Treaty of Madrid. From the sea-level on all sides of Jamaica a series of ridges gradually ascend towards the central ranges, from which they radiate, dividing the large rivers, and attaining, in the culminating Western Peak of the Blue Mountains, an elevation of 7,360 feet. From these mountains at least 70 streams descend to the north and south shores, but with the ex-

ception of one (the Black River, and that only for small craft) they are not navigable. There are several excellent harbours, and the island is intersected by good roads. There are 67 miles of railway open. Telegraph stations and post-offices are established in every town and village. The number of accounts open in the savings' banks is about 14,000. Most of the staple products of tropical climates are raised, and in this direction great improvement has taken place during the last few years. Maize and Indian corn grow luxuriantly. The Guinea grass, from five to six feet in height, grows wild, and is superior to any other for pasturage, while the woods furnish an abundance of rich dye-stuffs, drugs, and spices, and the forests abound in the rarest of cabinet woods. Gold, silver, platinum, cobalt, copper, tin, and lead abound throughout the island, yet mining is now practically at a standstill, and no advance in this direction has been made since 1856. The Governor is assisted by a Privy Council not exceeding 8 members, and a Legislative Council consisting of 9 elected members, 2 nominated by the Government, and 4 *ex-officio*. The island is divided into three counties, Surrey in the east, Middlesex in the centre, and Cornwall in the west. The principal cities are Kingston, the largest port and town, pop. (1883), 40,000; Spanish Town, the seat of government, pop. over 8,000; and Port Royal, pop. about 7,000.

Public Revenue, 1884–85	£595,156
Expenditure from Income, 1884–85 ..	562,702
Expenditure from Loans	204,240
Public debt in 1885	1,427,758
Imports from United Kingdom, 1885	761,157
Exports to United Kingdom, 1885	532,971
Total imports, 1885, £1,456,373; exports	1,408,848

The chief articles of export in order of importance are:—Sugar, £307,826; rum, £234,953; tropical fruits, £181,501; coffee, £157,281; dye-woods, £155,526; pimento, £53,867; ginger, £20,168; beeswax and honey, £7,775; and cacao, £6,359. The produce of Jamaica, shipped in 1885, was as follows:—United Kingdom, 37·2 per cent.; United States, 42·2; Dominion of Canada, 5·4; other countries, 15·2.

TURKS AND CAICOS (Cayos or Keys).

These islands form part of the Bahama group, from which Government they were separated in 1848, and in 1874 were annexed to that of Jamaica; from the north-west of which they are distant about 200 miles. They have an area of about 223 square miles. The population in 1881 was 4,778, of which the principal island, Grand Cay, contains 2,000.

A Commissioner administers the affairs of the settlement, assisted by a Legislative Board.

Commissioner, Henry Moore Jackson	£500
Judge, Charles Henry Roberts	500

TRINIDAD,

the most southerly and one of the most considerable of the smaller West India Islands, lying off the north coast of the continent of S. America, between 10° 3′—10° 50′ N. lat. and 61° 39′—62° W. long., is about 55 miles in length by 40 in breadth. It comprises an area of 1,754 square miles, with a population (1881) of 153,128. The climate is healthy, and well suited to Europeans, the mean temperature during the cool season, being 76° F., and during the hot season, 79°. The island was discovered by Columbus in 1498, and was first colonized in 1588 by the Spaniards: it capitulated to the British under Abercromby in 1797. The chief town and port of entry, "Port of Spain," is one of the finest towns in the West Indies, and contains 31,858 inhabitants, the harbour being the finest in the West Indies. Other towns of importance are San Fernando (pop. 6,335), about 30 miles south of the capital, and Macaripe on the north coast. A remarkable phenomenon is the asphalte lake near the village of La Brea, 90 acres in extent, containing an almost inexhaustible supply. In 1885, 35,236 tons, valued at £41,961, were exported. The soil of the island is rich and productive, its most important products being sugar, cocoa, molasses, rum, coffee, cocoa-nuts, and pitch, in addition to various kinds of timber, and also the choicest of West Indian fruits. The chief exports during the year 1885 were as follows:—Sugar, 63,679 tons; rum, 72,525 gals.; asphalte, 35,236 tons; molasses, 2,416,761 gals.; bitters, 32,240 gals.; and cocoa, 6,129 tons. The total extent of land under cultivation is nearly 100,000 acres, or one-eleventh of the whole island, this area being distributed thus according to the assessment of 1884:—Sugar-cane, 52,150 acres; cocoa and coffee, 21,279; ground provisions, 16,986; cocoa-nuts, 2,885; and pasture-land, 6,103. Coal is found in Manzanilla, and geologists have favourably noticed the coal supplies of the island, yet no great attempts have hitherto been made to raise this mineral in any quantities. There are 51¼ miles of railway open. The island is intersected by the telegraph wires of the West India and Panama Company. Twenty steamers from Europe arrive every month, and four from the United States and Canada.

Amount of public revenue in 1885	£429,307

THE LEEWARD ISLANDS.

The Leeward Islands under British authority consist of Antigua, Montserrat, St. Christopher, Nevis, Dominica, Anguilla, and the Virgin Islands, forming part of the group of the Lesser Antilles. By Act 34 Vict. (1871), c. 107, these six previously separate colonies were formed into one. The federal colony contains 119,546 inhabitants, with a revenue of £115,664.

Antigua (and Barbuda).

The former is the most important of the Confederation, and the residence of the Governor-in-Chief. It lies in 17° 6′ N. lat. and 61° 45′ W. long., and is about 70 miles in circumference; its area being nearly 108 square miles, equal to 68,980 acres, of which nearly 20,000 are under cultivation. The population (with Barbuda) in 1881 was 34,964, including 16,147 males and 18,817 females. Chief exports, molasses, rum, sugar, tamarinds, arrowroot, and cotton.

Amount of public revenue in 1885 .....£41,957
Expenditure in 1885 39,603
Amount of public debt, 1885 15,671
Imports, 1885, £144,444; exports, 1885 .. 158,980

Principal town, St. John's. Pop. (1881), 9,636.
Pres. & Island Sec., Hon. Neale Porter, C.M.G. £350
Charles Monroe Eldridge (*acting*).
Treasurer, F. Wilde (J. Bunn, *acting*) 500

Barbuda is situated 30 miles N. of Antigua, in lat. 17° 35′ N., long. 61° 45′ W. Area, 75 square miles. Population, 813. The island is flat and fertile, producing corn, cotton, pepper, and tobacco. It is a dependency of Antigua.
Magistrate, J. B. Wilkinson.

Montserrat,

situated in 16° 42′ N. lat. and 62° 13′ W. long., 26 miles S.W. of Antigua. It is about 12 miles in length and 8 in breadth, comprising an area of 47 square miles, and at the Census in 1881 a population of 10,087. It is justly considered one of the most healthy and beautiful of the Antilles: it contains an active Souffrière and several hot springs. About two-thirds of the island are mountainous, the rest well cultivated. The lime-tree is largely grown; one company alone has a plantation of 600 acres, and annually exports about 100,000 gallons of lime-juice.

Revenue, 1885, £5,430; expenditure, 1885 £5,562
Imports, 1884, £25,598; exports, 1884 .. 32,678

The total imports of the island for 1884 were divided as follows:—United Kingdom, £8,110; British Colonies, £15,009; foreign, £2,479; and the exports thus:—United Kingdom, £13,761; British Colonies, £1,293; and foreign, £17,624. The chief town is Plymouth.
President and Treasurer, James Meade (*acting*) £300

St. Christopher's, Nevis (and Anguilla).

The former, popularly called St. Kitts, is situate in lat. 17° 18′ N. and long. 62° 48′ W., about 46 miles to the west of Antigua; it comprises an area of 68 square miles, its total length being 28 miles, and greatest breadth about five and a half miles. Population (1881), 41,001. Nevis, which is but a single mountain rising 3,200 feet above the sea, has an area of 50 square miles. Sugar, rum, and molasses are the only productions. Sulphur is found in the mountains of St. Kitts, which rise to 4,100 feet above the sea. Basseterre, on the south coast of St. Kitts, is the chief town and the seat of government, and has a population of 7,500.

Amount of public revenue in 1885 .....£55,443
Amount of expenditure in 1885..... 41,430
Public debt, 1885 1,200
Imports, 1885, £152,874; exports, 1885..
President, C. M. Eldridge (*acting*) £800
Receiver-General, W. D. Auchinleck 500

Anguilla, or Little Snake.—It is about 60 miles N.W. of St. Kitts, 16 miles in length, and varies in breadth from 3 to 1½ miles, containing an area of 35 square miles. Population, about 2,500, of whom 100 only are white. Salt, obtained from a small lake in the centre of the island, and phosphate of lime are the principal productions, besides cattle and garden stock. It forms part of the Government of St. Kitts.
Presiding Magistrate, James Louis Lake ..£220

Dominica, or Dominique,

the largest island of the Confederation, and the loftiest of the Lesser Antilles, is situate between 15° 20′—15° 45′ N. lat. and 61° 13′—61° 30′ W. long., 95 miles S. of Antigua, about 29 miles long and 16 broad, comprising an area of 275 sq. miles, or 186,436 acres, of which about 55,000 acres are cultivated, the major part being incapable of reclamation. It is very mountainous and picturesque, and abounds in rivulets well stocked with fish. It is of volcanic origin. There was a slight volcanic eruption in 1880, destroying 6 square miles of forest. Sulphur, thrown out of the souffrières, is very plentiful, and good game is abundant. Land may be purchased at about 20s. an acre. Population (1881), males, 12,867; females, 15,344. The principal productions are sugar, coffee, maize, cocoa, cotton, tobacco, molasses, rum, lime juice, fruit, and cabinet woods. The soil is good; the climate varies greatly according to the altitude: on the high lands it is excellent, but in the lowlands and the coast districts the mass of vegetable matter of various kinds keeps it unduly moist. The principal towns are Roseau (capital, on the south-west coast, and St. Joseph, on the west coast.

Amount of public revenue in 1885 .....£15,841

The Virgin Islands,

a group of islands belonging to Denmark, Spain, and Great Britain, forming a connecting link between the Greater and Lesser Antilles. They consist chiefly of a cluster of rocks. Such of the

islands as are British became so in 1666; they are—Tortola (the largest), situate in 18° 27′ N. lat. and 64° 40′ W. long., Virgin Gorda, and Anegada. The area of the British possessions is 64 square miles, and the population in 1881 was 5,500. There is good pasturage for cows, sheep, and goats. Sugar and cotton are raised in small quantities, and fishing and poultry-rearing are also carried on. A valuable mine of copper has been worked at Virgin Gorda, and it is expected that gold will ultimately be found in the neighbourhood. The capital of the group is Roadtown, a small place on the south side of Tortola.

Amount of public revenue in 1885 ..... £1,753
Amount of expenditure in 1885 1,926
Imports, 1885, £14,846; exports, 1885 14,917
President, R. H. Dyett £300

THE WINDWARD ISLANDS.

The Windward Islands of the Lesser Antilles belonging to Great Britain consist of Grenada, St. Vincent, Tobago, St. Lucia, and their dependencies, including an area of 622 square miles, with a population of about 114,000.

Gov.-in-Chief, Hon. Walter Joseph Sendall £2,500
Priv. Sec., and A.-de-C., Capt. C. F. Holder 200
Chief Clerk, G. F. West..... 300

Grenada (and the Grenadines).

Grenada is an island of volcanic origin, abounding in streams, mineral and other springs, situated between the parallels of 12° 30′—11° 58′ North latitude and 61° 20′—61° 35′ West longitude, and is about 21 miles in length and 12 miles in breadth; it has an area of 125 square miles, and is about 96 miles north of Trinidad, 68 miles S.S.W. of St. Vincent, and 100 miles S.W. of Barbados. It contains about 76,653 acres, of which about 17,000 are cultivated, and had, at the end of 1885, an estimated population (inclusive of the Grenadines) of 46,425. The country is mountainous and very picturesque. The Grand Etang, a lake on the summit of a mountain ridge about 1,740 feet above the level of the sea, and Lake Antoine, are the most remarkable natural curiosities. The climate is healthy; the death-rate, as shown in the Registrar-General's returns for 1884, was only 2·46 per cent. Grenada was discovered by Columbus in 1498, and named Ascension; he found it inhabited by Caribs. In 1650 it was purchased by Du Parquet, the Governor of Martinique, and after changing owners several times, during which period it was the scene of numerous encounters between the English and French, in 1783 it was ceded by the Treaty of Versailles to Great Britain, in whose possession it has since remained. The soil is very fertile; amongst the principal products are cocoa, cotton, spices, sugar, rum, and coffee; large quantities of fruit are also grown. The chief production of the island is, however, cocoa (or cacao), of which no less than 5,500,000 lbs. were exported during the year 1885. The value of land has greatly increased within the last few years, as evinced by the amounts paid for estates lately sold in Chancery, two of which averaged upwards of £70 per acre. The forests are rich in many valuable timbers, particularly bullet wood, locust, mahogany, white cedar, and galba; and vanilla and several varieties of gum-yielding trees have been found to be indigenous. Large numbers of turtle are also caught and exported, and whales abound, especially among the Grenadines. The imports chiefly comprise dry goods, bread-stuffs, hardware, &c.

St. George, on the south-west coast, is the chief town, and possesses a good harbour.

Amount of public revenue in 1885 ..... £56,968
Expenditure in 1885 59,418
Total imports, 1885, £138,105; exports .. 178,178

Chief Justice, Hon. John Foster Gresham .. 800
Attorney-General, Hon. H. R. Pipon Schooles 400
Treasurer, Hon. F. M. Chadwick 500
Provost-Marshal, Edward Drayton 450

The Grenadines are a chain of small islands lying between Grenada and St. Vincent (within which Governments they are included), comprising an area of 8,462 acres. The chief produce is roots and live stock: the largest island is Carriaiou.

Tobago,

the most southerly of the Windward group of islands, situate 11° 9′ N. lat. and 60° 43′ W. long., about 75 miles south-east of Grenada, 20 miles north-east of Trinidad, and 120 miles S.S.W. of Barbados, is 26 miles long and from 6 to 7½ broad, and has an area of 114 square miles, with a population (in 1881) of 18,051. Two-thirds of the island are still covered with primitive forests, comprising many varieties of hardwood and ornamental trees, and out of the 73,313 acres of total area, it is estimated that not more than 10,000 acres (including provision grounds) are under cultivation. Sugar, rum, and molasses are the chief productions; but cocoa-nuts to the value of £2,500 were shipped in 1883, and attention is now being turned to the cultivation of cocoa and coffee, for which the soil and climate are admirably adapted. This island is one of the most healthy of the West Indies. It lies almost exactly on the circle of maximum heat, and the temperature varies from 81° in February to 88° in September. The shipping trade of Tobago, which was for a long time declining, is now fast rising into importance, the returns for 1884 being:—Vessels entered, 145 (tonnage, 59,711); vessels cleared, 130 (tonnage 47,859). There are only two towns in the island, viz., Scarborough, the capital (formerly called Port Louis), and Plymouth.

St. Lucia,

the largest of the Windward group, situated in 13° 42′—14° 8′ N. lat. and 60° 52′—61° 7′ W. long., at a distance of about 90 miles W.N.W. of Barbados, and 75 miles N. of St. Vincent, is 42 miles in length and 21 at its greatest breadth: it comprises an area of 243 square miles, with an estimated population (in 1886) of over 40,000. The principal exports, together with the returns for 1884, were as follows:—Sugar, 18,976,592 lbs.; molasses, 335,900 gallons; cocoa, 498,610 lbs.; logwood, 217 tons. The chief places are Castries, the capital (pop. about 4,550), and Souffrière (pop. 2,900).

Chief Just. St. Lucia (& Tobago), Hon. J. W. Carrington, D.C.L.; J.C. Choppin (*acting*) 700
Attorney-General, P. J. K. Ferguson..... 400

ST. VINCENT,

an island about 95 miles west of Barbados, situate in 13° 10′ N. lat. and 60° 57′ W. long., is 18 miles in length and 11 in breadth, comprising an area of 140 square miles, and a population (in 1881) of 40,548. The island has been subjected to many changes in regard to ownership. In 1846 a large number of Portuguese labourers, amounting to 2,400, immigrated hither, and proved a valuable acquisition to the island. In 1861 Coolie immigration from India commenced.

The chief products are sugar, molasses, rum, arrowroot, cocoa, coffee, and cotton. Its chief imports are linen, cotton, and woollen manufactures, flour, wheat, fish, &c. The upset price of Crown lands, of which an area of 40,000 acres is still for disposal, is £1 per acre. The capital is Kingstown, on the south-west coast. (Pop. over 5,000.)

BAHAMAS,

a chain of islands lying between 21° 42′—27° 34′ N. lat. and 72° 40′—79° 5′ W. long. The group consists of about twenty inhabited, and an immense number of islets and rocks, comprising an area of about 5,794 square miles, and a population (in 1881) of 45,000, including 14,000 whites, the rest being the descendants of liberated Africans. The principal islands are: New Providence (containing the capital, Nassau), San Salvador, Abaco, Grand Bahama, Long Island, Eleuthera, Mayaguana, Harbour Island, Great Inagua, and Andros Islands. San Salvador was the first land discovered by Columbus on his voyage in 1492. In 1781 the Bahamas were surrendered to the Spanish, but at the Peace of Versailles were restored to the English. The climate is salubrious, and in the winter Nassau is frequented by many Americans. Large quantities of sponges, pineapples, tomatoes, and oranges are exported to England and the United States. The principal woods are mahogany, liguum-vitæ, mastic, iron, ebony, logwood, and satinwood; tobacco, cotton, and fibrous plants flourish. The castor-oil plant grows wild, and there is a varied abundance of fish and birds. The value of the sponge exports for 1885 is estimated at £60,000. The imports are chiefly wines, spirits, cotton, silk and worsted fabrics, hardware, and provisions.

Amount of public revenue in 1885.....£45,466
Amount of public expenditure in 1885.... 44,762
Public debt, 1885..... 90,197

BARBADOS,

the most windward of the West India Islands, is situated in 13° 4′ N., and longitude 59° 37′ W. It is nearly 21 English miles long by 15 broad at the widest part, and comprises an area of 105,470 acres, or about 166 square miles. About 100,000 acres are highly cultivated. The population by census of 1881 is returned at 171,860, being about 1,035 to the square mile. The principal exports are sugar, molasses, and rum; the imports are rice, salted meat, corn, salted fish, butter, flour, and Indian corn meal. Barbados is the headquarters of H.M. forces in the West Indies, under a major-general, who resides in the island; is a station of the West India and Panama Telegraph Company, has a railway across the island, a tramway through town and suburbs, and telephonic communication throughout the island. The deposits in the savings bank to Dec. 31, 1884, were £56,543. Besides various fire and life offices, the island has its own mutual life and fire insurance office. In 1861 a project for supplying the town with water was completed. Liberal provision is made for education, and, in addition to certain proceeds from landed property, £15,000 is annually voted, as also £6,630 to the general hospital. Unlike most of the neighbouring islands, Barbados has always remained in the possession of Great Britain. In 1885 Barbados was constituted a distinct government.

Amount of public revenue in 1885.....£145,758
Amount of public expenditure in 1885.. 146,134
Public debt, 1885 19,000
Total imports, 1885, £890,690; exports 1,003,936

The chief town and port is Bridgetown (pop. about 21,000), on the shores of an open roadstead known as Carlisle Bay; Speightstown, on the west coast, is further to the north. The government consists of a governor, aided by an executive council, a Legislative Council of nine members appointed by the Sovereign, and a House of Assembly of twenty-four members, elected yearly on the basis of a low franchise.

Exports to the West Indies in 1885.... £2,022,831
Imports from the West Indies in 1885 2,531,632

The British Empire in Africa.

THE British Empire in Africa is, for the most part, limited to the southern extremity of the continent, and consists of Cape Colony, Natal, and the British Transkei, besides various protected territories. Excluding the last named, the total area is more than 250,000 square miles, or greater than either the French or the German Empire, and almost as large as Austro-Hungary; and the aggregate population is estimated to have been (at the end of 1885) about 1,663,000. On the west, the Atlantic Ocean forms the boundary, on the east and south the Indian Ocean, while on the north it is bounded, in an easterly direction as far as 22° E. long., by the Orange or Gariop River, and thence to the coast by the Orange Free State, the Transvaal, and Zululand. The extreme limits of the whole territory may be taken as:—27° 15 to 34° 50′ S. lat. by 16° 25′ to 31° 30′ E. long. The country directly south of tne Orange River is formed by a series of terraces divided by three main mountain ranges, varying in height from 4,000 to 8,000 feet, and rising in stages from S. to N. as far as the parallel of 32° S., whence it gradually declines in a series of open, sterile plains to the river itself, the culminating point being the Spitzkop or Compass Berg, 8,500 feet above the sea-level; the passages from one terrace to another are by well-made passes through the *Kloofs*, narrow and difficult mountain gorges. One of the terraces, an inland and elevated tract, is known as the Great Karroo, and extends from east to west for 300 miles, with a breadth of 70 miles: on its surface lie shallow beds of the richest soil, which only require a regular supply of water to render them among the most productive in the world. Where streams exist the wondrous fertility of the Karroo is apparent, as also it is immediately after thunder-storms, when the whole area is covered with vegetation and teeming with animal life. The rivers of South Africa are numerous, but practically useless either for purposes of irrigation or of navigation; most of them flow in deep and precipitous ravines, and, except when swollen by the rains, are mere shallow torrents, and even the largest either have not sufficient depth of water save for the smallest craft, or have bars at their mouths which render entrance to them both difficult and dangerous. The climate is healthy, and the uniformity of the temperature causes it to be much favoured by Europeans suffering from pulmonary complaints. The mean thermometrical returns at the Royal Observatory, Capetown, showing a maximum of 72·4° and a miminum of 52·8°. The vegetation of South Africa has a peculiar and distinctive character; trees are scarce, while flowers of great variety abound everywhere. The principal native flora are heaths, proteæ, and stapelias (or carrion flowers), and dense thorny thickets of what is called *bush*, in which the most common plants are several species of aloe. The fauna is much more diversified in type and no less rich, though some at least of the native animals are either disappearing altogether, or retreating northward owing to the rapid spread of civilization. The chief are the following:—Elephant, rhinoceros, hippopotamus, lion, leopard, panther, cheetah, hyena, jackal, wolf, quagga, zebra, buffalo, antelope, ant-eater, several varieties of reptiles, many of which are very venomous, and a number of peculiar birds such as the secretary-bird, the honey-guide, the weaver bird, and the ostrich.

In 1486, Bartholomew de Diaz, a Portuguese commander, discovered the Cape of Good Hope, and eleven years afterwards Vasco de Gama doubled it. De Gama commanded the expedition sent out by King John of Portugal to verify if possible the allegations of an ocean route to India raised in the minds of some by the voyage of Diaz. The Portuguese, however, did not make any permanent settlement at the Cape, although for the succeeding century and a half it was used by their vessels, and also by those of England and Holland, as a place of call in going to and from the East Indies. In 1620, two English East India commanders landed and took possession of the peninsula in the name of James I., but nothing came of the attempt: thirty-two years later the Dutch East India Company seized the shores of Table Bay, established a defensive fort, and occupied the lands in Table Valley, chiefly in order to be always ready with supplies for their own passing ships. Until 1795 it remained in the hands of the Dutch, after which the English held it for nine years: in 1803 it was again restored to the Batavian Government;

and in 1806 it was, for the second time, occupied by the British, whose final claim to it was admitted and ratified by the Vienna Congress in 1815. From that year onwards the principal events in the history of the colony have been the following:—Kaffir wars (1819, 1835-36, 1846-47, 1851-52); introduction of British settlers, 1820; emigration of the Dutch Boers, 1837-39; extension of the boundary to the Orange and the Keiskamma rivers, 1848; grant of a regular constitution, 1853; introduction of railways, 1859; incorporation of British Kaffraria, 1865; gold and diamonds discovered, 1867; annexation of Basutoland, 1871; West Griqualand proclaimed a colony, 1871; federation of the several colonies, 1877; annexation of West Griqualand, 1879.

CAPE COLONY.

The Cape of Good Hope, strictly speaking, is a small promontory near the S.W. extremity of the continent of Africa; but the extensive colony of that name is washed by the Atlantic and Indian Oceans on the west and south, and is bounded on the north and north-east (excluding the Transkei) by the Orange, the Indwa, and the Great Kei Rivers. Including the adjoining territories in the "Transkei," it reaches in S. lat. from 28° to 34° 50′, and in E. long. from 16° 25′ to 29°. The extreme length of the colony is nearly 600 miles, the breadth 450, the coast-line nearly 1,200, and the area, including Transkei and Griqualand West, 213,636 square miles. The population of Cape Colony is estimated at the end of 1885 to have been about 1,240,000, made up of 340,000 whites and 900,000 coloured.

The Transkeian territories stretch from the Kei to Natal, and are bounded on the north by the lofty Quathlamba Mountains. Under Act of Parliament, No. 38, of 1877, and Proclamations, No. 110 of the 15th, and No. 112 of the 17th September, 1879, the following territories were annexed to the Cape Colony, viz.:—*a. Griqualand East*, comprising nine magisterial districts; *b. Fingoland* and the *Idutwa Reserve*, forming three magisterial districts, and Galekaland. Under Act 3, of 1885, and Proclamation No. 140, of Aug. 26, 1885, Tembuland (seven magisterial districts), comprising Tembuland proper, Emigrant Tembuland, and Borwana Land, was annexed to the Colony. The Territory of the *Port of St. John's*, which was purchased in 1878 from the Pondo Chief Nquiliso, was annexed in September, 1884. On the West Coast, the Territory of *Walfish Bay* was annexed to the Colony by Proclamation dated 7th August, 1884. On January 6, 1885, the High Commissioner announced that H. M. Government exercise a Protectorate over the whole coast of Pondoland. As the outcome of the Convention of London, concluded on Feb. 27, 1884, between Her Majesty and the South African Republic, it was decided by this country to establish a protectorate in Bechuanaland, in order to afford an efficient aid to two chiefs (Mankarsane and Montsioa) who were judged to have deserved well of Great Britain. Basutoland (estimated area, 10,239 sq. miles), a strip of territory lying between Cape Colony on the south and the Orange River Free State and Natal on the north and east, has recently been taken directly under British rule by request of the native tribes; and is now governed by a Resident Commissioner, acting under the direction of Her Majesty's High Commissioner for South Africa.

Generally speaking the eastern and southern portions of Cape Colony receive an abundant water supply, are well wooded, and extremely productive. The colonists at the Cape are chiefly employed in the production of wool and wine, in the rearing of horses, sheep, cattle, and ostriches, and the culture of wheat, barley, oats, &c. Ostrich-breeding is now carried on with good results. In 1884, 37,270,615 lb. (total value, £1,745,000) of wool were exported, against 37,283,291 lb. in 1870, and 23,172,785 in 1860; 233,411 lb. of ostrich feathers (total value, £966,480), compared with 28,768 lb. in 1870, and 2,287 in 1860; 4,329,355 lb. of Angora hair, against 403,153 in 1870, and 385 lb. in 1860. The colony is rich in minerals, principally gold, copper, diamonds, and manganese, the last named being found chiefly in the Paarl Division, and the copper in Namaqualand. The copper ores are of the richest kind, and yield a percentage from 32 to 35: the exports in 1884 amounted to 22,705 tons, value £405,415, against 7,300 tons in 1870. The copper mines are connected with Port Nolloth by a private railway 93 miles long. Coal is also raised of considerable value, the present annual produce being about 9,000 tons. The most valuable articles of export are diamonds, which are chiefly found in the *district* of Kimberley, of which the declared value of exports in 1883 was £2,742,470, £2,807,329 in 1884, and £2,492,755 in 1885.

The railways of the colony are the property of the Government. The lines now open for traffic represent an aggregate length of 1,603 miles. On the 30th June, 1885, the capital expended was £13,229,218, in which amount is included the money expended upon the Kimberley line; the total amount now spent (1886) on their construction and equipment is about £14,600,000. In addition to the mileage already mentioned, a line 43 miles in length, connecting Port Alfred and Grahamstown, has been constructed by a private company. The rails throughout are laid on the 3 feet 6 in. gauge. The returns for 1885 show a profit of 3½ per cent. per annum on the capital expended; and the annual number of passengers carried (1884) was 2,407,000, while the goods carried in the same year amounted to 413,000 tons. There are 4,219 miles of telegraph open, carrying 8,663 miles of telegraph wire. In 1884 the number of messages was 740,791; the revenue showed a profit of £24,926, or a percentage of 7$\frac{1}{10}$ on the capital invested. The Colonial Forces in December, 1884, consisted of Cape Mounted Riflemen (692 officers and men); Cape infantry (497 officers and men); and horse and foot volunteers (2,833 officers and men). The external trade of the colony is very considerable, and is carried on chiefly in British and Colonial vessels, as is shown by the following figures of total tonnage for the year 1884:—*Inwards*, British and Colonial, 2,517,707; foreign, 133,299. *Outwards*, British and Colonial, 2,528,621; foreign, 142,490. The colony unfortunately is absolutely destitute of natural harbours, and to supply this deficiency large sums of money, amounting in the aggregate to more than £2,145,000, have been spent in executing protective works on a massive scale. The leading

seaports are Capetown, Port Elizabeth, East London, Port Alfred, Mossel Bay, Port Nolloth, Simon's Town, Knysna, Plettenbergs Bay, and Port St. John's.

Total imports, 1884	£5,249,000
Total exports, 1884	6,945,674
Imports from United Kingdom, 1884	4,023,799
Exports to ditto, 1884	6,520,107
Actual revenue, 1884	2,949,950
Total revenue, 1884	7,532,983
Ordinary expenditure, 1884 (votes)	3,504,588
Total expenditure, 1884	5,374,982

Public debt, Dec. 31, 1884—General government, £19,658,267; Corporate bodies, £1,145,865.

The Revenue for the financial year 1884–85 is £3,321,958 (unaudited figures), and the estimate of Revenue for year ending June 30, 1886, is £3,502,601. The sum total of the estimates of expenditure for 1885–86 stands at £3,502,601.

The Government is Parliamentary or "Responsible." There is a Governor (who is also Commander-in-chief), a Legislative Council of 22 elected members, and a House of Assembly of 74 elected members; and the Executive consists of the Colonial Secretary, the Secretary for Native Affairs, the Commissioner of Public Works, the Treasurer-General (who is also premier), and the Attorney-General. On the 15th of October, 1880, by the annexation of the province of Griqualand West (extreme limits, 27° 40′—29° 35′ S. lat. and 22° 35′—25° 30′ E. long.) four fiscal divisions were added to Cape Colony proper, which is now subdivided into 66 fiscal divisions, or 70 magisterial districts.

CAPITAL, Capetown. Pop., 1875, 33,239; suburbs, 12,001; *Grahamstown*, (about) 7,000; *Port Elizabeth*, 13,049; *Kimberley*, (about) 14,000.

Gov., High Comm., and Comm. in Chief, Rt. Hon. Sir Hercules G. Rbt. Robinson, G.C.M.G.	£6,000

Buchanan (Judge President of High Ct.), £1,750 and £750 allowance; Hon. S. T. Jones, £1,500 and £500 allowance; and Hon. P. M. Laurence, £1,500 and £500 allowance.	
Agent-Gen., London, Sir C. Mills, K.C.M.G.	£1,200
Secretary, Spencer Todd, C.M.G.	600

Office, 7, Albert Mansions, Victoria Street.

NATAL.

The colony of Natal derives its name from the fact of its discovery by the celebrated Portuguese navigator, Vasco de Gama, on Christmas Day, 1497. Towards the close of the year 1837 a large body of Dutch Boers from the Cape Colony, taking offence at the restrictions placed on them by the British Government, migrated to Natal; but the Governor of the Cape took military possession of the district, and in 1843 the district of Natal was proclaimed a British colony. In 1856 it was erected into a distinct and separate colony, free from the control of the Governor of the Cape. It lies on the south-east coast of Africa, about 800 miles from the Cape of Good Hope, between 27° 15′—31° 5′ S. lat. and 29°—31° 30′ E. long., the Drakensberg Mountains forming its western boundary, separating it from the territory of the Cape Colony and the Orange River Free State. It comprises an area of about 19,000 square miles, with a seaboard of 180 miles. The population at the end of 1884 was estimated at 424,495, consisting of Europeans, 35,453; natives (Zulu-Kafirs), 361,766; Indian Coolies, 27,276. The scenery in Natal is in parts picturesque in the extreme; it is well watered, no less than 23 distinct rivers running through into the Indian Ocean, but not one of them is navigable. It has only one harbour on its coast, Durban, or Port Natal, which is completely landlocked, but a bar prevents vessels above a certain tonnage from entering. In spite of this drawback the shipping reaches a moderate amount, the returns for 1885 showing that 154 steam vessels (tonnage, 164,697), 152 sailing vessels (tonnage, 45,024), and 6 men-of-war (tonnage, 12,703) entered the harbour during the year. The coast region, extending about 15 miles inland, is highly fertile, and has a climate almost tropical, though perfectly healthy. Sugar, coffee, indigo, arrowroot, ginger, tobacco, rice, pepper, and cotton thrive amazingly, and the pineapple ripens in the open air. The midland district is more adapted for cereals and other European crops, while the upper district is chiefly grazing land, and sheep-farming is the principal occupation of the inhabitants; horses and cattle are also reared in large numbers. The live stock of Natal now (1886) includes 575,678 oxen, 43,431 horses, and 522,233 merino sheep. The chief mineral products are coal and lime. Large forests of valuable timber abound in the kloofs of all the mountain ranges, and many tracts along the coast are also well wooded. The chief exports are wool, sugar, ivory, hides, maize, angora hair, and ostrich feathers, and the several values of the quantities exported for the year 1885 were as follows:—£472,142, £144,463, £4,100, £90,571, £14,736 (including various grains), £13,542, £7,620.

The Government consists of a Governor, aided by an Executive Council and a Legislative Council of thirty members, twenty-three of them

being elected by the colonists, five are ex-officio members, and two are nominated by the Government.

PIETERMARITZBURG, the capital and seat of government, is situated about 50 miles inland from Port Natal. Population, 14,429.

Amount of public revenue in 1885....	£662,915
Amount of expenditure in 1885	774,159
Public debt, 31st December, 1885	3,762,060

Agents for the Colony in London, The Crown Agents, Downing Street, S.W.

WEST AFRICAN SETTLEMENTS.

These now consist of Sierra Leone and the settlements on the Gambia.

SIERRA LEONE.—This settlement comprises the peninsula of Sierra Leone (Lion Mountain), ceded to Great Britain in 1787 by the native chiefs; Sherbro Island, acquired in 1862, with some contiguous tracts, and a further accession of territory on the sea-coast acquired in 1882–83, extending to and including Mannah, which adjoins the negro Republic of Liberia and the Isles de Los; the whole situated between 7° 20′—8° 40′ N. lat. and 12° 20′—13° 20′ W. long., with a population, in 1881, of 60,546, of whom but 163 were resident whites, while liberated Africans and their descendants are computed to number 35,400. The inland boundaries of the colony have never been surveyed, hence it is difficult to form any accurate idea of the area, but it is estimated that no less than 3,000 sq. miles are now under British jurisdiction. The climate is humid and enervating to Europeans, and is the cause of periodical epidemics, the season from May to November being the most sickly. Tropical fruits and plants grow luxuriantly; coffee and cocoa have been introduced by the British. The exports consist chiefly of benni-seed, cocoa-nuts, ginger, ground-nuts, india-rubber, gum-copal, hides, palm-oil, palm-kernels, beeswax, and cola-nuts. The imports are chiefly ale and porter; apparel, including boots, shoes, and hats; beads, flour, and biscuits; cotton and woollen goods; cutlery, earthenware, and glassware; gunpowder and guns; haberdashery, hardware, lumber, provisions; spirits, chiefly rum and gin; tobacco and wine. The taxation consists of specific duties on wine, spirits, ale, and porter; tobacco, gunpowder, guns, and kerosine oil, and an export duty on ground-nuts, palm-oil, hides, and gum. The revenue of Sierra Leone may be said to average £65,000 annually, and is obtained principally from customs' duties: the shipping too is considerable, the total tonnage entered and cleared in 1884 being 413,000.

Amount of public revenue, 1885	£67,760
Amount of public expenditure, 1885	70,917
Public debt, 31st Dec., 1885	58,000
Total imports (settlements), 1885.....	318,505
Total exports, 1885.....	326,932

Freetown, the capital of Sierra Leone, is the seat of government, and had, in 1881, a population of 22,000. The Governor is aided by Executive and Legislative Councils, the latter consisting of 4 official and 4 non-official members.

Governor, Sir Samuel Rowe, K.C.M.G. .... £3,500 (Including personal allowance of £1,000)
Col. Sec. & Treas., Hon. T. Risely Griffith, and residence..... 800
First Assistant ditto, Capt. H. F. Richmond 400
Chief Justice, Hon. Francis Fred. Pinkett 1,500
Queen's Advocate, Legal Adviser, & Registrar-Gen., Hon. J. Kennedy Donaldson 750
Colonial Surgeon, D. Palmer Ross, M.D. .. 500
Police Magistrate, Edwin Adolphus 500
Auditor-General, J. C. Gore 600

GAMBIA.—The settlement on the river Gambia, founded in 1588, now consists of the Island of St. Mary, British Combo, Albreda, The Ceded Mile, and McCarthy's Island. It contains an area of 21 sq. miles, and a population, in 1881, of 14,150 (including 7,215 males and 6,935 females), of whom only 105 were whites. The climate is unhealthy during five months of the year, viz., from July to November, the principal diseases being malarial fevers, chiefly intermittent fever. The principal exports are beeswax, hides, and ground-nuts, the latter forming more than nine-tenths of the total exports. Rice, cotton, maize, and a kind of millet called *kous*, are produced in the countries bordering the Gambia, but not in sufficient quantities for export. The chief imports are spirits, wines, sugar, guns, gunpowder, and cotton goods. Rice is also imported to a large extent. There is an armed police force in the settlement (numbering about 100 men), which performs both civil and military duties. The principal station, Bathurst, is on the Island of St. Mary, at the mouth of the river. The Gambia River falls into the Atlantic Ocean by a large estuary, measuring, in some parts, nearly 27 miles across, but contracting to little more than two miles between Barrapoint and Bathurst Town. The annual value of the exports is reckoned at £200,000, of which nearly three-fourths is obtained for the ground-nuts, which are used for food in the colony, and sent abroad for the sake of the oil they contain.

The Government is vested in an Administrator (subordinate to the Governor of the West African Settlements), assisted by a Legislative Council.

Amount of public revenue in 1885	£20,258
Amount of public expenditure, 1885.....	26,595

There is no public debt.

Administrator, James Shaw Hay £1,300
Treasurer and Postmaster, G. T. Carter .. 700
Chief Magistrate, Francis Smith, B.L..... 600
Government Secretary, Capt. W. P. Roche. 400
Collector of Customs, Colin G. Blackburn.. 400
Queen's Advocate, J. R. Maxwell..... ... 550

GOLD COAST COLONY.

This colony comprises the coast of the Gulf of Guinea from 2° 40′ W. to 1° 10′ E. of Greenwich, extending inland to an average distance of 50 miles, calculated to include an area of 6,610 sq.

miles, and a population of over 520,000. It was formerly possessed by the Dutch as well as the British; but on 6 April, 1872, all the forts and settlements belonging to the Netherlands Government were transferred to Great Britain. In 1672 the Royal African Company, which built forts at Dixcove, Secondee, Commendah, Anamaboe, Winnebah, and Accra, was formed, succeeded in 1750 by the African Company of Merchants, which was constituted by Act of Parliament, with liberty to trade and form establishments on the West Coast of Africa between 20° N. and 20° S. lat. The settlement was in 1821 transferred to the Crown, and placed under the Government of Sierra Leone, from which it was separated on 24 July, 1874, under the title of Gold Coast Colony (including Lagos). The produce of the Gold Coast is chiefly sent to Great Britain. Gold, one of the chief exports, is found in small grains, mixed with red loam, gravel, and sometimes in quartz. Ivory, gum copal, monkey-skins, palm kernels, cotton, camwood, Guinea grains, and oil, are exported to England. This coast is of all others the region of the oil-palm, where it grows in great profusion. A very promising trade has been recently developed in rubber, the quantity shipped in 1882 being 64 cwt., in 1883, 414 cwt., and in 1884 1,552 cwt. (value, £13,139). The chief forts and settlements are Cape Coast Castle, Elmina, the former capital of the Dutch possessions, Accra, Secondee, Winnebah, Addah, Quittah, Axim, and Dixcove.

Public revenue, 1885	£183,838
Public expenditure, 1885	157,640
Imports from U.K. (includ. Lagos), 1885	504,165
Exports to U, K. (includg. Lagos), 1885	738,538
Total imports, 1885	466,424
Total exports, 1885	496,318
Governor, Wm. Brandford Griffith, C.M.G.	£3,500
Col. Sec., Capt. H. Knapp Barrow, C.M.G.	1,000
Assist. do., Frank Simpson	700
" " C. D. Turton	700

Chief Justice, Hector Wm. McLeod	1,500
Puisne Judge, John Smalman Smith	1,000
Queen's Advocate, W. H. Quayle Jones	1,000

LAGOS,

an island and port on the Slave Coast, embracing also the north coast of the Gulf of Guinea, between 2° 50′ and 4° 30′ E. long. The permanent occupation of this territory being deemed absolutely necessary for the complete suppression of the slave-trade in the Bight of Benin, and for the protection and development of its important trade (of which the town of Lagos was the seat), the treaty ceding the island to Her Majesty was, on the 6th August, 1861, signed by Docemo, the native reigning king, whereby Lagos and its dependencies, Badagry, &c., became British territory. The chief native industries are cloths, embroidered robes, grass cloths and mats, basket-work, bamboo and other kinds of furniture; while the natural products of the colony are pepper, seeds, lentils, nuts, oil, cotton, and silk. Palm-kernels, £221,634 in 1881, and palm-oil, £147,422, are the chief exports. Lagos has, within the present year, been separated from the Gold Coast, and received a constitution of its own, the new colony including Lagos Island in the centre, Badagry in the west, and Palma and Leckie to the east. The Government is vested in an Administrator (subordinate to the Governor of the Gold Coast Colony), aided by a Legislative Council. Population in 1881, 75,270, of whom 94 only were whites.

Amount of public revenue, 1883	£50,558
Amount of expenditure, 1883	37,879
Imports, 1885, £542,564; exports	614,181
Lt.-Gov., Cornelius A. Maloney, C.M.G.	£1,7000
Colonial Secretary, Frank Evans, C.M.G.	700

MAURITIUS,

an island lying in the Indian Ocean, east of Madagascar, between 57° 17′—57° 46′ E. long. and S. lat. 19° 58′—20° 32′, comprising an area of 708 square miles, without the Seychelles group, Rodrigues, Diego Garcia, and a number of other small dependencies, about 70 in number, having a superficies of 350 square miles. The resident population on 31st December, 1884, was 370,766, of whom 253,730 were Indians (the majority originally Coolies imported for working the sugar estates), and about 16,000 in dependent islands.

Mauritius was discovered in 1507 by the Portuguese, who held possession during the whole of that century. The Dutch, who were the first that made any settlement there, in 1598 named the island Mauritius, in honour of their prince, Maurice. In 1710 it was abandoned by them, but in 1715 was taken possession of by the French; it was captured in 1810, and has since remained a British possession. Port Louis, the capital, has a spacious harbour. The island produces sugar, rum, vanilla, and aloe fibre. The imports consist mainly of rice, grain, iron, wine, lead, and cotton manufactures for the Coolies, with general articles for the remainder of the population, including oxen from Madagascar, and sheep from South Africa and Australia. In 1884 there were 50 post-offices in the island, with 92 miles of railway and 92 miles of telegraph. The annual trade of the island passes almost entirely through Port Louis, and is estimated at about £6,000,000 sterling.

CAPITAL, Port Louis. Population, 64,344.

Public revenue in 1885	£730,923
Public expenditure in 1885	839,105
The total public debt, Government, Poor Law, and Municipal, in 1884	£906,278
Paper money in circulation, 1884	Rs. 3,375,111
Imports from United Kingdom, 1885	£293,781
Exports to United Kingdom, 1885	307,364

The Government is administered by a Governor, aided by an Executive Council of five officials, and a Legislative Council of twenty-seven members, eight ex-officio, nine nominated by the governor, and ten elected for the various districts into which the island is divided.

Governor and Commander-in-Chief, Sir John Pope Hennessy, K.C.M.G.	Rs. 60,000
Lieutenant-Governor & Colonial Sec., Clifford Lloyd	13,500
Com. of Forces, Colonel Wm. H. Hawley	
Receiver-General, H. N. D. Beyts, C.M.G.	12,000
Auditor-General, Thomas Elliott	9,000

Chief Judge, Hon. Eugène P. J. Leclézio	17,500
Puisne Judges, Hons. A. Mure, F. C. Williams, and John Rouillard, each	12,000
Procureur-Gen., Wm. H. Lionel Cox	13,500

The Seychelles Islands, 940 miles due north from Mauritius, and Rodrigues, 300 miles almost due east, are administered by Commissioners under the control of the Governor of Mauritius.

They are extremely fertile, and abound in natural beauty. Originally discovered by the Portuguese, they afterwards fell into the hands of the French, and finally, in 1814, were ceded to Great Britain. The principal exports from these islands are cocoa-nut oil, cocoa-nuts, Indian corn, cacao, and vacoa bags. The chief town of the Seychelles is Victoria, with a good harbour, situated in the north-east of Mahé, the largest island of the group. The population in 1881 was 14,081.

Chief Civil Comm., Geo. H. Griffiths.. Rs. 8,000
Private Secretary, Geo. Hollier Roullet
Collector of Customs, Arth. C. S. Barkly
Collector of Dues and Taxes, H. W. Estridge 3,000
District Judge, R. M. Brown..... 5,000
(And 1,000 rs. house allowance.)
Governmt. Med. Officer, Dr. Wm. Hoad 4,000

British Possessions in the Southern Atlantic.

ASCENSION,

an isolated island in the South Atlantic (3,417 m. from Plymouth, 760 from St. Helena, and 900 m. from Cape Palmas on the African coast), is of volcanic origin, one peak rising to the height of 2,870 feet, situated 7° 55′ 55″ S. lat. and 14° 25′ 5″ W. long. It is said to have been discovered by a Portuguese named Gallego, on Ascension Day, 1501—hence its name. Its extreme length is 7½ miles, and extreme breadth 6½ miles, with a circumference of 22 m., and an area of about 38 square miles, and being within the immediate influence of the S.E. trade winds, its climate is dry and salubrious. It remained uninhabited till 1815, when the English took possession of it. It now possesses a steam factory, naval and victualling yards, and a coaling dépôt. There are also excellent hospitals. Rabbits and goats abound, and a few pheasants, guinea-fowls, and partridges afford some sport. The island is visited by the sea-turtle from Christmas to Midsummer to lay their eggs in the sand; as many as fifty or even sixty are then often "turned" in one night, and taken to ponds in the town. They weigh about 700 lbs. each, and are sold at an average price of £2 10s. In 1884 there were about 5 acres of ground under cultivation, which produced 14,000 lbs. of vegetables. It is in the charge of the Board of Admiralty, by whom a naval officer is appointed as Governor, whose rule is as absolute as if on board a man-of-war. In October, 1884, the inhabitants consisted of officers, seamen, marines, and Kroomen. There are now only 200 people on the island. The chief exports are turtles and birds' eggs. The imports from the United Kingdom in 1885 were £2,232, and the exports to the United Kingdom £3,000. Georgetown is the only station, and is situated in a small bay on the N.W. coast, with a fort to protect the stores and tanks.

Officer in Charge, Capt. George Parsons, R.N. £600

TRISTAN D'ACUNHA

is the chief of a group of islands lying in lat. 37° 6′ S. and long. 12° 2′ W. These islands are of volcanic origin, and were discovered in 1506 by a Portuguese admiral, after whom they are named. The climate is mild and moist, but remarkably healthy, the mean temperature of the coast ranging from 43° to 82°. The population of the group in 1883 numbered 93; and they were well supplied, having a large number of sheep and cattle, and an abundance of potatoes. Mackerel, salmon, and mullet are caught off the rocky shores, and the ocean round is frequented by whales.

Inaccessible Island is a lofty mass of rock with a square table-land for a summit, and with sides 2 m. in length. The highest point, in the west of the island, is 1,840 feet high, and the island generally is the resort of penguins and sea-fowl.

The Nightingale Islands are three in number, of which the largest is 1 mile long, and ¾ m. wide, and rises in two peaks, 960 and 1,105 ft. above the sea-level respectively. The smaller islands, Stoltenhoff and Middle Isle, are little more than huge rocks. These islands are visited by large numbers of seals and sea-elephants.

FALKLAND ISLANDS.

These, the only considerable cluster in the South Atlantic, lie about 300 miles east of the Straits of Magellan, between 51° 15′—53° S. lat. and 57° 40′—62° W. long. They consist of East Falkland (area 3,000 sq. miles), West Falkland (2,300 sq. miles), and upwards of 100 small islands (islets, rocks, and sandbanks), comprising in the aggregate 6,500 sq. miles, and a population in 1884 of 1,553. Mount Adam, the loftiest peak in the colony, rises 2,315 feet above the level of the sea. The Falklands were discovered by Davis in 1592, and visited by Hawkins in 1594. After having successively belonged to France and Spain, they have since 1771 formed part of the British Empire. In 1820 the Republic of Buenos Aires established a settlement in these islands, which was destroyed by the Americans in 1831. In 1833 they were again taken possession of by the English for the protection of the whale-fishery, and colonized, and from that time to the present have so continued, being, as a whole, the most southerly organized colonies of the British Empire. The climate, though somewhat bleak, is usually considered healthy; and the temperature is on the whole equable, the thermometer ranging in winter from 30° to 50°, and in summer from 40° to 65°. The islands are chiefly pasture-land, and kitchen-gardens occupy the only cultivated part, the population being mainly of the farming and seafaring industries. In 1884 the live-stock was estimated at 2,770 horses, 11,569 horned cattle, 473,227 sheep, and 1,002 goats. The exports consist of oil, hides, tallow, sealskins, and wool. The amount of wool exported during 1884 was 2,536,257 lbs., valued at £84,540, while the exported tallow was worth £13,314, sheepskins, £5,686, and hides £4,242. The total tonnage of vessels entered for the same period was 33,086, and of those cleared 31,421. There are three elementary schools, attended by 155 scholars, and three places of worship (one Church of England, one Roman Catholic, and one Presbyterian). The only important settlement is Port Stanley, a free port at the head of Port William, on the coast of East Falkland.

South Georgia, an island 800 miles east-south-east of the Falkland Group, with an area of 1,570

square miles, and several other small uninhabited islands are comprised within this colony.

Amount of public revenue, 1885	£9,687
Amount of expenditure, 1885	7,807
Total imports, 1885	48,314
Total exports, 1885	97,846
Imports from the United Kingdom, 1885	26,071
Exports to the United Kingdom, 1885	98,468

The Government is vested in a Governor, aided by an Executive Council of three members and a Legislative Council, both appointed by the Crown.

Governor and Chief Justice, Thomas Kerr £1,000	
Lieut.-Governor, Arthur C. Stuart Barkly	
Colonial Sec. and Police Magistrate, E. Pakenham Brooks	450
Government Clerk, H. Jameson	200
Colonial Chaplain, Rev. E. L. Brandon, M.A.	300
Colonial Surgeons, S. Hamilton, £300; B. J. Henston, £200; and A. J. Anderson	200

ST. HELENA,

probably the best known of all the solitary islands in the world, is situated in the South Atlantic Ocean, 760 miles from the nearest land—Isle of Ascension—and 1,200 from the nearest point of the African Continent, in 15° 55′ S. lat. and 5° 42′ W. long.; it is 10½ miles long and 6½ broad, and encloses an area of 47 square miles, with a population in 1881 of 5,059, including 2,617 males and 2,442 females. It is of volcanic origin, and consists of numerous rugged mountains, the highest rising to 2,700 feet, interspersed with numerous ravines, the scenery being most picturesque. The climate vies with that of Madeira in point of salubrity and evenness of temperature. Although within the tropics, the south-east "trades" keep the temperature mild and equable; and varieties of climate may be obtained from a minimum of 74° at Longwood, 1,780 feet above the sea, to 82° on the seacoast. The lowest temperature in winter is 57°. The lowest annual rainfall between 1841 and 1848 was 19·51 inches (1845); the greatest was 90·46 inches (1842). St. Helena was discovered by the Portuguese navigator, Juan de Nova Castella, on 21st May, 1501 (St. Helena's Day), and remained unknown to other European nations until 1588, when it was sighted by Capt. Cavendish on his return from his voyage round the world. It remained uninhabited until the Dutch became possessors of it; in 1673 it was taken from the Dutch by Capt. Munden, of the English Navy, and soon afterwards the East India Company obtained a charter for its possession from Charles II., which they held until 1833 (with the exception of the period 1815 to 1821, the British Government requiring it as a residence for Napoleon Bonaparte, who died there 5th May, 1821), when it was ceded by them to the British Government. The prosperity of the island received a fatal blow by the cutting of the Suez Canal, and is now frequented only by ships on their homeward voyage from the East Indies for fresh provisions and water, which constitute, in fact, the chief trade of the island. Its strategical importance for the protection of British commerce is now recognized, and its geographical formation makes it a natural stronghold. There is one good inlet only, on the north-west of the island—St. James's Bay—possessing a good harbour, where the chief town and seat of government (Jamestown, pop. 2,500) is built. Oats, barley, root-crops, and flax are grown; and the live-stock returns for 1884 showed that the island possessed 1,444 horned cattle, 4,165 sheep, 202 horses, and 1,500 goats. Of export trade in the ordinary sense there is none; but a recent report to the Colonial Office expresses the opinion that the fisheries might be better worked with great advantage, and that productive industries might be obtained by the introduction of the English aloe, New Zealand flax, Barbados aloe, tobacco, vanilla, and Guinea grass, besides various fruits, such as the Spanish olive and the pineapple.

Amount of public revenue, 1885	£9,049
Amount of expenditure, 1885	13,099
Amount of public debt, 1884	6,750
Total imports, 1885	51,911
Total exports, 1885	11,922
Imports from the United Kingdom, 1885	24,918
Exports to the United Kingdom, 1885	2,184

The Government of the island is administered by a governor, with the aid of an Executive Council of four other members. There is no legislative council, and the Governor alone makes the ordinances.

Governor (vacant)	£900

Police Magistrate, &c., J. Heneage	429

British Possessions in Europe.

MALTA,

an island in the Mediterranean Sea, 58 miles from Sicily, and about 180 miles from Africa, about 17 miles in length and 9 in breadth, comprising, with Gozo and Comino, adjoining islands, an area of 122 square miles. It possesses one of the finest harbours in the world, with such an even depth that the largest vessels may anchor alongside the very shore, forming an admirable station for a fleet. Malta was taken possession of by Great Britain in 1800, and finally annexed by the Treaty of Paris, 1814. There is an extensive arsenal and important dockyard, Malta being the headquarters of the Mediterranean Fleet. The climate is hot in the daytime, but well tempered by the cool sea-breezes of night. During the three coldest months (Dec., Jan., Feb.) of the year the minimum temperature is 53°, and the maximum temperature is 61° F., while the hottest season (June—September) shows a minimum of 73·5° and a maximum of 82·5°. The island is highly cultivated; its principal products are cotton, corn, oranges, melons, and potatoes. The vine is grown largely for the table only, and figs and honey of good quality are plentiful. It was estimated that in 1884 the acreage in the three islands under crops was 49,376, distributed as

follows:—Gardens, 11,174 acres; wheat, 9,793; barley, 2,910; beans and other pulse, 2,748; cotton, 3,847; sesamum, 446; cumin-seeds, 1,642; pasture-land, 3,255; forage, 8,341. In 1884 the port of Valetta was entered by 5,381 vessels (tonnage, 4,517,498), while the vessels clearing from the same port numbered 5,388 (tonnage, 4,518,819). A large quantity of live stock, about 30,000 head, including 5,329 horses, mules and asses, 8,110 horned cattle, 11,150 sheep, and 6,007 goats, are also maintained on the island. Medina, the former capital of the island, now known as Citta Vecchia, is a handsome old town, and contains the ancient palace of the courts of justice, the Cathedral, and the Seminary; its rival and successor is Valetta, an important naval station, strongly fortified. The population of Malta, 31 Dec., 1885, was 157,134, exclusive of the British troops and their families, numbering 5,507 in November, 1885.

Amount of public revenue, 1885	£213,311
Amount of expenditure, 1885	226,345
Total imports, 1884 } Incorrectly stated in Govt. Total exports, 1884 } returns.	
Imports from United Kingdom, 1885	£117,333
Exports to United Kingdom, 1885	8,295

The Government is administered by a Governor, who is assisted by an Executive Council consisting of 6 members, and by a Council of Government—9 official and 8 elected members. The Governor is President in both. Malta is well provided with an educational system; in addition to the university and lyceum at Valetta, it has four infant schools, forty primary schools, and two secondary schools, to all of which the government grants, amounting in 1884 to £15,895, are given. The total number of scholars for the same year amounted to 9,294. There are also 112 private schools, attended by 2,913 scholars.

Governor & Commander of the Troops, General Sir John Lintorn Arabin Simmons, G.C.B.	£5,000
Military Sec., Sir C. Larcom, Bart., R.A.

Assist. Sec. & Clerk to Council, E. de Petri	400
Auditor-Gen. and Dir. of Contracts, Hon. George Cousin, M.D.	500
Chief Justice & Pres. of Court of Appeal, Sir Adriano Dingli, G.C.M.G., LL.D.	1,000
Crown Advocate, Giuseppe Carbone, LL.D.	600

GIBRALTAR,

a rocky promontory, 3 miles in length and ¾ of a mile in extreme breadth, and greatest elevation 1,439 feet, near the southern extremity of Spain, at the entrance to the Mediterranean, everywhere fortified by works of great strength and extent, connected on the north by a low isthmus with Andalusia, in 36° 8′ N. lat. and 5° 21′ W. long. Five and a half miles distant across the sea is the Spanish town of Algesiras, between which and Gibraltar lies the Bay of Gibraltar, called also the Bay of Algesiras, which is about 8 miles long by 5 broad, with a depth in the centre of upwards of 100 fathoms. Gibraltar was captured in 1704 by a combined Dutch and English force, under Sir George Rooke, after a vigorous bombardment, and ceded by the Treaty of Utrecht, 1713, and since that time it has remained continuously in possession of the British, notwithstanding desperate efforts on the part of France and Spain to dislodge them. Gibraltar is a free port, and stands at the foot of the promontory on the N.W. side; it enjoys the advantages of an extensive shipping trade. During the year 1884 no less than 6,146 vessels entered, with a tonnage of 4,610,629, while the number of those which cleared was 6,068 (tonnage 4,609,280). The chief sources of revenue are the port dues, the rent of the crown estate in the town, and duties on wine, spirits, and beer.

Total population in 1885 (including 5,522 military), 24,680.	
Amount of public revenue, 1885	£44,052
Amount of expenditure, 1885	47,262
Imports from United Kingdom, 1885	715,482
Exports to United Kingdom, 1885	15,832

The Governor is in command of the garrison, and exercises all the functions both of government and legislation; there is no executive or legislative council. There are 16 schools in the colony, with 1,977 scholars, excluding the military schools; all are aided by government grants.

Governor and Commander-in-Chief, General the Hon. Sir A. E. Hardinge, K.C.B.	£5,000
Colonial Secretary, Lord Gifford, V.C.	900

HELIGOLAND (Holy Land),

a small island in the North Sea, captured from Denmark in 1807, situate opposite to, and about 25 miles from, the mouths of the Elbe, the Eider, the Weser, and the Jahde, in 7° 51′ E. long. and 54° 11′ N. lat. Including Sandy Island it is about two and two-thirds of a mile in circumference, and has an area of about three-fourths of a square mile, with a population in 1881 of 2,001. In consequence of its salubrious climate it is much resorted to as a bathing-place by Germans and other continental visitors, sometimes to the number of 10,000 in the season. It is a coast-guard and rocket station. The inhabitants, who live by fishing and letting lodgings, have an unwritten language of their own, which linguists say is undoubtedly Anglo-Saxon. Lobsters to the number of nearly 30,000 are gathered annually on the rocks between June 15 and September 15: they are stored in boxes for local use, or are sent to the continent, where the average price per lb. varies from 7½*d.* to 1*s.* 6*d.* The average annual yield of the Heligoland oyster-bank, which is fished from September to March, is 130,000, the price paid for them being seven marks per thousand delivered on the island.

Revenue in 1885	£7,947
Expenditure in 1885	7,717
Public Debt, 1885	3,447
Governor, Lt.-Col. J. T. N. O'Brien, C.M.G.	£800
Government Secretary, H. Gätke	130
Police Magis., Capt. J. Campbell (*and fees*)	80
Town Clerk, K. N. Michels	90
Clergyman, Rev. H. Schrader	150
Physician, Dr. Lindeman	225

THE CHANNEL ISLANDS,

comprising the bailiwicks of Jersey and Guernsey (in the latter of which are comprehended the small islands of Alderney, Sark, and Herm, situated off the north-west coast of France, at distances of from ten to thirty miles), though not colonial possessions, are nevertheless dependencies of the British Crown. They are the only portions of the Dukedom of Normandy now belonging to England, to which they have been attached ever since the Conquest. The area altogether is about 73 square miles; and the population in 1881 was 88,806. The land under cultivation in Jersey amounts to 20,000 acres, under about 2,500 proprietors, and more than 700 varieties of flowering plants and ferns, including many species not to be found among British flora, may be obtained there. Though belonging to the British Crown, the islands have a certain independent status. The principal officer is the Lieut.-Governor, who represents Her Majesty. French is the official language of the local legislature, called the *States*, and of the Royal Court, but the old Norman dialect is still spoken by the people. The chief civil officer is the Bailiff, who presides over the *States* and over the civil Court; he is appointed by the Crown. The royal court is the judicial body, and is composed of twelve jurats elected by the people. It is divided into two tribunals, known as Le Nombre Inférieur, and Le Nombre Supérieur or the Court of Appeal. The States consist of fifty members (excluding the president), viz., the twelve jurats, twelve rectors, twelve constables, and fourteen deputies, three for St. Helier's, and one for each of the eleven country parishes. The climate of these islands is mild, and the soil exceptionally productive. An abundance of apples are grown for making cider, and the famous Alderney breed of cows has earned a well-deserved celebrity. The fisheries of Jersey are of considerable value, and include lobster, cod, and oysters. The islands being all but exempt from taxation, they possess a very large trade. The chief town of Jersey is St. Helier's, on the south side; the principal town of Guernsey is St. Pierre, on the east coast.

Imports from United Kingdom, 1885 ..	£708,692
Exports to United Kingdom, 1885.....	809,878

ISLE OF MAN (MONA),

an island of Great Britain, in the Irish Sea, in lat. 54° 3′—54° 25′ N. and long. 4° 18′—4° 47′ W., nearly equidistant from England, Scotland, and Ireland. It is about 34 miles long, and from 10 to 12 broad, containing an area of 180,000 acres, with a population of 54,089. Curiously enough, the history of the island is intimately linked with that of the Hebrides and the kingdoms of Scotland and Norway. In the ninth century a body of malcontents from Norway emigrated to the western isles of Scotland, and their prosperity drew upon them the anger of the Norwegian monarch Harold, who in the year 870 sent forth a great expedition, conquered the Orkneys and the Shetlands, the Western Isles, and Man, and added them to the kingdom already beneath his sway. For three centuries the Norwegian rule remained intact, but when, in 1263, Alexander III. defeated the famous Haco, at the Battle of Largs, all these islands fell under Scottish rule. On his accession to the English throne, Henry IV. seized on the Isle of Man, and in 1406 bestowed it on the Stanley family, by whom and by their successors, the Dukes of Athole, it was held until 1765, when parliament purchased the civil and military rights of the then duke for £70,000. Additional arrangements were made some sixty years afterwards, and since the year 1826 Great Britain has enjoyed all sovereign rights and privileges on the island. The land is rich in minerals, lead, iron, blende, and slate, and exports large quantities of agricultural produce. About 50 miles of railway have been constructed. The natives of this island belong to a mingled race of Celts and Norwegians, and the language, in which the Celtic element is predominant, is known as the Manx: it is still spoken on the island, and all laws are still promulgated in that tongue.

Man is governed by an independent Legislature called the Tynwald, consisting of two branches—the Governor and Council, and the House of Keys. CAPITAL, Castletown, pop. 2,243; but the chief town is Douglas, pop. 15,719; and other towns of some importance are Peel and Ramsey.

Foreign Countries, chiefly those with which this Nation holds intercourse by means of Ambassadors or Consuls; giving the Name of the Sovereign or Ruler of each, with Statistics of the Area, Population, Products, and Commerce; distinguishing the Amount of Trade with this Country, Names of English Ambassadors, Ministers, and Consuls, with their Salaries, also of Foreign Ambassadors and Consuls resident in London.

Many of the following Statistics have been revised specially for this Almanack by direction of the various Governments. The Editor is also indebted to some English residents at Foreign Courts, to the British Consuls abroad, and to the Foreign Ministers and Consuls in London for many particulars.

ABYSSINIA.

Ruler, Johannes II. (Kassa), *crowned* 1872.

A country of N. Africa, situated on the highlands S.W. of the Red Sea, between 80° 20′—16° 20′ N. latitude and 25° 30′—40° 30′ E. longitude, containing the sources and upper portions of the Blue Nile and Atbara rivers. Area, 129,000 square miles. It consists of a series of plateaux, with an average elevation of 5,000 to 8,000 feet, from the surface of which rise mountain groups and ranges, the loftiest point attaining an altitude of 15,200 feet. The exports consist of ivory, gold-dust, musk, and coffee. After the death of King Theodore, 13th April, 1868, the country broke up into various petty States, the chief of which are Tigre, Amhara, and Shoa, but the present Emperor has again brought them under his rule. The population numbers about 3,000,000, embracing several distinct tribes and races.

AFGHANISTAN.

Amir, Abd ur Rahman Khan, G.C.S.I., 1880.
Agent to British Government, Lt.-Col. Attaoolla Khan, 10th Bengal Lancers.

A country on the north-west frontier of India, between the parallels of 61° — 71° E. longitude and 27° — 35° N. latitude, bounded on the west and south by Persia and Baluchistan, and extending northwards beyond the Hindu Kush mountains to the Oxus, and to a boundary extending thence to the Heri Rud, which has been laid down by an Anglo-Russian Commission in 1886. The country is generally rugged and mountainous, the elevation being, with few exceptions, more than 4,000 feet above the sea. Among its mountains are the great passes, notably the Khiber, by which India has from time to time been invaded; and to this fact is due the chief importance of Afghanistan. In the 11th and 13th centuries the Afghan empires of the Sultans of Ghazni and Ghor, and in the last century that of Ahmed Shah, extended over the Punjaub. In 1838 the country was occupied by British troops, but three years later a national revolt broke out at Cabul, which resulted in the destruction of an English army, and the abandonment of the country to its native rulers. A second invasion by the English in 1879 led to the temporary occupation of Cabul and Candahar, and to the annexation to the Indian Empire of the chief passes between Afghanistan and India. In the cultivable parts of the country there are generally two crops in the year, one of wheat, barley, or lentils, the other of rice, millet, &c.; wheat, however, being the staple food. There being no roads suitable for wheeled traffic, goods are conveyed by beasts of burden, especially camels. The mineral wealth of the country is reputed great, but few mines are worked. In 1884 the exports into India were worth £252,212, and the imports £521,291. The revenue of the present Amir is reckoned at about £400,000, besides a subsidy from the Indian Government of £120,000. The area is estimated at 279,000 square miles, with a population of 4,000,000. The people, who are split up into numerous clans, are turbulent and subject to little control. The Amir is a kind of military dictator.

CAPITAL, Cabul.

ALGERIA.

Governor-General, M. Tirman.

A French province in North Africa, between Morocco and Tunis, bordering for about 630 miles upon the Mediterranean, and stretching southward into the Sahara. There are three distinct zones, viz., the fertile Tell, or maritime region; a steppe region, with shotts (salt swamps), and sebkhas, (salt-pans); and the Sahara, with its oases, portions of which lie below the level of the sea. The area is 122,910 sq. miles, the population (1881), 3,310,412, including 233,937 Frenchmen, 114,323 Spaniards, and 75,624 other Europeans. The country exports wheat and other cereals, esparto grass, olive oil, fruits and vegetables, tobacco, and raw silk. The mineral wealth is considerable, and iron, copper, quicksilver and lead mines are being worked. The live-stock (1884) included 1,104,820 head of cattle, 6,056,683 sheep, 3,168,392 goats, with about 216,000 camels, and 480,000 horses, mules, and asses. There were (December, 1884) 1,049 miles of railway. The Revenue has at no period carried the cost of administration and of an army of occupation numbering about 50,000 men.

Revenue, 1884	£913,655
Imports, 1884	8,625,792
Exports	6,111,356
Imports from the U. Kingdom, 1885	356,635
Exports to the United Kingdom, 1885	880,152

CAPITAL, Algiers. Pop. (1881), 70,747.

Consul-General, Lt.-Colonel Sir R. L. Playfair, K.C.M.G.	£1,200
Vice-Consul, George W. Crawford	150
Beni Saf—Vice-Consul, John A. Stewart	100
Bône—Vice-Consul, Abel de la Croix	150
Oran—Vice-Consul, Anthony Boozo	150
Philippeville—Vice-Consul,	

ANDORRA.

A miniature Republic in the Pyrenees, with an area of 175 sq. miles, and a population of 6,000; it is under the joint suzerainty of France and Spain. There are a Council of Twenty-four, elected by certain of the inhabitants, a judge, and two vicars (priests) appointed in turns by France and the Bishop of Urgel.

ANNAM.

Emperor, Metrieu *Prince* Chanh-Mong, also named Donc Khan, succeeded Kienphuc, 1 August, 1884.
French Resident, M. Bihourd, app. Nov., 1886.

An empire in Eastern Asia, under French

protection. It extends from 10° 30′ to 20° 30′ N. lat., and borders for about 800 miles upon the China Sea. Its inland boundaries are ill defined. Tongking bounds it on the north, and French Cochin China on the south. The area is estimated at 106,300 square miles, with about 6,000,000 inhabitants. The inhabitants are Indo-Chinese, largely mingled with Chinese in the coast districts, and speaking a monosyllabic language. The religion consists of a worship of protecting spirits, but the educated classes hold the doctrines of Confucius, and there are said to be about 400,000 native Christians. The government is carried on by native officials under a French Resident-General (at Hue), three Residents (at Binh-tuan, Kwin-hon, and Than-hoa), and six assistant Residents. The country is said to be rich in metals and coal; the forests abound in useful timber: the chief agricultural products are rice, cotton, spices, and sugar. The trade is almost exclusively in the hands of the Chinese. Annam was conquered by the Chinese in 214 B.C., but after a long struggle won its independence in 1428. The French first interfered in its affairs in the 18th century, when they helped their protégé Ghialung to the throne (1799). Massacres of native Christians repeatedly brought the French into the field since 1847. By treaties concluded in 1862 and 1867 Annam was compelled to cede to the French the southern and most productive portion of Cochin China, and by the treaty of August 31st, 1874, Tongking was virtually handed over to them, notwithstanding the protests of China. Finally, by a treaty of June, 1884, Annam was declared a French Protectorate; Tongking was ceded to France, and Hue, the capital, is now occupied by a French garrison. Military operations in Tongking have been carried on since 1882, but they have not yet led to a complete establishment of French authority.

The Revenue of Annam and Tongking was estimated at £560,000 in 1886, the expenditure at £1,760,000. The French army of occupation numbers 12,000 men.

ARABIA,

a huge peninsula of S.W. Asia, bounded by the Gulf of Persia, the Indian Ocean, and the Red Sea, and having an area of 1,219,000 square miles, with a population roughly estimated at five million souls. The littoral region (Tehama) is a barren, sandy plain, but mountains with fertile valleys rise at some distance inland; and although the greater part of the interior plateau consists of sandy wastes, there are also met with large tracts which afford fine pasturage during the rainy season. The climate is healthy. The population is wholly Semitic, but whilst the north is occupied by Arabs and Ismaelites, the south is still held by Joctanides (the Himyarites of the Ancients), who speak a language of their own. The inhabitants are either Bedouins (Bedawi) or "wanderers," or "Hadesi," settled in towns and villages. With the exception of a few Jews, they are Mohammedans. The country is famous for its horses, camels, asses, and mules. Cattle, goats, and sheep are kept by the pastoral tribes. Millet is t e principal grain cultivated, but coffee is the product for which Arabia is most famous. Arabia has at no time formed a political unit, and in the present day it is divided among several powers. *Turkey* claims possession of the maritime district El Hasa, on the Gulf of Persia, and of the vilayets of Hejaz and Yemen on the Red Sea. Mecca and Medina, the sacred cities of the Mohammedans, and the seaport of Jedda, are in Hejaz; whilst Sana and the ports of Hodeida and Mokha are the principal places in Yemen. *Egypt* holds the Sinai Peninsula and the old Land of Midian, stretching southward from the Gulf of Akaba. *England*, besides occupying the stronghold of Aden and the island of Perim, at the mouth of the Red Sea, owns the Kurian Murian Islands on the south coast, and Kamaran Island in the Red Sea. The only independent native states of importance are Oman, with Muscat for its capital, in the south-east; and Jebel Shammer (capital Hail) and Nejd, the country of the Wahabis, in the interior. Hadhramaut, on the south coast, is split up into numerous little states or principalities.

ARGENTINE REPUBLIC.

President, Dr. Miguel Juarez Celman, elected 12th October, 1886, for six years.
Vice-President, Dr. Carlos Pellegrini, elected 12th October, 1886, for six years.
Minister of Foreign Affairs, Dr. Norberto Quirno Costa.
Minister in London, Don Luis L. Dominguez, 16, Kensington Palace Gardens, W.
Secretary of Legation, Florencio L. Dominguez.
Attaché, D. Severo Ygarzabal.
Do., D. Luis H. Dominguez.
Consul-General, Alexr. Paz, 19, Gloucester Pl., W.
Consul, A. Lumb, 16, Bishopsgate Street Without.

The Republic is composed of 14 provinces and 8 territories, with a large seaboard on the east coast of South America. It is estimated to contain 1,095,013 square miles, with a population, in 1882, of 3,026,000. By the treaty of 23rd July, 1881, with Chili, Terra del Fuego has been divided between these two republics. The country was discovered in 1517, and settled by the Spaniards in 1535. The principal productions are wool, hides, flax, sugar, maize, wheat, and tobacco. The other products are cotton, cochineal, Paraguay tea, and excellent European and indigenous fruits. The mineral products are copper, silver, coal, salt, alum, sulphur, and gold. The export of frozen sheep to Europe is becoming of great importance; there are at present 3 factories in working operation. The chief articles of export are wool, £7,190,020; hides, £2,600,000; sheepskins, £1,598,037; tallow, £1,000,000; live animals, £513,942; maize, £791,438; wheat, £627,947; flax, £691,261; salted meat, £840,815. The principal imports from the United Kingdom are machinery, hardware, and cotton, woollen, and linen goods. The number of steamers arrived at the ports of the Argentine Republic during the year 1885 was 15,740.

In 1886 there were 4,150 miles of railways in working order, which connect the principal cities of the Republic with the capital. Immigration is encouraged, the arrivals reaching 100,000 every year, most of them Italians, Spaniards, and French.

Letters despatched by the P.O. in 1885 20,050,000
Printed matter 15,425,000
Telegraphs, length of government lines, 7,000 miles.
Inland telegrams despatched in 1885 .. 658,461

The Argentine Republic is connected by cable with all the cities in the world. The Army consists of about 7,400 men, in addition to the National Guard of about 350,000. The military school has 150 cadets, and the school for non-commissioned officers, 120. Navy: 27 vessels, including 3 ironclads and 6 torpedo launches. The naval school has 60 cadets, and the school of gunners, 80. Public instruction is much developed: there are 2 universities, 2 schools of engineering, 2 colleges of agriculture, 15 normal schools for women, and 6 for men. There are 3,253 elementary schools and 15 lyceums. The climate of the Argentine Republic is temperate and very healthy.

Public revenue in 1885	£7,836,955
Public expen., including £1,681,400 for interest on the External Debt	8,400,000
Public debt, 31st March, 1886	24,226,404
Imports and exports in 1885	32,417,200
Imports from United Kingdom, 1885	7,075,125
Exports to United Kingdom in 1885	2,563,268

CAPITAL, Buenos Aires. Pop., 1886, 398,496.

AUSTRO-HUNGARIAN EMPIRE.

Reigning Sovereign, Francis Joseph I., Emperor of Austria, King of Hungary and Bohemia, *born* 18 August, 1830; *suc.* 2 Dec., 1848; *married* April 24, 1854, Elisabeth, daughter of Maximilian Joseph, Duke in Bavaria.

Heir Apparent, Archduke Rudolph, Prince Imperial, *born* 21 Aug., 1858; *mar.* 10 May, 1881, Princess Stéphanie of Belgium, *born* 21 May, 1864.

[There are three Ministries for the *whole* Empire, those of Foreign Affairs, Finance, and War.]

Minister of Foreign Affairs, Count G. Kálnoky.

Finance, Von Kallay.

War, Count A. Bylandt-Rheydt.

Ambassador in London, Count Károlyi, 18, Belgrave Square.

Councillor, Von Hengelmüller-Hengervár.

Secretary, Count Henry Lützow.

Hon. Secretary, Count Fr. Lützow.

Attachés, Count Bolesta-Koziebrodski, Count Paul Esterházy, Count Ch. Kinsky.

Hon. Attachés, Count W. Kaunitz, Chev. de Krapf-Liverhoff.

Naval and Military Attaché, Capt. von Bousquet.

Chancellor, Baron Vesque von Püttlingen.

Consul-General, Baron Alfred de Rothschild.

Deputy Consul-General and Director of the Commercial Department, Chevalier Krapf-Liverhoff.

Vice-Consul, Baron A. Pereira.

Office, 11, Queen Victoria Street.

The largest State, next to Russia, on the continent of Europe, situated between 42°—51° N. lat. and 9° 30′—26° 20′ E. long. It embraces an area of 261,649 English square miles, and a population (1880) of about 39,206,045, consisting of the following nationalities, viz.:—Austria proper, 115,914 sq. miles, population, 22,144,244; Hungary, 125,557 sq. miles, pop. 15,725,710; Bosnia and Herzegovina, 20,177 sq. miles, pop. 1,336,091. Among this total population there are about 18,126,000 Slavs, 9,951,000 Germans, 6,422,000 Magyars, and 2,592,000 Roumanians. According to Religion, there are nearly 30,000,000 Roman Catholics, 3,616,000 Protestants, 3,500,000 Greeks and Armenians, 1,648,000 Jews, and 493,000 Mohammedans. The Empire—the official denomination of which is now Oesterreichisch-ungarische Monarchie (the Austro-Hungarian Monarchy)—is divided into the Austrian State and the Hungarian State, each having its own Parliament, Ministry, and Administration.

The lands of the Austrian Crown are—Lower Austria, Upper Austria, Salzburg, Styria, Carinthia, Carniola, Coast-Districts (Görz, Istria, Gradisca, and Trieste), the Tyrol and Vorarlberg, Bohemia, Moravia, Silesia, Galicia, Bukowina, and Dalmatia. The lands of the Hungarian Crown embrace Hungary, Transylvania, Fiume, Croatia, and Slavonia. The soil produces grain of all kinds, potatoes, beetroot, and wine. Austria ranks next to France, Italy, and Spain as a wine-growing country (1884: 173,480,912 gallons, of which 97,050,602 in Hungary); but from its inland position and other causes the wines are little known in this country: 130,857,982 cwt. of beet-sugar were manufactured in 1884. Industry is almost wholly confined to the western half of the monarchy, and more especially to Vienna, Bohemia, Moravia, and Silesia. Styria is the great centre of the iron-trade, Brünn is famed for its woollens, Reichenberg for woollens and cottons, Trautenau for linen, Bohemia for glass, and Vienna and Pilsen for lagerbeer. The mineral riches are very great, comprising gold, silver, copper, iron, quicksilver, lead, tin, zinc, coal (1884: 19,000,000 tons). The Empire possesses a powerful army, amounting, on the peace footing, to 268,556 men, with 17,867 officers; and the war establishment, including a Landwehr of 265,164 men, &c., consists of 1,044,319 men and 32,785 officers, with 1,592 field guns. Military service is compulsory on all. The navy consists of 87 vessels, of which 12 are ironclads, 7 torpedo vessels, and 38 torpedo boats.

Pola is the great naval arsenal.

The imports amounted (1884) to £61,303,300, the exports to £68,734,590.

The imports included raw cotton, £4,911,200; wool, £3,865,700; grain, £3,617,740; woollen yarns and manufactures, £3,208,330; cotton yarns and manufactures, £2,799,700; tobacco, £2,790,000; coffee, £2,574,000; hides and skins, £2,029,000; silk, £1,739,000; flax, hemp, and jute, £1,682,100; machinery, live animals, leather and leather wares, silks, dyestuffs, &c.

About one-half of the exports consists of agricultural produce. Some of the principal articles were grain and flour, £6,902,800; timber, £6,024,000; sugar, £6,043,800; fancy wares, £4,694,700; live animals, £4,273,200; wool, £2,149,300; woollen stuffs, £2,609,300; glass, £2,123,200; leather and leather wares, £2,008,300; wooden ware, £1,703,300; silks, £1,183,600; wines, £1,067,000; cottons, £854,400. Commerce is carried on principally with Germany, Italy, Roumania, and Russia, and through the free ports of Trieste and Fiume also direct with the transmarine world, including England. In 1886, 14,301 miles of railway were open for traffic. The commercial marine, including fishing smacks, consisted (1885) of 9,206 vessels with a burthen of 324,458 tons.

Duality extends to the annual budgets. To-

wards the common expenses Austria contributes to the extent of 68·6 per cent.; Hungary, to that of 31·4 per cent. These common expenses are estimated for 1887 at £11,833,102.

Each of the two countries has a separate Parliament and a separate Ministry; that of Austria is:

President and Interior, Count Edward Taaffe.
Finance, Dr. J. Dunajewski.
Defence, Count S. von Welsersheimb.

That for Hungary:

President and Interior, C. Tisza.
Finance, Count Szapáry
Defence, Baron Fejérváry.

Austria, Revenue, 1887	£49,576,098
,, Expenditure, 1887	51,174,083

Trieste—Cons., Capt. Sir R. F. Burton, K.C.M.G.	700

Austria is charged with the administration of the Turkish Provinces of Bosnia and the Herzegovina. These are situated between 42° 40′ to 40° 15′ N. lat. and 33° 22′ to 38° 45′ E. long. The Austrian garrison consists of 12,000 men, with a native gendarmerie of 2,000. An entirely Austrian administration has been established. The local Revenue (1886: £832,833) suffices for the cost of administration, but not for the maintenance of the army of occupation.

CAPITAL, Serayevo (Bosna-Serai). Pop., 25,000.
British Consul, Edward B. Freeman £700

BALUCHISTAN.

Khan, Mír Khodádal Khán, 1856.

Bounded by Afghanistan, Persia, the Arabian Sea, and the Sind frontier of India, Baluchistan has an area of about 106,000 sq. miles. The country is poor, but the trade is not unimportant. The population is about 500,000, and the Khan's revenue is not more than £30,000; in addition to which he receives, under the treaty of 1876, a subsidy of 100,000 Rs. from the British Government. Besides affording protection to merchants in his territories, the Khan is bound to oppose to his utmost all the enemies of the British Government, and to have no relations with other foreign States. Another clause of the treaty permits British troops to occupy such positions in his territory as may be thought advisable by the British authorities. Under this clause Quettah, which commands the Bolán Pass, was occupied in 1876, and British troops are still quartered there.

CAPITAL, Khelát (Kalat).
Agent to the Governor-General of India, Col. Sir Oliver B. C. St. John, R.E., K.C.S.I.

BELGIUM.

King, Leopold II., *born* 9 April, 1835; *suc.* 10 Dec., 1865; *mar.* 22 August, 1853, Marie Henriette, daughter of the late Archduke Joseph of Austria, *b.* 23rd Aug., 1836; issue three daughters.
Heir Presumptive, his brother Philippe, Count of Flanders, *born* 24 March, 1837; *mar.* 25 April, 1867, Princess Marie of Hohenzollern-Sigmaringen; issue two sons and two daughters.
Minister of Finance and Presid., A. Beernaert.
Foreign Affairs, Prince de Caraman-Chimay.
Interior and Public Instruction, J. Thonissen.
Agriculture Indust. & Works, Chev. A. de Moreau.
Minister in London, Baron Henri Solvyns, 36, Grosvenor Gardens, S.W.
Councillor, Count G. Errembault de Dudzeele.
First Secretary, Count Warner van den Steen de Jehay, 6, Harley Gardens.
Attaché, F. Hanon.
Consul-Gen., François H. Lenders, 118, Bishopsgate Street Within, E.C.
Vice-Consul, H. de Grelle, 130, London Wall, E.C.
Consul at Dover, W. Crundall.

A kingdom of Central Europe, anciently inhabited by the Belgæ (a Celtic-speaking German tribe), and part of the *Gallia Belgica* of the Romans. It enjoyed a period of high prosperity under the Emperor Charles V. In 1815, the country was joined to the kingdom of the Netherlands, an arrangement which was upset by a coalition of clericals and liberals. On Oct. 4, 1830, a National Congress proclaimed Belgian independence, and on June 4, 1831, Prince Leopold of Saxe-Coburg was chosen hereditary king.

Belgium extends from the North Sea and the mouth of the Scheldt to the German frontier, and is bounded on the north by the Netherlands, in the south by France. The Meuse and its tributary the Sambre divide it into two distinct regions, that in the west being generally level and fertile, whilst the tableland of the Ardennes, in the east, has for the most part a poor soil.

Belgium has an area of 11,373 square miles, about equal to the four counties of Hertford, Lancashire, York, and Lincoln; its great harbour and commercial *entrepôt* is Antwerp, a strongly fortified city on the Scheldt. On the south the French frontier extends 184 miles; on the north, the Dutch, 168 miles; on the east, Germany, 59 miles; Luxemburg, Grand Duchy, 80 miles; and a sea coast of 41 miles with the one harbour at Ostend.

The 'polders' near the coast, which are protected by dikes against floods, cover an area of 193 square miles. The highest hill, Baraque Michel, rises to a height of 2,230 feet, and the mean elevation of the whole country does not exceed 536 feet. The principal rivers are the Scheldt (Escaut) and the Maas (Meuse). Brussels has a mean temperature of 50° F. (summer 63°, winter 37°).

The population was 5,784,948 (December, 1884). It is consequently one of the most densely peopled countries of the world. It is divided into nine provinces, namely, Antwerp, Brabant, East and West Flanders, Hainaut, Liége, Limburg, Luxemburg, and Namur. BRUSSELS (403,389) is the capital. Other towns with over 100,000 inhabitants are Antwerp, the chief port (191,124), Ghent (140,926), and Liége (133,044).

The population increases annually at the rate of 1·2 per cent. (1880–84). Immigration and

emigration nearly balance each other (1841–84 423,277 emigrants, 407,782 immigrants), and since 1870 there has been an excess of immigrants. There are 1,002 females to every 1,000 males; and annually 30 births and 25 deaths to every 1,000 inhabitants.

French is the official language and that of the upper classes, although Flemish is spoken by the majority, and preponderates in those parts of the country which have played the leading part in history, more especially in Flanders and Brabant, including Antwerp. In 1880 45 per cent. spoke Flemish, 40 per cent. French, 8 per cent. both Flemish and French. Nearly all the inhabitants are at least nominally Roman Catholics, and in 1880 there existed 1,259 convents, inhabited by 4,027 monks and 20,545 nuns. Education can hardly be said to be in a satisfactory condition, for in 1880 32 out of every hundred inhabitants of 15 years of age and upwards were unable to read; and of the recruits levied in 1883, 15 per cent. were in a similar condition. There are four universities—Ghent, Liége, Brussels, and Louvain—with (1884) 5,564 students, besides a famous Academy of Art at Antwerp, a Conservatoire of Music at Brussels, and numerous technical schools.

Belgium is essentially a manufacturing country, for although agriculture is carried on with much industry it is largely dependent upon foreign supplies for its food. The soil is divided (1883) among 1,164,874 proprietors. Of the total area 58 per cent. are under cultivation, 13 per cent. consists of meadows and pastures, 17 per cent. of forest. Rye, wheat, oats, potatoes, turnips, green crops, flax, and beetroot are the principal crops cultivated. In 1880, there were 271,974 horses, 1,382,815 cattle, 365,450 sheep, and 646,375 pigs. The mineral kingdom yields coal (1883, 18,177,754 tons), iron, zinc, lead, and copper. The leading manufactures are firearms (Liége), machinery (Seraing), iron and steel, glass (Charleroi), woollens (Verviers), cottons and linen (Ghent), lace (Brussels, Mechlin, and Bruges), hosiery (Tournai), beetsugar (Hainaut), paper, beer. The exports, in addition to these manufactures, include also corn, butter, eggs, vegetables, coal, building-stones, hides, tallow, and rabbits. The imports of merchandize were valued in 1884 at £110,020,640, the exports at £106,257,220. This includes the transit trade, the imports for home consumption only amounting to £56,577,180, the exports of home produce to £53,086,400. France, Germany, and England take the lead in this foreign commerce. The exports to the United Kingdom in 1884 were valued at £15,146,175, the chief articles being—

Cotton manufs.	£513,826	Iron manufactures	£630,713
Eggs	251,707,320	Lace	287,790
Articles of food	1,135,789	Linen yarn & mfs.	354,655
Clocks & watches	586,693	Metals and ores	280,131
Flax	936,933	Silk and manufs.	1,840,786
Glass	786,713	Sugar	478,328

Hides & leather	373,643	Woollen manufs.	1,432,933
Hops	394,469		

The imports of British produce and manufacture amounted to £8,500,703, and included—

Apparel of all kinds	£236,554	Machinery	£662,828
Coals, &c.	203,109	Leather & manufs.	289,716
Cotton yarn & mfs.	2,156,414	Metals & hardware	541,791
Linen yarn & mfs.	273,241	Woollen yarn & mf.	1,546,133

The value of foreign and colonial goods exported to Belgium included raw cotton, £1,077,003; wool, £2,937,524; coffee, £224,350. Most of the maritime trade of Belgium is carried on in foreign bottoms, the mercantile marine only consisting (1884) of 64 vessels (51 steamers), 80,592 tons, in addition to which there were 305 fishing boats. In 1885 there were 2,711 miles of railway (1,931 miles being the property of the state); the telegraphs had a length of 3,724 miles, and the post-office carried 267 millions of letters, post-cards, &c. The navigable rivers have a length of 684 miles, the canals of 560 miles.

The Belgian constitution of 1831 jointly vests the legislative power in the King, the Senate, and the Chamber of Representatives. The 69 senators and 138 representatives are elected by the people, the former for 8, the latter for 4 years; the franchise is limited to persons paying annually 42 frcs. (33*s.*) in direct taxes, and the united constituencies only numbered 126,419 voters in 1885. There are in addition representative Provincial and Communal Councils, elected on a somewhat more liberal franchise.

The army, on a peace-footing, consists of 58 battalions, 8 regiments of cavalry, 82 batteries, &c., and numbers 47,734 men: on a war footing it is raised to 114,407. It is recruited by conscription, the term of service being ten years, of which from two to four are passed with the colours. Exemption can be purchased for £72. There is also a *Garde civique* of 35,000 men. Antwerp is the principal fortress. Belgium has neither a navy nor colonies, but the King of the Belgians is at the same time "Sovereign" of the Congo State.

Public revenue, Budget, 1886	£12,815,997
Public expenditure, Budget, 1886	12,760,404
Public debt, 1886, of all kinds	84,092,855

BOKHARA.

Amir, Seid Abdul Ahad, succeeded 12 Nov. 1885.

Once the most famous State in all Central Asia, but since the capture of Samarkand by the Russians, in May, 1868, scarcely more than a vassal-state of Russia. Bokhara, inclusive of its tributary territories of Shignan, Roshan, and Karategin, has an area of 92,300 square miles, with a population of 2,130,000. The Uzbegs, of Turkish extraction, are the dominant race, but the Aryan Tajiks are the aboriginal inhabitants of the country. Slavery has been abolished through the influence of Russia. The country produces corn and fruit, cotton, silk, wine, tobacco, and hemp. Sheep, horses, goats, and camels are numerous; gold, salt, alum, sulphur, and coal are among the mineral productions. The Amu-Darya, which runs along the southern frontier of the country, is now navigated by Russian steamers, and a railway from Merv to the Oxus has been completed, and is to be extended through Bokhara to Samarkand. The capital, Bokhara, has 70,000 inhabitants.

BOLIVIA, OR UPPER PERU, REPUBLIC OF.

President, Don Gregorio Pacheco, *proc.* 1 Aug., 1884.
Minister for Foreign Affairs, J. Oblitas.
Consul-General in London, José Maria Artola.
Consul,

The only State of South America without a seaboard, Autofagasta having been ceded to Chile in 1884. It was formerly comprised in the Spanish Viceroyalty of Columbia under the name of "Peru," and derives its present name from its great liberator, Simon Bolivar. It extends between lat. 8° to 23° S. and long. 57° 30′ to 73° W., and occupies an area of 472,000 square miles. Its population is estimated at about 2,300,000. In the war against Chile, 1879, it equipped an army of about 6,000 men. The mineral productions are very valuable: the silver mines of Potosi are believed to be almost inexhaustible, while gold, partly dug and partly washed, is obtained on the eastern Cordillera of the Andes: copper, lead, tin, salt, and sulphur are also found. Its agricultural produce consists chiefly of rice, barley, oats, maize, cotton, cocoa, indigo, potatoes, the choicest fruits, cinchona bark, medicinal herbs, &c., which are also its principal exports; its chief imports being iron, hardware, and silks. A railway connects La Paz (26,000) with Aygacha, on the Lake of Titicaca.

Public revenue, 1880–81	£687,657
Public expenditure, 1880–81	652,227
Public debt, 1881 (inc. railway debt)	4,385,000

CAPITAL, Sucre. Population, 12,000.

BRAZIL, EMPIRE OF.

Emperor, Dom Pedro II., *born* 2 Dec., 1825; *suc.* 7 April, 1831; *mar.* 4 Sept., 1843, Theresa, daughter of Francis I., late King of Naples.
Heiress Presumptive, Dona Isabel, *b.* 29 July, 1846; *m.* 15 Oct., 1864, to Louis d'Orléans, Comte d'Eu, and has issue three sons.
Prime Minister and Minister of Foreign Affairs, Baron de Cotegipe.
Finance, Francisco Belisario Soares de Sousa.
Minister in London, Baron de Penedo, 32, Grosvenor Gardens.
Secretary, Pedro de Araujo Beltrao, Granville Chambers, Granville Place, Portman Square.
Attachés, Chevaliers Vianna de Lima, Ade Carvalho Moreira, H. de Miranda, and Du Silva Prado.
Consul-General in London, Baron de Ibiramirim, 6, Great Winchester Street Buildings.
Do. in Liverpool, Commander da Silva Paranhos.

Brazil, the most extensive State of South America, discovered in 1500 by Pedro Alvarez Cabral, a Portuguese navigator, is bounded north by the Atlantic Ocean, Guiana, and Venezuela; on the west by Ecuador, Peru, Bolivia, Paraguay, and Argentina; on the south by Uruguay; and on the east by the Atlantic Ocean. This immense country extends between lat. 4° 22′ N. to 33° 45′ S. and long. 34° 40′ to 73° 15′ W., being 2,600 miles from north to south, and 2,500 from west to east; with a coast-line on the Atlantic of 3,700 miles. It comprises an area of 3,219,000 square miles, and contains a population of 13,000,000, of whom, in 1886, 1,050,000 were slaves [whose emancipation has since been steadily proceeding], 1,000,000 "wild" Indians, and the greater part of the remainder of mixed blood. It has a Constitution dated 25th March, 1826. Service in the army is compulsory, but substitutes are permitted. In 1885 the army consisted of 15,048 men on the peace footing, and the navy of 59 vessels, inclusive of 9 ironclads, 17 gunboats, and 9 torpedo boats. Brazil contains 20 provinces, 16 of which lie along the coast, and 4 in the interior. It is unequalled for the number and extent of its rivers: the Amazon, the largest, though not the longest, in the world, with its immediate tributaries; and the Tocantins, San Francisco, and others. Its forests are immense, abounding in the greatest variety of useful and beautiful woods, some possessing a peculiar fragrance, well adapted for dyeing, cabinet-work, or shipbuilding; among these are mahogany, logwood, rosewood, brazilwood, &c. Towards the interior the land rises by gentle gradations to the height of from 2,000 to 5,000 feet above the level of the sea, and in those regions European fruits and grain are reared in abundance, while the intermediate valleys are found extremely favourable for the raising of sugar, coffee, cotton, cocoa, india-rubber, tobacco, and tropical products. Its agricultural produce is abundant; maize, beans, cassava-root, and nuts are very generally cultivated—also, in some parts, wheat and other European cereals. Cotton also is being largely cultivated for export. The minerals are very considerable and valuable, comprising gold, silver, iron, diamonds, topazes, and other precious stones. The exports consist solely of the raw produce of the soil, and owing to the vast extent of the Empire, and the consequent very different peculiarities of the soil and climate, their nature varies considerably. Sugar-cane is grown in large and increasing quantities in the northern provinces, Pernambuco being the centre of the sugar-producing zone. India-rubber comes from the more northern provinces, especially Pará; and coffee, though also grown in the north, comes chiefly from the central portions of the empire, Rio de Janeiro and Sao Paulo. Tobacco is grown largely, especially in Bahia. The imports consist of every description of manufactured articles, as the country possesses hardly any manufactories; all articles of clothing may be said to be imported. The customs duties, both on imports and exports, are enormous. In 1885 there were 3,800 miles of railway open, and 1,237 miles in course of construction. Length of telegraph wires in 1885 about 4,875 miles: number of Post Offices, 1,712.

Public revenue, 1886–87	£15,155,236
Expenditure, 1886–87	16,054,890

BULGARIA.

Prince,
Regents, Stamboulof, Mutkurof, & P. Karavelof.
Minister of Foreign Affairs, M. Nacevics.

The Principality of Bulgaria is under the suzerainty of Turkey. It was created by the Treaty of Berlin, 13th of July, 1878, and was to have been governed by a Prince elected by the National Assembly or Sobranje, with a popular legislature and constitutional government. Prince Alexander of Battenberg was duly elected 29th April, 1879, but having been removed at the instigation of Russia by a *coup d'état*, 21 April, 1886, he resigned the crown. On Nov. 10, 1886, the Sobranje, elected Prince Waldemar of Denmark, but that choice being objected to by the Emperor of Russia, the Prince declined the offer. Bulgaria is bounded on the north by Roumania, the Danube forming a boundary line, on the west by Servia, on the east by the Black Sea, and on the south by Eastern Roumelia, the Balkan Mountains here forming a physical frontier. The area within these limits is 24,700 square miles, with (1881) 2,007,919 inhabitants, of whom 70 per cent. are members of the Greek Church. Bulgaria contains the five famous Turkish fortresses of Widdin, Rustchuk, Silistria, Schumla, and Varna; it has a regular army of 22,570 men on a peace-footing, and of 62,370 men, with 96 guns in time of war. There is a flotilla of 14 steamers on the Danube. The exports consist principally of grain, wool, skins, and timber; the imports of iron, coals, and manufactured goods. A railway, 139 miles in length, connects Rustchuk with Varna.

Public revenue, 1885..... £1,384,916
Expenditure 1 419 854

EASTERN ROUMELIA,

a creation of the Berlin Treaty of 1878, has an area of 13,862 square miles, with 976,100 inhabitants in 1885, viz., Bulgarians, 682,757; Mussulmans, 200,499; Greeks, 42,516; Gypsies, 27,201; Jews, 6,993; Armenians, 1,867. The eastern boundary is the Black Sea; the south and west, a line from Cape Seityn, on the Black Sea, to the Rhodope Mountains, and then northward to the Rilo mountain. Among the products of the country are wheat, wine, tobacco, silk, and attar of roses. The live-stock is very considerable.

Eastern Roumelia was designed to be an autonomous province, under a Christian Governor-General appointed by the Porte, but effected its junction with Bulgaria by a bloodless revolution, September, 1885. The European Powers met at Constantinople in order to decide upon the future destinies of this Province, but the earnest desire of England to legalize the revolution by an international agreement was frustrated by the hostile attitude assumed by Russia.

Bulgaria and Roumelia jointly have an area of 38,562 square miles, with 2,984,019 inhabitants.

Revenue, 1886 ..... £1,873,016

CAMBODIA.

King, Norondon.

An ancient Kingdom in Further India, adjoining French Cochin-China, and consisting for the greater part of a fertile alluvial plain, traversed by the Mekong, and exceedingly productive of rice. The inhabitants are kin to the Siamese. The magnificent ruins of Angkor bear witness to the bygone glories of this kingdom, which accepted, in 1867, the "Protectorate" of France. By a convention of August, 1886, the kingdom enjoys home rule, but the French hold the customs, and have the monopoly of the opium trade. The area is 32,380 square miles. Pop., 1,500,000.

CAPITAL, Udeng.

CENTRAL AMERICA,

originally comprising one State, known, while in the possession of the Spanish Crown, as the Kingdom of Guatemala, but now divided into five independent Republics, viz., Guatemala, Salvador, Honduras, Nicaragua (including, since the treaty of 28th January, 1860, the Mosquito territory), and Costa Rica, besides the territory of Belize, or British Honduras, situate upon the east side of the Peninsula of Yucatan. It comprises the southern part of the continent of North America; and the total area is calculated in round numbers at 175,865 square miles (inclusive of British Honduras, 7,562 square miles; pop. 27,452), with a population of 2,855,000, about a quarter of whom are whites, Creoles of European parentage, the remainder Indians and Mestizoes of mixed descent. From the year 1525, when the country was conquered by Don Pedro de Alvarado, one of the companions of Cortes, to 1821, it remained subject to Spain, but in September of that year it effected its independence. A federal government was established, which, after some years of civil war, was upset in 1839, and the five confederated States above named proclaimed their absolute independence of each other. It possesses mines of gold, silver, copper, zinc, as well as other valuable mineral produce, with various marbles and other stone; but the real wealth of the country consists in the vegetable productions—woods, cotton, coffee, sugar, cochineal, indigo, cocoa, sarsaparilla, tobacco, &c.

Imports from the United Kingdom, 1885 £669,386
Exports to the United Kingdom, 1885 .. 1,072,255

In the Board of Trade returns the amount of trade with each of the separate Republics of Central America is not now distinguished.

British Minister to the several Republics of Central America, James P. Harriss-Gastrell £2,000

GUATEMALA, REPUBLIC OF.

President, General Don M. L. Barillas, 1885.
Minister of Foreign Affairs, Dr. Fernando Cruz.

Minister to London, Señor Crisanto Medina (resides at Paris).
Consul-Gen., Benj. Isaac, 22, Gt. Winchester St.

Guatemala, the most northerly of the Republican States of Central America, is situate in N. lat. from 13° 40′ to 17° 40′, and in W. long. from 88° 15′ to 92° 30′, and comprises an area of 46,774 square miles, and a population in 1885 of 1,284,604. The Republic is divided into 22 departments, and is traversed from W. to E. by an elevated mountain chain, containing several volcanic summits rising to 13,000 feet above the sea: earthquakes are frequent. The country is well watered by numerous rivers; the climate is hot and unhealthy near the coast, but more temperate and salubrious in the higher regions. There are 112 miles of railway open, and one of about 225 miles, connecting Guatemala with St. Thomas in the Gulf of Honduras, is in course of construction. Nearly 3,000 miles of telegraph are in working order. The chief ports are San José de Guatemala, and Champerico on the Pacific. The principal exports are coffee, hides, indigo, sugar, india-rubber, mahogany, sarsaparilla, tobacco, and fruits. The crop of coffee, 1884, exceeded 42,000,000 lbs., but that of cochineal was almost a failure.

Revenue, 1885	£1,235,000
Expenditure, 1885 (estimated)	1,625,000
Public debt (1885)	2,116,670
Total exports, 1884, £1,028,750; imports 683,958	

CAPITAL, New Guatemala. Pop., 59,039.

COSTA RICA, REPUBLIC OF.

President, General Don Bernardo Soto, March 12, 1885.
Minister of Foreign Affairs, Ascension Esquivel.
Minister in England and France, Señor Léon Fernandez (Paris).
Consul-Gen. in London, J. A. Le Lacheur, 19, St. Swithin's Lane.

The Republic of Costa Rica, the most southern State of Central America, extending across the Isthmus, between 8° 17′ to 11° 10′ N. lat. and from 82° 30′ to 85° 45′ W. long., contains an area of 19,985 English square miles, and a population (1884) of 210,177. The chief exports are coffee, sugar, caoutchouc, metals, sarsaparilla,, dyewoods, hides, cedar-wood, tortoise-shell, and fruits. The country is rich in minerals, but for want of capital and skilled labour the mines are almost unworked. The imports are dry goods, hardware, and provisions from the United States, Germany, and England. A railway from Limon, on the Atlantic, to Punta Arenas, on the Pacific, is being constructed, but only 110 miles have been completed. There is an armed force of 500 men, and a militia of 3,500.

Budget, income, 1886	£611,824
Budget, expenditure, 1886	611,824
Public debt, foreign (no interest paid)	3,400,000
,, interest (1885)	613,882

HONDURAS, REPUBLIC OF.

President, General Luiz Bogran, Nov. 27, 1883.
Minister of Foreign Affairs, Don Jeronimo Zelaya.
Consul-General in London, Guillermo Binney.

The Middle State of Central America, stretching in N. lat. between 13° 10′ and 16°, and W. long. between 83° 10′ and 88° 40′; containing 42,658 English square miles, including a small portion of the Mosquito territory, and the Bay Islands in the Gulf of Honduras. The population, in 1884, was 319,972, mostly of aboriginal blood. It has a coast line of nearly 400 miles on the Caribbean Sea, but only about 40 miles on the Gulf of Fonseca, on the Pacific side: the country is mountainous, being traversed by the Cordilleras. The products are mahogany, fruit, cattle, cotton, sugar, tobacco, coffee, indigo, sarsaparilla, hides and skins, india-rubber, cedar, fustic, rose and Lima wood. Its mineral wealth is great. The only railway (42-inch gauge) runs from Puerto Cortez to San Pedro Sula, 69 miles. A proposal to develop this into a ship-railway, connecting the Atlantic with the Pacific, has come to nought.

Revenue, 1883-84 (estimated)	£273,288
Expenditure, 1883-84	235,799
Debt (interior), 1885	156,000

SALVADOR, REPUBLIC OF.

President, General Francisco Menendez, 19 June, 1885.
Minister for Foreign Affairs, M. Delgado.
Minister for England, José Maria Torres Caicedo.
Consul-Gen. in London, Luis Alexander Campbell.

San Salvador, the smallest, though in point of population the second, of the Central American Republics, extends along the Pacific coast for 170 miles, with a general breadth of 43 miles. It contains an area of about 7,228 English square miles, and a population in 1883 of 613,273. The principal exports are coffee, indigo, tobacco, sugar, silver, balsam (known as balsam of Peru), rice, hides, cedar, and fustic. Its mineral resources are not great, but rich veins of silver are

found in Tabanco, also iron mines near Santa Ana. A railway 54 miles in length connects Acajutla with La Libertad. The only river of importance is the Lempa. Earthquakes are frequent; the capital (now rebuilt) was entirely destroyed by one in 1873.

Revenue for 1884	£847,333
Expenditure, 1884	845,239
Public debt, 1883 (interior)	962,810
Imports (total), 1884	551,381
Exports (total), 1884	1,263,708

La Union—Vice-Consul, John Harrison.. *unpaid*
Santa Ana—Vice-Consul,

CHILE, REPUBLIC OF.

President, Don José Manuel Balmaceda, proclaimed 18 September, 1886.
Premier, Señor Autunnez.
Min. of Foreign Affairs,
Minister for England, Don Ambrosio Montt, 30, Old Burlington Street, W.
Secretary, Don Ambrosio Montt y Montt.
Attaché, Don Rafael Orrego.
Honorary Attachés, Dons Luis G. Ossa and Valentin Marcoleta.
Consul-Général, Juan de la Cruz Cerda.
Consul, Thos. Kynaston Weir, 53, Old Broad Street.
Vice-Consul, Frederici S. Hammack, 98, Portsdown Road, Maida Vale.

A State of South America, of Spanish origin, lying between the Andes and the shores of the South Pacific, including Patagonia west of the Andes, extending coastwise from the Rio Zama to Cape Horn south, between lat. 16° 30′ and 56° S., and long. 66° 30′ and 75° 40′ W. Extreme length of coast line about 2,485 miles. Its extreme length is about 2,800 miles, with an average breadth, north of 41°, of 100 miles. The great chain of the Andes runs along its eastern limit, with a general elevation of 5,000 to 10,000 feet above the level of the sea; but numerous summits attain the height of 18,000 feet—the highest, Aconcagua, a volcano, being 22,422 feet. The chain, however, lowers considerably towards its southern extremity. There are no rivers of great size, and but few of them are of much service as navigable highroads. In the north the country is arid. Chile is divided into 21 provinces and 3 territories, the aggregate area of which is estimated at 256,850 square miles, with a population (1884) of 2,444,000 souls. This is inclusive of the Antofagasta, ceded by Bolivia, April 4th, 1884, of Tarapaca, surrendered by Peru, Oct. 20th, 1883, and of the Peruvian territory of Tacna, which will remain with Chile until 1893, when a popular vote will determine whether it is to revert to Peru. The boundary with Argentina has been determined by a treaty concluded at Buenos Aires on July 23rd, 1881. The population increases but slowly, and immigration, although to some extent encouraged, is inconsiderable. The number of Tribal Indians is small. The Arancanians on the mainland voluntarily submitted to government in 1883, but several tribes on the islands and in the densely-wooded territory of Magellanes are still virtually independent. More has been done for education than in any other state of South America. Agriculture and mining are the principal occupations. Wheat, maize, barley and oats, beans, peas, and lentils; tobacco, flax, hemp, hops, Chile-pepper, and potatoes are grown extensively; the vine and all our European fruit trees flourish. The mineral wealth is considerable. The rainless north yields more especially nitre, iodine, and borate of soda; the centre, copper and silver; the south, coal-iron and coal. There are smelting works, tanneries, corn and saw mills, starch, soap, and candle factories, breweries and distilleries, and the domestic industry furnishes carpets, linens, embroideries, baskets, and pottery. The many ports favour commerce, and three lines of steamers connect the country with Panama and through Magelhaens Strait direct with Europe, a passage to Liverpool occupying from 35 to 40 days. There are 1,414 miles of railway open, 7,580 miles of telegraph, and 390 post offices; the commercial marine numbers 158 vessels (30 steamers) of 65,790 tons. The staple articles of export are nitre, copper bars and ores, silver ores, corn, flour, leather, and guano. The imports include silks, woollens and other textiles, food, and machinery. About 60 per cent. of the foreign trade is carried on with England. The army in 1885 consisted of 7,100 men and 1,039 officers, with a national guard of 53,741 more; the navy in 1885 consisted of 37 vessels, three of them ironclads, manned by 1,728 men.

CHINA.

Reigning Emperor, Kuang Hsü (Tsai t'ien was the name of the Emperor before he succeeded to the throne; the Emperor of China on his accession always selects a new name or *Kwo Hao*, and Tsai t'ien was exchanged for Kuang *Hsü*), *born* 15 August, 1871; *suc.* 12 January, 1875.
Regent, The Empress Dowager.
Minister of Foreign Affairs (*President of the Tsung-li-Yamen*), Prince Ch'ing.
Envoy Extr. & Min. Plen. in London, H. E. Liu Ta-jên, 49, Portland Place.
English Sec., Sir Halliday Macartney, K.C.M.G., 3, Harley Place, Regent's Park.
Secretaries of Legation, Vicomte Li, Tzüchun Pau, Fung Yee.
Attachés, S. Tingfau Chang, Yu Szu-yi, and Yang Wen-Hwei.

China Proper (or the Eighteen Provinces) contains an area of 1,554,000 square miles, its length from north to south being 1,860 miles by 1,520 in breadth. It is bounded on the north by Mongolia and Manchuria; on the west by Turkestan,

Thibet, and Burmah; on the south by Burmah, Tongking and the China Sea; and on the east by the Pacific Ocean, the Yellow Sea, and Corea. The northernmost part of this area is in lat. 44° 50′ N., and the southernmost point, Yulin Bay, in the Island of Hainan, in 18° 10′ N. On the east it extends to long. 126° 10′ E., on the west to 97° 30′ E. But the possessions of China extend far beyond these limits, and include Manchuria, Mongolia, and Dzungaria in the north, and Eastern Turkestan and Tibet in the west. The area of China Proper and her territories contains about 4,468,750 square miles, or rather more than one-twelfth part of the entire land surface of the globe. Within these limits are four great mountain ranges, whence proceed some of the largest rivers in the world, and these, with their tributaries, furnish an unrivalled internal water-communication. The Amur, 2,400 miles in length; the Brahmaputra, which runs more than 1,000 miles within the Empire; the Hoangho, or Yellow River, which in its course of about 2,800 miles drains nearly 715,000 square miles of territory; and the great River Yangtze, which drains an area of 950,000 square miles, is said to flow nearly 3,200 miles. The most extravagant estimates of the population of this empire have been made at various times, and it is quite clear that the so-called census returns of Chinese officials are untrustworthy. Mr. A. E. Hippisley, of Shanghai, in 1876, gives China a population of only 250,000,000; Sir R. Temple, in 1884, roughly estimates it at 282,000,000; and another recent estimate by a local resident, and for the most part based upon censuses taken in 1879 and 1882, arrives at 382,000,000. The details for the constituent parts of the Empire are as follows:—

	Sq. Miles.		Population.
China	1,554,000	..	300,000,000
Mancharia	379,350	..	15,000,000
Mongolia	1,304,000	..	2,000,000
Thibet (p. 470)	651,700	..	6,000,000
Dzungaria	148,000	..	600,000
East Turkestan	431,700	..	580,000
	4,468,750		324,180,000

To this should perhaps be added Corea (*see* p. 446, which acknowledges the suzerainty of China.

No trustworthy statements as to revenue and expediture exist. In 1875 the revenue was supposed to have amounted to £25,837,500. The debt is inconsiderable. Four foreign loans to the amount of £6,231,950, made between 1874–85, have in part been paid off, whilst the internal debt is stated not to exceed £8,750,000. During the Franco-Chinese hostilities of 1884–85 China had over 600,000 men under arms, and these were sufficiently well armed not only to keep the French at bay, but to drive them off at Tamsui and Langson. The navy consists of 4 ironclads, 4 cruisers, and 12 gunboats built in England and Germany, and of about 40 other vessels, some of which were built in the arsenals of Shanghai and Foochow. The discipline and drill on board these is most defective. The army at its full strength would number about 1,200,000 men. The external commerce of the empire is comparatively small. The staple articles imported are opium and cotton stuffs, whilst tea, silk, and silk manufactures and sugar constitute the bulk of the exports. Twenty-two "Treaty" ports are thrown open to foreign commerce, and the customs managed by European officials. Three-fourths of the trade carried on there is with England and her Colonies. China is as yet without railways (a short experimental line was closed in 1877 by government), but there are about 3,000 miles of telegraph.

Imports (in European-built vessels) at the Treaty ports, 1885	£33,600,000
Exports, do.	21,125,000
Imports from the U. Kingdom, 1885	5,515,918
Exports to the United Kingdom, 1885	8,614,069

COCHIN CHINA,

an old province of the Empire of Annam (*see* p. 435), the southern and more fruitful portion of which was ceded in 1862 and 1867 to France. French Cochin China embraces an area of 22,958 square miles, with 1,642,182 inhabitants, and consists almost wholly of the alluvial delta of the Mekong. The soil is fertile, producing rice in abundance, but the climate is not at all favourable to Europeans, whose number does not however exceed 2,000. Saigon is the capital.

COLOMBIA, REPUBLIC OF.

President, Rafael Nuñez, 1 April, 1884.
Minister of Foreign Affairs, V. Restrepo.
Minister in London, Gen. A. B. Ciservo, 55, Cornwall Road, S.W.
Attachés, M. Rebolledo, and N. Otalora.
Consul-General, Señor Napoleon Borrers, 12, Blomfield Terrace, Bayswater.
Vice-Consul, L. Schloss, 70, Bishopsgate Street.
Consul in Liverpool, José I. Barberi.
Consul at Southampton, Ramon Goenaga.

Formerly New Grenada—a Republic with Constitution, 8 May, 1863, consisting of 9 States—Antioquia, Bolivar, Boyaca, Cauca, Cundinamarca, Magdalena, Panama, Santander, and

Tolima—in the most N.W. part of South America, and includes the isthmus connecting the two continents, having a coast-line on both the Atlantic and Pacific Oceans. It is situated between 2° 40′ S. to 12° 25′ N. lat. and 68° to 83° W. long., comprising an area of 331,420 square miles, and possessing a population of about 4,000,000, of whom more than one-half are whites and half-castes. It has been subjected to several revolutionary changes and civil wars. The country is intersected by three great ranges of the Andes, known as the Western, Central, and Eastern Cordilleras; the latter is by far the largest, consisting of a series of vast table-lands, cool and healthy. This temperate region is the most densely-peopled portion of the Confederation. Its forests are extensive; among the trees are mahogany, cedar, fustic, and other dye-woods and medicinal plants. Its mineral productions are gold, silver, platinum, copper, iron, lead, coal, and precious stones. Its agricultural products consist of tobacco, coffee, cocoa, plantains, bananas, vegetable ivory, and indigo; also wheat and other cereals. Its manufactures, for home consumption, consist of woollen and cotton stuffs. The plains yield large quantities of hides, and jerked beef is obtained from the cattle feeding there. The chief exports are cinchona bark, coffee, tobacco, the precious metals, balsam, hides, caoutchouc, straw hats, and dye-woods. All religions are tolerated, and considerable attention is paid to education. The standing army consists of about 3,000 men: there is no navy. Railroads are in their infancy, there being but 133 miles open in 1886, including the Panama line.

Revenue, 1886 (Budget)	£1,020,800

PANAMA,

one of the United States of Colombia, occupying the isthmus which joins North to South America. The area is 31,890 square miles, the population (1881) 285,000. Agriculture and cattle breeding are the leading industries. The once famous pearl-fisheries in the Gulf of Panama yield now but little, nor are the gold-washings very productive. The prosperity of the State depends very largely upon its favourable geographical position, which facilitates transit from the Atlantic to the Pacific. The distance from Limon Bay to Panama on the latter is only 35 miles, and the highest elevation of the water-shed does not exceed 278 feet. A railway joins the two oceans since 1855, and a ship-canal is under construction since 1881, by a French company founded by F. de Lesseps. The canal will have a total length of 47 miles, an average depth of 28 feet, and a minimum width of 72 feet. Huge floodgates are required to regulate the tides, for Colon, on the Atlantic, has a tide of only 2 feet; Panama, on the Pacific, one of 20 feet. Up to the middle of 1885, 18 million cubic yards of earth and rock had been removed out of an estimated total of 157 millions. M. de Lesseps, who inspected the works in 1886, accompanied by M. Rousseau, a government engineer, now confidently announces the opening of the canal in 1892. The cost, in 1879, was estimated at £41,700,000; and M. de Lesseps asserts that the actual cost will not exceed £49,000,000. Twenty thousand men are employed upon this great work.

CONGO FREE STATE.

Sovereign, Leopold, King of the Belgians.
Administrator-Gen., M. Camille Janssen, appointed 1885.

The Congo Free State has sprung out of the discoveries of Stanley, and the explorations carried on subsequently by an International Association founded at Brussels under the presidency of the King of the Belgians in 1876. The new State has in the course of 1884 and 1885 been recognized by the leading Powers of Europe, and by the United States, conditional upon its maintaining the principles of Free Trade, and of only levying such dues upon shipping, or otherwise, for which there shall be returned an equivalent in facilitating the operations of commerce. The territory of this State includes the right bank of the Congo to within a few miles above Vivi; both banks of the river thence to Manyanga; the left bank only as far as the Equator, and thenceforth both banks. In the east it extends to Lake Tanganyika. The total area included within its limits amounts to 802,000 square miles, with a population of probably not over 8,000,000. The mighty Congo, with its numerous navigable tributaries, constitutes the leading feature of this so-called State. It is navigable for large vessels from its mouth at Banana to the Yelala Falls above Vivi (460 miles); but between that place and Leopoldville, on Stanley Pool, there occur rapids and falls, which it has been proposed to avoid by a railroad 280 miles in length. Above Leopoldville the river is navigable as far as the Stanley Falls, a distance of over 900 miles. The population of this vast territory consists of numerous negro tribes, of whom none have as yet attained a superior degree of civilization, whilst some still practise cannibalism. There are undoubtedly many fertile tracts, more especially along the rivers; but the barren mountain-land, which shuts out the coast from the more productive interior, necessitating as it does considerable expenses for the transportation of articles of commerce ill able to bear them, must always present a difficulty in developing the resources of the country. At present these are not sufficient to defray even the working expenses of the proposed railway, and it is doubtful whether they can be developed at all without perpetuating the institution of slavery. The exports at the present time consist of palm-kernels, palm-oil, ground-nuts, caoutchouc, copal, ivory, wax, sesamum, dyewoods, copra, hides, and a few minor articles. The coffee plant, sugar-cane, and cotton grow wild. Gold,

iron, lead, copper, and other useful minerals have been found. Four mail steamers now call every month at the mouth of the Congo; 11 steamers navigate the Lower, and 7 the Upper Congo. The King of the Belgians has endowed this State out of his private fortune to the extent of £40,000 annually.

COREA.

A Kingdom in Eastern Asia, nominally a vassal of China, although from very early times under rulers of its own, and perfectly independent as far as concerns the management of its home affairs. Corea presents itself as a mountainous peninsula, stretching southward from the snow-clad Shan Alin, and fringed in the south and west with numerous islands. The country yields rice and various cereals, hemp, pea cotton, and tobacco, and the medicinal ginseng root forms an important article of commerce. Gold, lead, iron, and coal are mined. The area is 84,250 square miles; the population 10,519,000. In features the inhabitants resemble the Chinese, from whom they received their civilization, and Buddhism is the religion of the people. Fusan, Gen-san (Wen-san), and Nin-sen (Chemulpo) are the ports open to foreign commerce, and England occupies Port Hamilton, on a small island off the south coast, commanding the strait of Corea.

Imports (Treaty ports), 1883 ..... £369,583
Exports 331,704
These figures include gold and silver.

CAPITAL, Seul. Population, 220,000.

Brit. Minister, Sir John Walsham, Bt. (Pekin).
Consul-General, Wm. George Aston.

COSTA RICA. *See* under Central America, p. 442.

DENMARK.

King, Christian IX., *born* 8 April, 1818; *suc.* 15 Nov., 1863; *married*, 26 May, 1842, Louise, daughter of Wm., Landgrave of Hesse-Cassel.
Heir Apparent, Prince Frederick, born June 3, 1843; *married*, July 28, 1869, Louise, Princess Royal of Sweden and Norway.
Min. for Foreign Affairs, Baron Rosenörn-Lehn.
Envoy Extra. and Min. Plenip. in London, M. de Falbe, 18, Grosvenor Square.
Secretary, Count Reventlow.
Attaché, C. A. Gosch, 21, Stanhope Gardens.
Consul-Gen., in London, Ernest Adolf Delcomyn, 5, Muscovy Court, Tower Hill.
Ditto—Hull, Clements Frederick Good.

A Kingdom of Northern Europe, and the smallest of the Scandinavian States, with a Constitution dated 28 July, 1866, consisting of the islands of Zeeland, Fünen, Laaland, &c., the peninsula of Jutland, and the outlying island of Bornholm in the Baltic. Denmark is situated between 54° 34′—57° 44′ N. lat. and 8° 5′—12° 40′ E. long.; its present contracted dimensions being the result of the Dano-German war of 1864, which stripped it of the Duchies of Schleswig-Holstein and Lauenburg. It comprises an area of 14,789 square miles, with a population in 1885 of 2,033,959, nearly one-half of whom live exclusively by agriculture, and one-fourth by manufactures and trade. The common products are wheat, rye, oats, barley, potatoes, cattle, horses, pigs, sheep, and butter. Its manufactures are, for the most part, for home consumption. Its principal imports are manufactured goods (woollens, silks, cottons), iron, hardware, wine, fruit, tea, and colonial produce. Its chief exports are those of agricultural produce, including wheat and barley, bacon, hams, flour, butter, eggs, hides, skins, corn-meal and oil-cake, horses, and cattle, the latter principally to Great Britain. Denmark possesses an army of 50,522 men on the war footing; a navy consisting of 47 steam-vessels (including 10 ironclads), mounting 252 guns, with 1,271 officers and men; and a mercantile marine of 3,289 vessels, with a tonnage of 281,344. There are 1,208 miles of railway.

The outlying possessions and colonies of Denmark have an area of 75,115 square miles, with 127,209 inhabitants. They include the Faröe or Sheep Islands (515 sq. m., pop. 11,220); Iceland (40,458 sq. m., pop. 72,445); Greenland (34,000 sq. m., pop. 9,781): and 3 islands in the West Indies, St. Croix, St. Thomas, and St. John (142 sq. m., pop. 33,763). These latter export sugar and rum.

DOMINICAN REPUBLIC.

President, General Ulises Heureaux, elected 1886.
Minister for Foreign Affairs,
Cons.-Gen., Miguel Ventura, 18, Coleman Street.

San Domingo, formerly the Spanish portion of the Island of Hayti, is the oldest settlement of European origin in America, having been founded in 1494 by Bartolomeo Columbus. The capital city contains the Cathedral and Columbus's residence. It comprises an area of about 20,596 square miles, with an estimated population of 300,000. The imports in 1884 were £514,136, and the exports, £540,938. The chief products are tobacco, coffee, sugar, cocoa, mahogany, and a great variety of other furniture woods, wax, honey, logwoood, fustic, turtle-shell, hides, and divi-divi. Sugar, the most recent industry, is now the most important. The minerals are gold, copper, and iron. The Revenue in 1883 was estimated at £319,500. The debt is stated to be £782,812, but there is in addition an unacknowledged debt of £714,300 contracted in London.

CAPITAL, San Domingo. Population, 16,000.
British Consul for Hayti and Dominican Republic, Alfred St. John (at Port-au-Prince).
Vice-Consul, David Coen £200
Puerto Plata—Vice-Consul, Alfred Reimer *unp.*

ECUADOR, REPUBLIC OF.

President, José Maria Plácido Caamaño, elected 23 Oct., 1883.
Foreign Minister, J. Modesto Espinoza.
Consul-General in London, Pedro A. Merino, 1, Leadenhall Street, E.C.

A State of South America, on its western side,

being that portion of the Colombia States which lies on each side of the Equator, extending from lat. 1° 50′ N. to 4° 50′ S., and between 70° and 81° W. long., comprising an area of 248,380 English sq. miles. It has a population of about 1,000,000, mostly descendants of the Spaniards, aboriginal Indians, and Mestizoes. The giant chain of the Andes here presents the Chimborazo, 20,700 feet, the Cotopaxi, 19,490 feet, the Antisana, 18,847 feet above the level of the sea, and others. Ecuador is watered by the Upper Amazon, and by the rivers Guayaquil, Charapoto, Chones, and Esmeraldas on the Pacific coast. There are extensive forests, and the cinchona bark tree is common. Its chief products are cocoa, vegetable ivory, nuts, cotton, coffee, india-rubber, orchilla weed, straw hats, bark, yams, tobacco, fruits, sarsaparilla, wheat, &c. Its minerals consist of gold, quicksilver, lead, iron, copper, and emeralds. Sulphur abounds near the Chimborazo. The chief exports are—cocoa, caoutchouc, cascarilla bark, silver and gold, cinchona bark, Panama hats, coffee, and cattle. Ecuador is divided into 3 departments—Quito, Guayaquil, Azuay—and 17 provinces, including that of "Orienté." In 1885 there were 53 miles of railway open; and an English contractor has engaged to prolong the line from the base of the Cordilleras to the high Central table-land, a distance of 50 miles. Guayaquil is the chief port: population about 40,000.

The Galapagos Islands (2,951 square miles), belong to Ecuador; Floreana and Chatham are private property. The other islands were leased in 1884 to a Scandinavo-Swiss Company.

Public revenue, 1885–86, estimated	£338,780

EGYPT.

Khedive, or *Reigning Sovereign*, Mohammed Tewfik Pasha, *b.* 19 Nov., 1852; *suc.* 25 June, 1879; *mar.* Jan. 18, 1873, Emina, dau. of Prince El Hami Pasha.

Heir Apparent, Abbas Bey, *born* July 14, 1874.

President of the Council and Minister for Foreign Affairs, Nubar Pasha, G.C.S.I.

The position and condition of Egypt are unparalleled. Nominally a province of the Ottoman Empire, it is also independent and under the rule of the Khedive by Firmans of the Sultan in 1841, 1866, 1867, and 1879, subject to the annual payment of a tribute of £695,681. It is at the same time entirely dependent for its existence as a Sovereign State upon the will of stronger Powers, England at the present moment being dominant. The title of Khedive was given by Firman of 14 May, 1867, and is hereditary. In consequence of a military revolt, headed by Arabi Pasha, which the Khedive was powerless to subdue, England was most unwillingly compelled to intervene, and is now in possession of Egypt, and for many years to come must continue to exercise a very powerful influence over the fortunes of the country. Whilst British troops were re-establishing the authority of the Khedive in Egypt, a revolution headed by Mohammed Ahmed, who proclaimed himself a Mahdi, broke out in the Egyptian territories in the Soudan. The Egyptian troops having been beaten in the field, General Gordon volunteered to proceed to Khartoum to withdraw the garrisons. He fell dying nobly at his post before an English expedition, sent somewhat tardily to his relief, could reach him. Since then the whole of the upper valley of the Nile and the vast territories which had been brought under Egyptian rule, almost as far as the Equator, have been abandoned. The Khedive's possessions are consequently limited to the valley of the Nile, as high up as Akashe, above Wadi Halfa, in lat. 22° N., to the Oases, the Sinai peninsula, and the Land of Midian in Arabia, having a total area of 494,000 square miles, of which 10,328 square miles consist of arable land, and 13,363 square miles are covered with water, towns, roads, &c., the rest being a desert affording at most pasturage in a few favoured localities. The population in 1882 was 6,806,381, including 90,886 European foreigners (37,301 Greeks, 18,665 Italians, 15,716 French, 8,022 Austrians, 6,118 English, &c.). Besides this, Suakin on the Red Sea, and Zeila and Berbera on the Gulf of Aden, are occupied by British troops, whilst the Italians have been permitted to establish themselves at Massowa. Nubia, Senaar, Kordofan, Darfur, and other districts acknowledge the sway of Khalifa Abdullah el Taashi, whom the Mahdi appointed his successor when he died. In the Equatorial Province the Egyptian Governor, Dr. Emin-Bey, still maintained himself in June 1886. The whole of these former dependencies of Egypt have an estimated area of 760,000 square miles with 11,000,000 inhabitants.

The cultivated portion of Egypt is confined to the country annually inundated by the Nile, or capable of being irrigated by canals. Its agricultural products consist of millet, maize, wheat, rice, melons, gourds, sugar, tobacco, hemp, cotton, &c. It has no metals; but salt, petroleum, nitre, marble, red granite, Oriental alabaster, and limestone are found. The chief imports are cotton stuffs, coals, provisions, woollens, coffee, indigo, hardware, timber, wine and spirits, and machinery. The exports consist mainly of cotton and cotton seed (78 per cent.), beans, wheat, sugar, maize, rice, gums, hides, wool, barley, ivory, and ostrich feathers. Of the entire trade over 50 per cent. is carried on with the United Kingdom, 12 per cent. with Turkey, 10 per cent. with France, and 8 per cent. with Austria. There are 1,276 miles of railway.

The British army of occupation numbers about 12,000 men, and there is a local military and police-force of about 14,000 men under various names.

The Suez Canal, opened in 1869, and in which the English Government acquired by purchase, 25 Nov., 1875, shares to the amount of £4,000,000, is attracting a large portion of the traffic between this country and the East; and Egypt being now the high road to India, England is compelled to take an active part in supporting the Khedive. In consequence of gross mismanagement and extravagance the finances of the country had got into a thoroughly disorganized condition, almost hopeless. At the present time, however, and notwithstanding the ill-will shown by at least one of the Powers, the Revenue is more than sufficient to cover all liabilities, and the intervention of an international commission, threatened for 1887, is not therefore called for.

Public revenue, Budget for 1886	£9,095,585
Public expenditure " "	9,462,170

FINLAND.

Grand Duke, The Emperor of Russia.

A Grand Duchy on the gulfs of Finland and Bothnia, which was successively conquered by Russia from Sweden in 1721, 1743, and 1808, but was, nevertheless, permitted to retain its ancient native institutions. The Finns call their country "Suomenmaa," that is, "Land of Lakes," and very appropriately so, for Finland is a granite plateau, abounding in depressions filled with water. The hills nowhere attain a greater height than 2,000 feet; the coast is much indented, and fringed with islands and reefs. Of the total area, 11½ per cent. is covered with lakes, 54 per cent. is woodland, 4½ per cent. meadow land, 1 per cent. arable land, and the rest consists of waste land and coarse pastures. The area is 144,254 square miles with a population of 2,142,093 (December 31st, 1883), of whom 1,828,300 are Finns, 306,500 Swedes, and 4,400 Russians; a few Laps lead a nomadic life in the north. Nearly all the inhabitants are Lutherans. Education is well cared for, and there is a flourishing university at Helsingfors. Formerly a granary of Sweden, the country at present draws much of its food from foreign sources, and occasionally it is visited by famines. The leading crops are rye, barley, oats, potatoes, beans and peas, flax and hemp, with a little tobacco. Berries largely supply the place of fruit. The live stock, in addition to horses, cattle, sheep, pigs, and goats, includes also the reindeer. Iron, copper, lead, and graphite are found, but no salt. The iron industry is of importance, and spinning and weaving of cotton, flax, and wool, distilling, the making of matches, sugar-refining, shipbuilding, and other branches of industry are carried on with success. The forests are a great source of wealth—wantonly wasted in too many instances. The exports include more especially timber and woodenware, butter, textile fabrics, iron, and steel. There are 1,132 miles of railway; and (1883) a marine of 1,593 vessels, of 255,381 tons.

Finland is a constitutional monarchy of a somewhat antiquated type. The Diet consists of four estates:—nobles, parsons, citizens, and peasants. The Grand Duke alone can introduce bills, which become law after they have been carried by two successive Diets. There are 9 battalions of Finnish Rifles, mustering 4,833 men.

FRANCE.

Pres. of the Republic, François Paul Jules Grévy, *born* 15 Aug. 1813; elected by the Assembly, 30 Jan., 1879; re-elected in Dec., 1885, for 7 years.
President of the Council, Minister of the Interior, and Public Worship, M. Goblet.
War, General Boulanger.
Marine, Admiral Aube.
Finance, M. Dauphin.
Commerce and Labour, M. Lockroy.
Justice, M. Sarrien.
Instruction and Fine Arts, M. Berthelot.
Agriculture, M. Develle.
Ambassador in London, Senator William Henri Waddington, Albert Gate House, Hyde Park.
Councillor, Comte L. d'Aubigny.
1st Secretary, Comte X. de Florian.
2nd ditto, M. Bapst.
3rd ditto, Viscount de St. Genys.
Attaché, M. René David.
Military Attaché, Lieut.-Col. de Waru.
Naval Attaché, Captain Roustan.
Secretary Archiviste, C. P. Maistre.
Consul-General, M. Blanchard de Farges.
Vice-Consul, M. D'Anglade, Office of the Consulate, 38, Finsbury Circus, E.C.

The most westerly State of Central Europe, extending from 42° 20′ to 51° 5′ N. lat., and from 7° 45′ E. to 4° 45′ W. long., bounded on the north by the Channel and Straits of Dover, which separate it from England. Its circumference is estimated at about 3,000 miles, and its present area at 204,090 square miles. The territory lost in 1871 amounted to 5,602 square miles. France is divided into 86 departments, including the island of Corsica, in the Mediterranean, off the west coast of Italy. The principal rivers are the Seine, Loire, Garonne, and Rhone; the principal forests, Ardennes, Compiègne, Fontainebleau, and Orléans, consisting chiefly of oak, birch, pine, beech, elm, chestnut, and the cork-tree in the south. Fruit trees abound, and are very productive, the principal being the olive, chestnut, walnut, almond, apple, pear, citron, fig, plum, &c. The vine is cultivated to a very great extent, as the wines of Bordeaux, Burgundy, Champagne, &c., evidence (1885, 628,000,000 gal.). The chief agricultural products are wheat, barley, rye, maize, oats, potatoes, beetroot for the manufacture of sugar, hops, &c. Its mineral resources are comparatively small. They include, however, coal (1884, 21,000,000 tons), iron, copper, lead, silver, antimony, and salt. The most important manufactures are of metals, watches, jewellery, cabinet-work, carving, pottery, glass, chemicals, dyeing, paper-making, woollens, carpets, linen, silk, and

lace. Its oyster fisheries are an important industrial feature. The population in 1881 amounted to 37,672,048, 692,800 of whom were Protestants and 53,436 Jews. The effective strength of the army under the colours is 523,833 men. On a war footing the army consists of 1,392,200 men (field force, 754,600, with 2,622 guns; dépôts, 180,000; garrison troops, 458,600). The navy consisted in 1886 of 507 steam vessels, of which 63 were ironclads (22 still building), 59 large cruisers, and 140 torpedo vessels and boats. The educational system is governmental, and presided over by a Minister of Instruction, part of the expense being defrayed by the State. In addition to the faculties of Theology, Law, and Medicine, the Lycées, the Colleges, the Naval and Military Schools, and the Ecole Polytechnique, the State supports numerous establishments for instruction in special branches of knowledge. The system of railways in France is very extensive; they are entirely *concédés*, i.e., they will become State property after the expiration of the concession. The entire length open for traffic in 1885 was 17,408 miles. The length of telegraphs is 56,217 miles. There is a mercantile marine of 15,352 vessels (938 steamers), of 1,038,829 tons.

The imports consist largely of food and raw materials; the exports of manufactured goods. The most important among the former are cereals and flour, wine (the imports of which exceed the exports), wool, raw silk, timber, hides and skins, cotton, coal, live animals, cotton yarns and manufactures. The exports rank thus:—woollens, wine, silks, hides and skins, raw silk, leather wares, haberdashery, &c., cheese and butter. Of the total trade 20 per cent. is with the United Kingdom, 12 per cent. with Belgium, 9 per cent. with Germany, 7½ per cent. with the United States, and 7 per cent. with Italy.

Revenue, 1887 (estimated)	£125,639,793
Expenditure, 1887 (estimated)	125,673,929
Public debt, funded, 1886	782,644,677
Public debt, floating, annuities, &c. capitalized	530,000,000
Total value of imports, 1885	187,863,444
Total value of exports, 1885	140,995,640
Imports from United Kingdom, 1885	14,978,367
Value of exports to U. Kingdom, 1885	35,712,357

DEPENDENCIES. — Within recent years the French Colonial Empire has been increased by extensive acquisitions in Africa and Asia, but these can scarcely be looked upon as compensating for the loss of Canada in the 18th, and of that of Louisiana in the beginning of the present century. Algeria in North Africa (*see* p. 435) is in several respects looked upon as an integral part of France, whilst Tunis (*see* p. 471) is a French "protectorate." On the Senegal great efforts are now being made to found an African Empire. The road to the Niger has been secured by forts, a treaty of commerce and amity has been concluded with the Sultan of Sego, and a steamer has actually been launched upon the Niger. A railway, connecting the Senegal with that river, is being constructed. Official reports estimate the area of the districts in Senegambia acknowledging the sovereignty of France at 97,000 square miles, which implies a population of about one to one and a half million of inhabitants. On the Ivory Coast France maintains the trading posts of Assini and Grand Bassam; and further east, on the Slave Coast, she has secured a protectorate over Kutanu, or Porto Novo. The territory of the Gaboon, Ogowe, and Congo, as defined at the Berlin Congress, embraces 174,000 square miles, with about 1,700,000 inhabitants. In Eastern Africa France possesses the wealthy Island of Réunion (764 sq. miles, pop. 170,518), the Comoro Islands (760 sq. miles, pop. 64,000), and a few insignificant islands on the coast of Madagascar (*see* p. 459), upon which large island she has forced a French protectorate. Further in the north France has occupied Obok, and the whole Gulf of Tajura opposite Aden. Altogether the African possessions and Protectorates of France extend over 672,100 square miles, with about 12,000,000 inhabitants.

In Asia there remain to her Pondicherry, Chandernagore, and a few others of her once-important possessions in India, having together an area of 196 square miles, and a population of

273,283. In Further India France has firmly established her rule in Cochin China (*see* p. 444), has forced her protectorate upon Cambodia (32,380 sq. miles, pop. 1,500,000) in 1867 (*see* p. 441), and upon the old empire of Annam in 1884, the northern portion of which is known as Tongking, and has been absolutely surrendered (*see* p. 471). These recent acquisitions give French Asia 196,830 square miles, with 18,415,500 inhabitants.

In America France possesses in the small islets of St. Pierre and Micquelon (90 sq. miles, pop. 5,554) an excellent basis for her Newfoundland fisheries; in Martinique and Guadaloupe (1,103 sq. miles, pop. 364,884)—two of the most fertile West India islands—and in Cayenne or French Guiana (46,880 sq. miles, pop. 36,000) a wide territory in South America.

In the Pacific Ocean the French colonies consist of two groups—New Caledonia, with the Loyalty Islands, in the west (7,654 sq. miles, pop. 60,703); and Tahiti, or the Society Islands, with the Marquesas, the Low Archipelago or Tuamotu, and the Austral Isles or Tubuai (1,412 sq. miles, pop. 25,050), in the east. Clipperton, in the Northern Pacific, is merely an uninhabited islet of 2 square miles. The New Hebrides (5,106 square miles, pop. 70,000) have recently been occupied as if for a permanency.

The total area of French colonies, dependencies, and protectorates amounts thus to 931,163 square miles, with a population of nearly 31,000,000; and it is worthy of note that within all these territories the number of Frenchmen does not probably exceed half a million.

THE GERMAN EMPIRE.

Emperor, William (King of Prussia), see *Prussia*.
Chancellor, Prince Otto von Bismarck.
Sec. of State for For. Affairs, Count H. Bismarck.
Sec. of State, Interior, Von Boetticher.
Ambassador in London, Count Hatzfeldt-Wildenberg, 9, Carlton House Terrace.
Councillor of Embassy, Baron L. von Plessen.
Secretary, Count Paul Wolff-Metternich.
Attaché, A. von Mumm.
Military and Naval Attaché, Captain William Schroeder, German Navy.
Attaché (Architecture & Engineering), Prof. Garbe.
Consul-Gen., P. L. W. Jordan, 27, Finsbury Circus.
Counc. & Direc. of the Chancery, W. A. Schmettau.

The Empire, according to the Constitution of 16th April, 1871, is confederate, under the presidentship of the King of Prussia, who bears the hereditary title of German Emperor. He has the right and the duty of representing the Empire for all purposes of international law, of declaring war, making peace and treaties, &c. He is the commander-in-chief of the whole army and navy in peace as well as in war, except the military forces of Bavaria and Wurtemberg, which form—but in *peace* time only—separate corps under the command of their respective kings. He names and dismisses the officers and functionaries of the Empire. His edicts, made in the name of the Empire, must be countersigned by the Chancellor, who, as the First Minister of the Empire, is by his signature responsible for them. The third factor of Government is the *Reichstag*, or legislative parliament, consisting of one deputy to about every hundred thousand inhabitants of the Empire, and the *Bundesrat*, formed of delegates of the confederated governments.

The departments especially belonging to the legislation, administration, or control of the Empire and its government are—all matters connected with the army, navy, post, and telegraphy, passports, emigration, colonization, political laws of the citizens, the whole civil law, coinage, banking, commerce, navigation, the railways, &c. The bills promulgated by the *Bundesrat* and the *Reichstag* in accordance, and sanctioned by the Emperor, are compulsory on all Governments of the Empire, and annul *eo ipso* all possible regulations contradictory to them in the different States.

This large Empire of Central Europe, situate in lat. 47° 18′—55° 52′ N. and long. 5° 50′—22° 50′ E., comprises the following 25 States, and a Reichsland (*see* p. 455):—

	English sq. miles.	Pop. 1885.	Inc. 1880-5 per cent.
1. Prussia	134,467	28,313,833	3·7
2. Bavaria	29,291	5,416,180	2·4
3. Saxony	5,789	3,129,168	6·7
4. Wurtemberg	7,531	1,994,849	1·2
5. Baden	5,803	1,600,839	1·9
6. Hesse	2,965	956,170	2·1
7. Mecklenburg-Schwerin	5,137	575,140	dec. 0·3
8. Saxe-Weimar	1,387	313,668	1·3
9. Mecklenburg-Strelitz	1,131	98,371	1·9
10. Oldenburg	2,479	341,250	1·1
11. Brunswick	1,425	372,580	6·4
12. Saxe-Meiningen	953	214,697	3·6
13. Saxe-Altenburg	511	161,129	3·8
14. Saxe-Coburg and Gotha	760	198,717	2·0
15. Anhalt	906	247,603	6·2
16. Schwarzburg-Rudolstadt	363	83,939	4·4
17. Schwarzburg-Sondershausen	333	73,623	3·5
18. Waldeck	433	56,565	0·1
19. Reuss (elder line)	122	53,787	5·7
20. Reuss (younger line)	319	112,118	10·1
21. Schaumburg Lippe	131	37,204	5·0
22. Lippe	472	123,250	2·9
23. Lubeck	115	67,658	6·2
24. Bremen	99	166,392	6·0
25. Hamburg	158	518,712	13·3
26. Alsace-Lorraine	5,602	1,563,145	dec. 0·2
Total German Empire	208,683	46,840,587	3·5

According to religious confessions there were (1880) 28,731,152 Protestants (62·6 per cent.), 16,232,651 Roman Catholics (35·9 per cent.), 561,612 Jews (1·2 per cent.).

German is spoken by the bulk of the inhabitants, but there reside within the limits of the Empire over 3,000,000 persons of other nationalities, viz. 2,500,000 Poles and 150,000 Lithuanians in the eastern parts of Prussia; 140,000 Wends in Lusatia, 50,000 Chechians on the Bohemian frontier, 140,000 Danes in Schleswig, and 220,000 Wallones and French to the west of the Rhine. On the other hand, about 13,000,000 Germans live in Austria-Hungary, Switzerland, and Russia.

There are in Germany 21 towns of over 100,000 inhabitants—viz., Berlin (1,315,412), Hamburg-Altona (406,759), Breslau (298,893), Munich (260,000), Dresden (245,515), Elberfeld-Barmen (209,557), Leipzig (170,076), Cologne (161,260), Frankfurt-on-the-Main (154,504), Königsberg

(151,157), Hanover (139,330), Stuttgart (125,906), Bremen (118,615), Nürnberg (115,981), Düsseldorf (115,183), Danzig (114,822), Magdeburg (114,052), Strassburg (112,019), Chemnitz (110,808).

EMIGRATION.—Between 1871–84 1,309,272 Germans emigrated, of whom 1,250,937 went to the United States. In 1881 the number of emigrants reached the exceptional figure of 210,547; in 1883 it had sunk down to 166,119; in 1885 it was only 107,000.

Education.—There are 21 universities in the Empire, with 2,150 professors and teachers, attended by about 28,000 matriculated students. Education is general and compulsory.

Germany is becoming more and more a manufacturing country. In 1883, 43 per cent. of the population were supported by agriculture, 36 per cent. by mining and industries, 10 per cent. by commerce and transportation. Of the total area 48·5 per cent. are cultivated, 11 per cent. consist of meadows and pastures, 26 per cent. are covered with forest. The agricultural produce no longer suffices to support the population. The produce of the mines was valued in 1884 at £22,000,000, and included 57,233,875 tons of coal, 14,879,945 tons of lignite, 9,005,800 tons of iron ore, 1,884,859 tons of salt, besides copper, lead, zinc, silver, &c. The Lower Rhine (Crefeld, Elberfeld-Barmen), Alsace (Mülhausen), Saxony (Chemnitz), Westphalia, and Silesia are the great centres of the textile industries.

The mercantile marine in 1886 consisted of 4,311 vessels, with a tonnage of 1,282,449, manned by 38,931 men; of these 669 were steamers, with a tonnage of 420,605.

The total length of the railways in the Empire on 2nd April, 1885, extended to 23,074 miles, of which above three-fourths belong to the State. At the end of 1884 the length of telegraph lines was 49,440 miles. In 1884 there were 15,428 post-offices, with 89,848 employés, and 1,930,000,000 letters, &c., were sent.

ZOLLVEREIN.—The Empire forms a Customs League, named "Zollverein," to which also belongs the Grand Duchy of Luxemburg, but excepted from which are the free ports of Hamburg and Bremen. The leading imports (classed according to value) are grain and flour (£21,000,000), wool, cotton, silk, coffee, animals, hides, woollen yarn, petroleum, horses, and tobacco. The chief exports are woollen manufactures (£9,250,000), sugar, silk manufactures, iron, animals, leather wares, cotton stuffs, grain and flour, coal and machinery. Of the total trade 20 per cent. is with the Hanse Towns, 16 per cent. with the United Kingdom, 14 per cent. with Holland and Belgium. A large portion of the trade with England does not appear in the returns, as it is carried on through the Hanse Towns, Holland and Belgium.

BUDGET.—The revenues for 1886–87 consist of the following items:—Customs, £19,196,160; from post, telegraph, and railways, £2,275,020; contributions of the Confederate States, £6,786,420; total, £34,147,820. The expenditure amounts to the same. £18,850,401 is the cost of the army; £2,294,274 the cost of the navy. The National Debt, 1886, is £29,469,914. The funds created from the French war indemnity for fortifications, invalids, and war purposes amounted in Jan., 1886, to £33,587,246.

The GERMAN ARMY on the peace footing, consists of 21,238 officers and 428,104 men, with 81,598 horses and 1,374 guns. On the war footing the total strength amounts to 35,427 officers and 1,456,677 men, with 312,731 horses and 2,808 guns. The field army has 744,031 men and 19,391 officers, 242,415 horses and 2,040 guns; the dépôt troops, "*Ersatztruppen,*" number 296,614 men, 4,796 officers, with 31,373 horses and 444 guns; the garrison troops, "*Besatzungstruppen,*" with 416,032 men, 11,240 officers, 38,943 horses, and 324 guns. The "*Landsturm,*" a last reserve, is not included in the above, but it is not organized in time of peace. Service in the army is compulsory (an increase of 41,135 men has been ordered).

The imperial navy in 1886 consisted of 185 steam-vessels, with 626 guns, including 27 ironclads, mounting 164 guns, 29 cruisers, 4 torpedo vessels, and 90 torpedo boats, with 14,121 men.

Imperial revenue, 1887–88 (Budget)	£ 36,800,140
Imperial debt, 1886	29,469,914
Total imports (Zollverein), 1885	188,548,823
Total exports (Zollverein), 1885	140,205,882
Imports from the U. K., 1885	16,402,091
Exports to the U. K., 1885	23,080,498

PRUSSIA.

King, William, German Emperor, *born* 22 Mar., 1797; *suc.* 2 Jan., 1861; *married* 11 June, 1829, Augusta (*born* 30 Sept., 1811), daughter of Charles Fredk., Grand Duke of Saxe-Weimar.

Heir Apparent, Prince Royal, Frederick William (German Crown Prince), *born* 18 Oct., 1831; *married* 25 Jan., 1858, Victoria, Princess Royal of Great Britain.

Minister of Foreign Affairs, of Commerce, and Premier, Prince Otto von Bismarck.

Vice-President and Interior, Von Puttkamer.

War, General Bronsart von Schellendorff.

Public Works, Maybach.

Finances, Dr. von Scholz.

Agriculture, Woods, and Forests, Dr. Lucius.

Justice, Dr. Friedberg.

Instruction and Worship, Von Gossler.

Prussia is an extensive Kingdom of Central Europe, comprising the larger portion of Germany, situate in lat. 49° 7′—55° 52′ N. and long. 5° 50′—22° 50′ E. On the 1st of December, 1885, the population was as follows:—

Provinces.	Sq. miles, English.	Population.
1. East Prussia	14,278	1,958,858
2. West Prussia	9,447	1,407,950
3. Brandenburg	15,406	3,657,892
4. Pomerania	11,622	1,505,795
5. Posen	11,180	1,715,024
6. Silesia	15,558	4,111,399
7. Saxony	9,748	2,427,979
8. Schleswig-Holstein	7,275	1,150,233
9. Hanover	14,836	2,172,294
10. Westphalia	7,800	2,202,726
11. Hessen Nassau	6,058	1,592,152
12. Rhenish Provinces	10,418	4,344,802
13. Hohenzollern	441	66,709
Total	134,467	28,313,833

Prussia possesses a large number of navigable rivers intersecting the country—viz., the Niemen, Pregel, Vistula, Oder, Elbe, Weser, and Rhine. The coasts of the Baltic and North Seas form a number of gulfs and bays. Its principal mountains are the Harz and the Riesen-gebirge, the latter reaching an altitude of 5,255 feet. The forests are extensive, occupying an area of nearly 10,000,000 acres, chiefly consisting of fir. Its minerals consist of iron, copper, lead, alum, nitre, zinc, cobalt, sulphur, nickel, arsenic, baryta, amber, agate, jasper, onyx, &c., and, to a small extent, silver. Salt (from the brine springs of Prussian Saxony) is abundant, also coal. Metallic ores, salt, precious stones, and amber belong to the Crown. Agriculture and the rearing of cattle constitute the principal sources of employment and wealth of the rural population of the entire monarchy. Wheat, rye, oats, barley, peas, millet, rape-seed, maize, linseed, flax, hemp, tobacco, hops, &c., are extensively cultivated and largely exported. The western division is noted for its excellent fruits and vegetables, and the Rhenish provinces stand pre-eminent for their wines. Prussia has upwards of 100 mineral springs, possessing various properties and qualities. Its manufactures consist chiefly of linens, for which Silesia, Saxony, and Westphalia have long been noted. The cotton works are extensive. Besides these there are numerous manufactories of silk, woollen, mixed cotton and linen fabrics, including shawls, carpets, &c.; woollens are made in almost every town and large village. Next in importance are leather, earthenware, glass, paper, and tobacco manufactures, and working in metals. Brewing is a business of great importance. The principal imports comprise coffee, tea, sugar, cotton, and other produce of the colonies; wines, silk, fruit, manufactured goods, tin, furs, dye-stuffs. The principal exports comprise linens, woollens, hardware, corn, wool, timber, pitch, linseed, tobacco, mineral waters; to which may be added horses, horned cattle, hams, salt meat, &c.; and from the Rhenish provinces, wine.

For the work of education there are about 34,000 elementary schools, attended by about 4,500,000 scholars. There are also 520 high schools, in addition to numerous technical schools.

There are ten celebrated universities in Prussia, attended by about 15,000 matriculated students in 1886; and the whole of the educational establishments are under the immediate control of the "Minister of Public Instruction and Ecclesiastical Affairs." The Royal Family belong to the Evangelical Church ('Evangelical' is a sort of compromise between Lutheran and Calvinist); and the majority of the population consists of Evangelicals (Protestants), who numbered 17,633,279 in 1880; of Roman Catholics there were 9,206,283, and of Jews 363,790.

Estimated public revenue, 1886-87 .. £64,378,025
Expenditure, the same.
Total debt, 1886 207,316,522

CAPITAL, Berlin. Population, 1885, 1,315,412.

SAXONY.

King, Albert, *born* 23 April, 1828; *suc.* 29 Oct., 1873; *mar.* 18 June, 1853, Carola, dau. of the late Prince Gustave de Wasa, *b.* 5 Aug., 1833.
Heir Presumptive, his brother, Prince George, *b.* 8 Aug., 1832; *m.* 11 May, 1859, Marie Anne, Infanta of Portugal, who *died* 5 Feb., 1884.
Minister of State, Count von Fabrice.

A Kingdom of Germany, the third in importance and population of the German Empire, comprising an area of 5,789 English square miles, with a population of 3,179,168, among whom are about 75,000 Catholics, and 6,500 Jews. More than one-half of the surface is arable, and has always been in a high state of cultivation; its agricultural products consist of the usual cereals and leguminous plants, with rape, buckwheat, hops, flax, and fruits of all kinds suited to the climate. The forests supply timber of excellent quality, and in such abundance as to render them a great source of industry and wealth. The minerals are another great source of wealth, the ores being both rich and abundant. The mines consist of silver, tin, bismuth, cobalt, iron, zinc, lead, nickel, arsenic, &c., besides coal, marble, porcelain-earth, and various gems—as topazes, chrysolites, amethysts, cornelians, garnets, &c. The smelting is centralized in large establishments belonging to the State. Manufacturing industry has been greatly developed, and in some branches carried to a high degree of perfection, employing about three-fifths of the population: the linen manufacture employs more than 16,000 looms, but cotton spinning and weaving are in a measure superseding it. Broadcloths, merinos, silks, mixed silk and woollen goods, thread, muslin-de-laines, laces, and embroideries maintain a high reputation. Saxon pottery and porcelain, "the Dresden china," have long been famous; all these form its chief exports. The great fairs of Leipzig are the principal mediums of commerce. The imports are chiefly corn, wine, salt, cotton, silk, flax, hemp, wool, coffee, tea, &c. Its chief towns are Dresden, Leipzig, the great book-market, with, next to that of Berlin, the most frequented University of Germany (having 3,069 students in 1886); Freiberg, in the mining district; Meissen, the site of the potteries; and Chemnitz, the Manchester of Saxony.

Revenue and expenditure, Budget, 1886 £3,456,283
Amount of public debt (chiefly for railways), 1886 32,734,218

CAPITAL, Dresden. Population (1885), 245,515.
Brit. Chargé d'Affaires, George Strachey .. £750
Leipzig—Cons.-Gen., Baron von Tauchnitz, *unpaid*

ANHALT, Duchy of.

Duke, Frederick, *born* 29 April, 1831; *suc.* 22 May, 1871; *married*, 22 April, 1854, Princess Antoinette of Saxe-Altenberg.
[*Heir Apparent*, Prince Leopold, *b.* 18 July, 1855; *m.* 26 May, 1884, Princess Elizabeth, dau. of Landgrave Fredk. of Hesse, *dec.* 19 Aug., 1886.]

A Duchy of Central Germany, in two principal portions, surrounded by Prussian Saxony, containing 906 square miles and a population of 247,603. Budget, 1886, £946,346; Debt, £254,231.

CAPITAL, Dessau. Population, 27,584.

BRUNSWICK, Duchy of.

Regent, Prince Albrecht of Prussia, *born* 8 May, 1837; *elected* 21 Oct., 1885.

A State of Northern Germany, consisting chiefly of three detached parts, comprising an area of 1,425 English square miles, and a population of 372,580, nearly all of whom are Protestants; 9,600 only being Roman Catholics, and 1,400 Jews. Budget in 1886, £486,700; Debt, £3,790,380.

CAPITAL, Brunswick. Population, 85,385.

MECKLENBURG-SCHWERIN, Grand Duchy of.

Grand Duke, Frederick Francis III., *b.* 19 March, 1851; *suc.* 15 April, 1883; *married* 24 Jan., 1879, to Princess Anastasia, dau. of the Grand Duke Michael of Russia.

Heir Apparent, Hereditary Duke Fredk. Francis Michael, *born* 9 April, 1882.

Min. of State, Count H. F. C. von Bassewitz.

A maritime State of Northern Germany, on the Baltic, comprising an area of 5,137 square miles, with a population of 575,140. The Legislative power is vested in 632 proprietors of Knights' estates and 40 representatives of the towns. Revenue, £700,000; debt, £1,122,400.

CAPITAL, Schwerin. Population, 31,532.

MECKLENBURG-STRELITZ, Grand Duchy of.

Grand Duke, Frederick William I., *born* 17 Oct., 1819; *suc.* 6 Sept., 1860; *mar.* 28 June, 1843, Princess Augusta of Cambridge.

Heir Apparent, Adolphus Fred., *b.* 22 July, 1848; *married* 17 April, 1877, the Princess Elizabeth of Anhalt.

A State of Northern Germany, consisting of two detached pieces, separated by Mecklenburg-Schwerin. Area, 1,131 square miles; population, 98,371. No proper budget. Finances in good condition.

CAPITAL, Neu-Strelitz. Population, 9,407.

OLDENBURG, Grand Duchy of.

Grand Duke, Peter, *born* 8 July, 1827; *suc.* 27 February, 1853; *married* 10 Feb., 1852, Elizabeth, daughter of Prince Joseph of Saxe-Altenburg.

Heir Apparent, Frederic Augustus, *b.* 16 Nov., 1852; *married* Feb. 18, 1878, to Princess Elizabeth, second daughter of Prince Frederick Charles of Prussia.

A maritime State of North Germany, situate on the North Sea and the Weser, with an area of 2,479 square miles and a population of 341,250. Budget, 1887: revenue, £335,759; expenditure, £360,323; debt, 1885, £1,857,298.

CAPITAL, Oldenburg. Population, 20,575.

SAXE-COBURG AND GOTHA, Duchies of.

Duke, Ernest II., *born* 21 June, 1818; *suc.* 29 Jan., 1844; *married* 3 May, 1842, Alexandrine, dau. of the late Grand Duke Leopold of Baden.

Heir Presumptive, his Nephew, H.R.H. Prince Alfred, Duke of Edinburgh; *b.* 6 August, 1844; *mar.* Jan. 23, 1874, to the Grand Duchess Marie, only daughter of the late Emperor of Russia.

A State consisting of two principal and several smaller detached portions, an area of 760 English square miles, with a population of 198,829, the majority of whom are Protestants. The country is distinguished by beautiful forests and castles of the Duke (Reinhardsbrunn and Rosenau, favourite retreat of Queen Victoria). The capital, Gotha (population 27,802), is the seat of the oldest life assurance company in Germany; also of the famous Geographical Institute of Justus Perthes. Coburg (the other capital) has 16,210 inhabitants. The Crown revenue is (every year in the period 1885-89) £30,152, and that of the State £166,958.

British Chargé d'Affaires, (vacant) £500

WALDECK.

Prince, George Victor, Prince of Waldeck-Pyrmont, Count of Rappolstein, Seigneur of Hoheneck and Geroldseck, Wasziegen, &c., *born* 14 Jan., 1831; *suc.* 15 May, 1845; *m.* 26 Sept., 1853, Princess Helena of Nassau, *b.* 12 August, 1831, and has issue—Pauline, *b.* 19 October, 1855; *Marie*, *b.* 23 May, 1857, *m.* 15 Feb., 1877, Prince William, heir to the Crown of Wurtemberg, *d.* 30 April, 1882; Emma, *b.* 2 Aug., 1858, *m.* 7 Jan., 1879, to the King of Holland; Helena Frederica Augusta, *b.* 17 Feb., 1861, *married* 27 April, 1882, the late Duke of Albany (who *died* 28 March, 1884); Frederick (Prince-hereditary), *born* 20 Jan., 1865; Elizabeth, *born* 6 Sep., 1873.

A Principality in the north-west of Germany, with an area of 433 square miles, and 56,565 inhabitants. The Budget for 1886 gives an income of £51,504, and an expenditure of £47,726. There is also a Debt of £116,471.

CAPITAL, Arolsen. Population, 2,442.

British Chargé d'Affaires, (vacant) (resident at Coburg).

THE HANSE TOWNS.

The Hanse Towns comprise the three Republics of Hamburg, Bremen, and Lübeck, and are situated in the north of Germany, on the Elbe, Weser, and Trave respectively. Hamburg is the great emporium of Germany, and is 70 miles from the sea. Bremen is much smaller, but very prosperous, and only second in commercial importance to Hamburg. It is connected by railway with the outport of Bremerhaven, 35 miles distant, and carries on a very extensive American trade. Lübeck is situate near the Baltic; its commerce is principally with Norway, Sweden, and Russia.

The commerce between the Hanse Towns and Great Britain is very large; the imports from United Kingdom to Hamburg and Bremen in 1885 (excluding bullion) amounted to £24,617,647.

HAMBURG possesses an area of 158 square miles, and a total population of 518,712.

Burgomaster, Dr. Petersen.

Public revenue in 1885	£1,927,348
Public expenditure in 1885	1,932,573
Public debt, 1885	7,478,749
Total imports, 1884 (excluding bullion)	109,312,108
Total exports	90,144,902

British Consul-Gen. Hon. Charles S. Dundas £1,300

Vice-Consul, George Ambrose Pogson ..... *unp.*

BREMEN possesses an area of 99 square miles, with a population of 166,392.

Burgomaster, Dr. Lürman.

Public revenue, 1885	£628,346

Bremerhaven, Johannes Schwoon 150

LÜBECK possesses an area of 115 square miles, with a population in 1885 of 67,658.

Burgomaster, Dr. Behn.

Revenue, 1885. £145,426; Expenditure.. £131,088
Public Debt, 1885..... 729,754
Total Value of Imports, 1885..... 9,534,509

Brit. Vice-Consul, Heinrich Leo Behncke .. £50

BAVARIA.

King, Otto, *born* 27 April, 1848, succeeded his late brother, Louis II., June 13, 1886.

Regent, Prince Luitpold, *born* 12 March, 1821, uncle of the late King Ludwig II., appointed Regent, June 14, 1886.

Ministers of State—President, Dr. Baron von Lutz, Dr. von Faeustle, Dr. von Riedel, Baron von Crailsheim, Baron von Feilitzsch, von Heinleth.

The second Kingdom in size and population of the German Empire. It is divided into two unequal parts. The eastern portion, comprising eleven-twelfths of the whole, is situated between 47° 16′—50° 33′ N. lat. and 9°—13° 48′ E. long.; the western part, forming the Palatinate, on the left bank of the Rhine. Bavaria is divided into eight circles (Upper Bavaria, Lower Bavaria, Palatinate, Upper Palatinate, Upper, Middle, and Lower Franconia, and Swabia), comprising an area of 29,291 square miles, and a population (in 1885) of 5,416,180. In 1880, 3,748,253 were Roman Catholics, 1,477,952 Protestants, and 53,526 Jews. Bavaria contributes two *corps d'armée* to the forces of the German Empire; their strength is about 50,224 men on a peace footing. The rivers are the Danube, Rhine, Main, Lech, Isar, and Inn. Its forests are extensive, covering nearly a third of the country; the soil is highly productive, wheat, rye, oats, and barley being the chief products; buckwheat and maize are also grown, and tobacco is one of the staple articles. Wine is produced in Lower Franconia and in the Palatinate. The hop-plant is most extensively cultivated. The chief minerals are salt, coal, iron, copper, and pyrites; manganese is found in some places. Many important manufactures are carried on. The brewing of beer is carried to great perfection. The chief imports are sugar, coffee, woollens, silks, stuffs, drugs, hemp, cotton, tobacco, and flax; the chief exports are timber, grain, wine, hops, beer, leather, glass, jewellery, &c. There are three Universities, viz., Munich, Würzburg, and Erlangen.

Budget, 1886..... £11,858,380
Public debt, 1885 (including railway debt, £46,444,137)..... 66,460,276

CAPITAL, Munich. Population (1885), 261,981.

Brit. Chargé d'Aff. Victor A.W. Drummond £1,250
Consul, John S. Smith.

WURTEMBERG.

King, Charles, *born* 6 March, 1823; *suc.* 25 June, 1864; *mar.* 13 July, 1846, the Grand Duchess Olga, dau. of the Emperor Nicholas of Russia.

Heir Presumptive, Prince William, *born* 25 Feb., 1848; *mar.* 15 Feb., 1877, Princess Marie of Waldeck, who *died* 30 April, 1882, *remar.* 8 April, 1886, Princess Charlotte of Schaumburg Lippe.

President of Ministry, Dr. von Mittnacht.

A Kingdom of South Germany, with an area of 7,531 English square miles, and a population (in 1885) of 1,994,849, of whom thirty per cent. are Roman Catholics. It possesses rich cultivated fields, orchards, gardens, and hills covered with vines; the forest, grain, and pasture-land being nearly equally distributed throughout. Wheat, oats, barley, hemp, hops, rye, potatoes, beans, maize, and turnips are the principal agricultural products. The minerals, consisting chiefly of iron, granite, limestone, ironstone, fireclay, &c., abound in the neighbourhood of the Black Forest; mineral springs are numerous throughout the kingdom. The principal rivers are the Danube and the Neckar. The manufactures generally are linen, woollen, and cotton fabrics; carpets, porcelain, leather, tobacco, iron and steel goods, cabinet-work, &c. There are also many oil mills, breweries, and brandy distilleries. The principal exports are grain, cattle, wood, salt, oil, leather, woollen, cotton, and linen fabrics, beer, wine, &c.

Budget, 1886 ..... £2,699,773
Total amount of public debt, Nov. 1886 (including £18,698,355 for railways) 20,656,857

CAPITAL, Stuttgart. Population, 125,906.

2nd Secretary, Arthur G. Vansittart 375

BADEN, Grand Duchy of.

Grand Duke, Frederick, *born* 9 Sep., 1826; *Regent*, 24 April, 1852; *suc.* 5 Sept. 1856; *mar.* 20 Sept., 1856, Louise, daughter of Emperor William I. of Germany.

Heir Apparent, Frederick, *born* 9 July, 1857.

President of Ministry, L. Turban.

A State of the German Empire, situate in the south-western part. The Rhine forms its southern and western boundary, separating it from Alsace and Switzerland. A great part of the surface is mountainous, and includes the Black Forest and Odenwald. It is divided into four districts, viz., Constance, Freiburg, Mannheim, and Carlsruhe, and comprises an area of 5,803 square miles, 3,200 of which are under cultivation—corn, wine, fruit, potatoes, tobacco, hemp, hops, and chicory being the chief produce. Its population in 1885 was 1,600,839, two-thirds of whom were Catholics, and one-third Protestants (Jews 27,300). Nearly one-half the people are engaged in agriculture. Timber is extensively grown, and much attention is given to the breeding of horses, cattle, sheep, &c. Tobacco is cultivated to a large extent. The chief manufactures are cigars, cotton and silk stuffs, straw hats, brushes, trinkets, clocks, chemicals, and machinery. There are 1,835 schools and colleges, and two universities. There are 830 miles of railway, mostly belonging to the State, constructed at a cost of £20,107,000.

Public revenue, 1885-86 ..... £2,135,645
Public expenditure, 1885-86 2,210,526
Debt in 1885 (chiefly railways) 18,579,971

Consul-Gen., Charles Oppenheimer (at Frankfort) ..... *unpaid*

ALSACE-LORRAINE.

Statthalter, Prince Clovis von Hohenlohe-Schillingsfürst.

Alsace-Lorraine (Elsass-Lothringen), which was annexed by France from the old German Empire between 1648 and 1697, and restored to Germany, after a sanguinary war with France, by the Treaty of Versailles in 1871. It embraces the fertile plain between the Rhine and the Vosges, and stretches beyond these mountains as far as Luxemburg. Wine, tobacco and hops, iron, and coal are among its leading productions, and the cotton industry is most flourishing.

The new province is called a "Reichsland," or imperial territory, and is governed by a "Statthalter," appointed by the Emperor. There is an elective Provincial Committee of 58 members. The area is 5,602 square miles. The population in 1885 was 1,563,145. French was spoken by about 200,000 persons.

The principal towns are Strassburg (112,019), Mülhausen (69,676), and Metz (53,928).

Revenue (1886-87)..... £2,157,321
Debt (1886) 1,682,754

DEPENDENCIES.—Although Germany sends forth a larger number of emigrants than any other country in Europe, excepting the British Islands, it was not till the year 1884 that she made an effort to acquire so-called colonial possessions. These annexations have been confined hitherto to Africa and the Pacific. The annexations which Dr. Nachtigal effected in 1884 along the west coast, between the British Gold Coast and the Orange River, include:—Togo Land, adjoining the Gold Coast on the east; the territory extending from the Rio del Rey southwards, past the Cameroons, to the French border; and the whole of the Dama and Nama coast, from Cape Frio to the Orange River, excepting, however, Walvisch Bay, which remains with Great Britain. By a convention with France, concluded in 1886, the Rio Campos is to form the boundary between the Protectorates of France and Germany. The Baptist missionary settlement of Victoria, at the foot of the Cameroons, was acquired by Germany in 1886 by purchase. The Dama and Nama lands have an area of 200,000 square miles, with about 236,000 inhabitants, whose chiefs cheerfully signed a treaty in 1876 which placed them under the rule of Queen Victoria. This treaty, however, was not ratified. Hence Germany was able to step in; but though several of the Nama chiefs in the so-called Lüderitz Land in the south have accepted her overtures, the Dama chiefs, notwithstanding the presence of German missionaries, have hitherto for the most part remained obdurate. On the east coast of Africa a German trading company claims to have "bought" vast territories at the back of the Sultan of Zanzibar's dominions, stretching from Cape Guardafui to Cape Delgado, and extending inland to Lake Nyassa and beyond the Kilimanjaro. The boundaries between the Sultan of Zanzibar's dominions and the territories claimed by Germany have recently been defined by an International Commission. In the mean time, the Germans have established stations at the Durnford river, south of the Juba, in Chaga, in Usagara, and elsewhere.

In the Pacific, by virtue of an amicable arrangement with England, Germany has taken up a portion of the north coast of New Guinea and of the neighbouring islands, now called the Bismarck Archipelago, which comprise 88,330 square miles, with a population of 297,000. In addition to this the German flag has been hoisted in 1885 in the Marshall and Gilbert Islands (320 square miles, population 46,600).

All in all these German "colonies" cover an area of at least 450,000 square miles, and they have a population of 855,000. There is not, however, believed to be a single square mile upon which Germans could settle as "colonists." An experimental 'settlement' is, however, to be formed upon the slopes of the Kilimanjaro. The trade of these countries is as yet far too insignificant to cover the cost of even the most simple system of administration and supervision.

GREECE.

King, George, second son of the present King of Denmark, *born* 24 Dec., 1845; *elected* King of the Hellenes, 30 (18) March, 1864; *married*, 27 Oct., 1867, Olga, eldest daughter of the Grand Duke Constantine of Russia.
Heir Apparent, Prince Constantinos, *born* 2 August, 1868.
Prime Minister, Finance, & War, C. Tricoupis.
Foreign Affairs, Stephen Dragoumis.
Minister Res. in London, John Gennadius, 5 St. James's Street, S.W.
Consul-Gen., Alex. A. Ionides, 19, Gt. Winchester Street, E.C.

A maritime Kingdom in the south-east of Europe, situate in lat. 35° 40′—40° 10′ N. and long. 18° 20′—25° 50′ E., comprising an area of 24,977 square miles, with a population (in 1879) of 1,979,453. The country is composed of a continental portion, almost separated into two parts by the Gulfs of Patras and Lepanto on the west, and the Gulf of Ægina on the east, the Archipelago of the Ægean Sea and the Ionian Islands, and is divided into sixteen provinces, called Nomarchies. The surface is nearly all mountainous; the coasts are elevated, irregular, and deeply indented. Vegetation is varied, but agriculture is generally in a very backward state. The most important of the fruit trees are the olive, the vine, orange, lemon, fig, almond, citron, pomegranate, and currant-grape. The imports are cotton and other manufactures, corn, timber, hides, sugar, &c. Its exports consist of currants, olive oil, lead from the mines of Laurium, figs, and other fruit; hides, tobacco, valonia, wine, honey, wax, gum, silk, and sponges. The army in 1886 consisted of

about 32,612 men. The navy consists of 57 vessels, 2 of them small ironclads, with 2,715 men and officers. There are 109 miles of railway open for traffic. Telegraphs, 3,170 miles. The mercantile marine consists of 3,238 vessels of 272,679 tons.

Estimated revenue, 1887	£3,848,269
Estimated expenditure, 1887	3,657,326
Public debt (foreign), £1,625,664; internal and floating	25,000,000
Exports, 1883	5,410,198
Exports, 1883	3,684,802
Imports from United Kingdom, 1885	873,947
Exports to United Kingdom, 1885	1,932,542

HAWAIIAN ISLANDS.

King, David Kalakaua, *born* 16 Nov., 1836; *elected* 12 Feb., 1874.
Premier and Minister of Foreign Affairs, Hon. Robert J. Creighton.
Chargé d'Affaires, Abraham Hoffnung.
Consul-Gen. in London, Henry R. Armstrong, 4, Great Winchester Street Buildings.

A rich, beautiful, and most interesting chain of islands, situate in the North Pacific Ocean, forming the Kingdom of Hawaii, extending from south-east to north-west, in lat. 19°—22° 15′ N. and long. 154° 48′—160° 20′ W., discovered by Captain Cook in 1778. They consist of 13 islands, 8 of which are inhabited. All are very mountainous, and appear to be chiefly of volcanic origin: they occupy a united area of 6,587 square miles, with a population, in 1884, of 80,578, of whom 17,900 are Chinese, and 17,300 whites of European descent, mostly Portuguese. Hawaii, the largest of the group, contains two stupendous volcanic mountains, Mauna Loa, which is still in activity, and Mauna Kea, each rising to nearly 14,000 feet. In 1881 there was a vast eruption and a river of lava that threatened to destroy the town of Hilo. The imports are chiefly manufactured goods, while the exports consist mainly of sugar, coffee, rice, pulu, hides, &c. The islands are well situated for trade, being in the route between America and China. There is a commercial marine of 57 vessels of 9,826 tons; railways, 32 miles.

Revenue, 1886-87 (estimated)	£618,204
Expenditure, 1886-87 (estimated)	613,761
Public debt, 1884	184,538
Total value of imports, 1885	810,671
Total value of exports, 1885	1,844,969

CAPITAL, Honolulu. Population, 20,487.

British Commissioner and Consul-General, Major James Hay Wodehouse £1,500

HAYTI, REPUBLIC OF.

President, General Salomon, *elected* 22 Oct., 1879.
Minister of Foreign Affairs, Brutus St. Victor.
Minister in France & England, Gen. Laforestrie.
Consul, Maurice Erdmann, 101, Leadenhall St.

The Republic of Hayti is the western or French portion of the island of San Domingo, which, next to Cuba, is the largest of the West India Islands. It contains 29,830 square miles, of which 9,242 square miles belong to Hayti. It lies in N. lat. between 17° 37′—20°, and in W. longitude between 68° 20′—74° 28′; and belongs to the group of the Greater Antilles. The portion belonging to Hayti contains a population of 550,000. The mountains are richly and heavily timbered, and susceptible of cultivation nearly to their summits: it is probably the most fertile spot in the West Indies, whilst its harbours, especially Port-au-Prince, offer considerable facilities to foreign trade. The principal productions are coffee, logwood, cocoa, cotton, hides, sugar, honey, gums, these being the chief exports. It is said to contain mines of gold, silver, copper, tin, and iron. Its commercial prosperity has been almost annihilated by repeated revolutions. The principal foreign trade is carried on with Great Britain, France, and the United States.

Revenue, customs only, 1884-85	£1,261,253
Expenditure, 1882-83	1,251,314
Debt (admitted, 1882)	2,605,810
Imports, 1884-85	1,023,218
Exports, 1884-5	1,482,615
Imports from U. K., whole island, 1885	352,015
Exports to U. K., whole island, 1885	111,789

CAPITAL, Port-au-Prince. Population, 34,000.

British Consul, Alfred St. John £700

HONDURAS, REPUBLIC OF.—See under "Central America," page 442.

ITALY.

King, Humbert, *born* 14 March, 1844; *married*, 22 April, 1868, Princess Margaret of Savoy (*born* 20 November, 1851), daughter of the late Duke of Genoa; *succeeded*, 9 January, 1878.
Heir Apparent, Victor Emmanuel, Prince of Naples; *born* 11 November, 1869.
President of the Council and Minister of Home Department, Signor Depretis (May, 1881).
Foreign Affairs, Count Nicolis de Robilant.
Finance, Signor A. Magliani.
Ambassador in London, Count Corti, 19, Grosvenor Square.
1st Secretary, Chevalier T. Catalani.
2nd Secretary, Marquis Obizzo Malaspina.
Attachés, Sig. Giulio Desmè, Count di Trinità.
Naval Attaché, Capt. Candiani d'Olivola.
Consul-Gen., Baron E. B. Heath, 31, Old Jewry.
Vice-Consul, Cavaliere J. Buzzegoli.

A Kingdom in the South of Europe, consisting of a peninsula, the large islands of Sicily and Sardinia, the island of Elba, and about 66 minor islands. It is situate between lat. 36° 38′ 30″—46° 40′ 30″ N. and long. 6° 30′—18° 30′ E., and comprises a total area of 110,655 square miles (91,277 mainland, 19,378 islands), with a population, in 1885, of 29,699,781. Formerly it was composed of the various States of Sardinia, the two Sicilies, the Pontifical States, the Lombardo-Venetian provinces of the Austrian Empire, the Grand Duchy of Tuscany, the Duchies of Parma and Modena, and the Republic of San Marino. In 1870 the complete unity of the country under one crown was finally effected, and Rome became again the capital of Italy. The small community of San Marino, enclosed within the Italian Dominions, alone retains its independent form of government. The Kingdom is divided for administrative purposes into 69 provinces. The coast-line of the mainland is estimated at

1,999 miles; of Sicily, Sardinia, and Elba at 1,389 miles; of the minor islands at 557 miles; in all 3,945 miles, having several large bays and gulfs. The peninsula is traversed throughout its length by the chain of the Apennines: the Alps form its Northern limits, dividing it from France. The chief rivers are the Po, the Adige, the Arno, and the Tiber. Its wines are numerous and celebrated. The finest olives and olive oil are furnished by Tuscany, Liguria, and the Province of Bari. The cultivation of silk forms an important agricultural industry. Fruits abound, and are of exquisite flavour, such as grapes, oranges, lemons, almonds, figs, dates, melons, pistachio-nuts, all of which are largely exported. The supply of sea and fresh-water fish is considerable. Sardines and anchovies are exported. Among the principal minerals are iron, lead, zinc, copper, manganese and antimony ores, sulphur, gypsum, amianthus, alum, and boracic acid. Silver is found in Sardinia, and some gold in the Alps. Salt, a government monopoly, is supplied from 11 salines, and deposits of native salt are common in the Apennines. The total annual mineral produce is valued at £3,000,000, of which sulphur alone absorbed £1,700,000. The railway system is making rapid progress throughout the kingdom: in 1885 there were 6,167 miles open for traffic, and 18,135 miles of telegraph wire. The commercial marine (1884) consists of 7,287 vessels (215 steamers), of 971,001 tons. The imports chiefly consist of cotton, wheat, coal, yarns and manufactured goods, woollens, raw silk, silk-worms' eggs and cocoons, machinery, iron and steel in bars, plates and rails, hardware, raw hides, horses and cows, fixed oils, salt fish, dye-stuffs, tobacco, earthenware, &c. The principal exports are olive oil, wine, raw and thrown silk, hemp, cattle, straw hats, rice, iron, zinc, and copper ores, sulphur, marble, fruit, vegetables, fresh and prepared meats, poultry, chemical products, woods, roots, &c., for dyeing and tanning artistic works, &c. The manufactures are woollen, cotton, silk, hemp, and linen yarns and tissues, leathers, straw and felt hats, furniture, chemical products, paper, agricultural and other machinery, prepared meats, artistic works (such as mosaics, pottery, Venetian glass, alabaster ornaments), &c. The army in 1885, including the local and active militia, had a total nominal strength of 2,400,000 men on the war footing. The Force is divided into Regular Army 881,203; movable militia, 362,353; local militia, 156,522. On a peace footing about 170,000 men are with the colours. The navy in 1886, including vessels building, consisted of 173 vessels, with 402 guns, and manned by about 8,000 men; 21 of the ships are ironclads, several of the most powerful construction. There are also 11 torpedo vessels and 83 torpedo-boats.

ROME—*Sovereign Pontiff*, Leo XIII., *born* 2 March, 1810; *elected* 20 February, 1878.
Secretary of State to His Holiness, The Cardinal Ludovico Jacobini, appointed 1880.

COLONIES.—Italy has long been ambitious to come into possession of colonies, and since the annexation of Tunis by France she looks upon Tripoli and Barka as her possible share should the Turkish Empire ultimately break to pieces. For the present, however, her colonial possessions are confined to the inhospitable coast of the Afer or Danakil country on the Red Sea, where Asab Bay and other places to the north of the Strait of Bab el Mandeb have been occupied. Massowa, further north, one of the chief ports of Abyssinia, by an arrangement with England, has an Italian garrison since February, 1885. It needs hardly be said that the hope that these places might become important stations for a lucrative trade with Abyssinia has not hitherto been realized.

JAPAN.

Mutsu Hito, the present *Emperor*, *born* 1852; *mar.* Haruko, 1862; succeeded to the throne 13 Feb., 1867; was crowned 13 October, 1868.
Heir, Prince Yoshi Hito, *born* 31st Aug., 1879.
Prime Minister, Count Ito Hirsbumi.
Minister for For. Affairs, Count Inouye Kaorü.
Minister in London, Jushie Kawasé Masataka, 9, Cavendish Square.
Secretary of Legation, Ohyama Tsunaské.
English Secretary, R. Stuart Lane.
Attachés, Ijuin Kaneyoshi, Nakata Takunori, Sasaki Takayoshi, and Karomy Kayasaki.
Naval Attaché, Commander Hatchida.
Consul, Sonoda Kokcshi, 84, Bishopsgate Street.

An ancient and extensive Empire, consisting of several large and many small islands, said to comprise in all above 3,800, the principal of which are Nippon, or Niphon (which in Japan gives name to the whole empire), Sikoku, Kiusiu, and Yezo, situate to the north of the main island, Nippon, from which it is separated by the Tsugaru Straits. The Kurile Islands belong to Japan, and she has recently incorporated the Luchu (Riu-kiu) islands under the name of "Prefecture of Okinawa." The empire comprises an area estimated at 147,669 square miles, with a population in 1885 of 37,868,997. Japan

is said to possess a written history extending over 2,500 years, and its sovereigns to have formed an unbroken dynasty since 660 B.C., the present Emperor being the 123rd of his race; but the authentic history begins about 400 A.D. Within the last few years Japan has made unparalleled progress in civilization and the adoption of Western manners and customs. The feudal system under which the country was governed by numerous Lords has been abolished, and the Mikado is now absolutely the Sovereign of the State. An aristocracy after the European pattern has been introduced: instead of the old title of Daimio, those of Prince, Count, and Viscount have been conferred. The islands are eminently volcanic, and several of the summits are still eruptive; the chief of these, Fuji san, or Fuji yama, one of the most sacred mountains of Japan, about sixty miles from Tôkiô, is 12,365 ft. high. The country is very mountainous, and not more than one-sixth of its area is available for cultivation. It possesses five or six fine harbours. The soil is productive, teeming with every variety of agricultural produce. Copper, iron, and sulphur abound; agate, cornelian, and rock crystal are also found. Gold and silver mining is prosecuted on a small scale. It possesses a fair supply of middling coal. Among the vegetable productions may be noted the camphor-tree, paper mulberry, vegetable wax-tree, which also furnishes the celebrated "lacquer" of Japan. The principal timber trees are the Cryptomeria Japonica, Pinus Massoniana, and Zelkowa Keaki; the maple is merely for ornament. Chestnut, oak, beech, and elm are comparatively rare and little used. The tobacco-plant, tea-shrub, potato, rice, wheat, and other cereals are all cultivated; agriculture, upon which the Japanese bestow great care, being their chief occupation. The coasts are extremely rich in fish. The floral kingdom is rich, beautiful, and varied. The fruits are abundant, but for the most part of inferior quality. The chief manufactures are those of silk and cotton, japanned ware, porcelain, and bronze. The chief imports from Europe are cotton yarn, shirtings, mousseline, velvets, chintzes, and other piece-goods; metals, drugs, and medicines are also among the imports. Sugar is largely imported from China. The chief exports are silk, tea, rice, coal, fish-oil, lacquer-ware, copper, camphor, and dried fish.

The army consists of 38,425 men on a peace footing, and is increased to 131,475 in time of war; the navy of 29 vessels, of which five are armour-plated. Under treaties with Great Britain, the United States, and several other powers, the ports of Yedo (Tôkiô), Kanagawa (Yokohama), Hiogo, and Osaka (on the inland sea), Hakodate (in Yezo), Niigata, Nagasaki, and Nafa (Luchu), are open to trade. Of the total trade about 26 per cent. is with the United Kingdom, 24 per cent. with the United States, 20 per cent. with China.

CAPITAL, Tôkiô, formerly called Yedo, the residence of the Emperor; population, 824,000. Other cities are—Nagoya, 119,000, Osaka, 294,000; and Kiôto, the ancient capital, 239,000.

KHIVA.

Khan, Seid Mehemed Rehim Khan, *suc.* 1868.

A Russian Vassal-State in Western Turkistan, on the western side of the lower Amu Darga, or Oxus, which here flows into Lake Aral. The area is 22,320 square miles, with about 700,000 inhabitants, dominant among whom are the Uzbegs. The fields and gardens are irrigated by canals, derived from the Oxus; all the surrounding country being a barren wilderness, affording but little pasturage. Wheat, melons, and other fruits, cotton and wool are among the productions. The Russians captured Khiva on May 20th, 1873, abolished slavery, and compelled the Khan to acknowledge himself a vassal of the Czar, and to promise payment of a war indemnity of £348,333.

CAPITAL, Khiva. Pop., 6,000.

LIBERIA.

President, His Exc. J. Hilary W. R. Johnson.
Secretary of State, Hon. E. J. Barclay.
Consul-Gen. in London, Hon. Edward B. Gudgeon, 15, Abchurch Lane, E.C.
Consul, Henry Hayman.
Vice-Consul, John Neely.
Secretary of Legation, Reginald C. Saunders, Offices, 15, Abchurch Lane, E.C.
Postmaster-General, Hon. T. J. Wiles.
Attorney-General, Hon. W. Davis.

An independent Negro Republic of Western Africa, occupies that part of the coast of North Guinea which is between the river San Pedro, on the south-east, in long. 6° 40′ W. from Greenwich, and the River Manna, a distance of 400 miles, with an area of about 14,000 square miles, with a seaboard of nearly 509 miles. It claims authority for about, interior-wards, 100 miles. The population consists of 18,000 emigrants from America and their descendants, and aborigines, numbering in all nearly 1,050,000. The principal exports are coffee, cocoa, sugar, wax, ginger, palm-kernels, palm-oil, indigo, hides, ivory, gold-dust, &c. Liberia possesses excellent schools, and has a bishop educated and ordained in England. Liberia was founded by the American Colonization Society in 1823, and has been recognized by the United States and the European Powers since 1847 as an independent State.

Revenue, 1885.. £40,000. Expenditure.. £32,000

CHIEF TOWN, Monrovia. Population, 6,000.

British Consul, Sir Samuel Rowe, K.C.M.G. (Sierra Leone).

LIECHTENSTEIN.

Prince, Johann II., *born* 5 Oct., 1840, *suc.* 12 Nov., 1858.

A Principality, on the Upper Rhine, between the Tyrol and Switzerland, has an area of 61 square miles, with (1880) 9,124 inhabitants. Revenue about £50,000; debt, £17,500.

LUXEMBURG.

Grand Duke, The King of the Netherlands (*see* p. 461).

A Grand Duchy in Central Europe, bounded by Belgium and Germany, formed part of the German Confederation, 1815–66, and is still included in the German 'Zollverein.' In 1867 the Treaty of London declared it a neutral territory under the sovereignty of the King of the Netherlands. The area is 999 square miles; the population (1880) 209,570, nearly all Roman and German Catholics. The principality is rich in iron-ore. The revenue (1885) is £369,350, and there is a debt of £645,800. There are 224 miles of railway. The army numbers 320 men. The capital, Luxemburg (16,679), is a dismantled fortress.

MADAGASCAR.

Queen, Ranavalo III., *suc.* 13 July, 1883.
Prime Minister, Rainilaiarivony.
French Resident, M. Le Myre de Villers.
Ambassador in London, General Willoughby, 12, Pall Mall.
Consul, James Procter, 5, East India Avenue.

The largest of the African islands, situated to the east of the continent, from which it is separated by the Mozambique Channel, and surrounded by the waters of the Indian Ocean, in lat. 11° 57′—25° 38′ S. and long. 43° 15′—50° 30′ E., extending over an area nearly twice as large as the British Isles, containing a population of between 3,000,000 and 5,000,000. It is 1,010 miles in length, and 370 at its greatest breadth, containing an area estimated at 228,540 square miles. The island was known to the early Arabs as Jezira el Komr, and became known under its present name through Marco Polo. Its actual discovery is due to the Portuguese (1506). It has since the time of Henri IV. been an object of French desire, and Louis XIII., in 1642, declared it to be a possession of France. Attempts at settlement and conquest proved, however, a failure, and until recently the French possessions were limited to a few adjacent islets. In the year 1816 diplomatic and commercial relations were entered into between Great Britain and Radama, King of the Hovas, whose authority over the whole of the island was acknowledged. By a treaty signed at Tamatave, Dec. 12, 1885, Madagascar is declared a French Protectorate, a port on Diego Suarez Bay has been ceded, to be converted into a naval station, and a war indemnity of £800,000 is to be paid. The soil is in general fertile, with rich pasturage, and magnificent forests abounding in valuable trees and medicinal plants; the other products are rice, sugar, silk, cotton, cocoanuts, bananas, sweet potatoes, indigo, pepper, india-rubber, &c. The mineral products are few: iron ore is found in several places, and coal is also said to exist; gold, silver, copper, and lead are also found in small quantities. The principal manufactures are jewellery, chains, necklaces, straw hats, and dresses, termed lambas. An active import and export trade with this country was formerly carried on, but the chief trade was with the islands of Mauritius and Réunion.

Imp. from U. K. 1885, £6,729; exports, £10,545

CAPITAL, Antananarivo. Population, 80,000.

MALACCA.

Malacca, or the Malay Peninsula, has a southerly extension of about 900 miles, an area of 81,800 square miles, and about 1,250,000 inhabitants, including large numbers of Chinese. The country is hilly, densely wooded, abounding in game, and famous for its tin mines. The isthmus of Krah, in about 11° N. lat., has been examined with a view to the construction of a ship-canal, which would much shorten the passage between India and China, but competent authorities have declared the scheme to be impracticable. The greater portion of the peninsula owns allegiance to Siam. Along its western coast are the British "Straits Settlements," viz., Pulo Penang with the province of Wellesley, Dinding, and Malacca (ceded by the Dutch in 1825), whilst at its southern extremity lies an island with the great British emporium Singapore. The independent portion of the Malay peninsula (31,470 square miles, with 300,000 inhabitants) is occupied by a number of Mohammedan Malay states.

MEXICO, CONFEDERATE REPUBLIC OF.

President of the Republic, General Porfirio Diaz, acceded 1 Dec., 1884.
Minister of Foreign Affairs, Don Ignacio Mariscal.
Minister in England, Don I. Mariscal (absent).
Chargé d'Aff. ad int., Don Pablo Martinez del Campo, 175, Cromwell Road.
Secs. of Legation, E. A. Gibbon, M. J. de Lizardi.
Agent for Registration and Liquidation of Bonds, General D. Francisco y Mena.
Consul at Liverpool, J. Carlos Mexia.
Private Commercial Agent, Don R. de Olano, 57, New Broad Street, E.C.

A country in the southern part of the continent of North America, with an extensive seaboard to both the Atlantic and Pacific Oceans, situated between 15°—32′ N. lat. and 87°—117° W. long., and comprising one of the richest and most varied zones in the world, but from various causes her resources have never been fairly developed. It comprises 27 states, 1 territory (Lower California, almost separated from the main portion by the Gulf of California), and 1 federal district, that of Mexico, making in all 29 political divisions—comprehending an area of 751,177 square miles, a population of (1882) 10,447,974—consisting to the extent of about one-third of Indians. The surface consists of an elevated plateau, commencing at a few miles from the coasts, and containing several volcanic summits, the highest of which, Citlaltepetl and Popocatepetl, rise to 17,879 and 17,784 feet above the sea. Vera Cruz, Campeche, and Tampico are the chief seaports on the Gulf of Mexico, Mazatlan and Guaymas on the Pacific. About 3,703 miles of railway were open in 1885, and 19,317 miles of telegraph. The railways have in a large measure been built by American companies. The 'Mexican Central' joins El Paso (Texas) with the city of Mexico, which travellers can now reach from New York without change of carriage. Other lines have been

constructed by the 'National' and by General Grant's 'Southern' Companies. Heavy railway subsidies account largely for the embarrassment of Mexican Chancellors of the Exchequer, but it cannot be doubted that an efficient railway system will powerfully assist in developing the vast resources of this rich country. The country produces all the fruits, cereals, and vegetables of Central and Southern Europe. The principal crops are maize, wheat, barley, pulse, chile-pepper, sugar, potatoes, coffee, cotton, tobacco, vanilla, flax, grapes, and all kinds of fruit. The maguay, or Mexican aloe, yields a favourite beverage; other species of the same plant supply pita-flax and sisal-hemp or henequen. The forests abound in mahogany, rosewood, ebony, and caoutchouc trees. The mineral wealth is very great, silver and gold, copper, lead and quicksilver, iron and coal, are the leading products of the mines. Woollen and cotton spinning and weaving, and other branches of industry, are encouraged by high protective duties. The imports, nevertheless, consist very largely of textile manufactures. Of the exports 70 per cent. consist of silver and gold; flax and hemp, coffee, hides and skins, timber, logwood, vanilla, tobacco, dye-stuffs, sugar and drugs ranking next in importance. The army is (1885) composed of about 21,000 men. The navy is limited to 5 small vessels.

Estimated revenue for 1885-86	£5,819,000
Estimated expenditure, 1885-86	4,374,240
Total exports, 1884-85	10,033,060
Total imports, 1884-85, about	7,719,610
Public debt, 1886, estimated	29,406,000
Imports from United Kingdom, 1885	796,144
Exports to United Kingdom, 1885	723,061

CAPITAL, Mexico. Population, 300,000.

British Minister, Sir S. St. John, K.C.M.G.	£3,000
Sec. of Legation, George F. B. Jenner	500
Consul, Edward Gresley Carden	1,100

Guaymas—Vice-Consul, George Wood	
Mazatlan—Vice-Consul, Chas. Woolrich	

MONACO.

Prince, Charles III., *b.* Dec. 8, 1818, *suc.* 20 June, 1856.
Heir, Albert, *born* 13 Nov., 1848.

A miniature Principality on the Mediterranean, between France and Italy, including the town of Monaco with its gambling establishment and the surrounding country, and having an area of 8 square miles with (1883) 10,108 inhabitants. Olive oil, lemons, oranges, perfumes, liquors, and pottery, are exported. There is an army of 126 men.

MONTENEGRO.

Prince, Nicholas, *born* 7 October, 1841; *proclaimed* 14 Aug., 1860; *married*, 1860, Milena, daughter of Voyevod Peter Vukotich or Vucotic.
Heir, Danilo Alexander, *born* 29 June, 1871.

A small Principality, which has always claimed to be independent, which claim has recently been admitted by Turkey, has an area of 3,486 square miles, and a population of 245,380, of whom 10,000 are Mohammedans, 15,000 Roman Catholics, and the remainder Orthodox Slavs. The surface forms a series of elevated ridges with lofty mountain-peaks, many of which are covered with forests. Chief products are maize, potatoes, sumac, scoranzas (sardines), castradina (smoked mutton), and hides. The only manufactures are coarse woollens. Agriculture is the principal occupation.

The total revenue of the State is about £60,000, and there is a debt of £170,000. Apart from a body-guard of 100 men, there is no standing army, but in war every male above the age of 14 years is forced to serve in the army, which musters about 28,000 men. The two ports, Antivari and Dulcigno, have about 150 coasting vessels.

CAPITAL, Cetigne. Population, 1,400.

Chargé d'Affaires, Walter Baring £300

MOROCCO, EMPIRE OF.

Sultan, Mulai Hassan, *born* 1831, *suc.* 20 Sept. 1873.
Minister of Foreign Affairs, Caid Mohammed Torres, *ad interim*, *app.* November, 1886.

The largest of the Barbary States, situate in the N.W. of Africa, between 27°—36° N. lat. and 1° E.—11° 40′ W. long. The Empire, which is an absolute monarchy, consists of the Kingdom of Fez and Morocco, to the north of the Atlas, and the territories of Sus, Draa, Wadi Tafilet, Tuat, and others to the south, which are again subdivided into 33 districts, each under the superintendence of a "Kadi;" but the semi-independent tribes are ruled by their own chiefs, and scarcely acknowledge the authority of the Sultan. Morocco contains about 314,000 square miles, of which the "Tell," or fertile regions of the mountains and coast, contains 76,000, the steppe-land 26,000, and the Sahara 217,000, with a population variously estimated at from 5,000,000 to 8,000,000. The Jews number about 200,000, and reside chiefly in the cities. Among the chief products of the country are wheat, barley, maize, oil, esparto-grass, and hemp; among fruits, the fig, almond, pomegranate, lemon, olive, orange, and date are common; but agriculture is greatly neglected. Morocco is said to be rich in mineral treasures: antimony, iron, coal, copper, lead, tin—the last three in considerable quantities. Gold and silver also are found, and wool is plentiful. The chief ports are Tetuan, Tangier, El Araish (Laraiche), Rabat, Casa Blanca (or Dar-al-baida), Mazagan, Saff, and Mogador. The exports are maize, beans, peas, oil, wool, dates, fowls, eggs, carpets, slippers, goat-skins, leather, grain, cattle, ostrich feathers, gums, esparto; and the imports, cotton, linen, muslin, and worsted goods, tea, coffee, sugar, iron, brass, hardware, &c. The army consists of between 15,000 and 20,000, one-half of whom are negroes, and a sort of militia, of various arms, amounting to 80,000 men.

There are three capitals, of which Fez, the chief residence of the Sultan, with a population of 80,000, is the principal; Morocco, the old metropolis, 50,000; and Mequinez, 56,000.

Income and expenditure, each about	£1,700,000
Public debt, 1882, about	250,000
Imports, 1884	840,480
Exports, 1884	753,365
Imports from United Kingdom, 1885	427,491
Exports to United Kingdom, 1885	484,135

Tangier—British Minister, William Kirby Green, C.M.G.	£2,000
Consul, Herbert Edward White	500

MUSCAT. *See* OMÂN.

NAVIGATORS' ISLANDS. *See* SAMOA.

NEPAUL.

Sovereign, Maharaja Dhiraj Surandar Bikram Sah Bahadur Shumshir Jung, *born* 1875, *suc.* 1884.

Prime Minister, Dir Shumsheer, *proclaimed* 22 November, 1885, after the murder of the Regent, General Sir Runnodeep Sing, Rana Bahadur, K.C.S.I.

The Kingdom of Nepaul lies between British India on the south and Thibet on the north, and occupies the southern ranges of the Himalayas for a distance of about 500 miles, extending about 20 miles beyond the base of the mountains into the plains. It has an area of 56,800 square miles, a population of two millions, and for administrative purposes it is divided into nine districts. The mountains descend into the plains separated by narrow valleys, 3,000 to 6,000 feet above the sea-level. The lower ranges are covered with forests of sâl, pine, spruce, mimosa, oak, &c. The soil of the valleys and plains is extremely fertile, and wild animals abound. The chief minerals are copper, iron, sulphur, jasper, marble, and rock crystal. Nepaul has commercial relations with Thibet and British India, and the value of its exports to the latter in 1884 was £1,482,419; the imports amounting to £994,258. The revenue, amounting to £1,000,000, is realized chiefly from land rent, and from export duties levied at the frontier. The trade routes are numerous, the most important being that connecting Khatmandu, the capital, with Patna, in Bengal. Nepaul exports rice and other grains, oil-seeds, *ghi*, ponies and cattle, falcons for hawking, opium, musk, madder, borax, jute, hides and furs, ginger, cardamoms, and yaks' tails. It receives in exchange raw and manufactured cotton and twist, woollen cloth, shawls, rugs, flannel, silk brocade, embroidery, sugar, spices, indigo, tobacco, &c. The manufactures are coarse woollen cloth, iron, copper and brass vessels, and bell metal. The aborigines are of the Mongolian type, and the religion is a form of Buddhism. The Hindus invaded and occupied the country in the 14th century, and these in their turn were conquered by the Goorkhas in 1767. The frequent aggressions of these people brought on a war in 1814, which was concluded by the Treaty of Segowli in 1816, but it is only within the last thirty years that our relations with the country have become friendly. The sovereign, a minor, is the nominal chief; but the real power rests with the Prime Minister.

Khatmandu—British Resident, Charles E. R. Girdlestone.

NETHERLANDS (OR HOLLAND), KINGDOM OF.

King, William III., *born* 19 February, 1817; *suc.* 17 March, 1849; *m.* (1) 18 June, 1839, Prss. Sophia Frederica of Wurtemberg (*died* 3 June, 1877); (2) 7 Jan., 1879, Princess Emma of Waldeck and Pyrmont, *born* 2 August, 1858.

Heiress Presumptive, Wilhelmina, Princess of the Netherlands, *born* 31 August, 1880.

Minister of Foreign Affairs, Jonkheer A. P. C. van Karnebeek.

Finance, J. C. Bloem.

Minister in London, Count Charles de Bylandt, 40, Grosvenor Gardens, S.W.

Secretary of Leg., Count D. de Bylandt, 40, Grosvenor Gardens.

Chancellor, J. Van den Berg.

Consul-Gen., Jonkheer John William May, 40, Finsbury Circus.

Consul, H. S. J. Maas.

A maritime Kingdom of Central Europe, situate on the North Sea, in lat. 50° 46′—53° 34′ N. and long. 3° 22′—7° 14′ E., consisting of 11 provinces, including part of the Duchy of Limburg, and containing a total area of 12,680 square miles, with a population, on Dec. 31, 1884, of 4,278,272. The king is also sovereign of the Grand-Duchy of Luxemburg, with an area of 999 square miles, and 209,520 inhabitants in December, 1880. The majority belong to the Dutch Reformed Church; and the remainder are Roman Catholics, Lutherans, Jews, &c. The land is generally flat and low, intersected by numerous canals and connecting rivers—in fact, a network of watercourses. The principal rivers are the Rhine, Maas, and Yssel, with the mouths of the Scheldt. Railways to the extent of 1,407 miles have been constructed; also 2,822 miles of telegraph. The chief native products are potatoes, rye, barley, oats, wheat, buckwheat, chickory, madder, clover, flax, hemp, tobacco, and dairy produce. The principal manufactures are shipping, bricks, linen, rich damasks, cotton, woollen, silk fabrics, and "geneva." Diamond-cutting employs numerous hands in Amsterdam. The chief exports consist of refined sugar, flax, butter, cheese, cattle, sheep, madder, geneva, &c. The royal navy consisted, on Jan. 1, 1886, of 121 men-of-war (23 of them ironclads); and the army, on the war footing, of 2,338 officers and 62,734 men, with a militia (Schuttery) numbering about 114,000 more. The mercantile marine, on the 31st Dec., 1885, consisted of 750 ships, with 302,769 tonnage, employing 14,578 men.

The revenue, 1885	£9,663,750
Expenditure, 1885	10,250,000
Public debt in 1886	90,399,250
Total imports in 1885	90,910,000
Total exports in 1885	74,253,000
Imports from United Kingdom, 1885	10,785,650
Exports to United Kingdom, 1885	28,169,804

Exports to, and imports from, Dutch Colonies are included in the above amounts.

COMMERCIAL CAPITALS, Amsterdam, pop. 366,660; and Rotterdam, pop. 169,477.

COURT CAPITAL, The Hague. Pop. 134,552.

British Minister, Hon. Sir William Stuart, K.C.M.G.	£3,600
Secretary of Legation, Henry Philip Fenton.	500
2nd Secretary, Hon. A. Johnstone	315
Amsterdam—Consul, Wm. C. Robinson	300
Groningen—Vice-Consul, Jan Schilthuis	
Rotterdam—Consul, Henry Turing	500

Samarang—Vice-Consul, A. Dowie	
Curaçao—Consul, Abraham D. Jesurun	*unpaid*
Surinam—Consul, Capt. Wm. Wyndham	1,000

DEPENDENCIES.—The Dutch possessions in the East Indies are very considerable, comprising the whole of the Sunda islands, with the exception of the northern half of Borneo and Eastern Timor, together with Western New Guinea, with an area of 718,000 square miles, and a population of 28,500,000, of whom as many as 20,259,450 live in the islands of Java and Madura, and 405,727 in the Moluccas. Included in this estimate are many districts in the interior of Sumatra,

Borneo, Celebes, and other islands, in which Dutch sovereignty is merely nominal. In Java and Madura the so-called "culture system" has been introduced with much success, for it has secured a sufficient supply of food for a dense population, besides furnishing coffee and other products for exportation to Europe. The recent distress among the sugar-planters is due, not to this system, but to heavy taxation. The "outlying" islands are frequently administered by their own princes, subject to the directions of a Dutch resident. There is a colonial army of 30,600 men, one half of whom are Europeans. The colonial revenue amounted in 1886 to £11,198,670, and is largely derived from the sale of coffee, opium, salt, and tin, whilst the expenditure reached £11,566,200. The exports, in addition to the above, include also sugar, tobacco, indigo, gums, and spices, and amounted to £17,426,000 in 1883.

In South America the colony of Surinam, or Dutch Guiana, embraces 46,072 square miles and about 71,800 inhabitants; and in the West Indies, Curaçao and 5 other small islands belong to Holland, having an area of 436 square miles, with a population of 44,153.

OMÃN.

Sultan, or Sovereign, Seyyid Turki bin Said, *suc.* January, 1871.

Omãn is a Mohammedan State in S.E. Arabia, with a coast line of about 1,500 miles along the Gulf of Persia, the Gulf of Omãn, and the Arabian Sea, an area of 81,000 square miles, and a population of 1,600,000. There also belong to it two small territories on the Mekran coast of Persia and Baluchistan. Zanzibar, on the African coast, was a dependency of Omãn until 1856. The country rises from a bare and burning coast until in Jebel Akhdar it attains an elevation of 7,000 feet. In the interior, however, among the Bedouins, the authority of the Sultan is hardly even nominal.

The population of Omãn is chiefly Arab, but there is besides a considerable foreign element, consisting of Banians and Khojas from Western India, Persians, Abyssinians, Somalis, and Nubians. The chief productions are dates, grain, fruit, and sugar; and the fisheries are very productive. The revenue is about 180,000 dollars. The exports consist of dates, cloth, salt, fruits, pearls, dried fish, and matting, and amount to about 1,484,220 dollars. The imports are—sugar, rice, piece-goods, coffee, wheat, raw silk, cotton, &c., and may be estimated at 1,662,867 dollars. Omãn has no independent coinage, the East India rupee and (Austrian) Marie Theresa dollar are the current coins, the latter being the most used. The rainfall is very scanty, averaging about 6 inches annually.

Muscat, the capital, with 60,000 inhabitants, trades with India, the Persian Gulf, Batavia, Zanzibar, and Yemen, but has little direct intercourse with Europe.

Total exports, 1882-83	$1,278,254
,, imports	1,879,273
Imports from United Kingdom, 1885	£1,270
Exports to ditto, 1885	904
Consul, Lt.-Col. Samuel Barrett Miles	£1,500

ORANGE FREE STATE.

President, Sir John Henry Brand, LL.D., G.C.M.G., *born* Dec. 6, 1823.
Government Secretary, P. J. Blignaut.
Chief Justice Supreme Court, F. W. Weitz.
Consul-General, P. G. van der Byl.
Consul, Ph. Tho. Blyth, 17, Gracechurch St., E.C.

A South African Republic, situated to the N. of the Cape Colony, and bounded, E. by British Basutoland and Natal, N. by the Transvaal, and W. by Griqualand West. It was founded by Dutch emigrants from the Cape Colony. The country was proclaimed British territory by Sir Harry Smith in 1848, but, by the convention entered into on the 23rd of February, 1854, between Sir George Clerk, Her Majesty's special commissioner, and the representatives of the people, the inhabitants were declared "to all intents and purposes a free and independent people, and their Government to be treated thenceforth as a free and independent Government."

The Orange Free State is essentially a pastoral country, but the eastern part especially is admirably adapted for the cultivation of grain. Diamonds, garnets, and other precious stones are found, and rich coal mines exist in the territory. The chief exports are wool, ostrich feathers, hides, diamonds, &c. Area, 41,484 square miles, with a population of 133,518, of whom 72,496 are whites. It possesses State property valued at £530,000.

The legislative power is vested in the Volksraad, comprising 55 members, elected by the various constituencies into which the State is divided.

Public revenue, 1885-86	£172,267
Public expenditure, 1885 86	184,979
Public debt, 1886	170,134
Imports, 1884, £1,965,826; exports	2,033,431

CAPITAL, Bloemfontein. Pop. (1885), 3,270.

A fund of £200,000 has been established, the interest of which, amounting to £12,000 yearly, is devoted solely to educational purposes, whilst the Government is also a shareholder to the amount of £70,000 in the National Bank, a flourishing institution with a paid-up capital of £100,000.

PARAGUAY, REPUBLIC OF.

President, Gen. Escobar, *elected* 25 Sept., 1886.
Consul-Gen. in England, Christopher James, 8, Great Winchester Street.
Consul, Manchester, Ja. Parlane.
Vice-Consul, Manchester, Albert Yung.
Consul, Gibraltar, John Garese.

One of the smallest States of South America, and, except Bolivia, the only one without any seaboard, situate between 22° 4′—27° 30′ S. lat. and 54° 32′—61° 20′ W. long. Its area is computed at 92,000 square miles, enclosed within the rivers Parana and Paraguay; and contains a population of 476,000. The chief crops are maize, rice, coffee, cocoa, indigo, manioc, tobacco, sugar-cane, and cotton. Among its principal trees are several species of dye-wood, and many yielding juices, as the caoutchouc or india-rubber, and the valuable shrub called "Maté," or Paraguay tea-plant—one of its principal articles of commerce; medicinal plants also are very numerous. Sugar, rum, cotton, woollen cloths, and leather are almost its only industrial productions. The army, 60,000 men strong in the war of 1865-72, has been reduced to 500 men, and there is a "navy" of three river steamers. A railway, 44 miles in length, connects the capital with Paraguari.

Revenue, 1884	£227,828
Public debt, 1883, admitted	3,637,651
Imports, 1884	301,666
Exports, 1884	327,542

CAPITAL, Asuncion. Population about 22,000.
British Consul, Dr. William Stewart .... *unpaid*

PERSIA.

Sovereign, Shah Nasir-ed-Din, K.G., *b.* 24 April, 1829; *succeeded* 10 September, 1848.
Heir-Apparent, Muzaffer-ed-Din Mirza, *b.* 1853.
Minister for Foreign Affairs, Tahia Khan Mushir ed Dowleh.
Envoy in London, Prince Malcom Khan Nazim-ed-Dowleh, 80, Holland Park, Kensington.
Secretary, Mirza Mikayl Khan.
Attachés, Mounschi Baschi, Baron Henry de Barreto.
Physician, Dr. Vincent Ambler.

Called by the natives Iran, is the most extensive, opulent, and powerful native Kingdom of Western Asia, situate between 25° 10′—39° 50′ N. lat. and 44° 15′—63° E. long., extending about 900 miles from north to south, and the same from east to west, and comprising an area of 636,000 square miles. The population, which decreased considerably during the great famine of 1870, is estimated at 7,653,600, including nomads. The western and northern part of the country is traversed by mountain ranges, rising to 12,000 feet above the sea, and the peak of Demavend 18,469 feet; but nearly all the central and eastern portion is a vast salt desert. With the exception of the Karun it has scarcely a river that can be termed navigable, though some of them extend several hundred miles in length, and possess great volume of water. Some of its immense valleys abound with the rarest and most valuable vegetable productions; those chiefly cultivated are wheat of the very finest quality, barley, and other cereals, cotton in profusion, sugar, rice, tobacco, and opium. The vine flourishes, and the wines of Shiraz are celebrated. The mulberry tree is largely cultivated, silk being one of the most important products of the kingdom. Its minerals are salt, iron, and coal; copper, lead, antimony, sulphur, &c., also turquoises and some other precious stones are found. The most important manufacture is that of silks, of the richest and most gorgeous kind. The Persians excel in their dyes, also in brocade and embroidery. Arms, carpets, shawls, felts, cotton and woollen fabrics are among the manufactures. The Persian Government has no debt, as the revenue of the year always exceeds the expenditure, and its royal treasury is reputed to contain immense wealth in gold and other valuables. The commerce of Persia with Russia is chiefly by way of the Caspian Sea, and with British India by way of the Persian Gulf. The imports are estimated at £3,850,000; the exports, consisting of silk, tobacco, wool, carpets, opium, gums, hides, dates, &c., at £2,260,000. The exports from British India to Persia alone amount to £1,500,000 annually. Protection to British trade is secured by the Treaty of 1841. The regular army numbers about 80,500 (of whom 24,000 with the colours), with 200 field guns; the militia 70,000 men. There are 3,775 miles of telegraph. Railways have been begun, but no line has hitherto been opened.

Revenue (in cash), about	£2,100,000
Expenditure, about	2,300,000

In addition to the above, there is also a revenue in kind amounting to £330,000.

Direct imports from U. Kingdom, 1885	£226,367
Direct exports to ditto, 1885	102,517

CAPITAL, Teheran. Population, 200,000.

PERU, REPUBLIC OF.

President, General Caceres, *elected* April, 1886.
Foreign Minister, Señor Chacaltara.
Minister resident in London, Señor C. Caudamo.
Secretary, Toribio Sanz.

Peru is an important maritime Republic of South America, on the Pacific Ocean, about 1,400 miles in length, situate in lat. 2° 20′—18° S., and in long. 67° 30′—81° 20′ W. It is divided into 19 provinces, and its area is estimated at 405,040 English square miles, with a population of 2,970,000, including about 350,000 uncivilized Indians. The settled population consists of Indians 57 per cent., Mestizos 22 per cent., Blancos 18 per cent., and Negros and Mulattos 3 per cent. The country is traversed throughout its length by the magnificent chain of the Andes, running parallel to and about 60 miles distant from the coast, the region between being sandy desert, except where watered by transverse mountain streams. The valleys among the mountains are very fertile; and the Cordilleras are rich in minerals, among which silver, quicksilver, and copper are the most conspicuous, constituting the chief source of the wealth of Peru. It is intersected by numerous fine rivers, forming the head streams of the Amazon, by which it has complete communication with the Atlantic. Its medicinal productions are of great value, comprising cinchona, or Peruvian bark, sarsaparilla, copaiba, &c. The Huanillos, Guañape, Macabi, Pabillon de Pica, and Lobos islands are famous as the sources whence Europe has been supplied with Peruvian guano. Peru possessed, on a peace footing, an army of about 6,000, but although the army and navy had been well nigh annihilated in the war with Chile, yet enough men were left for some sanguinary domestic brawls for the Presidentship. The principal imports are cotton manufactures, ironware and cutlery, woollen goods, and machinery. The chief exports are guano, nitrate of soda, sheep and alpaca wool, sugar, silver, and cinchona. In 1884 there were 1,600 miles of railway open, and 390 more unfinished, with 1,374 miles of telegraph wire. Everything has been disorganized by the disastrous war with Chile, which cost Peru the departments of Tacna and Tarapaca, and annihilated her navy.

PORTUGAL.

King, Dom Luis, *born* 31 October, 1838; *suc.* 11 Nov., 1861; *m.* 6 October, 1862, Maria Pia, dau. of late King Victor Emmanuel II. of Italy.
Heir Apparent, Carlos, Duke of Braganza, Prince Royal, *born* 28 September, 1863.
Prem. & Min. of Int., Senhor Lucianna de Castro.
Foreign Affairs, Senhor H. de Barros Gomez.
Justice, Senhor Beirao.
Finance, Senhor Marianno de Carvalho.
Minister in London, Senhor Martins d' Antas, 12, Gloucester Place, Portman Square.
1st Sec. of Legation, Louis de Soveral.
2nd Sec., L. de Quillinan.
Naval Attaché, Lt.-Comm. J. P. da Fonseca Vaz.
Attachés, Baron da Costa Ricci, Comte d' Anadia, A. F. Pinto Baste.
Consul-Gen., Anselmo Ferreira Pinto Basto, 3, Throgmorton Avenue, E.C.
Financial Agent, Baron da Costa Ricci, 3, Throgmorton Avenue.

The most westerly Kingdom of Europe, and a part of the great Iberian Peninsula, lies in 37°—42° 8′ N. lat. and 6° 15′—9° 30′ W. long., being 360 miles in length from N. to S., and averaging about 100 in breadth from E. to W. Continental Portugal contains an area of 34,606 square miles, with a population in 1881 of 4,306,554, exclusive of the colonies. The Azores and Madeira (1,237 square miles, pop. 401,624) form part of the kingdom, which thus has a population of 4,708,178. The chief products are wheat, barley, oats, maize, flax, hemp, and the vine in elevated tracts; in the lowlands, rice, olives, oranges, lemons, citrons, figs, and almonds. There are extensive forests of oak, chestnuts, sea-pine, and cork, the cultivation of the vine and the olive being among the chief branches of industry; the rich red wine known to us as "port" is shipped from Oporto. Its mineral products are important, being chiefly copper, lead, tin, antimony, coal, manganese, iron, slate, and salt, which last from its hardness is in demand. Its manufactures consist of gloves, silk, woollen, linen, and cotton fabrics, metal and earthenware goods, tobacco, cigars, &c. The exports consist to the extent of 50 per cent. of wine, which is the chief industrial product of the country, cork, cattle, copper-ore, fruits, oil, and salt. The imports are manufactured goods—hardware, cotton and woollen stuffs, machinery, wheat, sugar, dried fish, coal, &c. There is a commercial marine of 398 vessels, of 97,002 tons. Railways, 1,000 miles in extent, are open for traffic. For many years the national income has been considerably less than the expenditure, so that the national debt is rapidly on the increase.

The army in 1885 consisted of 38,281 men, on a peace footing, and of 125,057 men with 264 guns, on a war footing; and the navy of 48 ships—36 steamers and 12 sailing vessels, many scarcely seaworthy—and about 3,400 sailors.

Estimated revenue, 1886	£7,025,053
Estimated expenditure, 1886	8,407,955
National debt 1884	129,005,862
Interest on do., 1885–6	3,154,012
Total imports, 1884	7,774,285
Total exports, 1884	4,805,275
Imports from U. K. (includ. cols.), 1885	2,968,853
Exports to U. K. (inc. colonies), 1885	2,293,063

The Island of Madeira, on the N. W. coast of Africa, is much frequented by invalids from England, and is especially recommended for consumptives: there are excellent hotels, communications with this country frequent, with every convenience in the way of English doctors, chaplains, and other English necessaries. The amount of trade between the Portuguese dependencies and the United Kingdom is included in the above amounts.

Mozambique—Consul, Lieut. Henry Edward O'Neill, R.N.	800

DEPENDENCIES.—These, in proportion to the mother-country, are of very great extent. They include the Cape Verd Islands, off the West Coast of Africa (1,847 sq. miles, population 99,317), Zighinchor on the Casamanza, Bissao, and a few other territories to the south of the Gambia, which are officially known as "Portuguese Guinea" (350 sq. miles, pop. 10,000); the Fort of San Joao Baptista de Ajuda, at Whidah, the principal part of the Kingdom of Dahome, where the Portuguese are allowed to remain on sufferance, but exercise no sort of jurisdiction; the fertile islands of St. Thomas and Principe, in the Gulf of Guinea (417 sq. miles, pop. 22,000); the Kingdom of Angola, on the west coast of South Africa, which includes the territory of Landana and Kabinda to the north of the Congo, and the whole of the coast to the south of that river as far as Cape Frio, and has Loanda for its capital (115,000 sq. miles, pop. 1,000,000); the Province of Mozambique, with the Lower Zambezi river, Sofala, and Delagoa Bay, on the East Coast of Africa (80,000 sq. miles, pop. 500,000); Goa, Daman, and Diu in India (1,295 sq. miles, pop. 481,467); part of the island of Timor, in the East Indian Archipelago (6,294 sq. miles, pop. 300,000), and Macao, in China, at the mouth of the Canton river (5 sq. miles, pop. 68,086). The possessions enumerated have an area of 204,848 square miles, with 2,540,872 inhabitants. In this estimate account is taken only of territories within which Portugal actually exercises some jurisdiction. Thus, whilst official statements give an extension of 659,000 square miles to Angola and Mozambique, the area is here reduced to 195,200 square miles.

ROUMANIA.

King, Charles, second son of Prince Charles Antoin of Hohenzollern-Sigmaringen, *born* 20 April, 1839; *elected Hereditary Prince*, 26 March, 1866; *confirmed* 24 Oct. 1866; *proclaimed* King by vote of both Chambers, 26 March; *crowned* 22 May, 1881; *mar.* 1869, Elizabeth, dau. of the late Prince Hermann von Wied, *born* 29 Dec., 1843.
Heir Presumptive (Nephew), Prince Ferdinand von Hohenzollern, *born* 24 August, 1865.
Pres. Council and Interior, John C. Bratiano.
Foreign Minister, M. Pherekyde.

Envoy Ext. and Min. Plenip. in London, Prince Ion Ghica, 50, Grosvenor Gardens.
1st Sec., M. Nedeyano.
Consul-General in London, Walter Cutbill, 37, Old Jewry, E.C.

The Kingdom of Roumania consists of the Moldo-Wallachian provinces formerly belonging to Turkey, but by the Treaty of Berlin, 13 July, 1878, was recognized as an independent State, and the territory of the Dobruja added to them. On the 26 March, 1881, Roumania was raised to a Kingdom. The entire area is 46,314 square miles, with a population of about 5,376,000. The dominating religion is that of the Greek Church (4,529,000): Roman Catholics, 114,200; Protestants, 13,800; Jews, 400,000. The soil is among the richest in Europe, and, but for the fearful summer droughts, would be also the most productive. The climate is extreme, for summer heats and winter colds are intense. The agricultural produce consists of wheat, maize, millet, beans, and peas. Vines and fruits of various kinds are abundant. The forests are of great extent and importance, but the riches of the country consist mainly in its cattle, sheep, and horses, of which immense numbers are reared on its far-stretching pastures. Minerals and precious metals are said to be abundant, but only salt and petroleum are obtained. The imports are chiefly the manufactured goods of Western Europe; the exports consist principally of wheat, barley, maize, rock-salt, and cattle. In this large, but ill-developed country there are but 1,045 miles of railway open. The telegraphs are reported to be 3,338 miles in length.

An International Commission, created by the Treaty of Paris, 1856, and whose powers were enlarged by the Treaty of Berlin, 1878, has its seat at Galatz, and exercises sovereign powers over the navigation of the Danube. Its income, principally derived from shipping dues, amounts to £100,000 per annum.

The field army consists, on the peace footing, of 18,532 men, but in time of war this can be raised to 158,000, and there is a militia in addition. There is also a small navy of 12 steamers.

Public revenue, 1885-86, estimated	£5,160,266
Public expenditure, 1885-86, est. the same.	
Public debt, 1885	29,576,138

Consul-General, Wladimir Weletsky, 17, Great Winchester Street, E.C.

An Empire comprising one-sixth of the territorial surface of the globe, stretching over a large portion of its northern regions, and approaching very nearly in extent to the dominion under British rule. In addition to Russia in Europe (exclusive of the Caucasus), situate between lat. 44° 28′—76° 33′ N. and 17° 40′—64° 30′ E. long., and embracing more than half of that continent, it comprehends one-third of Asia, and until lately included also a large section of North America. The empire comprises:

	English Square Miles.	Population in 1882-3.
European Russia:—		
Russia Proper (50 govs.)	1,887,610	77,879,521
Poland	49,158	7,416,958
Finland	144,254	2,142,093
Asiatic Russia:—		
Caucasus	180,504	6,534,853
Trans-Caspian	206,000	710,000
Central Asia	1,165,200	5,305,066
Siberia	4,824,563	4,013,369
	8,457,289	104,001,860

In the European parts of Russia alone the population increases annually at the rate of over a million. The largest towns are St. Petersburg (929,100), Moscow (751,812), Warsaw (406,261), and Odessa (217,000). The various nationalities in 1882 were represented about as follows:—Russ, 69,770,000; Poles, 6,010,000; Lithuanians, 2,910,000; Germans, 1,120,000; Swedes, 270,000; Tajiks (Persians), &c., 1,125,000; Armenians, 800,000; Jews, 2,954,000; Caucasians, 2,850,000; Finns, 4,560,000, Tartarized Finns, 1,500,000; Turks and Tartars, 7,700,000; Mongols, 530,000; various, 584,000. The established religion of the empire is the Russo-Greek Church, officially called the Orthodox Catholic Faith. According to religions there are:—Greek Catholics (including Dissenters), 72,990,000; Roman Catholics, 8,910,000; Protestants, 4,766,000; Jews, 2,954,000; Mohammedans, 11,814,000; and Pagans, 450,000. European Russia consists of an immense plain; throughout its vast extent it does not contain a single mountain. The principal rivers are the Volga, Ural, Dnieper, Dniester, Don, Dvina, Duna, and Neva. The Volga is the largest river in Europe, and is navigable almost to its source. In Siberia, the Ob, Yenisei, Lena, and Amur are each larger than the Volga, with many important tributaries; and the surface along the southern borders is mountainous, rising in many places far above the limit of perpetual snow.

A great portion of Russian territory is totally unfit for cultivation; in the north the barren *tundras* are almost constantly frozen, producing only moss; Finland is covered with lakes inter-

spersed with rocks and sandhills; and in the south, round the head of the Caspian Sea, is an immense sandy desert steppe; whilst all the interior provinces and nearly the whole of Siberia are clothed with forests. The country between the Baltic and Black Seas, however, is eminently fertile, producing abundance of grain. The chief cereals raised are wheat, barley, oats, buckwheat, millet, and especially rye, the staple food of the inhabitants. Hemp and flax are extensively cultivated, and of late years potatoes and tobacco. The forests and woodlands of European Russia are extensive, occupying an area of 460,000,000 acres. Oak, lime, maple, and ash trees predominate. The Ural mountains (forming the boundary between Europe and Asia), which contain nearly all the mineral riches of the country, are the principal seat of mining and metallic industry; producing gold, platinum, copper, iron of very superior quality, rock-salt, marble, and kaolin, or china-clay. Silver, gold, and lead are also obtained in large quantities from the mines in the Altai Mountains. The naphtha springs on the Caspian are annually increasing in importance, and already flood certain European markets with petroleum. An immense bed of coal, apparently inexhaustible, has been discovered near Kharkoff, in the basin of the Donetz. About 18,000,000 tons are raised there annually.

With metallurgical and engineering factories, Russia possesses many extensive manufacturing establishments for weaving, tanning, fur-dressing, &c. Linen is largely manufactured by hand-looms, the chief operations consisting in spinning and weaving flax and hemp. Woollen and worsted stuffs, fine cloths, and mixed fabrics are also produced. The chief imports are cotton, tea, and other colonial produce, iron and machinery, wool, wine, fruits and vegetables, oil, &c. The chief exports are grain (56 per cent.), raw and dressed flax, linseed, timber, hides and skins, hemp, tallow, wool, spirits, tow, and bristles.

The Russian Army has been reorganized since the Turkish War. On a peace footing nearly 800,000 men, with 1,632 guns, are supposed to be under arms. On a war footing it includes 1,766,248 regulars, with 3,488 guns (field troops, 1,010,601 men; 2,608 guns), 145,325 Cossacks with 312 guns, 6,331 irregulars, and a militia for which no cadres exist. The navy consists of the Baltic fleet, that of the Black Sea, and of flotillas on the Aral and Caspian Seas and in Siberia, comprising 268 armed steam-vessels (of which 37 are ironclads and 139 torpedo-boats), with an armament of 1,348 guns.

Of railways, there were open on 1st January, 1885, 16,502 miles. There are 4,663 post-offices, carrying, in 1883, 270,000,000 letters, etc. Of telegraphs there are 3,325 offices, with 78,183 miles of line.

The commercial marine (including Finland) consisted in 1883 of 2,343 vessels, of 625,436 tons.

Revenue, 1885 (estimated)	£138,053,942
Debt, bearing interest, 1885	457,147,711

SAMOA (NAVIGATOR ISLANDS).

King, Malietoa Laupepa, *suc.* 8 Nov., 1880.
Opposition-King, Tamasese.

A group of islands in the Southern Pacific, including Upolu, Savaii, and Tutuila, with an area of 1,076 square miles and 36,240 inhabitants. Apia is the centre of trade, which is mainly in the hands of German firms. The imports (1884) were valued at £86,828, the exports at £70,248. Copra and cotton are the principal productions. In September, 1886, the two kings were again fighting.

Consul, Wilfred Powell £450

SAN MARINO.

A small "Republic" in the hills near Rimini, on the Adriatic, founded, it is stated, by a pious mason of Dalmatia in the 4th century, and governed by a Council of 60 (20 nobles, 20 townsmen, and 20 peasants), of whom two act jointly as Regents. The area is 33 square miles, the population 8,000. There is an "army" commanded by several "generals," and titles and decorations, it is said, are bestowed freely for a consideration. The village of San Marino (1,500) occupies the slope of Mount Titan, and has a castle, fortified by King Berengar of Lombardy, a fine church, and a theatre. Agriculture and viticulture flourish. By a treaty concluded in 1872 the Republic has placed itself under the protection of Italy.

SERVIA.

King, Milan (Obrenovitch), *b.* (10) 22 August, 1854; proclaimed Hereditary Prince, 30 June, 1868, and King, 6 March, 1882; *mar.*, 17 Oct., 1875, Natalie de Keczko, *born* 14 May, 1859.
Heir Apparent, Prince Alexander, *b.* 14 Aug., 1876.
Prime Minister, M. Miloutine Garachanin.
Minister of Foreign Affairs, Col. Dragoutine Franassovich.
Minister in London, M. Ephrem Gronich, 7, Gloucester Place, Hyde Park.
Attaché, M. Alex. Z. Yovichich.
Consul-General, H. W. Christmas, 76, Cannon Street, E.C.

A Kingdom of Eastern Europe, governed by an hereditary sovereign; and by the constitution of 1869 a "Skupshtina," an elected parliament, represents the people. It is separated from Hungary by the Danube. By the Berlin Treaty, July, 1878, it received a large accession of territory, and now has an area estimated at 18,757 square miles, with a population in 1884 of 1,901,118. The surface of the country is mountainous, containing extensive forests and uncultivated heaths. Agriculture is carried on in a primitive fashion. The principal crops are maize for home consumption, and wheat for export; flax, hemp, and tobacco are also grown, the silk-culture is carried on to a limited extent, and the production of wine is increasing in importance. Very extensive is the cultivation of prunes. The live stock (1882) included 122,500 horses, 826,550 cattle, 3,620,750 sheep, and 1,067,940 pigs. Argentiferous lead, zinc, quicksilver, iron, and coal are found. Carpet-weaving and embroidery, and the making of jewellery and filigree work are of some importance. The imports consist in the main of cottons, sugar, and colonial goods, hardware, woollens, &c.; the exports of dried prunes (38 per cent.), pigs, and wool, besides wheat, wine, hides, cattle, and horses. The bulk of the trade is with Austria. In 1884, goods valued at £174,010 were declared to be of British origin. There are (1886) 150 miles of railway (104 building), and 1,634 miles of telegraph. The army, on a peace footing, numbers 13,000 men, with 132 guns. On a war footing it includes a field force (70,000 men, 264 guns), dépôts (25,000 men, 36 guns), a reserve (58,000 men, 120 guns), and a levy-en-masse. Every man between 20 and 50 years of age can be called to arms.

Revenue, 1887	£1,764,286
Expenditure, 1887	2,093,651
Public debt, 1886, about	8,000,000
(One-half of which was contracted for the construction of railways.)	
Imports, 1884	£2,027,267
Exports, 1884	1,140,592
Transit, 1884	23,036

Brit. Minister, Geo. Hugh Wyndham, C.B. £1,200

SIAM.

King, Phra Bat Somdetch Phra Paramindr Maha Chulalon-Korn Phra Chula Chom Klaochow Yu Hua, *b.* 1853; succeeded to the throne, 1 Oct., 1868.

Minister in London, H.R.H. Prince Narès Varariddhi, 23, Ashburn Place, South Kensington.

1st Secretaries, Phya Damrong (Raja Bholakhand), and F. Verney.

Attaché, Luong Visetsali.

Private Secretary, Richard Edgcumbe.

Hon. Consul-General in London, David King Mason, 6, Great Winchester Street Buildings.

Vice-Consul, James Riches.

An extensive Kingdom of South-eastern Asia, consisting of 41 provinces, each governed by a Phya, or great functionary, situated in the heart of the peninsula between India and China, in lat. 4°—21° 30′ N. and long. 97° 30′—107° E. Its area is estimated at 280,550 square miles, and its population at about 5,700,000. There are several ports along its coast-line in the Gulf of Siam, but foreign commerce is entirely carried on at Bangkok, a few miles up the River Menam, Paknam being the customs station at its mouth. The chief products are rice, gums, teak, sandal-wood, rosewood, aloeswood, and fruits and garden products. The chief exports are rice, teak, pepper, sesame, skins, sapan-wood, sugar, cardamoms, also fish, silk, rose-water, cotton, horns, birds' nests, &c. The chief imports are shirtings, linen, glass, cutlery, and hardware. The Government is an absolute monarchy, each sovereign appointing his own successor. There is a Council of State consisting of the five ministers, the Royal Princes, and nine members appointed by the King. There is an army of 2,000 men, and a small navy of 16 steamers, commanded by Englishmen. A telegraph connects Bangkok with Saigon (Cochin China), and with Burmah.

Revenue and expenditure.. each about	£1,200,000
Imports from United Kingdom, 1885..	51,055
Exports to United Kingdom, 1885	90,555

SOKOTO,

the most powerful among the Fulah or Fellalah States in Central Africa, adjoins the Sahara on the south, Bornu on the west, and extends southward across the Benue into Adamawa. Its area is 178,000 square miles, the population being estimated at 12,600,000. Its most important province is that of Haussa, inhabited by one of the most industrious and enterprising negro tribes of Africa. Within it are the towns of Sokoto, Wurno, Kano, and Katsena. The empire attained its greatest power in the time of Sultan Bello, 1819-32. Quite recently the Sultan has concluded a treaty with the Royal Niger Company of London, to whom, in consideration of an annual payment of £1,200, he grants the monopoly of trading within his extensive dominions, ready access to which is insured by the Niger and its tributary the Benue.

SPAIN.

King, Alfonso XIII., son of Alfonso XII. and of Queen Maria Christina, *born* 17 May, 1886 [after the death of his father, 25 Nov. 1885].

Regent, Queen Maria Christina, Archduchess of Austria, widow of King Alfonso XII., mother of the King, *born* 21 July, 1858; sworn in as Regent, 26 Nov., 1885.

Heiress Presumptive, The Infanta Doña Maria de las Mercedes, *born* 11 September, 1880.

Premier, Señor Sagasta.

Foreign Affairs, Señor Moret.

Finance, Señor Puigcerver.

Minister in London, Señor Cipriano del Mazo, 46, Portland Place, W.

1st Secretary of Legation, Don Pedro Juan de Zulueta, 54, Cadogan Place, S.W.

2nd Sec., Don Francisco de Reynoso.

Attachés, Don José Romero, Don José Soriano.

Naval Attaché, Lieut.-Col. A. Fernandez, R.S.N.A.

Consul-Gen., Don Urbano Montojo, 21, Billiter St.

A Kingdom situate in the south-west of Europe, between 36°—43° 45′ N. lat. and 43° 25′ E.—9° 20′ W. long., bounded on the south and

east by the Mediterranean, on the west by the Atlantic and Portugal, and on the north by the Bay of Biscay and France, from which it is separated by the Pyrenees, and occupying the larger portion of the great Iberian Peninsula. Its coast-line extends 1,317 miles—712 formed by the Mediterranean and 605 by the Atlantic. It was formerly divided into 14 provinces (now sub-divided into 49), called the Ancient Provinces, still best understood, viz.:—New Castile, La Mancha, Old Castile, Leon, Asturias, Galicia, Estremadura, Andalusia, Murcia, Valencia, Aragon, Catalonia, Basque Provinces, with the Canary and Balearic Isles, comprising an area of 196,173 English square miles, and a population in 1884 of 17,268,600. The Constitution upon which the present government is formed is dated 30 June, 1876. The interior of the peninsula consists of an elevated table-land, surrounded and traversed by mountain ranges—the Pyrenees, the Cantabrian Mountains, the Sierra Guadarrama, S. Morena, S. Nevada, Montes de Toledo, &c. The principal rivers are the Douro, the Tagus, the Guadiana, the Guadalquivir, the Ebro, and the Minho. Spain is rich in minerals, especially iron, copper, and lead, and as capital is attracted its resources will be developed. The country is generally fertile, and well adapted to agriculture and the cultivation of heat-loving fruits—as olives, oranges, lemons, almonds, pomegranates, and dates. The agricultural products comprise wheat, barley, maize, oats, rice, with hemp and flax of the best quality. The vine is cultivated in every province; in the south-west, Xeres, the well-known sherry, and tent wines are made; in the south-east, the Malaga and Alicante; these are the best known, but there are many others which only require to be brought before the English public in order to secure a market. Now that the country is in a more settled condition, there is little doubt that it will attract travellers, and then become better known: a drawback to this at the present time is the want of first-class hotel accommodation. The principal articles imported are raw cotton, spirits, fish, wheat and flour, sugar, coal, timber, woollen manufactures, machinery and railway materials, hides, &c. The principal exports are wine, copper and copper ores, lead, iron ores, olive oil, cattle, raisins, oranges, cork, esparto grass, wool, salt, quicksilver, grapes, &c.; trade was for many years mostly confined to France and Great Britain, but Germany and the United States are now competing for a share. Home trade is rigidly protected by high customs duties, but these will probably be reduced as more liberal notions prevail. The army on the peace footing consists of 100,000 men. On a war footing it is raised to 452,000 men, with 510 guns. The colonial forces, including militia, number 236,000. Service is compulsory on all for 8 years in Spain, or 4 years in the colonies. The navy consists of 126 steam-vessels, including 7 ironclads, and about 22,000 men.

Nearly all the 49 Provinces are now connected by railways, of which about 5,523 miles have been completed, and there are 10,670 miles of telegraph.

After the accession of King Alfonso great and successful efforts were made to rectify past mistakes, and place the finances of Spain on a more satisfactory basis. The national debt has been in a large measure consolidated, and consisted in October, 1884, of a nominal capital of £237,928,000, on which interest is paid mostly at the rate of 4 per cent., and of other liabilities, including the Church Fund and arrears of salary due to functionaries, to the amount of £14,302,000. In November, 1886, there was in addition to this a floating debt of £4,444,444. The debt, in 1885-86, involved a charge of £10,879,899.

Public revenue, 1885-86, estimated ..	£34,623,586

DEPENDENCIES.—The Spanish Colonial Empire is but a shadow of what it was in former times; still it is of considerable importance to the mother-country, and in Cuba and Porto Rico (49,479 sq. miles, pop. 2,275,997) she possesses two islands, the capabilities of which are very considerable. In Africa, Spain possesses but a small territory, for the "protectorate" quite recently (1884) declared over the coast of the barren Sahara, between Capes Bojador and Blanco, may prove of service to her Canarian fishermen, and lead to some trade at one or two factories, but is not otherwise of much importance. In Morocco, Spain holds Ceuta and a few other places, included under the name of "Presidios," as well as the small town of Ifni on the west coast; in the Gulf of Guinea, the islands of Fernando Po and Annobom, with the coast around Corisco Bay (in all, 1,500 sq. miles, with a

population of 50,000). Far more important are the Philippine Islands in Asia (114,360 sq. miles, pop. 5,636,000). In the Pacific, Spain is the acknowledged owner of the Mariana Islands (440 sq. miles, pop. 8,665), and her claim to the Pelews (Palao) and to the Carolinas (1,450 sq. miles, pop. 36,000) has recently been conceded by Germany. These islands were discovered by Spanish navigators in the 16th century, and have always been included in Spanish documents as a portion of the Colonial Empire, but they were never effectively occupied. The conflicting claims of Spain and Germany were referred to the arbitration of the Pope, and an amicable arrangement effected. Including these islands, the colonial dependencies of Spain have an area of 167,230 square miles, with a population of 8,097,000.

SWEDEN AND NORWAY.

King, Oscar II., *born* 21 January, 1829; *suc.* 18 September, 1872; *married* 6 June, 1857, Sophia, daughter of the late Duke William of Nassau.
Heir Apparent, Oscar Gustaf Adolf, Duke of Wermland, Crown Prince, *b.* 16 June, 1858; *m.* 20 Sept., 1881, Victoria, dau. of Grand Duke of Baden.
Minister of Foreign Affairs, Count Ehrensvärd.
Envoy Ext. and Minister Plenipotentiary in London, Count Charles Edward Piper, 47, Charles Street, Berkeley Square.
Secretary of Legation, M. d'Adelborg.
Consul-Gen., M. Carl Juhlin-Dannfeldt, 24, Gt. Winchester Street.
Vice-Consul, J. W. Tornöe.

The kingdoms of Sweden and Norway, now united under one sovereign, embrace between them the entire north-western peninsula of Europe, usually called Scandinavia, situate between lat. 55° 20′—70° 12′ N. and long. 4° 37′—31° E., bounded by the Baltic Sea and Gulf of Bothnia on the east, and the Atlantic on the west.

Sweden comprises the eastern half of the peninsula, and, except the capital, is divided into 24 governments, "Län," with an area of 173,974 square miles, and a population, Dec., 1884, of 4,644,448, nearly all of whom are Protestants, and for the most part well educated. About 2,340,000 of the population are devoted to agriculture, about 230,000 being owners of the land they cultivate. The coast-line is about 1,550 miles in extent. The country for the most part is flat, with pleasant undulations, rising in the north-west to the Kiolen Mountains, which separate Sweden from Norway, and may be divided into three separate districts; the northern, forest; central, mining; the southern, agricultural. The lakes cover about one-eleventh of the surface. The climate in the south is favourable for producing grain. The principal articles of cultivation are the various cereals—oats, wheat, barley, rye—and potatoes; a large quantity of oats are annually exported. The forests are very extensive, covering nearly one-half of the surface of the country, and consisting of pine, birch, fir; these are of great importance, as supplying not only pitch and tar, but also the chief fuel. The mineral products are extremely rich; iron of excellent quality, that known as the Dannemora iron being converted into the finest steel; gold and silver in small proportions; copper, lead, nickel, zinc, cobalt, alum, sulphur, porphyry, and marble. Considerable mines of coal have been discovered in Scania. The chief articles of import are coffee, sugar, rice, tobacco, and other ordinary colonial produce; coals, cloth, yarn, wool, cotton, hides, salt, spirits, oils, rye, pork, and machinery. The chief articles of export are timber, oats, cattle, butter, iron, copper, steel, paper, matches, zinc ores, pitch, tar, &c.

Railways 4,091 miles in length (of which 2,654 are the property of the state) are open, and 5,320 miles of telegraph.

The field army of Sweden numbers about 40,000 men, with 234 guns; the militia (Beväring), including volunteers, 138,000 more. The navy consists of 54 steamers and 170 guns, 15 being ironclads, with 13 sailing vessels, mounting 105 guns. The navy when fully manned comprises about 6,000 officers and men, with a reserve of 35,000 men.

NORWAY.

First Member of Government, J. Sverdrup.

Norway, since 1814 a conjoint kingdom and sovereignty with Sweden, occupying the western and northern portion of the peninsula, is about 1,100 miles in length, its greatest width about 250. It is divided into 20 provinces, or amts, and comprises an area of 121,740 square miles, with a population of 1,925,000. The coast-line is extensive, deeply indented with numerous fiords, and fringed with an immense number of rocky islands. The surface is mountainous, consisting of elevated and barren table-lands, separated by deep and narrow valleys. The cultivated area is about one-thirtieth part of the country; forests cover nearly one-fourth; the rest consists of naked, uninhabitable mountain-land. Agriculture, though pursued with some vigour of late, is unable to furnish sufficient produce for home consumption; hence it has been necessary to import considerable quantities of corn, meat, and butter. The fisheries give employment to a large part of the population throughout the year. The most important fisheries are cod and herring. The mineral products are similar to, but less considerable than those of Sweden. Shipbuilding and timber-dressing are the industrial arts most extensively prosecuted. The imports consist chiefly of the necessary articles of consumption. The chief exports consist of timber, cod and its oil, herrings, salmon, lobsters, minerals, furs, and ice. The navy consists of 39 steamers, with 154 guns, 4 being monitors. The mercantile marine in 1884 consisted of 7,884 vessels, of 1,583,434

tons. The regular army consists of 16,000 men, excluding reserve, &c. The administration of Norway is entirely distinct from that of Sweden, and it retains its own laws. The debt was incurred chiefly in the construction of railways (970 miles open). The length of telegraphs at work in 1884 was 5,568 miles.

Revenue, 1885-86	£2,381,495
Expenditure, 1885-86	2,357,142
Public debt, December, 1885	6,011,130
Total imports, 1884	8,749,091
Total exports, 1884	6,181,768
Imports from United Kingdom, 1885	1,331,480
Exports to United Kingdom, 1885	2,833,822

SWITZERLAND, REPUBLIC OF.

Presid. Swiss Confederation (not elected when the Almanack went to press).
Vice-Pres. Fed. Council, and Chief of the Political Department,
Pres. of National Council,
Pres. of Coun. of States,
Agent and Consul-Gen., London, Henri Vernet, 25, Old Broad Street, E.C.

The Helvetia of the Romans, a Federal Republic of Central Europe, situated between 45° 50′—47° 34′ N. lat. and 5° 58′—10° 30′ E. long. It is composed of 22 Cantons, of very dissimilar size, united under a Constitution dated 29 May, 1874, and comprises a total area of 15,981 square miles, with a population of 2,906,750 in 1884, who are divided between Roman Catholics, 41 per cent., and Protestants, 58 per cent., Jews numbering 7,400, and others 11,000. The population is formed by three nationalities, distinct by their language, as German 71 per cent., French 21 per cent., Italian 6 per cent., and Romanshe (in the Grisons), 1½ per cent. The most considerable cities are Zürich, 75,956, Geneva, pop. 68,320, and Basel, 61,399. It is the most mountainous country in Europe, having the Alps, covered with perennial snow and glaciers, rising from 5,000 to 15,213 feet in height, not only along the whole of its southern and eastern frontiers, but throughout the chief part of its interior; and the Jura mountains in the north-west. Agriculture is followed chiefly in the valleys, where wheat, oats, maize, barley, flax, hemp, and tobacco are produced. The forests cover about one-sixth of the whole surface. The manufactures consist chiefly of silks, cottons, linen, lace, thread, woollens, &c.; clocks and watches have long been the staple products of Geneva and Neufchâtel, while leather, gloves, porcelain, pottery, tobacco and snuff, cheese, sugar, &c., are made. Being an inland country, the direct trade with the U. K. is very small. In 1884 there were 1,879 miles of railway in working order, and 4,271 miles of telegraph.

The military establishment on a war footing, including Landwehr, consists of 200,774 men—staff 799, infantry 159,962, cavalry 5,615, artillery 24,925, engineers 5,807, others, 3,666.

The legislative power is vested in a Parliament, consisting of two Chambers, a Council of States of 44 members, and a National Council of 145 members; both Chambers united are called the Federal Assembly, and the members of the Second Chamber (National Council) are elected for three years. The executive power is in the hands of a Federal Council of 7 members, elected by the Federal Assembly, presided over by the President of the Confederation. The President has a salary of £600; the Vice-President and other members of the Federal Council £480 each. The President and Vice-President are elected for one year, the five other members for three years.

Revenue, 1887 (estimated)	£2,051,500

THIBET.

Thibet, or Bodyul (the former name being unknown in the country itself), extends east and west from Cashmere and the Karakorum range to the province of Szechuen in China. It is divided into four provinces, Ari, Tsang, U, and Kam. Ari, a mountainous region, borders on Cashmere and Nepaul; Kam adjoins Szechun. Between the two lies Central or Great Thibet, comprising the provinces of Tsang and U. The Tsanpu or Upper Brahmaputra, rising near Lake Mansarowah, traverses the entire length of the two provinces. The capital is Lhasa, in the province of U, situated on one of the tributaries of the Tsanpu, 11,700 feet above the sea. The form of government is a hierarchy; the religion is Buddhism, which was introduced in the seventh century, long after its adoption in China. The extraordinary geographical features of Thibet, the height of its mountain ranges, the great rivers which here take their rise, the numerous salt and fresh-water lakes, situated from 13,800 to 15,400 feet above the sea-level, the amiable character of the people, and the nature of their religion, all combine to create an interest in this country which is enhanced by the mystery in which it is still shrouded and the difficulty of adding to our knowledge. In 1883 the imports from Thibet into India only amounted to £76,637, the imports from India to £30,224.

TONGA ISLANDS (FRIENDLY ISLANDS).

King, George I. Tubou.

A group of islands in the Southern Pacific, to the east of Fiji, with an area of 385 square miles and 23,000 inhabitants. Vavau and Tongotaba, the largest among them, have much fertile soil. The principal products are copra, coffee, cotton, arrowroot, and fruits. The imports (1883) had a value of £105,000, the exports of £95,000. Most of the imports (£61,000) come from England, while the bulk of the exports (£60,000) goes to Germany, which has a coaling station on Vavau.

Vice-Consul, (vacant).

TONGKING.

A French possession in Eastern Asia, which was ceded by Annam in 1884 (see p. 435). The country is densely peopled, and fruitful. Its principal river is the Song-ka, which rises in the Chinese province of Yun-nan, and forms an extensive delta at its mouth. Tongking has an area of 35,000 square miles, with a population of 9,000,000 (see also Annam).

TRANSVAAL, OR S. AFRICAN REPUBLIC.

President of the "Uitvoerend Raad" (Executive), S. J. Paul Krüger, elected April, 1883.
Vice-President, C. J. Joubert.
Pres. of Legis. Council (*Volksraad*), J. J. Hoffman.
Secretary of State, J. V. Eduard Bok.

A South African Republic, bounded on the north by the Limpopo or Crocodile River, on the east by the Portuguese possessions, Swaziland and Zululand, on the south by the Vaal River, and on the west by the countries of the Bechuana, Bangwaketsi, and other tribes. Its limits lie between latitude 22° 15′—28° 40′ S. and longitude 26°—32° 10′ E. Area 112,700 square miles, containing about 800,000 inhabitants, of whom 50,000 or 60,000 are whites. The chief riches of the country, apart from its cattle and agricultural produce of all kinds, is gold. Copper, lead, cobalt, iron, and coal are also found. The history of the Republic is interesting. In 1840 a number of Boers, dissatisfied with the Government at the Cape, chiefly in connection with slavery and the treatment of the natives, left that colony and established themselves in Natal, where their treatment of the Zulus compelled the British Government to interfere and annex that settlement. Many of the inhabitants rather than submit left Natal, and crossing the Vaal River established a Commonwealth in which they could act with more freedom in their intercourse with the natives. In 1854 the commonwealth was recognized, but in 1877 the Cape Government, fearing an outbreak which might lead to a general rising of the natives, took possession of and annexed the Territory. This proceeding was violently resented by a large number of the Boers, who took up arms and were successful in their encounters with small bodies of British troops; more were poured into the colony, and the rising would have been speedily quelled, but after a truce, the Government, by Convention, 3rd August, 1881, agreed to give up the country to the Boers, subject to certain regulations, the suzerainty of the British Crown being recognized. The chief towns are Potchefstroom and Pretoria.

Revenue, 1885	£220,553
Expenditure, 1885	215,526
Debt, about	422,000
Imports, 1885–86	524,966
Exports, say	600,000

CAPITAL, Pretoria. Population, 4,500.

British Resident, George Hudson.

TRIPOLI.

Governor-General, Ahmed Rassim Pasha, *appointed* November, 1881.

A Vilayet, or Province of the Ottoman Empire, on the northern coast of Africa, and the most easterly of the States of Barbary, including Fezzan and the Vilayet of Barka. It has an area of 399,000 square miles, and a population of 1,010,000, but this is uncertain. There are no rivers in the country, and rain seldom falls. The military force of the country, usually of about 3,000 Turkish soldiers, had in October, 1885, been increased to 17,000 men. The revenue is chiefly raised by tax or tribute. Principal articles of import: metals, British and other European manufactures, wines, and spirits. Principal articles of export: bullocks, ivory, wheat, oil, barley, ostrich feathers, madder, pepper, wool, and (lately) esparto grass. Bengazi, the second town in the vilayet and capital of a Sanjak, has a population of 22,000, consisting of Arabs, Greeks, and Levantines. The commerce in cereals, wool, and other agricultural produce is considerable.

Imports from United Kingdom, 1885	£389,665
Exports to United Kingdom, 1885	9,443

CAPITAL, Tripoli. Population, about 25,000.

Consul-Gen., Frank R. Drummond-Hay	£1,000
Vice-Consul, Alfred Dickson	350
Bengazi—Consul, Cecil Godfrey Wood	515

TUNIS.

Bey, H.H. Sidi Ali Pasha Bey; *born* 1817; *suc.* 28 October, 1882.
French Governing Resident, M. Bihourd, *appointed* November, 1886.

The Regency of Tunis, formerly a tributary province of the Ottoman Empire, may now be considered an informally annexed dependency of France, nominally under the dominion of the Bey, but in reality under the control of a French Resident, the Bey's functions being now almost entirely confined to the distribution amongst French officials of a chivalric Order known as the "Nichan Iftihar." By a convention signed 10 July, 1882, France administers the country and collects the taxes in the name of the Bey, who is granted a civil list of £28,000, and the princely sum of £52,000. It is in the north of Africa, situated on the Mediterranean, east of Algeria, between lat. 32° 20′—37° 25′ N. and long. 7° 40′—11° 15′ E. It comprises an area of 44,920 square miles, and has about 1,500,000 inhabitants.

The chief town, Tunis, is the largest and most commercial city of Barbary, with a population of 145,000, of whom 30,000 are Jews and 20,000 Christians (8,000 Maltese). It possesses considerable manufactures of silk and woollen stuffs, shawls, carpets, mantles, fez caps, bernouses, also otto of roses and jessamin. The chief exports are grain, oil, wool, and esparto grass. N.E. of Tunis is the site of the ancient city of Carthage. There are 258 miles of railway and 1,245 of telegraph.

Revenue, 1884–85	£590,596
Expenditure, 1884–85	912,029
Debt	5,656,750
Imports, 1884	948,804
Exports, 1884	486,808

Tunis—Consul and Judge, T.B. Sandwith, C.B. 700

TURKEY (THE OTTOMAN EMPIRE).

Sultan, Abdul Hamid II., *b.* 22 September, 1842; *proclaimed* 31 August, 1876.
Heir Presumptive, his brother, Mehemmed Reshad Effendi.
Prime Minister, Kiamil Pasha.
Minister of For. Affairs (*Kharidjie-Naziri*), H.E. Saïd Pasha.
Ambassador in London, H.E. Rustem Pasha, 1, Bryanston Square.

Councillor of Embassy, Morel Bey.
1st Secretary, Abdul Hagg Hamid Bey.
2nd Secretary, Mustapha Chekib Bey.
Naval Attaché, Ibrahim Effendi.
Chancellor, Joseph Henry Trewby.
Consul-General, Emin Effendi Férédjullah, 42, Old Broad Street.

TURKEY IN EUROPE, formerly very extensive, is now reduced to 66,500 square miles, with a population of 4,668,000. (This, however, does not include Bulgaria, Eastern Roumelia, and Bosnia, which jointly have an area of 58,739 sq. miles, and a population of 4,320,110.) The total population includes about 700,000 Turks, 1,500,000 Albanians, and 1,300,000 Greeks. About 2,000,000 are Mohammedans. A great part of the surface is covered with mountains of moderate elevation. Since the Balkans no longer lie within the limits of the empire (although Turkey is entitled to occupy their passes in case of war), the loftiest mountains are those of the Rhodope or Depoto Dagh (7,464 ft.) in the east, and the mountain-ranges of Albania in the west. To the latter belongs the Skhar Dagh (10,007 ft.), the culminating point of the whole Balkan peninsula. Rivers are numerous, the principal of which are the Vardar, the Struma, and the Maritza. The soil is for the most part fertile, but owing to various causes little progress has been made in agriculture. The cultivated products are maize, rice, cotton, barley, millet, sesame and other oil-seeds, and tobacco; the natural products are the pine, beech, oak, lime, and ash, with the palm, maple, sycamore, walnut, chestnut, carob, box, myrtle, laurel, &c., south of the Balkans; large forests of pine and fir in the north-west; the olive, orange, citron, vine, peach, plum, and fruit trees in Albania. The breeding of sheep is carried on extensively, and wool constitutes an important article of trade. The mineral products are iron in large quantity, lead blended with silver, copper, sulphur, salt, alum, and coal. Its manufactures are almost entirely domestic, such as woollen and cotton stuffs, carpets, shawls, leather, firearms, with dyeing and printing works.

TURKEY IN ASIA, the larger of the two divisions, comprises Asia Minor, Syria, including Palestine, the greater part of Armenia, and Kurdistan, Mesopotamia (the valley of the Euphrates and Tigris), and the western portion of Arabia, bordering the Red Sea, with the district of El Hasa on the eastern side of the Persian Gulf; having a total area of 680,000 square miles, and an estimated population of 16,333,000 inhabitants. To this number must be added the autonomous island of Samos (180 sq. miles, pop. 40,513), and Cyprus, which pays an annual tribute. Of the total population about 6,800,000 are Turks, 5,300,000 Syrians and Arabs, and 1,000,000 Greeks. The number of Mohammedans is 12,000,000.

In AFRICA, Turkey rules Tripoli and Barka (399,000 sq. miles, pop. 1,010,000), and levies a heavy tribute upon Egypt.

Nominally, therefore, the Turkish Empire has an area of 1,710,000 square miles, with 32,500,000 inhabitants, but of the vast territories only 1,145,500 square miles, with 22,011,000 inhabitants, are under the direct rule of the Turks, the rest paying a tribute or merely acknowledging the suzerainty of the Porte.

The exports of European Turkey are valued (1884–5) at £17,843,260, the imports at £22,500,000. The exports include tobacco, cereals, fruits, silk, opium, mohair, cotton, coffee, skins, wool, oil seeds, valonia, carpets, &c., and are largely derived from the Asiatic provinces. Among the imports cotton and woollen manufactures take the foremost rank. There are 920 miles of railway (of which 390 in Asia). The Commercial Marine consists (1883) of 404 vessels (10 steamers) of 72,762 tons.

The finances of Turkey are in anything but a satisfactory condition. In 1876 the Empire declared itself bankrupt, but the creditors came to an arrangement, and the customs and other revenues were assigned to them in payment of interest on a very much reduced scale, and towards a sinking fund. At present the debt includes priority bonds held by Galata bankers (£8,170,000); consolidated stock (£90,500,000); debt guaranteed by France and England, or secured upon the Egyptian tribute (£15,000,000); railway bonds (£14,212,000), an internal debt (£20,000,000), and the balance of £32,000,000, which Russia claims as a war indemnity. It was arranged by the Berlin treaty that Bulgaria, Eastern Roumelia, Servia, Montenegro, and Greece should take upon themselves a portion of the Turkish debt, but little appears to have been received from these emancipated or aggrandized States.

The army is recruited by conscription, from which Christians are still exempt on payment of a tax. The term of service is 14 years, of which 6 are passed in the Nizam or its reserves, and the remainder in the Redif or Landwehr. There is in addition a Muhstafiz or levy-en-masse. In 1885 about 159,000 are stated to have been under arms. On a war footing the army is supposed to muster 18 army corps (Nizam and Redif) of 612,000 men, with 1,512 field guns; dépôt troops, 200,000 men; garrison troops, 70,000 men; and a Muhstafiz of 300,000 men. The navy consists of 32 steamers, including 15 ironclads.

Revenue, 1883–84 (estimated)	£14,736,200
Expenditure	14,655,500
Debt, about	180,000,000
Imports from United Kingdom, 1885	3,104,259
Ditto Asiatic Turkey, 1885	3,032,390
Exports to United Kingdom, 1885	1,491,333
Ditto Asiatic Turkey, 1885	3,171,986

Consular Office, 12, St. Helen's Place, Bishopsgate Street, E.C.	

A Federal Republic, consisting of 38 partially independent States, 1 Federal District, and 8 organized Territories, occupies the central portion of North America, between the Atlantic and Pacific Oceans, in lat. 25°—49° N. and long. 67°—124° 30′ W. The area is estimated at 3,008,400 square miles, of which rivers and lakes cover 38,400 square miles. This area, however, is exclusive of the vast district of Alaska, in the extreme north-west of the continent, purchased from Russia, 30th March, 1867, comprising 577,390 square miles. Only one-fourth of the country is to any great extent in a state of cultivation. The population of the whole of the States and Territories, according to the Census of 1880, was 50,152,866; inclusive of coloured people, 6,580,793; settled Indians, 143,302; unsettled Indians, 179,332; Chinese, 105,468; and Alaska, 35,426; Germans, 1,966,742; Irish, 1,854,571; Canadians, 717,157; English, 662,676; Scandinavians, 440,262; Scotch, 170,136; Welsh, 83,302, and 519,254 of other Nationalities, in addition to which no fewer than 12,978,394 natives were of foreign parentage, every country under Heaven being represented. The total present estimated population is 60,000,000. The increase in the ten years, 1870–1880, was 11,594,495. In 1885 a census was taken in 12 states and territories, when it was found that their population had increased from 10,476,838 to 12,721,699, or to the extent of 214 per cent.

Its coast-line on both oceans is reckoned to have a length of about 13,200 miles, excluding the numerous bays and sounds, besides 3,620 miles on the great Canadian lakes. The principal river is the mighty Mississippi-Missouri, formed by the confluence of these two noble streams, traversing the whole country from north to south, and having a course of 4,500 miles to its mouth in the Gulf of Mexico; with many large affluents, the chief of which are the Yellowstone, Nebraska, Arkansas, Ohio, and Red rivers. The rivers flowing into the Atlantic and Pacific Oceans are comparatively small; among the former may be noticed the Hudson, Delaware, Susquehanna, Potomac, and Savannah; of the latter, the Columbia, Sacramento, and Colorado. The Alabama and Colorado of Texas fall into the Gulf of Mexico, also the Rio Grande, a large river forming the boundary with Mexico. The areas of the water-basins have been estimated as follows:—rivers flowing to the Pacific, 644,040 square miles; to the Atlantic, 488,877; and to the Gulf of Mexico, 1,683,325 square miles, of which 1,257,547 are drained by the Mississippi-Missouri. The chain of the Rocky Mountains separates the western portion of the territory from the remainder, all communication being carried on over certain elevated passes, several of which are now traversed by railroads; west of these, bordering the Pacific coast, the Cascade Mountains and Sierra Nevada form the outer edge of a high table-land, consisting in great part of stony and sandy desert, and in which occurs the Great Salt Lake, extending to the Rocky Mountains. Eastward, the country is a vast, gently undulating plain, with a general slope southwards towards the marshy flats of the Gulf of Mexico, extending to the Atlantic, interrupted only by the Allegbany Mountains, of inferior elevation, in the Eastern States. Nearly the whole of this plain, from the Rocky Mountains to some distance beyond the Mississippi, consists of immense treeless savannahs and prairies of luxuriant grass. In the Eastern States (which form the more settled and most thickly inhabited portion of the territory) large forests of valuable timber, as beech, birch, maple, oak, pine, spruce, elm, ash, walnut; and in the south, live-oak, water-oak, magnolia, palmetto, tulip-tree, cypress, &c., still exist, the remnants of the wooded region which formerly extended over all the Atlantic slope, but into which great inroads have been made by the advance of civilization. The Mississippi valley is eminently fertile. The mineral kingdom produces in great abundance copper, iron, coal, lime, salt, and lead, which in Missouri appear inexhaustible; there are also rich lead-mines in Illinois and Wisconsin. In California, besides silver, iron, copper, and lead, gold is found in great abundance; quicksilver is found in Kentucky, also coal, the supply of which is said to equal that of any country in the world. A correspondent writes to say that in California the increase in the produce of wine is so great that the value will probably equal that of the minerals. Nitre is found in Kentucky, Tennessee, and Virginia. The salt-springs are numerous and copious, and appear almost inexhaustible.

The financial condition of the United States of America exerts a great influence on that of other nations. The extensive trade transacted by the Union with all parts of the world necessarily reacts on the exchanges of the countries with which business is engaged in. Before the unfortunate internecine struggle that has happily become a matter of history, the debt of the States as a whole was, comparatively speaking, nominal. The following is a statement of the debt on the 1st of September, 1886:—

Four and half per cent. bonds.....	$250,000,000
Four per cent. bonds and certificates	737,769,500
Three per cent. bonds.....	134,422,750
Pacific Railway Bonds, at 6 per cent.	64,623,512
Miscellaneous liabilities (incl. intrst.)	29,969,744
Greenbacks and other currency....	531,607,200
Total debt	1,748,392,106
Less cash and reserve in Treasury	370,215,526
Actual indebtedness.....	$1,378,176,580

During the fiscal year ending June 30, 1885, the debt was reduced by $63,494,709.

The total decrease in the debt since August 31, 1863, when, after deducting the cash in the treasury, it amounted to $2,756,431,571, to Sept. 1, 1886, has been $1,378,254,991.

Balance Sheet for Year ending June 30, 1886.

RECEIPTS.

Customs.....	$181,471,939
Internal revenue	112,498,726
Land Sales	5,705,986
Miscellaneous sources	24,014,055
	$323,690,706

EXPENDITURE.

Civil service and miscellaneous.....	$87,494,258
War department	42,670,578
Navy department.....	16,021,080
Indians.....	6,552,495
Pensions	56,102,267
Interest on public debt	51,386,256
	$260,226,934

The total income for the previous year was $323,690,706, and the expenditure $250,226,934.

The total imports and exports for the year ending June 30, 1885, compared with those for 1884, were as follows:—

Total imports to June 30, 1885.....	$620,769,650
Total exports to June 30, 1885	784,421,280

These figures include the specie movements, which for 1885 amounted to, imports, $43,242,323, and exports, $42,231,525.

Imports from United Kingdom, 1885	£21,977,344
Exports to United Kingdom, 1885 ..	85,158,221

The navy of the United States on the 1st December 1884, was:—

Number of war-vessels	93
Armament	550
Enlisted men (active list)	8,250
Commissioned officers (active list)	1,655
Non-commissioned officers (active list).....	265
Marine Corps:—Commissioned officers	89
Privates and non-comm. officers..	1,939

The army at the same date consisted of 2,177 officers and 25,000 enlisted men.

The Government of the United States is, by the Constitution, intrusted to three separate authorities—the Executive, the Legislative, and the Judicial. The Executive power is vested in a President, who is elected every four years, and is eligible for re-election. The mode of electing the President is as follows:—Each state chooses, by popular vote, "Electors" equal in number to the Senators and representatives sent by that State to Congress. The Electors for each State meet at their respective State Capitals on a day appointed, and there vote for a President by ballot. The ballots are then sent to Washington, and opened by the President of the Senate in presence of Congress, and the candidate who has received a majority of the whole number of electoral votes cast is declared President for the ensuing term. If no one has a majority, then from the three highest on the list the House of Representatives elects a President. There is also a Vice-President, who is *ex-officio* President of the Senate; and, as in a late instance, on the death of the President succeeds to the office for the remainder of the term. In case of the disability of both President and Vice-President, the Senator who may be president *pro tem.* of the Senate, and after him, the Speaker of the House of Representatives, succeeds to the Presidency until Congress orders a new election.

The Legislative power is vested in two Houses, the Senate and the House of Representatives, the President having a *veto* power, which may be overcome by a two-thirds vote of each House. Two Senators from each State are elected by the Legislature thereof for the term of six years; and Representatives are chosen in each State, by popular vote, for two years. The number of Representatives for each State is allotted in proportion to its population, 1 for 154,325. The Senate consists of 76 members, and the House of Representatives of 325.

The Supreme Judicial Authority is vested in a Chief Justice and eight Justices, who are appointed for life by the President, by and with the consent of the Senate.

The following is a list of the 38 States included in the Union:—

Alabama, Arkansas, California, Colorado, Connecticut, Delaware, Florida, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Nebraska, Nevada, New Hampshire, New Jersey, New York, North Carolina, Ohio, Oregon, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Vermont, Virginia, West Virginia, Wisconsin.

Wilmington—Consul, James Sprunt.....

POSTAL.—The number of Post Offices in the United States, June 30, 1884, was 51,252.

RAILWAYS.—The number of miles open and in actual use on the 31st December, 1884, was 125,379, of which 6,753 miles were constructed during the year.

MERCANTILE MARINE.—In June, 1885, it consisted of 23,963 vessels, of 4,265,934 tons, inclusive of 5,349 steamers, of 1,494,917 tons.

COMMERCE OF THE UNITED STATES.

The following table, prepared at the Bureau of Statistics, Washington, exhibits the steady increase of the trade of the United States during the past 25 years. Nearly the whole amount of merchandise exported is of home growth or manufacture. It is noticeable that for the first 15 years, with two exceptions, the imports exceeded the exports, but that during the past 10 years the balance of trade has been largely in favour of the country. These figures represent the specie values of merchandise only.

Year ending June 30	Exports.	Imports.	Total.
	Dollars.	*Dollars.*	*Dollars.*
1862	190,670,501	189,356,677	380,027,178

URUGUAY.

Acting President, Mascün o Tagès, *elected*, 19 November, 1886.
Minister of Foreign Affairs, Dr. Juan Carlos Blanco.
Minister Plen. in London, Col. Don Amaro Carvó.
Sec. of Legation, M. A. Portillo.
Consul-General, Don Ricardo Machado Hasse, 35, New Broad Street, E.C.
Consul, William Litchfield, 114, Osborne Road, Forest Gate.

A Republic in South America, on the east coast of the Rio de la Plata, situate in lat. 30°—35° S. and long. 53° 25′—57° 42′ W., containing an area of 72,112 square miles, and a population of 520,536 in 1883; was formerly a dependency of Spain. United to the Argentine Confederation early in the present century, it was afterwards annexed by Portugal, and became later a province of Brazil; but through the bravery of the patriotic "thirty-three" it succeeded in throwing off the Brazilian yoke, declared its independence on the 25th of August, 1825, and rejoined the Platine States. A war in consequence ensuing between Brazil and the Argentine Confederation, both the Powers agreed, through the mediation of Great Britain, to recognize Uruguay as a sovereign and independent State, the Constitution of the Republic being sworn on the 18th of July, 1830. The language of the country is Spanish, the inhabitants being chiefly descendants of the original Spanish settlers and Italian and other European emigrants. Much attention has lately been given to elementary education, which is entirely free. The country is extremely well watered, and the climate healthy, resembling that of the south of France. There are no Indians, but there is a sprinkling of Negroes, engaged chiefly as servants and in the army. Judged proportionately in regard to population, and of goods imported from Great Britain, Uruguay stands at the head of the list as our best foreign customer. The imports from Great Britain are very numerous, the principal being woollen and cotton goods, hardware, and coals. The chief exports are wool, hides, horn, hair, tallow, and, during recent years, fresh meat. Wheat, barley, and maize are cultivated, but the wealth of the country is obtained from its pasturage, which supports large herds of horned cattle (6,009,791 in 1883), horses, and sheep (14,595,495 in 1883), the wool of which is of excellent quality. Gold mines exist at Cuñapirú. The principal river is the Uruguay, which forms the western boundary, and its affluents, of which the Rio Negro is the chief. There is a regular army of 3,100 men with 30 guns, in addition to a militia of 20,000 men. The navy consists of 5 small steamers. There are 261 miles of railway and 660 miles of telegraph.

Public revenue, 1884-85..... £2,425,000
Public expenditure, 1884-85 2,400,102
Public debt, Jan. 1, 1886..... 12,466,000
Total imports, 1884 5,114,600
Total exports, 1884..... 5,158,226
Imports from United Kingdom, 1885 1,406,522
Exports to United Kingdom, 1885 .. 624,393

VENEZUELA, Republic of.

President, General Guzman Blanco, *elected* 14th September, 1886.
Minister of Foreign Affairs, Urbaneja.
Finance, Herera.
Minister to England and France, Genl. Guzman Blanco, Paris.
Secretary of Legation, Rafael Seijas.
Attaché, G. F. Valens.
Consul in London, Nathaniel G. Burch, 4, Tokenhouse Buildings, E.C.
Consul-General in London, Antonio Parra.
Vice-Consul, W. White, 4, Tokenhouse Buildings.

The most northerly Confederation of South America, situated between 1° 30′—12° 12′ N. lat. and 59° 52′—73° 15′ W. long. It consists of 21 States, comprising an area of 566,159 English square miles, and a population, in 1883, of 2,121,988. The goldfields on the Orinoco are among the richest in the world, and yielded in 1884 £543,530. The chief imports are manufactured goods, provisions, and wine. The chief exports are coffee, cocoa, hides, cotton, sugar, tobacco, indigo, bark, tallow, dye-woods, timber, and copper ores. The railways opened and under construction have a length of 370 miles.

Revenue, 1885	£1,172,950
Expenditure, 1885	1,573,134
Foreign debt, 1884	2,700,000
Internal debt	1,631,934
Imports, 1883	3,423,240
Exports, 1883	3,912,743
Imports from United Kingdom, 1885	336,656
Exports to United Kingdom, 1885	225,744

ZANZIBAR.

Sultan, Seyyid Barghash bin Sa'id, G.C.M.G., *suc.* 7 October, 1870.

A territory situated on the east coast of Africa, extending from about 3° N. to 11° 30′ S. Zanzibar was conquered in 1784 by a Sultan of Omān in Arabia, and became an independent dominion under a brother of the Sultan in 1856. The islands of Zanzibar and Pemba are by far the richest and most important of the Sultan's dominions, distant from the coast about 25 miles. Zanzibar has an area of 614 square miles, with a soil of more than ordinary fertility, covered with woods and plantations of perpetual verdure. The principal products are cloves, rice, sugar-cane, manioc, millet, cocoanuts, and fruits, especially oranges, of the finest quality. The population of the island is estimated at 200,000. The chief people are Arab landed proprietors, possessing large plantations and numerous slaves; besides these are the free blacks and slaves, and about 6,000 natives of India, who are all engaged in commerce, and through whose hands nearly all the foreign trade passes. Zanzibar, the chief town, is extensive, with a population of 80,000; but there are several important towns on the coast where native merchants reside, and whence caravans are sent into the interior to collect ivory and other products. The more important of these towns are Brava, Melinda, Mombasa, Pangani, Bagamoye, and Kilwa. The Sultan's authority, however, does not extend along the whole of the coast, and this has enabled Germany to step in and establish claims upon a considerable portion of it. The limits between the Sultan's possessions and the German Protectorate were defined, in 1885, by an International Boundary Commission. The Universities Mission and other missionary societies have established themselves at various points of the Sultan's dominions. Bagamoyo is the centre of a French Roman Catholic Mission. The imports of the Island of Zanzibar consist of cotton goods, beads, arms, brass wire, &c., and amount to about £800,000; and the exports, consisting of gum-copal, cloves, ivory, india-rubber, cocoanut-oil, seeds, &c., amount to about £1,200,000. Since 1871 the trade has greatly increased; the Sultan's revenue amounts to about £245,000. The export of slaves has never totally disappeared. There is a small army of about 1,200 men.

British Agent and Consul-General, Sir John Kirk, G.C.M.G. £2,150
Consul, Frederic Holmwood 750
Nyassa—Consul, A. G. S. Hawes 600
Vice-Consul (Legal), Walter B. Cracknall 700
Surgeon, R. Lee Huzzey 300
Vice-Consuls in Zanzibar Dominions, Lieut. Charles S. Smith, R.N., Harry Lionel Churchill, E. L. Berkeley, and M. H. Drumond ..... each 500

ZULU REPUBLIC.

President, L. J. Meyer.
Secretary of State, Esselm.

When Ketchewayo, the Zulu King, was defeated on July 21st, 1883, by his rival Usibebu, he fled into the Zulu Reserve, and died there February 9th, 1884. His son and heir Dinizulu appealed for help to the Boers, with whose assistance he defeated Usibebu on June 10th, 1884, and they claimed and received in acknowledgment of their services a large slice of his kingdom, which they proclaimed on August 16th, 1884 as a "Nieuwe Republiek." Subsequently the Boers managed to obtain additional concessions, until the new State extended down to Santa Lucia Bay, which brought them into conflict with the British authorities. According to an agreement concluded on October 22nd, 1886, between delegates of the "New Republic" and the Governor of Natal, the Boers have, however, surrendered their claim to the coast, and the new State is therefore confined to the western part of independent Zululand, adjoining Transvaal and the Zulu Reserve. Its area is about 1,800 square miles. The "Capital" is called Vryheid ("Freedom").

THE ASTEROIDS AND PLANETS.

During the year ended on November 1, 1886, nine new planets have been discovered, making a present total of 260.

The following are the dates of discovery:—

253, Mathilde ..	by Palisa	on Nov.	12, 1885
254, Augusta ..	,, ,,	,, March	31, 1886
255, — ..	,, ,,	,, ,,	31, 1886
256, — ..	,, ,,	,, April	3, 1886
257, —	,, ,,	,, ,,	5, 1886
258, Tyche	,, Luther	,, May	4, 1886
259, Aletheia ..	,, Peters	,, June	28, 1886
260, — ..	,, Palisa	,, Octr.	3, 1886

The following have also been named in the past year:—

249, Ilsa.	251, Sophia.
250, Bettina.	252, Clementina.

It will be noticed in the above list, that Herr Palisa discovered four of these minor planets, viz. Augusta and the three following, in less than a week.

In the "American Journal of Science" for April last, Professor Newton points out the interesting fact that the mean orbit given by 251 asteroids agrees very nearly with that of Jupiter. The orbit of Jupiter lies nearer to this mean orbit than does that of any one single asteroid, being inclined to it only 30′.

From observations of the brightness of certain of the minor planets by means of a Zöllner photometer, Dr. G. Müller finds two classes of light curves given by his observations, and from them he draws the conclusion that this is due to their different physical condition, four of them showing changes in brightness only when the planet is approaching opposition, others varying in brightness with change of phase. In the former case he assumes that the physical condition of the asteroids is similar to that of Mars, and in the latter case, like that of the Moon or Mercury.

Professor Bakhuysen, of the Leyden Observatory, has published a Memoir on the rotation period of Mars, in which he discusses observations extending from those of Huyghens in 1661 to those of Schiaparelli in 1879, and thence deduces a period of rotation of 24*h.* 37*m.* 22·66*s.*; a result almost identical with that of Kaiser; Kaiser's period being 0·04*s.* smaller. The drawings of Mars, made at different epochs, point with tolerable certainty to the conclusion that considerable changes have taken place on the surface of the planet since the times of Schroeter and Sir William Herschel. Many of the markings described by the earlier observers must have been more conspicuous than they now are, or they could not have been seen with the appliances at the command of Schroeter at the beginning of this century.

Professor Hough, in his Report on the work at the Dearborn Observatory, says that much attention has been given to Jupiter, the great red spot being still an object of much interest. This spot has now been under observation for seven years, and in that time has undergone but slight change. There appears to have been a slight diminution in the length between 1883 and 1884, the breadth at the same time being somewhat greater. The principal equatorial white spot, observed since 1879, was not so conspicuous as in former years.

The meridian circle of this Observatory has been used for the determination of standard time, which is furnished daily to the city of Chicago. In connection with this instrument Professor Hough has invented a printing chronograph, which so records the observations that the time and labour of translating the record into figures is done away with, and another source of error avoided. In the "Proceedings of the American Academy of Arts and Sciences," Professor Todd publishes a list of all the *suspected objects* which he encountered in his search for a trans-Neptunian planet in 1877–78. This list should prove very useful to any future observer who may take up the search. Professor Todd's examination was restricted to that portion of the heavens which his theoretical researches pointed out as likely to be the place of the planet; and though his search for the planet was unrewarded, he does not conclude that there is no planet to be found.

Comets.—A faint comet was discovered at the Paris Observatory by M. Fabry on December 1st, 1885, having a sensible nucleus. On December 3rd, another was found by Mr. Barnard of Nashville, U.S. America. This was also a faint one. The first computed elements resembled those of the second comet of 1785. A comet was discovered by Mr. W. Brooks, of the Red House Observatory, Phelps, New York, on December 26th, and independently by Barnard of Nashville on the following night. It was described as being of the average size and brightness of telescopic comets, of slight central condensation, without nucleus or tail. Another comet was discovered by Brooks on April 27th, in R.A. 0*h.* 15*m.* and Decl. 62° N. This was followed by the discovery of another by the same observer on May 22nd, situate in R.A. 11*h.* 55*m.* and Decl. 8° 55′ N.

A comet discovered by Mr. Finlay at the Cape on September 26th, in R.A. 17*h.* 2*m.* 23*s.* and Decl. 26° 4′ S., was described as circular, having a diameter of 1′, faint, and slightly condensed towards the centre, but without any tail.

A comet was discovered by Barnard on October 4th, and was observed on October 5th at 16*h.* 2*m.* Greenwich mean time, in R.A. 10*h.* 37*m.* 24*s.* and Decl. 1° 3′ N., bright and round. It is rapidly increasing in brightness, and will be at its brightest early in December, after which it as rapidly degrades and goes south.

The Sun.—The expedition which proceeded to Grenada, in the West Indies, to observe the total solar eclipse of August 29th, met, on the whole, with a fair measure of success. The sky on the morning of the 29th was very unpromising, being generally overcast and threatening rain. At Carriacou, where Father Perry and Mr. Maunder were stationed, the clouds cleared away just before the critical time, and the sky continued clear to the end of the phenomenon. At three other stations the moon was hidden by clouds during some portion of the totality, and at Green Island, where Mr. Lockyer was stationed, nothing could be seen at all.

Professor Tacchini, by a comparison of the prominences seen during totality with those observed in full sunshine, came to the conclusion that many very fine prominences seen in the former case are not visible by the spectroscopic method under the latter circumstances. The luminous intensity of the white prominences seen during totality is small, and they are not visible to the naked eye unless they attain to a height greater than that of the brightest part of the corona. But when they attain to a great height, as was the case

in this eclipse, their summits are visible to the naked eye.

M. Trouvelot, in a Memoir on the structure of the Solar envelope, propounds a theory which in all essential points agrees with that of Professor Young. It amounts to this, that the Sun is surrounded by a relatively very shallow shell of vertical filaments, due to the condensation of metallic vapours, their glowing summits forming the photosphere. The varying effect on these filaments of hydrogen and metallic eruptions from the solar nucleus of different degrees of violence is made to account for all the phenomena of spots, faculæ, and prominences.

STARS AND NEBULÆ.—At the end of the year 1885, the American Committee on Standards of Stellar magnitudes issued their third Report. The maps of those regions from which the standards are selected were made, in the first instance, with the great refractor of the Harvard College Observatory, and have since been revised with the larger telescopes of the Washburn and Princeton Observatories. From the maps, stars to be used as standards will be chosen, their magnitudes being determined by the meridian or wedge photometer. The report also contains a table of the magnitudes of twenty-one close circumpolar stars.

A *new star* of the 6th magnitude was discovered by Mr. T. E. Gore on the evening of December 13th, 1885, about 20′ following χ Orionis. The *Nova*, as it is called, does not appear in Harding, Lalande, Heis, or Birmingham. It was observed at Dun Echt on the 16th, and noted as being of 6½ magnitude, of an orange-red colour, and exhibiting a fine banded spectrum of the 3rd type. Mr. T. E. Gore says: "It slowly diminished in brightness, and in September, 1886, was below the 9th magnitude. It is of a very reddish colour, and its spectrum was a most interesting example of Secchi's 3rd type. This was the second *new star* discovered within twelve months, an occurrence unique in the annals of astronomy." Its position in 1885 was R.A. 5*h*. 48*m*. 59*s*. and Decl. 20° 9′ N. It will be remembered that the first of the *new stars*, to which Mr. Gore alludes, was discovered by Dr. Hartwig on August 31st, 1885, close to the nucleus of the great nebula in Andromeda.

Regarding the relation between the *Nova Andromedæ* and the nebula, M. Trouvelot holds the opinion that the nebula itself has undergone no change during the appearance of the *Nova*. He is led to adopt this opinion by the result of a comparison of the present aspect of the nebula with a chart of the same region made in 1874, in which two stars are shown occupying the central district, one of which is the present *Nova*. As none of the stars visible upon the nebula show diffused or ill-defined borders, they are probably neither in nor behind the nebula, but before it, and form a part of the Milky Way.

Orbits have recently been computed of the following double stars, and periods assigned them by Mr. Gore:—

γ Coronæ Australis,	having a period of		81·78	yrs.
β Delphini	,,	,,	30·91	,,
ζ Sagittarii	,,	,,	18·69	,,
O Struve 234	,,	,,	63·45	,,
T Cygni	,,	,,	53·87	,,
85 Pegasi	,,	,,	39·03	,,
Struve 1757	,,	,,	340·38	,,
40 Eridani	,,	,,	139·00	,,

Dr. C. F. W. Peters has obtained elliptic elements of the Double Star 61 Cygni, representing with considerable accuracy the observations from the earliest times down to 1883. Dr. Peters finds the period of revolution to be 783 years. The combined mass of the system is about half the Sun's mass, and the mean distance between them about seventy times that of the Earth from the Sun.

Several new Variable Stars have been discovered, among the most interesting of which are 10 Sagittæ, discovered by Gore, and D.M. 27° —3890 by Sawyer (U.S.A.); the former is a short-period variable, ranging from 5·6 to 6·4 magnitude in a period of about 8·38 days. The latter is also a remarkable variable of short period, near 32 Vulpeculæ, ranging in magnitude from 5·5 to 6·7 in a period of about 4·437 days.

A new Variable Star was discovered at Melbourne while observing Barnard's Comet on May 31st, on which day it was estimated at the 4th magnitude. On June 4th it appeared brighter than β Leporis, and on June 5th it was found to be of the 5·8 magnitude.

The "Report" of the Observatory of Yale College contains an account of the survey of the Pleiades, by Dr. Elkin, with the heliometer under his care. The observations have been completed. Sixteen thousand measures of distance and seven hundred of position angle have been obtained. The discussion of this mass of observations is in a forward state. Besides the above work, Dr. Elkin is also engaged in a scheme for determining the parallax of first-magnitude stars. Professor Hough, in his Report on the Dearborn Observatory, states that 39 new Double Stars were discovered.

On November 16th, 1885, the MM. Paul and Prosper Henry found on one of their photographic plates of the Pleiades a nebula, hitherto unknown, which at that time they could not detect by direct telescopic observation. The photograph shows the nebula as 3′ in extent, and presenting a well-marked spiral form. It is in R.A. 3*h*. 39*m*. and Decl. 24° 1′ N. The nebula has since been seen at Pulkova with the great refractor, though it would probably for a long time have escaped discovery had not its exact position been made known by the photograph.

The "First Part" of the Observations of the Southern Nebulæ, made with the great Melbourne reflector, has been published, containing the results for the revision of the southern nebulæ observed by Sir John Herschel at the Cape between 1834 and 1838. The great reflector has been dedicated to this work since 1869. The performance of the mirror on average fine nights is said to be somewhat disappointing, but very fine on really good nights. The number of nights fit for using the telescope is put at 40 per cent., and the best nights at only 17 per cent. The observations of the nebulæ afford some remarkable instances of apparent changes having taken place in a few years.

Professor Pickering has undertaken a series of photographs of the spectra of the moderately bright stars visible in the latitude of the Harvard Observatory, as a memorial to the late Professor Henry Draper. One of these photographs, in the region of Cygnus, known to contain four spectra showing bright lines, contains four other spectra of the same character, one of which exhibits bright lines apparently due to hydrogen. Among the Stars shown by the photograph to have bright lines is D.M. +37°

—3821, lines first discovered by Dr. Copeland in 1884.

OBSERVATORIES.—Professor Holden, late of the Washburn Observatory, has been elected, by the trustees, President of the University of California and a director of the Lich Observatory. The mounting of the 36-inch objective has been intrusted to Messrs. Warner & Swasey, of Cleveland, Ohio. The telescope tube will be nearly 60 feet long, with a diameter of 42 inches. The mounting is so arranged that all the motions required in working the telescope can be controlled by the observer at the eye end, using the minimum of physical exertion. A photographic objective will also be supplied with the instrument.

Another new observatory is about to be established in America, and is the gift of Mr. R. McKim of Madison to the Pauw University, Indiana. Among other instruments it is to be fitted with an equatorial of 9½ inches clear aperture, the dome for which is to be made by Messrs. Warner & Swasey with a peculiar system of friction-rollers, and capable of being moved round with a pull of only 12 lbs. Dr. T. P. John is to be the first director.

An observatory has been erected at Kis-Kartel, near Budapest, by the Baron Podmaniczky, furnished with a 7-in. achromatic, Zöllner spectroscope, and other smaller instruments. It is intended to be devoted to physical observations of the Sun, Moon, and planets, as well as to the observation of Double Stars and Nebulæ.

Notwithstanding the unsatisfactory condition of the financial position of the Harvard College Observatory, the photometric and meridian work has been pursued with much vigour. Observations are being made by Professor Rogers, with the meridian circle, for a catalogue of Polar Stars. Investigations in stellar photography are, at the same time, being carried on. It is found that trails can be obtained on the plates of stars near the Equator down to the 6th magnitude, by allowing the image of the star to traverse the plate by the diurnal motion, and of stars near to the pole as low as the 14th magnitude. Using a large prism in front of the lens, the spectra of the stars as small as the 8th magnitude have been obtained, from which prints could be taken on paper showing distinctly the lines in the spectrum.

The committee appointed to consider the question of erecting a new Naval Observatory at Washington, have reported to the Secretary of the Navy that it is advisable at once to proceed with the erection on the site purchased for the purpose in 1880, the name to be changed from that of the United States Naval Observatory to National Observatory of the United States, and to be under civil administration. The instruments of the present Observatory, excepting the 26-in. equatorial, transit-circle, and prime vertical transit, to be transferred to the Observatory at Annapolis, which is to be further enlarged, if necessary, to serve the wants of the naval service, whether practical, scientific, or educational, and be under the direction of the Navy Department, and to be called the Naval Observatory of the United States. Such members of the old Washington Observatory as may be required to work the instruments, and take charge of those books of the library which refer chiefly to navigation, will also be transferred to the Observatory at Annapolis; the remainder of the library and the above-excepted instruments being retained as a portion of the equipment of the National Observatory, to which also will be assigned the remaining officers of the astronomical staff.

At the instigation of M. Folie, a director of the Brussels Observatory, the Cointe Observatory has been founded in Belgium to be attached to the University of Liége, for the instruction of the students in astronomy and geodesy, as well as for making regular observations to form the basis for special researches. The Observatory is furnished with a meridian circle having a telescope with an objective of 6-in. diameter; an equatorial by Cooke & Sons of York of 10-in. aperture, and shortly to be added a complete set of magnetical and meteorological apparatus.

Mr. G. R. Rogerson, F.R.A.S., of Liverpool, has presented his Observatory to the Liverpool College, of which he was an old pupil. The Observatory contained an equatorially-mounted refractor, spectroscope, micrometers, &c. To this munificent gift Mr. Rogerson has also added his astronomical library.

The annual visitation of the Royal Observatory, Greenwich, took place on June 5th last. The Report read to the Board of Visitors states that the usual routine observations of the Sun, Moon, and Planets have been kept up during the past year to which the report applies, and stars from a working list containing 2,750 stars. In the Spectroscopic Department the determination of the motion of stars in the line of sight has been followed up. Daily photographs of the Sun are also taken on all occasions when the weather permits. The photographs show a marked diminution in the areas of spots and faculæ in 1885 as compared with 1884, the mean daily area in 1885 being only three-quarters of that in 1884. On twelve days the Sun's disc appeared to be entirely free from spots. The manufacture of the new object-glass of 28 inches, to be mounted on the south-east equatorial, has been intrusted to Mr. Grubb of Dublin. By an arrangement for separating the lenses, it is to be made available for photography. Mr. Chance has already cast a flint disc which promises well. The present object-glass of 13 inches is to be adapted to photographic purposes by the introduction of another lens in the cone of rays, about 30 inches from the principal focus, which it is expected will correct the chromatic aberration of the object-glass without altering materially the focal length.

At the Paris Observatory stellar photography occupies a prominent place. The great nebula in Andromeda, showing the *Nova* and nucleus of the nebula, have also been photographed. By using a prism having an angle of 5° before the object-glass, a large number of beautiful stellar spectra have been obtained, including the spectrum of Gore's *Nova* Orionis. Admiral Mouchez points out the great advantage photography possesses over eye-observations in the measurement of position, angle, and distance of double stars, where the components are of very unequal magnitude. In cases of this kind the eye of the observer is dazzled by the light of the brighter object, so much so as to be frequently unable to keep the smaller star steadily in view. The photographic plate has no retina to be dazzled, and only asks for an exposure sufficiently long to impress the image of the smaller star on the sensitive surface.

M. Cruls, the Director of the Rio de Janeiro

Observatory, has been commissioned by the Emperor of Brazil to procure for the Observatory a photographic equipment similar to that of the Brothers Henry at Paris; and to co-operate with other Observatories in the proposed photographic survey of the sky.

An equatorial refractor of 10 inches aperture and 10 feet focal length has been installed in the Robinson Memorial Dome at Armagh, and is being used for micrometrical observations of nebulæ, under the superintendence of Dr. Dreyer.

A great catalogue of stars is promised from the Madras Observatory. The total number of observations made there since 1862 to the end of 1884 amounts to 51,722. The separate results and annual catalogues will fill eight volumes, which will produce a final catalogue of about 5,000 stars, reduced to the epoch 1875.

A new Observatory, well supplied with the best modern instruments, is to be built at La Plata, in the Province of Buenos Ayres. The proposed equipment is to consist of a reflector of 31½ inches in diameter, an equatorial coudé of 17 inches, an 8-in. transit, an altazimuth, and apparatus for celestial photography. A time signal service is also to be instituted.

METEORITES.—On the evening of November 27th, 1885, the great shower of meteorites was generally observed over England and the Continent. This stream is believed to be connected with the famous comet of Biela. Much cloud prevailed over England, and in many places only a very partial view could be obtained of the display. At Keswick, where the weather was fine, they were observed to follow each other in such rapid succession that they could not be counted. At Leicester also they were well observed. At Greenwich, between 6 and 7 o'clock, they were observed to fall at the rate of 30 or 40 per minute. At Oxford, soon after 7 o'clock, 60 were counted in a minute. The accounts from Persia, Greece, and Italy all agree in describing the shower as very fine. Most of these meteors showed short paths. Mr. J. Rand Capron, observing at Guildown, put the time of richest display at 7*h.* 50*m.* p.m., when they were falling at the rate of 29 per minute. A few of the observations, when the shower was thickest, gave from 40 to 50 per minute. The sky at Guildown, excepting for a short interval about 7.30 p.m., was more or less clouded, and Mr. Capron thinks that possibly on this account the numbers may have been under estimated. M. P. F. Denza, at the Moncalieri Observatory, counted 3,954 meteors during the four hours and eight minutes which elapsed between 6 p.m. and 10.8 p.m., four observers being employed in counting most of the time. M. Denza calculates that with four observers at work and a perfectly clear sky they would in the same time have registered 62,300.

STELLAR PHOTOGRAPHY.—The application of photography to the mapping of the stars, nebulæ, &c., has, in the hands of the MM. Henry, at Paris, reached a state of perfection that could hardly have been anticipated. We know that the photographic plate can be made to receive impressions from objects not visible to the eye with the same objective. As an instance of this may be mentioned the discovery of a new nebula in the Pleiades, round Maia, the existence of which was never suspected till revealed by photography. It has since been seen with the big telescopes at Pulkova and Nice. It appears that it was also registered on a plate exposed at Harvard in November, 1885, but was taken to be at that time a defect in the film. The MM. Henry have also been able to obtain excellent photographs of the planets, and the satellite of Neptune has been photographed in all parts of its orbit. Not only in Paris or America, however, has photography been thus made use of. In England Mr. Isaac Roberts has produced results not inferior to those of the MM. Henry. Public observatories in England are experimenting on processes and methods.

The usefulness of photography in charting the stars is now so well recognized that, in order to make work of this kind valuable in the highest degree, and to avoid the waste of work which would be the case if each Observatory followed its own practice, it has been proposed by Mr. Gill, Her Majesty's Astronomer at the Cape, that a meeting of astronomers should be held in 1887 to consider the details of a scheme for producing a general photographic map of the heavens, in which the principal Observatories in all parts of the world should take a share. There are at the present time enough of telescopes of the necessary aperture available to make the work, steadily carried on, not of such an overwhelming nature as would at first sight appear.

The MM. Henry have compared their photographic map of the Pleiades, alluded to above, with that of M. Wolf, published in vol. xiv. of the *Mémoires de l'Observatoire de Paris*, and point out some of the advantages in this work of star-charting which photography possesses over direct observations. Many faint stars near to bright ones were thus, for the first time, rendered visible; the photographic map containing 1,421 stars, while Wolf's map showed only 625, the apertures of the instruments used being nearly alike.

Towards the end of 1885 the measurement of the 700 photographs obtained at the various French stations of the Transit of Venus in 1882 was begun. It was expected that they would be finished in about fifteen months.

OBITUARY.—On December 22nd, 1885, Dr. J. C. Draper died, in his 51st year. He was well known as a spectroscopist, and when his brother, Dr. Henry Draper, announced his discovery of what he believed to be bright lines of oxygen in the sun, he published a series of measures of dark lines which he considered belonged to the spectrum of that gas. Dr. J. C. Draper had held the chair of Natural History in the University of New York since 1863, and that of Chemistry in the medical department of the college from 1866.

Professor Dorna, director of the University Observatory at Turin, died on August 19th. He was appointed to succeed the late Professor Plana twenty-one years ago.

Mr. C. G. Talmage died on March 20th, at Knotts Green, Leyton. Mr. Talmage's first apprenticeship to astronomy was served at Greenwich. After holding several intermediate appointments he was selected as director of Mr. Barclay's private Observatory at Leyton, which he held till his death.

The Rev. Stephen H. Saxby, incumbent of All Saints', Clevedon, died on August 5th, in his 56th year. Latterly Mr. Saxby had devoted his entire leisure to the pursuit of astronomy, and was the author of many papers on astronomical subjects and history.

In a paper in the *Comptes Rendus* Mr. Loewy proposes a new method for determining the amount of astronomical refraction. The method consists in placing before the object-glass of the equatorial a prism with silvered faces forming a double mirror, so that the images of two stars widely separated—one, say, on the horizon, and the other near the zenith—can be brought near together in the focal plane of the telescope and their distance measured. After a certain interval, when the stars may be of nearly equal distance from the zenith, and the difference of refraction between them a minimum, the distance between the images can again be measured, and in this way M. Loewy thinks an accurate determination of the amount of the atmospheric refraction may be easily determined.

The Emperor of Russia has conferred upon Messrs. Alvan Clark & Sons the honorary golden medal of the Empire, in acknowledgment of the great excellence of the objective supplied by them to Dr. Struve.

The Lalande prize of the Académie des Sciences has been awarded to M. Thollon for his map of the Solar spectrum, and the Valz prize to Herr Spoerer for his thirty years' work on the physical constitution of the sun.

The gold medal of the Royal Astronomical Society was awarded to Professor Pritchard of Oxford, and Professor Pickering, U.S.A., for their photometric researches.

Dr. Robert Stawelly Ball, the Royal Astronomer for Ireland, received the honour of knighthood on January 25th.

A decree was issued in Japan in July last relative to time-reckoning, which declares that the meridian passing through the centre of the transit-circle instrument at Greenwich shall be the initial meridian for longitude, which is to be counted in two directions up to 180°, *i.e.* east and west; and, further, that on and after January 1st, 1888, the time on the meridian 135° east shall be the standard time throughout the Empire.

The Year's Weather.

THE WEATHER IN THE BRITISH ISLANDS DURING THE YEAR ENDING 31ST OCTOBER, 1886.

This summary of the weather experienced in the British Islands during the year commencing November 1st, 1885, and ending October 31st, 1886, has been mainly compiled from the data contained in the Daily and Weekly Weather Reports issued by the Meteorological Office. It is hoped that the remarks on each month will be useful for purposes of reference and comparison, especially when considered in relation to the daily results of the Greenwich observations as given for each month in the Almanack.

November, 1885.—The weather was mild, with few frosty nights, and seasonable rainfall except in Scotland, where rain was much below the average quantity. The highest temperature, 63°, was recorded at Leith on 3rd; the lowest, 18°, also at Leith on 18th. At 8 a.m. on 8th the temperature at Wick was 52°, while at Oxford it was only 37°.

At Roche's Point 1·25 inches of rain fell on 27th. Atmospheric pressure ranged between 30·45 inches on 17th, and 28·7 on 27th. A thunderstorm occurred in Hampshire on 5th. Stormy boisterous weather prevailed from 1st to 9th, and 26th to 30th; brilliant weather from 15th to 18th. Ireland had finer weather than usual owing to the south-easterly winds. Bright sunshine, estimated in percentage of its possible duration, varied between 22 in north Ireland and 10 in north-east England.

December.—The weather was seasonable, the rainfall small, and more than ordinary sunshine. The highest temperature, 59°, was recorded at Sumburgh Head and at Foynes on 16th; the lowest, 14°, at Penrith on 11th. At 8 a.m. on 9th the temperature was 42° at Malin Head, while it was only 22° at Parsonstown; on 11th, Sumburgh Head 42°, York 20°; on 16th, Valencia 54°, London 33°; on 28th, Belmullet 48°, Dungeness 28°; on 30th Belmullet 46°, Yarmouth 26°. From 5th to 11th frost prevailed, with snow in Scotland. The rainfall in Ireland and England was less than half the ordinary quantity. Atmospheric pressure ranged between 28·6 inches on 4th and 30·55 on 11th; from 8th to 27th it was high, with small fluctuations. Bright sunshine varied between 24 per cent. in the Channel Isles and 11 in north Scotland.

January, 1886.—Severe and rapid changes cha-

racterized the weather; the mean temperature was low, and most of the nights frosty. The highest temperature, 57°, was recorded at Aberdeen on 1st; the lowest, 6°, at Rothampstead on 8th. At 8 a.m. on 19th the temperature at Valencia was 42°, while at York it was only 18°; on 23rd, Aberdeen 40°, and Parsonstown 19°. On 13th a severe thunderstorm with terrific wind occurred in central England. Snow fell heavily at times, but did not remain long. Between 4.30 a.m. and 1.30 p.m., on 6th, eight inches of snow fell in London; and the minimum temperature at Kew was 13°. In Ireland and south-west England the rainfall was below the average; elsewhere slightly above. Cyclonic storms were frequent. Atmospheric pressure ranged between 30·25 inches on 12th, and 29·75 on 31st. Bright sunshine varied between 27 per cent. in east England and 11 in north Scotland.

February.—The weather was generally cold, but although frosts occurred almost every night they were not intense. The atmosphere was quiet and the sky gloomy. Sunshine was almost absent in England. The highest temperature, 56°, was recorded at Killarney on 8th; the lowest, 14°, at Rothampstead on 15th. At 8 a.m. on 7th the temperature at Valencia was 50°, while at Cambridge it was only 24°; and similar conditions continued three or four days. The rainfall in Great Britain was very small; in Ireland it was seasonable. On 28th, 1·05 inches of rain fell at Roche's Point. Snowfalls, snowdrifts, and fogs occurred in Great Britain, especially severe in the eastern parts. Atmospheric pressure ranged between 28·85 inches on 1st and 30·7 on 8th, and was generally high. Bright sunshine varied between 34 per cent. in north Scotland, and 14 in south England and west Scotland. At Kew the sunshine was 14 per cent., and the mean temperature was lower for the month than it has been for the past thirty years.

March.—The weather was cold, with frost, much snow, and boisterous squally winds. The highest temperature, 65°, was recorded at Cambridge on 24th; the lowest, 7°, at Stoke-on-Trent on 7th. At 8 a.m. on 1st the temperature at Scilly was 49°, while at Oxford it was only 29°; on 4th at Aberdeen 39°, at Parsonstown 20°; on 8th at Valencia 46°, at Loughborough 24°; on 17th at Scilly 40°, at Oxford 21°. The rainfall was large in Ireland. Thunderstorms occurred in England on 29th. On 26th, 1·29 inches of rain fell at Barrow-in-Furness, and 1·27 at Holyhead. Atmospheric pressure ranged between 30·5 inches on 10th, and 29 on 31st. Bright sunshine varied between 36 per cent. in the Channel Isles and 17 in north Ireland.

April.—The weather was partly severe and partly very fine. The mean temperature was 3° below the average in south England. The highest temperature, 71°, was recorded at Hereford on 24th; the lowest, 23°, at Nairn on 2nd. At 8 a.m. on 27th the temperature at Aberdeen was 60°, while at Sumburgh Head it was only 36°; Jersey was 59°, York 39°. On 6th, 1·03 inches of rain fell at Valencia. Thunderstorms occurred in England on 9th and 24th. On 11th four or five inches of snow covered Worcestershire. On 29th considerable snow fell in north Wales and north Scotland. Atmospheric pressure ranged between 28·6 inches on 8th and 30·45 on 15th. Bright sunshine varied between 46 per cent. in the Channel Isles, and 31 in north-east England; 74 was registered at Kew on 1st.

May.—After a few bright days the weather became exceedingly wet, dismal, and ungenial, with strong winds. The highest temperature, 77°, was recorded at Bawtry on 7th; the lowest, 29°, at Cirencester on 5th. In Ireland the rainfall was excessive; in England between 10th and 17th, heavy local falls caused the Severn and other rivers to overflow. On 12th, 1·40 inches of rain fell at Donaghadee, 1·45 at Barrow-in-Furness, 1·30 at Oxford, 1·04 at London; on 13th 1·39 at Loughborough; on 20th, 1·15 at Leith; on 24th 1·16 at London; on 27th, 1·40 at Leith. On 12th snow fell in south Scotland and north England. Severe thunderstorms occurred in London on 22nd and 23rd. Atmospheric pressure ranged between 30·5 inches on 5th and 29·2 on 18th. Bright sunshine varied between 41 per cent. in the Channel Isles and 19 in north-east England.

June.—The weather was cold and dry, except in north Scotland, where the rainfall was normal, and in west Ireland, where the temperature was seasonable. The highest temperature, 79°, was recorded at Cambridge on 29th; the lowest, 33°, at Hillington on 4th. The mean temperature was 4° below the average in England, 3° in Scotland, 1° in Ireland. The week ending 21st was very cold in England, while the air was from 15 to 20° warmer in the north of Norway, within the Arctic Circle. On 1st 1·05 inches of rain fell at Spurn Head. On 10th, between 9 a.m. and noon, there was intense darkness in London. On 14th a destructive tornado occurred at Deal. Atmospheric pressure ranged between 29·4 inches on 15th and 30·3 on 30th. Bright sunshine varied between 52 per cent. in the Channel Isles and 27 in north Ireland.

July.—During the first ten days very little rain fell, sunshine was remarkable for its intensity and duration; the rest of the month was much cooler, cloudy, changeable, rain frequent, and at times heavy. The highest temperature, 89°, was recorded at Southampton on 4th; the lowest, 30°, at Wick on 29th. Rainfall was excessive in amount and frequency generally, nearly double the average quantity in north Scotland. At Sumburgh Head 1·20 inches of rain fell on 13th; at Valencia 1·33 on 20th; at Donaghadee 1·01, at Oxford 1·81, at Cambridge 1·40, at York 2·20 on 25th; at Barrow-in-Furness 1·43, at Shields 1·12 on 26th. Atmospheric pressure ranged between 30·4 inches on 3rd and 29·1 on 22nd. Thunderstorms occurred on 21st and 25th. Bright sunshine varied between 56 per cent. in the Channel Isles and 26 in north Scotland.

August.—The weather was moist, cloudy, and showery, except the last week, which was clear, dry, and hot, especially in England. The highest temperature, 87°, was recorded at London on 30th; the lowest, 30°, at Wick on 4th. At Valencia, 1·16 inches of rain fell on 12th, and at Cambridge 1·23 on 17th. Atmospheric pressure ranged between 29·3 inches on 13th and 30·3 on 20th. Thunderstorms occurred in England on 13th and 18th. There were no easterly winds. Mist and fog were frequently reported from stations in south-west England and around the Irish Sea. The sky was almost continuously overcast in Ireland. Bright sunshine varied between 49 per cent. in the Channel Isles and 22 in north Ireland.

September.—The weather was exceedingly fine. The highest temperature, 85°, was recorded at London on 1st; the lowest, 28°, at Newton Reigny on 17th. The rainfall was only about half the average quantity in England. On 2nd 1·20 inches of rain fell at Hurst Castle; on 9th, 1·64 at Barrow-in-

Furness; on 12th, 1·08 at Roche's Point; on 13th, 1·12 at Nairn. Thunderstorms occurred on 2nd, 3rd, and 4th in south-east England. A gale on 9th was most severe on the west and north-west coasts. Atmospheric pressure ranged between 29·15 inches on 9th and 30·6 on 16th. Bright sunshine varied between 47 per cent. in the Channel Isles and 25 in north-east England.

October.—The weather was very mild generally. The highest temperature, 80°, was recorded at Cambridge on 4th; the lowest, 29°, at Brookeborough on 22nd. The first part of the month was very fine, dry, and exceptionally warm, especially in south and south-east England. Rain was over-abundant in the south and deficient in the north. On 3rd, 1·04 inch of rain fell at Valencia; on 12th, 1·56 at Barrow-in-Furness; on 15th, 1·10 at Mullaghmore, 1·74 at Belmullet, 1·37 at Parsonstown, 1·00 at Pembroke; on 16th, 1·23 at Stornoway; on 20th, 0·99 at Cambridge. Atmospheric pressure ranged between 28·5 inches on 16th, and 30·5 on 25th. Thunderstorms occurred on 6th, 10th, 19th, 20th, and 21st. A tempest of extraordinary severity and destructiveness prevailed on 15th to 17th inclusive, embracing the whole of these islands. Bright sunshine varied between 35 per cent. in north Scotland and the Channel Isles, and 17 in east Scotland.

The Variable Star Algol (*Beta Persei*).

This is one of the most noteworthy variable stars in the heavens: its magnitude oscillates between 2·3 and 4·5, and its period is *2d. 20h. 48m. 54·7s.* The star is commonly a little fainter than 2nd mag., and remains so for *2d. 13½h.*, when it rapidly declines in lustre, and within some 3½ hours becomes less than 4th mag. It continues at this minimum about 15 minutes, when it suddenly acquires greater brilliancy, and in 3½ hours assumes its ordinary magnitude. The following are the times of minima in 1887. Between April and July the star is not favourably visible, being immersed in the twilight low on the northern horizon:—

Summary of Celestial Objects and Phenomena for Observation, 1887.

In compiling a statement of the more important astronomical events which may be expected in 1887, we refer only to such phenomena as may be definitely predicted. There are many attractive objects for observation during every year which are not capable of being exactly precomputed and announced. This relates to certain comets and meteor showers, to the outburst of temporary stars such as that which occurred in the great nebula of Andromeda during the latter part of August, 1885; to displays of Aurora Borealis; to isolated large meteors, called fireballs, and other phenomena of diversified character, which are always attractive subjects for observers. Though occurrences of this nature are to a certain extent erratic, there are many others, regulated by conditions which are now so well understood that the times of their apparition may be correctly assigned, and it is chiefly to these we wish to direct attention.

Occultations.—The temporary hiding of bright stars by the moon affords extremely interesting views for small telescopes. During 1887 there will be several occultations of this class that may be well observed. The first magnitude star, Aldebaran, or Alpha Tauri, will be occulted on no less than four occasions, viz., Jan. 7, March 2, July 17, and October 7, and the times are specified in another part of this Almanack. On October 13 the bright star, Regulus, or Alpha Leonis, will be similarly obscured, and other dates furnish analogous phenomena in reference to minor stars. A telescope is requisite in witnessing them, and the observer will probably be surprised at the suddenness with which the stars disappear on coming up to the Moon's limb. In the case of bright stars they may be traced with the naked eye until close to the margin of our satellite, when, however, they become overpowered by the glare, and a glass must be brought into use in order to observe the actual disappearances:—

Planets.—Mercury may be observed under favourable circumstances at the end of February and during the first week in March. The planet will be shining brighter than a star of the first magnitude, and twinkling perceptibly amid the vapours circulating near the horizon. The intending observer should look towards the western horizon about an hour or more after sunset, and there is every probability he may succeed in detecting this object. At the end of June Mercury again emerges into view as an evening star. For a week or so at the middle of August, and again at the beginning of December, the

planet will be conspicuous near the eastern horizon in the mornings about an hour or so preceding sunrise.

Venus will become a resplendent object in the summer months as an evening star, and in the autumn and winter months will be equally brilliant in the morning sky. This planet arrives at greatest E. elongation on July 13, and at greatest W. elongation on December 2; and on August 16 and October 28 attains a very high degree of brilliancy. During the first half of the year Venus will present a gibbous phase, but in July and the four succeeding months will be crescented in varying degree, according as her position with respect to the Sun changes. On September 21 this planet comes to inferior conjunction with sun.

Mars will appear in the morning sky during the later months of the year, but he is not thoroughly well placed at any time. The planet will be a somewhat diminutive object in a telescope, as his apparent diameter is less than 8 seconds. On August 28 Mars and Saturn will be close together, the distance separating them being less than one degree. The study of areographic features must be left to the early months of 1888.

Jupiter will be a fine object during the first half of the year, but his declination being some 11 degrees south of the equator, observations of his surface cannot be continued with so much effect as during the few previous years. This planet arrives at opposition to the sun on April 21, and will be in conjunction with the sun on November 9. He will be very near Mercury at the end of November and beginning of December. Numerous changes occur on the large disc of this planet. They are probably of atmospheric character, though some of the markings distinguished show a striking degree of permanency. The great red spot, which became well visible in July, 1878, is still to be seen, and there are brilliant white spots involved with the equatorial belts which are well worthy of study. The observer will also find agreeable entertainment in the phenomena attending the revolution of the four satellites. The position of the planet is in Libra.

Saturn comes to conjunction with the sun on January 9, and will be a conspicuous object in Gemini during the first few months of the year. The luminous rings may be viewed under most favourable conditions, though they are not so widely open as during the few preceding oppositions. Early in January the planet's diameter reaches 18·6 seconds. In the summer months he will be practically invisible, but emerges from the sun's rays in September, and during the last quarter will be in good aspect, chiefly as a morning star in Cancer.

Uranus may be observed during the first half of the year. His position is in Virgo, about 3 degrees S. of the equator, and on March 31 he will be in opposition with the sun. This planet is visible to the naked eye on a dark night as a faint star, and in a telescope his small disc of 4 secs. diameter can be well perceived. On Nov. 24 he will be only 1 degree S. of Venus.

Neptune, the minute telescopic planet, must be looked for, if at all, in the autumnal months, as he reaches opposition to the sun on November 21.

It is a fact worthy of special comment that all the major planets of our system will be visible in the morning sky at the early part of December. An observer who surveys the firmament before sunrise at this period will find it very rich in bright stars and planets. It is only at long intervals that all the leading planets are thus presented to view at the same time.

Shooting Stars.—These phenomena should be expected on the following dates, when it is most essential that careful observations be secured. Though no conspicuous displays may take place in regard to the November showers, it is necessary to be prepared for such an event:—Jan. 2, April 19–20, July 27–30, August 9–11, Oct. 18 19, Nov. 13–14, Nov. 26 27, and Dec. 9 12.

Large Comets.

The following is a table of some of the largest comets observed during the present century:—

Year.	Discoverer.	Perihelion Passage.		Long. of Perihelion.		Longitude of Node.		Inclination.		Perihelion Distance.	Motion.	Computer.
		S.	H.	°	′	°	′	°	′			
1807	Parisi	Sept. 18	18	270	55	266	47	63	10	0·6462	D	Bessel.
1811, I.	Flaugergues	Sept. 12	7	75	1	140	25	73	2	1·0354	R	Argelander.
1819, II.	Tralles	June 27	17	287	5	273	42	80	44	0·3410	D	Tralles.
1823	In Switzerland	Dec. 9	10	274	34	303	3	76	11	0·2265	R	Encke.
1825, IV.	Pons	Dec. 10	17	318	47	215	43	33	33	1·2408	R	Hansen.
1840, IV.	Bremiker	Nov. 13	16	22	32	248	56	57	57	0·4808	D	Götze.
1843, I.	Several observers	Feb. 27	9	278	39	1	12	35	41	0·0053	R	Hubbard.
1845, III.	De Vico	June 5	16	262	2	337	48	48	41	0·4016	R	D'Arrest.
1858, VI.	Donati	Sept. 29	23	36	13	165	19	63	1	0·5784	R	v. Asten.

This branch of astronomical inquiry has made considerable advances during the last quarter of a century. The great meteoric storm of November 13, 1866, aroused general attention, and the result of investigation has shown that these phenomena are probably allied to comets, being, in fact, minute planetary bodies revolving in streams of countless atoms around the sun. The elements of some of their best-determined orbits have been found to absolutely coincide with certain periodic comets, and the name of "cometoids" is occasionally, and no doubt properly, applied to those shooting stars which, it is fair to assume, have a definite cometary origin. The appearance of numbers of these bodies in regular showers is well explained on the theory that the earth, during her orbital revolution, intersects cometary orbits (as proved in the case of the *Lyrids*, *Perseids*, *Leonids*, and *Andromedes*); and these orbits are more or less replete with disintegrated and dispersed cometic materials, which, entering our atmosphere with great velocity, are rendered combustible as the effects of concussion. They may either be gaseous, stony, or metallic in their constitution; in any case they are presented to the eye as luminous objects in rapid motion, and are immediately consumed and frittered into harmless dust, which slowly and imperceptibly subsides upon the earth's surface. Only in exceptional cases, where these bodies are of large size and formed of hard compact materials, can they penetrate the dense under-layers of our atmosphere and (still retaining much of their native condition) fall bodily upon the surface of the earth.

Every shower of meteors has a *radiant point*—in other words, a centre whence the individual flights are successively directed. If the apparent paths are accurately observed and projected on a celestial globe, it will be found that they converge (like the spokes of a wheel) upon a central point. This marks the focus of the shower, and as there are many of these radiant points in action on the same night, it is difficult to ascertain them with great precision, for an attentive and prolonged vigil will reveal shooting stars having every conceivable direction of motion athwart the firmament. Several hundreds of well-marked showers have now been ascertained as the result of assiduous observation, but the extended *durations* of many of these are difficult to reconcile with theory. Amongst English astronomers we owe much in the elucidation of these phenomena to the labours of Prof. Herschel, Lieut.-Col. Tupman, Messrs. Greg, Glaisher, Denning, and others.

Annexed is a table of 40 Radiant points which embrace many of the principal showers visible during the year:—

No.	Epoch.	Radiant pt. R.A. Dec.	Name of Meteor Shower.	Notes.	Observer or Authority.
		° °			
1	January 2—3	232+49	*Quadrantids*	Rich shower, 9° NNW. β Boötis	Greg & Herschel.
2	January 18—28 ..	233+31	*θ Coronids*	Observed in 1868 by Zezioli.	S. & Zezioli.
3	February 20.....	181+34	*Coma Berenicids* .	Also in January and March.	Denning.
4	February—March	177+13	*β Leonids*.....	Continued in April (Corder).	Heis.
5	March 7.....	244+15	*γ Herculids*.....	11 meteors per hour in 1869.	Tupman.
6	March—April....	233+11	*α Serpentids*	Also in January—February.	Corder.
7	April	255+38	*π Herculids*.....	Visible also in July—Aug...	S. & Zezioli.
8	April 9—12	249+51	*τ Draconids*.....	Another shower, 184°+59°..	Denning.
9	April 19—20.....	275+34	*Lyrids*	269°+33° (D.). Comet I. 1861	Greg & Herschel.
10	April—May.....	227— 5	*δ Lybrids*.....	Seen also in Jan. & Feb. ..	Greg & Herschel.
11	April 29—May 6..	326— 2	*α Aquariuds*	Obs. in 1886 at 337°. 2° (D.)	Tupman.
12	May	232+27	*α Coronids*	Obs. in 1885, meteors small.	Denning.
13	May—June	262+64	*ζ Draconids*.....	Visible also in other months.	Denning.
14	May 29—June 4..	333+27	*η Pegasids*	Frequently seen in July....	Denning.
15	June 26—July 6..	294+39	*δ Cygnids*.....	Obs. in 1886, meteors slow..	Denning.
16	July	258—20	*θ Ophinchids*	254°—21° Ap. 30, May 7 '86 (D.)	Neumayer.
17	July	11+48	*α Cassiopeids*	Meteors bright with streaks.	Denning.
18	July 23-25 -Aug. 4	48+43	*α—β Perseids*	Active showers in '84 & '86.	Denning.
19	July 27	7+32	*π Andromedes*....	7 meteors per hour in 1870..	Tupman.
20	July 27 -29	341—13	*δ Aquariuds*.....	Shower of 63 meteors in 1879	Denning.
21	July 27—Aug. 11..	291+51	*θ Cygnids*.....	Well observed in 1885 86....	Denning.
22	July 30, August 11	350+51	*λ Andromedes*....	345°+50° Aug. (Weiss)	Denning.
23	August 8—23	74+63	*c Comelids*	159 meteors. In autumn also	Heis.
24	August 9—11	43+56	*Perseids*	Rich shower, Comet III. '62	Greg & Herschel.
25	August 21—25....	291+60	*o Draconids*	Shower of 56 meteors in 1879	Denning.
26	August 21, Sept. 21	62+37	*ε Perseids*	Meteors swift with streaks	Denning.
27	Aug.—Sept.—Oct.	292+70	*δ Draconids*	Well observed in 1886	Heis & Denning.
28	Sept. 15—Oct. 2 ..	73+41	*α Aurigids*	Seen in 1877, '79, '84 & '86..	Denning.
29	Sept. 21—Oct. 5..	31+18	*α Arietids*	Obs. '79 & '85. Also in Aug.	Denning.
30	October 17—20 ..	90+15	*Orionids*	A rich annual display	A. S. Herschel.
31	October	29+ 8	*ξ Arietids*.....	Well seen in 1877 79.....	Corder.
32	Oct.—Nov.	108+23	*δ Geminids*	Meteors swift with streaks..	G. & H., & others.
33	November 2—3 ..	55+ 9	*ε Taurids*.....	Shower of bright meteors '86	Denning.
34	November 13—14	149+23	*Leonids*.....	Max. 1866. Comet I. 1866 ..	A. S. Herschel.
35	November 13 28	155+40	*Leo Minorids*....	Well observed in 1876 & 1885	Denning.
36	November 20—28	63+22	*ε Taurids*.....	Also on September 21—22 ..	Denning.
37	November 27	25+43	*Andromedes*.....	Max. '72 & '85. Biela's comet	A. S. Herschel.
38	December 5—7 ..	46+55	*η Perseids*	At 42°+55° Oct. 6-16 '85 (D.)	Backhouse.
39	December 7—10..	117+32	*α Geminids*	Shower of 21 meteors in 1885	Denning.
40	December 9—12..	107+33	*Geminids*.....	A rich annual display.....	Greg & Herschel.

The following is a general catalogue of the elements of recent cometary orbits. We have confined the table to comets which have appeared since 1850. In addition to the principal elements, the dates of discovery and names of discoverers are given:—

Year and Number of Comet.	Perihelion Passage. Greenwich Mean Time.	Longitude of Perihelion.	Longitude of Ascending Node.	Inclination.	Perihelion Distance.	Direction.	Computer.	Date of Discovery.	Discoverer.
	h.	° ′	° ′	° ′					
1850, I.	July 23, 13	273 25	92 53	68 11	1·0814	D	Carrington	1850, May 1	Peterson.
1850, II.	Oct. 19, 8	89 20	206 0	40 6	0·5647	D	Reslhüber	1850, Aug. 29	G. P. Bond.

Periodical Comets.

The following is a table of those periodical comets which have been well observed during at least two returns to perihelion, and are fully recognized as belonging to our system :—

Comet's Name.	Period of Revolution.	Epoch of Perihelion Passage.	Longitude of Perihelion	Longitude of Ascending Node.	Inclination.	Perihelion Distance. Earth = 1.	Motion.
	Years.	h.	° ′	° ′	° ′		
Encke	3·310	1881, November 15 7	158 30	334 34	12 53	0·3433	D
Tempel (1873).....	5·209	1883, November 20 4	306 7	121 2	12 45	1·3447	D
Swift.....	5·446	1880, November 8 0	43 5	296 52	5 23	1·0670	D
Brorsen.....	5·462	1879, March 30 2	116 15	101 19	29 23	0·5898	D
Pons-Winnecke.....	5·730	1880, December 4 8	276 43	111 31	11 17	0·8306	D
Tempel (1867).....	5·582	1879, May 7 0	238 11	78 46	9 47	1·7694	D
Biela [1]	6·587	1852, September 23 17	109 5	245 50	12 33	0·8602	D
Biela [2]	6·629	1852, September 22 23	108 58	245 58	12 34	0·8606	D
D'Arrest	6·686	1884, June 13 14	319 11	146 7	15 42	1·3264	D
Faye	7·566	1881, January 22 16	50 49	209 35	11 20	1·7381	D
Tuttle	13·811	1871, November 30 22	116 5	269 17	54 17	1·0301	D
Pons-Brooks	71·480	1884, January 25 17	93 21	254 9	74 3	0·7757	D
Halley	76·370	1835, November 15 0	304 32	55 10	17 45	0·5889	R

In addition to these the paths of many other comets have exhibited decided evidences of ellipticity. Some of these will doubtless be re-observed, and their orbits and periods more exactly ascertained during future returns to perihelion. The following list comprises some of the chief instances of such periodical comets as are awaiting confirmation. There are many others, especially of longer period, and many in reference to which great uncertainty still prevails. Those in the table are arranged according to the duration of their revolutions.

Year.	Discoverer.	Period.	Year.	Discoverer.	Period.
1819	Blanpain	4¾ years.	1783	Pigott	10 years.
1766	Buckhardt	5 ,,	1846	Peters	13 ,,
1743	Clausen.....	5½ ,,	1866	Tempel	33¼ ,,
1770	Lexell	5½ ,,	1867	Stephan	33½ ,,
1844	De Vico.....	5½ ,,	1852	Westphal.....	67¾ ,,
1884	Wolf	6½ ,,	1846	De Vico.....	73¼ ,,
1884	Barnard	6½ ,,	1815	Olbers	74 ,,
1881	Denning	9 ,,	1847	Brorsen.....	75 ,,

The shortest period of any known comet is that of Encke, 3½ years. The comet of 1744, which exhibited seven tails, is computed to have a period of no less than 122,683 years, while that of 1844 II. is assumed to revolve in 102,052 years. The great comets of 1680, 1843 I., 1880 I., and 1882 II. were at one time thought to be returns of the same body, in consequence of some orbital resemblances and their marvellously close approaches to the sun when passing their perihelia.

MEDICAL.—M. Pasteur, in a recent report upon the operations he had performed on persons bitten by rabid animals, stated that out of 1,009 French cases, three had died; of 182 Russians, 11, eight of whom had been bitten by wolves; Roumanians, 20, one; of 445 of mixed nationalities, none whatever. The average of deaths, therefore, in all, was rather less than 1 per cent.

DEPOSITION OF GOLD AND SILVER AMALGAM.—A new method of depositing gold and silver, or rather the revival of a lost art, for the secret was well known and practised by mediæval workers, has been re-discovered by Mr. Pratt and perfected by Mr. Maffey, F.R.S., of Johnson, Maffey, & Co. The process consists of pouring a solution of gold on glass, similar to that of coating a negative, when the gilding adheres to the prepared surface; a solution of silver is then poured over the gold, and the two metals form an amalgam impervious to damp, or the effects of oxidation or decay, as is the case when gilding is done by the old adhesive leaf process, in which organic matter is employed. The gold being placed on the underside of the glass is effectually protected against external injury, and is practically as indestructible as the glass itself. The cost is much the same as ordinary gilding, and Mr. Maffey hopes to restore the gold and silver decorative business to this country, as at present it is almost exclusively in the hands of the German workers.

AGRICULTURE.—The decadence of the potato in England ever since the disease first made its appearance in 1845 has been most marked, and the minds of agriculturists have been exercised with a view of devising a remedy. The Earl of Cathcart has so far been the first to have achieved success in conjunction with Messrs. Sutton & Co. The method adopted is that of cross-fertilization of the tubers by crossing the best-known varieties of the cultivated hardy sorts with the pollen of wild plants. The result of the experiments has so far been highly satisfactory during the past year, and if the success thus achieved be continued the potato will no doubt again come into universal favour.

EPIDEMICS.—In tracing the causation of an outbreak of scarlatina which occurred in London, Mr. W. H. Power of the Local Government Board found that the disease emanated from the milk of certain cows which were affected with a skin disease, which showed itself in the region of the teats and udders. It is well known that the woolsorter's disease is caused by the same germ that brings on splenitic fever in cattle, whilst glanders can be transferred from horses to human beings. The direct communication of scarlatina to human beings from the cow opens a much wider range in the communication of what could be made a preventible disease, and the Government have engaged Dr. Klein to make further investigations. As a set-off to these startling facts, Sir Joseph Fayrer stated that in the case of cholera, the theory that it was a communicable disease was now exploded, and that the Indian Government had discontinued all quarantine restrictions, and relied solely on sanitary measures such as care in dietary, ventilation, and the avoidance of all extremes of heat, cold, or excessive exertion.

SMELTING. — Professor Wrighton and Dr. Munro have succeeded in utilizing the hitherto waste deposit of basic cinder, as it has been found to contain from 16 to 19 per cent. of phosphoric acid in combination with lime and other bases, which form a valuable manure for swedes, turnips, and grass. This hitherto useless product is the exhausted material of the converters used in the Thomas Gilchrist method of dephosphorizing iron.

METEOROLOGY.—Meteorology and the prognostication of storms and earth-currents is rapidly becoming an exact science as the law and influence of storms are becoming more known. Mr. Eddy, of the American Signal Service Bureau, stated that out of thirty-eight predictions of tornadoes in April and June, 1885, eighteen were verified, but those relating to the past year were far more exact, as 15 out of 19 prophecies proved absolutely correct, and the indications in other cases showed that wind and hail-storms prevailed. Signor Ferrari, of Italy, as the result of his studying the effects and cause of six hundred and fifty storms, concluded that every thunderstorm is connected with a barometric, hydrogenic, and thermic depression. It is behind the two former and in front of the last.

LIQUID FUEL.—The utilization of petroleum as fuel, in view of the enormous number of recently discovered sources in Russia and other parts of Europe, will do something to allay the fears that exist as to the exhaustion of our coal supplies. Inventors have turned their attention to the liquid fuel, and the latest development has been the building of a steel vessel propelled by a continuous series of explosions of petroleum, similarly to that of a gas-engine. The vessel has no piston or fly-wheel, and the motive power is obtained by a succession of charges of petroleum and heated air, under pressure, and the charges fired by electricity. The explosions occur several times in a minute, the force being expended below the water-level, and the impinging of this force upon the water propels the boat forward.

VOLCANIC ERUPTIONS.—In writing on the terrible volcanic eruptions that occurred last year, Mr. Proctor says that they had to confirm geologists in their belief that if the earth's internal fires are diminishing in intensity, the diminution takes place so slowly as to be quite imperceptible at the present, and they cannot point to any period when the earth's internal forces were superior in energy than they are at the present moment. The work achieved by subterranean action, destructive as its immediate effects may at first appear, is absolutely necessary to the welfare and happiness of the human race, as it is to the reproductive energy of the earth's internal forces that we are indebted to the existence of continents and islands in which warm-blooded animals can live.

OCEAN BASINS.—At a meeting of the Paris Academy of Sciences, M. Faye established his position respecting the more rapid cooling of the earth's crust under the seas than under continents. This rule he contends is not only applicable to Polar seas whose lowest depths may be taken as zero, but also to those which are more remote from Polar influence. In these latter the temperature decreases with the depth, the difference between the ocean and the continents at the same depth being about 15 degrees more in the latter.

STEEL.—During the past year steel has come largely into use as a substitute for iron, the last development being the use of steel pipes for the conveyance of water under high pressure.

Mr. James Watson, C.E., subjected these pipes to high pressure, and reports favourably on them, the weight of the cast-iron being about four and three-quarters more than that of steel, which was manufactured by the Steel Company of Scotland. At the same time the casting of steel had been successfully carried out by Mr. Spencer of Newcastle, and Messrs. Fox & Co. of Millwall; whilst for railway work steel rails have practically superseded iron, and is being used for sleepers as a substitute for wood.

NITRO-GLYCERINE AND DYNAMITE.—From a series of carefully tested experiments made at Ardur, it was found that nitro-glycerine and dynamite do not exert such a force on explosion as is generally supposed. The power developed by the explosion of a ton of dynamite is equal to 45,675 foot tons; of one ton of nitro-glycerine, 64,452 foot tons; blasting gelatine exerts a force of 71,050 foot tons. These figures, says the reporter, though large, are not enormous, and need not excite terror. Seventy-one thousand tons of ordinary building-stone, if arranged in the form of a cube, would measure only 90 feet on the side, and if it were possible to concentrate the whole of the force of a ton of blasted gelatine, the only effect would be to lift it to the height of one foot. The power exerted by an explosion on surrounding objects is in the inverse ratio of the cube of the distance from the point of explosion. Thus at 100 feet from the exact point of an explosion, the power is only the cube of 1 : 100, or a millionth part of what it is at only 1 foot distance; that is, if the power at the point of explosion be represented at 1,000,000, the force at 100 feet would be represented by 1.

DEEP-LAKE FAUNA.—Dr. Plessis, who has made a series of observations on the fauna of the deep Swiss lakes, which range from 75 to 80 feet in depth, notes some curious anomalies, inasmuch as while some varieties may be found with good eyes at a depth of 100 feet, others again at 70 feet, where light penetrates, have no sense of sight. Dr. Plessis attributes this to a species of emigration that must be going on from an extremely remote period, since he found among individuals of the same species some wholly blind, others with their eyes in the way of atrophy, and again others with sound eyes but small. He assumes therefore, with reason, the species with perfect eyes are descendants of a later set of emigrants. Similar anomalies occur also with breathing organs: the pulmonary sacs are usually filled with water, but they resume the normal method of breathing when brought in contact with the air.

NEW CHEMICAL ELEMENTS.—Professor H. Carrington Bolton has given a complete list of the new chemical elements that have been discovered since 1877 to the present time. They number forty-two in all. In 1885 Welsbach discovered two, and Lecoq de Boisbaudran two elements to exist in didymium. In 1886 Professor Crooks discovered six new elements in gadolinite, and two in samarskite.

BACTERIA.—M. Certes has been conducting a series of experiments on the decomposition of organic matter at high pressure, for the purpose of ascertaining whether the process takes place in the depths of the sea as in the open air. He found that bacteria increased under pressure of from three to six hundred atmospheres, except that the microbes are different in being acid instead of alkaline, and have a feeble instead of a strong odour.

CHEMISTRY.—A new artificial process for manufacturing quinine has been introduced by Dr. Cresswell Hewett, by which means the price of that drug can be reduced to threepence per ounce. The discovery itself was the result of a fortunate accident; but it is stated that it will render us independent of the cinchona-tree, from the bark of which only 2 per cent. of good quinine can be obtained, the remaining 98 per cent. being valueless.

TELEGRAPHY.—The application of telegraphy for every-day purposes as a motive, heating, and speaking agent is coming more and more into use almost daily as fresh discoveries, inventions, or adaptations are constantly being brought out. Mr. George Westinghouse, of air-brake celebrity, has patented a new system of distributing, which will greatly reduce the cost of lighting by electricity, it is stated, to the amount of 95 per cent. By means of telebarometers, telethermometers, telemonometers, and telehydrobarometers, which record at distant points air, heat, steam, and water pressure, we have new and sensitive registers; whilst another electrician is stated to have invented a process by which gold, silver, and copper can be smelted by electricity. The utmost average distance at which telephony can be carried on is said to be 100 miles, though the Wisconsin Company carry on regular and successful operations over 199 miles' distance. A French technical journal gives details of a clever invention for damascening metals by electrolysis, based on the well-known fact that when two copper-plates are hung in a bath of sulphate of copper, and connected with the opposing poles of a battery, a transfer of metal from one to the other will take place. By placing an etched copper-plate, and insulating all parts except the engraved design, a deposit of nickel or metallic silver fills up the lines left by the etching-needle, and the result is stated to be most successful. In electric lighting, again, Mr. Apword has developed a primary battery, the exciting cause being chlorine gas instead of a liquid, and it is said to be capable of bringing electric lighting into domestic use on a small scale.

ELECTRICAL PLANT.—The Phytolacca-electra-plant seems to be the most recently discovered natural storage-battery. It is said that it imparts a shock resembling the sensation produced by an induction-coil, and will affect a small compass at the distance of twenty feet, and that no birds or insects are ever seen in the immediate neighbourhood of the plant. The *New York Medical Times* is said to have instituted these experiments. According to *La Nature* magnesium and aluminium can now be produced at a comparatively nominal cost, and a Bremen manufactory offers prizes for the best form of lamp for burning magnesium.

THE COAL AGE.—An American authority makes the calculation that it would require 1,000,000 years to form a coal-bed of 100 feet in thickness, as the formation of a layer of coal requires an enormous amount of vegetable matter. He calculates that the coal-beds of America are sufficient at the present rate of consumption to supply the whole world for a period of from 1,500 to 2,000 years.

PHOTOGRAPHY.—Mr. A. A. Common, in a lecture before the Royal Institution recently, stated in reference to dry-plate photography, that "At

a bound it has gone far beyond anything that was expected of it. I hope soon to see it recognized as the most potent agent of research and record that has ever been within the reach of the astronomer, so the records will not be the written impression of dead men's views, but veritable images of the different objects of the heavens as recorded by themselves." MM. Henry, of Paris, succeeded in photographing the group of stars known as the Pleiades, showing a nebula of a spiral form, which had never before been brought under the ken of the human eye. MM. Paul and Prosper Henry have succeeded in photographing a portion of the Milky Way. These recent discoveries will open up an illimitable field of observations for our astronomers. The *Camera* records a singular phenomenon in connection with photography. An operator had taken the portrait of a child with a clear complexion, and the negative showed the face covered with eruptions, which three days after appeared as prickly heat. Another case is recorded in which a child's portrait showed spots in its face a fortnight before an attack of small-pox developed itself.

Electrical Engineering.—This industry, though still hampered by the vexatious Electric Lighting Act, continues to make great and steady progress. A very large amount of private installation work has been done by various firms during the past year; as examples of which we may mention the Great Western Railway installation at Paddington, the Central Station in the neighbourhood of the Grosvenor Gallery, and several public buildings, mansions, and factories in various parts of the country.

This work has not been confined to land alone, many ships, both of the mercantile marine and the royal navy, having been fitted with electric light; while arrangements have been made for installing it in most, if not all, the new ships being built for the latter. Several attempts have been made to solve the difficulty of house-lighting by means of primary batteries, among which are the employment of chlorine gas as the active material, and various inventions, greatly increasing the output of batteries using acid solutions. One of the most noteworthy events of the past year in the electrical world has been the voyage of the "Volta," an electrically propelled boat, from Dover to Calais and back.

The application of electricity to various purposes is being largely extended and improved. Examples of this, such as the driving of tramcars, the controlling of railway-signals, the synchronizing of clocks on a large scale, the blasting necessary in mining and other operations, and the management of various arrangements in naval operations, are of common occurrence.

In telegraphy the most important advance is the adoption by the Post Office of the "Delany" system, which greatly facilitates the transmission of messages, since it enables as many as six to be sent at one time over the same line.

The use of the telephone has largely increased both in London and the provinces. Experiments in long-distance telephony have been made by the Post Office and others; and a line is now in practical use between London and Brighton.

Burthens on Land.

New Scale of Law Costs on the Sale, Purchase, or Mortgage of Real Property, Houses, or Land.

	For the 1st £1,000.	For the 2nd and 3rd £1,000.	For the 4th & each subsequent £1,000 up to £10,000.	For each subsequent £1,000 up to £100,000.*
	Per £100. £ s. d.	Per £100. £ s. d.	Per £100. £ s. d.	Per £100. £ s. d.
Vendor's solicitor for negotiating a sale of property by private contract	1 0 0	1 0 0	0 10 0	0 5 0
Do., do., for conducting a sale of property by public auction, including the conditions of sale—				
When the property is sold	1 0 0	0 10 0	5 0	0 2 6
When the property is not sold, then on the reserved price†	0 10 0	0 5 0	0 2 6	0 1 3
Do., do., for deducing title to freehold, copyhold, or leasehold property, and perusing, and completing conveyance (including preparation of contract, or conditions of sale, if any)	1 10 0	1 0 0	0 10 0	0 5 0
Purchaser's solicitor for negotiating a purchase of property by private contract	1 0 0	1 0 0	0 10 0	0 5 0

Mortgagor's solicitor for deducing title to freehold, copyhold, or leasehold property, perusing mortgage, and completing	1 10 0	1 0 0	0 10 0	0 5 0
Mortgagee's solicitor for negotiating loan	1 0 0	1 0 0	0 5 0	0 2 6
Do., do. for investigating title to freehold, copyhold, or leasehold property; and preparing and completing mortgage	1 10 0	1 0 0	0 10 0	0 5 0
Vendor's or mortgagor's solicitor for procuring execution and acknowledgment of deed by a married woman	2 10 0	extra.		

* Every transaction exceeding £100,000 to be charged for as if it were for £100,000.
† A minimum charge of £5 to be made whether a sale is effected or not.

No geographical discovery of great and popular interest can be put down to the credit of last year, but work has been steadily progressing in all parts of the world, and our knowledge of the earth's surface is almost daily gaining in precision. Africa still engrosses the greater share of public attention, which quite recently has been directed to Dr. Emin-Bey, the governor of the Equatorial Province of Egypt, who, notwithstanding the Mahdi and his followers, has stuck to his post and maintained the Khedive's authority over a wide area. The last steamer left Lado on April 14, 1883, and the mail it carried arrived at Cairo after 45 days. Since then, until quite recently, no news had been received from the Europeans on the Upper Nile. Two Relief Expeditions sent from Europe, the one under Dr. Lenz, the other under Dr. G. A. Fischer, failed in their object. Dr. Lenz, travelling up the Congo, reached Stanley Falls on February 2, 1886, but, finding the northern road closed against him, is now marching upon Zanzibar; whilst Dr. Fischer, when he reached Lake Baringo, to the north-east of the Victoria Nyanza, had to face a famine, and was compelled to turn back. He returned to Zanzibar on June 21, 1886. Meantime, Dr. Junker had left Emin-Bey on Jan. 2, 1886, and has since safely reached the coast; and we know from Dr. Emin himself that he and his companion, Captain Casati, were still in good health in June last, and that failing relief they would place themselves at the head of the men still faithful to them and march down to the coast. Closely connected with the Upper Nile is the Kingdom of Uganda, where the friendly, if somewhat capricious, Mtesa has been succeeded by his bloodthirsty son, Mwanga, who persecutes the native Christians, and expelled the missionaries with the exception of Mr. Mackay, whose services as a clever mechanician he desired to retain. Bishop Hannington, who endeavoured to reach Uganda by marching through the Masai country, was, by order of this savage, foully murdered with forty-six followers, when close to the borders of the kingdom, on October 31, 1885.

In Abyssinia the Italians still maintain a station, but apart from some explorations carried on by Dr. Traversi, who visited Lake Zuway, we are not aware of any work of interest or value having been accomplished. Count Porro, who left Zeila on March 16, 1886, was murdered with eight companions by orders of the Emir of Harar; a French explorer, M. Barral, met with a similar fate at the hands of the Danakil, when within a few days' march of Shoa; and M. Solleilet died at Aden on September 10, 1886, when about to return to Shoa, where considerable privileges had been granted him. An Italian journalist, Franzoi, proposes to travel from Zanzibar to Kafa—a bold venture, not likely to prove a success.

The country at the back of the Sultan of Zanzibar's dominions has recently been explored in various directions by agents of the German East African Company. The most remarkable success attended a journey by Count Pfeil and Lieutenant Schlütter, who reached the Nyassa by a new route, and travelled thence through an unexplored region to Kilwa on the coast. On the lake just named, the Rev. G. H. Swinny of the Universities' Mission, and other missionaries are doing occasionally geographical work, whilst the Tanganyika continues to be the scene of the labours of Mr. E. C. Hore.

The countries of the Makua and Yao, lying between the Mozambique coast and Lake Nyassa, have been the scene of explorations carried on by Mr. Last, who arrived at Blantyre on January 13, 1886; and by a Portuguese expedition, commanded by Serpo Pinto, and organized on an ambitious scale. Having thoroughly explored the coast between Mozambique and Ibo, the expedition left the latter place with 200 armed Zulus and 740 porters. But it soon came to grief, and whilst Serpo Pinto returned to the coast, his companion, Lieutenant Cardozo, reached Blantyre in February, 1886, with only three followers. He thence returned overland to Kilimani, at the mouth of the Zambezi.

In the region to the South of the Zambezi, Captain Paiva de Andrada has undertaken the exploration of reported lead-mines on the Sabia, but the hostility of the Zulu chief Umganyana, which culminated in an attack upon the Portuguese town of Inhambane, appears to have frustrated his plans.

Of expeditions which started from the Cape we may mention that of Mr. Farini, who claims to have proved that the Kalahari is not the inhospitable region it is reputed to be; and that of Dr. E. Holub, who, according to the latest accounts, was about to cross the middle Zambezi, accompanied by Mr. Westbeach.

On the West Coast it is naturally the Congo Basin which draws upon it the eyes of the civilized world, not so much, perhaps, because of any geographical discoveries to be made there, but on account of the great problem which the King of the Belgians has undertaken to solve—namely, the possible civilization of Africa. The most important geographical work was undoubtedly done by Captain Rouvier and Dr. Bayole, the French Commissioners, who, jointly with their Belgian colleagues, Captain Massari and Lieutenant Liebrechts, were ordered to define the boundary between the Congo State and the French possessions. The Rev. Geo. Grenfell, in his little steamer the "Peace," continued his exploration of the tributaries of the Congo, and in April ascended the Kasai. Dr. Wolf, in January to April, 1886, traced the Sankuru and its tributary, the Lomami. More remarkable, and attended by incomparably greater hardships, was a journey performed by Lieutenants Kund and Tappenbeck, who started from Stanley Pool, successively crossed the Kuango and the Sankuru, and then forced their way through dense primeval forests until the hostility of the natives compelled them to desist. Embarking on a tributary of the Kasai they reached Stanley Pool again in the beginning of February, 1886. Dr. Lenz's journey has already been referred to. A Swedish officer, Lieutenant Gleerup, stationed at Stanley Falls, left that place on December 28, 1885, and arrived at Zanzibar on June 25, 1886. On the road he was able to render some assistance to M. Révoil, the French explorer, whom he found suffering from fever. Farther south, but still in the Congo Basin, the Portuguese have scored a success, both geographically and politically, for Captain H. de Carvalho has reached the residence of the Muata Yamvo, and induced that monarch to place himself under Portuguese protection. In the "French Congo," M. J. de Brazza, a brother of the present Governor-General, has reached the

Jambi country in 2° 20′ N., and has then followed the Sekoli river to its junction with the Congo, which he reached on January 1, 1886.

In Spanish West Africa, Dr. Ossorio has carried on a successful exploration which took him up the Campo river to the interior watershed, and back by the Benito to the coast.

In the Cameroons, now a German Protectorate, no explorations of importance have been carried on. Dr. Schwarz only succeeded in getting a few days' journey beyond Lieutenant Rogozinski's farthest; whilst our Consul, Mr. H. H. Johnston, confined himself to a navigation of the Cameroon river. Important work is, however, proposed. Mr. Johnston is charged with an exploration of the Cameroons mountains; Dr. Zintgraff has been sent out by the German Government to explore the anthropology of the country; and Lieutenant Wester, a Swede, is preparing an expedition on a large scale, which is intended to reveal to us the mysteries of the inland region.

Dr. Flegel's death, which took place at Akassa on September 11, 1886, has for the present suspended German exploratory work on the Niger. Farther west, however, German explorers have been at work. Herr G. A. Krause has visited Salaga, the great emporium on the Upper Volta; and Herr Falkenstein, starting from Lome, has made his way into the Eweawo country. The Upper Niger is now navigated by a steam-launch, in which Captains Davoust and Delanneau explored the river as low down as Jenne.

The whole of the western Sahara having been annexed by Spain, the desire to know something of this new acquisition is only natural. Señor J. Cervera Baviera and Dr. F. Quiroya, who visited Adrar in June and July last, do not, however, present a report which can be called encouraging. Another effort to explore the Sahara from the north was made by Lieutenant Palat, a young Frenchman of great ability, but it terminated fatally, the traveller having met his death at the hand of Tuareg, after he had reached Tidikelt.

In Tunis and in Egypt French and English engineers are actively engaged in the preparation of good maps. In the latter country Dr. G. Schweinfurth had paid a visit to the Wadi Moelleh, to the south of the Fayum, which, according to a levelling made at the request of Mr. Cope Whitehouse by Mr. Stadler, in January last, lies about 40 feet below the level of the sea, and might thus be flooded with water from the Nile.

Crossing over from Africa to Asia we first meet with that veteran geographer, Dr. H. Kiepert, exploring Asia Minor, in search of materials for a map of that country upon which he has been employed for years. The Caucasus is more and more attracting the attention of Alpine tourists. In the course of this year it was visited by M. Dechy and by Messrs. C. D. Dent and W. F. Donkin of the Alpine Club. The former explored the Elbruz and its glaciers; whilst the latter examined the glaciers around the Koshtan Tau, and ascended the Caucasian "Jungfrau," the Tau Tetnuld, 16,500 feet in height.

The territories only recently annexed by the Russians to the east of the Caspian were explored by Dr. G. Radde, the botanist, who examined the Kopet range on the Persian frontier, and visited Merv and Serakhs. Far more extensive is the tour of Dr. G. Capus, Bonvalot, and Pépin, a party of French explorers. They left Paris on March 27, 1886, and desired to explore northern Afghanistan. But having been refused admission to that country — an adventurous bycicist, Stevens, had shortly before been turned out—they left Meshed for Sarakhs, Merv, Bokhara, and Samarkand, where they arrived in August, and propose to go thence to Balkh and Afghan Turkistan.

Much work has been carried on in the territories still separating the Russian from the British possessions. The Afghan Boundary Commission has completed its labours, and we are promised a full report from the pen of Major T. H. Holdich. Mr. Ney Elias has successfully explored a great part of Afghan and Chinese Turkistan, and looks upon the Murghab as the true head-stream of the Oxus. Colonel Lockhart's mission into Badakshan has likewise been successfully terminated; Colonel Woolthorpe remained behind after the departure of his chief, and completed the exploration of the passes which lead over the Hindukush into Gilgit and Chitral. On the Russian side explorations were carried on by Grum Grshimailo, who left Ferghana in April, 1886, for the Tian Shan and the Pamir; and by Lieutenant Gronbchevski, who traversed Chinese Turkistan to Khotan, and then crossed over into Gilgit, where he made a stay of some time. We should also place on record the successful journey of Mr. Carey, who started from Leh and traced the river Tarim down to its termination, in Lob Nor, where he arrived in April, 1886. The proposed expedition into Thibet, of which Mr. Macaulay was to have been the leader, had, however, to be abandoned, owing to objections raised by the Chinese.

The question of the Upper Brahmaputra may be said to have been solved by a journey to Rima, in Thibet, which Mr. Needham, of the Assam police, reached on January 4, 1886; Mr. Needham followed the Brahmaputra all the way, and is in a position to affirm that the Sanpo is in reality the Upper Dihong.

Our geographical knowledge of Australia is steadily gaining in precision through the operations of the Survey and Geological departments, established in various colonies. One of the most interesting explorations of the kind is that which was recently carried on in the Australian Alps by Dr. von Lendenfeld, of the Geological Survey of New South Wales, when it was found that Mount Townsend, attaining a height of 7,357 feet, was the culminating point of all Australia. Distinct traces of glacial action were discovered on this occasion. Among recent expeditions into the interior, that conducted by David Lindsay, appears to be most worthy of notice. D. Lindsay left the Hergott springs in South Australia, in October, 1885; he fully explored the Fincke river, and in April last arrived in the Northern Territory. Another remarkable journey is that of the brothers McDonald, who succeeded in driving 1,000 head of cattle from Queensland to the Fitzroy river, in Western Australia, without serious losses. This remarkable "exodus," occupied 3 years. We may also state that an Afghan camel-man claims to have discovered fresh traces of the unfortunate Dr. Leichhardt, at Cloncurry, in Western Queensland.

In New Guinea Mr. H. O. Forbes has failed

in the main object of his expedition, namely, the exploration of the Owen Stanley range. He has, however, done some thorough work in the neighbourhood of Port Moresby, and is prepared to renew his efforts whenever sufficient means are placed at his disposal. An exploration of the Baxter River, first discovered in 1877 by the Rev. McFarlane, was conducted in November, 1885, to January, 1886, by Captain J. Strachan, in the steam-launch *Herald*. In German New Guinea explorers are also busily at work. Captain Dallmann, in April, 1886, explored a large river, named by him after the Empress Augusta, and this river was subsequently traced by Captain von Schleinitz for a distance of 200 miles. Much is expected from a scientific expedition fitted out by the New Guinea Company, which arrived at Finsch Harbour on April 19, 1886. Dr. Carl Schrader, of Arctic fame, is the leader.

Turning to America, we find that some remarkable explorations have been carried on in Alaska. Lieutenant G. M. Stoney, with an exploring party, landed on July 11, 1885, in Hotham inlet, ascended the Putnam River, and built Fort Cosmos, in lat. 67° N. to winter in. The country around was explored during the winter months, and Ensign Harvard and F. J. Price succeeded in crossing to the Arctic Ocean, arriving at Point Barrow on June 25, 1886. On August 14 they were picked up by the *Bear*, and conveyed back to Hotham inlet, where they rejoined their comrades. Another exploration, not so extensive, but of considerable interest, was that carried on by Lieutenant Schwatka, in the St. Elias' range. Mount St. Elias was ascended to the height of 7,200 feet; and considering that the glaciers of this mountain descend to the sea-level, this achievement may be looked upon as a creditable piece of mountaineering.

In Canada, the navigability of Hudson Bay is still forming the subject of discussion. Lieut. Gordon, of the *Alert*, once more left Halifax for Hudson Bay in June last, this time accompanied by Capt. Markham. His report is by no means conclusive. Even though it be admitted that steamers will be able to enter Hudson Bay and depart from it with safety, it is very doubtful whether the shorter passage can compensate them for the uncertainty in the opening of the ice, which may lead to serious delays.

In the United States the geological surveys in the various States and in the far West have been carried on as usual. Major Powell has been intrusted with the preparation of a general map, on a scale of 1 : 250,000, in which will be embodied all the surveys made hitherto. This map cannot, consequently, be compared in accuracy with our European trigonometrical surveys; but it will, nevertheless, meet an urgent want. An Appalachian Mountain Club has been formed, and promises to do useful work.

In South America, Dr. W. Siewers, in February last, ascended the Sierra de Santa Marta to the snow-line; R. Payer is continuing the exploration of the upper tributaries of the Amazon; and M. Chafferjon has resumed his work in the Orinoco basin, his main object being the survey of the Cassiquiari. In Guiana, Dr. H. Ten Kate has been studying, since June, 1885, the Indian tribes. From Brazil we learn that Dr. Orville A. Derby has been intrusted with the survey of the province of São Paulo, which is to occupy him ten years.

In Patagonia an exploration of the basin of the Chubut has been carried on by Colonel Fontana, with the aid of thirty-one colonists. The party returned to the mouth of the river in February last, after having visited the Corcovado Pass, which presents unusual facilities for communicating with Chile. The whole of the country lying along the eastern foot of the Andes is stated to present great advantages to settlers. Dr. Ramon Lista is spending the summer in Terra del Fuego, for which he started in October last.

No great achievements can be recorded from the Arctic regions, but neither has geographical exploration been quite at a standstill. A Danish expedition, under Capt. Braem, commander of the *Fylla*, has been engaged in an examination of the west coast of Greenland as high up as Upernivik and Proeven, which yielded valuable results, especially to the botanist and zoologist. Prince Waldemar was one of the party. An effort to cross Greenland from Godthab to the east coast was made by an American, R. E. Peary, but of its success no record has yet reached us. Another American, Col. W. H. Gilder, whose departure from New York was frustrated by the intervention of a sheriff's officer, has made a fresh start from Winnipeg, on October 2, 1886. His object is to attain the highest possible latitude, with the aid of sledges only. His companions are all of them Eskimo. He proposes to devote five years to the task which he has set himself, and as he has some experience of Arctic sledging, having been a member of Lieut. Schwatka's expedition, he may achieve some success. The expenses of this expedition are borne by Mr. J. Gordon Bennett. From Siberia we learn that Baron Van der Toll and Dr. Bunge left the Lena Delta for New Siberia on March 15, as originally proposed.

The Antarctic regions, which have been so shamefully neglected by geographical explorers, are at length attracting attention, not only in this country, where a committee of the British Association is considering the subject, but also in the Australian colonies, which are more immediately concerned in it, for there, as in the Arctic regions, the progress of discovery is sure to lead to the opening up of new whaling grounds.

Among deep-sea explorations, those carried on by Capt. Thomson and N. Y. Buchanan in the Southern Atlantic, and by Commander Barker, of the United States Navy, in the Pacific, are deserving of record. The former demonstrated by their soundings the existence of a submarine delta lying off the Congo mouth; the last, sailing from New Zealand to the Strait of Magellan, sounded down to a depth of 3,002 fathoms. We may also state that Prince Albert of Monaco continued during the past year his inquiries into the force and direction of the Gulf Stream.

In conclusion, we desire to draw attention to the exhibition at Edinburgh, Manchester, Bradford, and Birmingham, of the collection of geographical appliances made by Mr. Keltie in various countries on behalf of the Royal Geographical Society. Let us hope that this movement will lead to a better system of teaching and the foundation of geographical professorships in our universities.

The last earthquake noted in last year's summary was one in Cashmere, on November 16, and this was both preceded and followed by a constant series of shocks. Several other occurrences of earlier date have to be noted, the particulars of which did not reach us till later. The great volcanic outbreak of Mount Smeru, in Java, which took place in May, 1885, was followed later in the year by a smaller demonstration on the part of Mount Merabi, in the middle of the island; while in the Krakatoa district, the great rock-masses which had been thrown up by the great cataclysm of August, 1883, suddenly disappeared. On October 9 two shocks of earthquake were felt in the Lis Island, in the parish of Sorunda, Sweden; and a sharp shock in the Vosges, on November 11; and a few days later Andalusia and Malaga in Spain were both affected at several points; while on the African coast opposite the bed of the Mediterranean rose, and several landslips occurred, apparently due to seismic movement. On November 15, 18, and 20, three districts in Western Switzerland were affected; and on November 19 several great waves from the Pacific were observed at San Francisco, which were attributed to earthquakes farther west. On December 3, 4, and 5 a series of violent earthquakes did great damage in central Algeria, especially at Msila, Blidoh, Merceville, Aumale, Bognari, Boussaada, Moscari, Setif, etc. At Msila three-quarters of the village were swallowed up by the first shock, and another on the following morning completed the work of destruction. Thirty-three bodies were dug out of the ruins, besides a considerable number of wounded. At Bordj-Lespaut the house of the administrator fell in, burying several Europeans. At Boussaada the Presbyterian church and 71 dwellings were destroyed, and several persons were killed and injured.

These disturbances made themselves felt as far north as England, where, in the early morning of December 3, a shock of earthquake was experienced at Gateshead. They were repeated at Msila on December 10—11. A week later a great earthquake nearly destroyed the town of Amatitlan, in Guatemala, when no less than 131 shocks were counted, but no lives were lost. Earthquakes occurred at the same time in other parts of Central America, particularly at Chimbo, in Ecuador, where Mount Tunqurqua was in violent eruption, in sympathy with the volcano of Cotopaxi, which was also in a state of great activity. A few days later the Colima volcano, in Mexico, became active. On December 29 an earthquake occurred at Ismidt, in Asia Minor, and on the following day at Venice. On January 2, shocks were felt in various parts of Norway and Sweden; and on the 4th January at Dartmouth, Torcross, Chillington, and several other places in Devonshire. On January 8 and 9 severe shocks were felt at Philippopolis; on the 16th in various parts of Rockland county, New York; and on the same day the Colima volcano, in Mexico, threw out great streams of lava and huge masses of stone, the eruption being accompanied by terrible earthquakes. A few days later the steamer *Janet Nicoll* reported that the submarine volcano, southward of Culebras Reef, near the Tonga Islands, in 20° 28′ S. and 175° 21′ W., had again become active, and had formed an island two miles long and 250 feet in height. On January 20 another earthquake occurred in the West of England. At Bodmin the houses were much shaken, and at Mevagissey a long rumbling noise was heard. At St. Blazey buildings swayed to and fro. At St. Austell a deep rumbling sound was heard, houses were shaken, and china and glass were set jingling. At Wheal Eliza Mine the shock was so great that the miners ceased work for a time, fearing that water had broken in. Almost simultaneously with this two shocks were felt at Hernösand, on the Baltic coast of Sweden. Ten days later, a strong shock was felt at Velez Malaga, in Spain, and this was followed, on February 4, by a considerable outburst on the part of Vesuvius. On February 22 Sulina was visited by a sharp *tremblement*. In the month of March the only demonstrations of seismic force of any moment occurred on the 6th, at Cosenza, in Italy, where several houses were thrown down, and at Wiesbaden and in the Province of Grenada, both on the night of the 14th. In April, however, there were two distinct shocks of earthquake in Scotland—the first, on the 8th, in the neighbourhood of Gorebridge, the miners in Lord Lothian's Newbattle pits being greatly alarmed by the loud explosion and vibrations; and the second on the 18th, in the neighbourhood of Comrie and St. Fillans. Later on, in the week ending May 15, Garelochhead and several other places on the Firth of Clyde twice experienced the indications of an earthquake, in the swaying of houses and smothered rumbling noises. In the mean time the volcano of Smeru, in Java, was again in active eruption, and this was the beginning of a series of terrible volcanic outbursts and earthquakes in different quarters of the globe. In the early part of May the great volcano of Mayou, in the Island of Luzon, Philippines, began to throw out stones, etc., in great quantities. In the middle of the month Mount Etna followed suit, lava flowing freely from a dozen new craters; while some earthquake shocks did considerable damage at Palermo, Biancaville, and other places. Early in June the eruption ceased, the lava-stream, which had threatened to engulf Nicolosi, stopping within a few hundred yards of the nearest house, after having destroyed a convent and other outlying buildings, and many woods and vineyards.

On June 5 several shocks of earthquake were felt in the Island of Chios and the Erythrian Peninsula, and two days later Guernsey had a similar experience, the shock being particularly noticeable at St. Peter Port. On June 10 occurred the most remarkable volcanic eruption of the year, the two extinct craters of Tarawera and Ruapchu, in New Zealand, suddenly becoming active and covering 2,000 square miles of country to the depth of at least three inches with volcanic dust and ashes. Fortunately the dust was found to possess great fertilizing properties, so that the thinner deposits were an advantage rather than otherwise; but at least 400 square miles were ruined, being covered to the depth of over three feet in mud and ashes, while the world-famed pink-and-white terraces of Rotomahana were totally destroyed, not a vestige of them being left. The reports of the explosions were heard in the South Island, 300 miles away; and at Hamilton, 80 miles distant, the reverberations shook the windows. Many natives and several Europeans lost their lives. On July 1st a submarine disturbance was felt by the steamer *Thessaly*, in 0° 55′ S. and 29° 34′ W., the vessel suddenly being four times violently

shaken and bumped about as if she had struck on hard rock, the shock being accompanied with a loud rumbling noise. The captain concluded he had run ashore on an unknown rock; but the surface of the sea was quite calm, and the lead showed a depth of 60 fathoms with no bottom. For about six weeks after this the only important earthquake recorded was one which occurred in Shinano, Eshigo, and the neighbouring provinces of Japan, on July 23, when several houses were overthrown, deep fissures were formed, and a hot spring near Nozawa was stopped. On the 14th August the village of Kilsyth, in Scotland, suffered a considerable shock, and on the same day Malta experienced three successive shakings, followed three days later by another series of less intensity. On the 17th a submarine volcano was observed on board the ss. *Transition*, about 200 miles eastward of Malta, a sheet of fire 30 feet wide being seen to rise from the water to a height of 100 feet. Later on (on August 27) another vessel passed through a series of broad yellow streaks about a quarter of a mile long, in the sea, 50 miles from Cape Matapan, the captain and crew having just previously observed a mass of thick black smoke, changing at intervals to a reddish colour, rising perpendicularly from the horizon in the shape of a cone. On the 25th a sharp earthquake was felt at Srinagar. These were the precursors of a terrible series of earthquakes in two different parts of the world—of one of which the Peloponnesus, and of the other South Carolina, were the centres. On the night of August 27, Philitria, Gargaliano, Pyrgos, Coroni, Catacolo, and several other Greek towns were laid in ruins, and over 500 people killed, twice that number injured, and thousands rendered homeless. The shocks were severely felt at Athens and other parts of Greece and throughout the Ionian Islands, the telegraph cable being broken about 30 miles south of Zante; at Alexandria, in Egypt; at Taranto, Foggia, Caserto, Brindisi, and Naples, in Italy: at the Island of Ischia, at the Island of Capri, in Sicily, and at Malta. Simultaneously Vesuvius showed renewed activity, throwing out quantities of ashes, stones, and lava, accompanied by loud detonations. On the 30th August the eastern and highest peak of Galita, a small island between Tunis and Sardinia, was in eruption, sending forth smoke and cinders. On the following night several smart shocks were felt at Smyrna, and on the 6th and 7th September renewed seismic disturbances occurred at several towns in the Peloponnesus and other parts of Greece; while on the 22nd four shocks were reported from Aumale, and on the 26th one from Constantinople and two from Smyrna. On the 27-28th September several places in Thuringia were violently agitated. On 4th October two severe shocks were felt in the Island of Unst, one of the Shetlands. In the United States, as in the Levant, a series of disastrous earthquakes commenced on August 27, which were continued almost without intermission throughout September, and afterwards, with longer intervals of rest, till November 5th. The greater part of the city of Charleston, South Carolina, was thrown into ruins, and at that place alone 200 persons were killed and 40,000 rendered homeless. The shocks were also felt at places as widely apart as Omaha, Mobile, Detroit, Washington, Richmond, Atalanta, Louisville, Indianapolis, Cleveland, Pittsburg, Chicago, Memphis, and New York, doing more or less damage at most of these cities. The first shock was coincident with the sudden spouting of the great Excelsior Geyser in the Yellowstone Park, Colorado, which had been quiescent for four years. Summerville, 20 miles distant from Charleston, was nearly destroyed; Sullivan Island, a watering-place near Charleston, was submerged by a tidal wave; Columbia City also suffered severely, while at Bellaplain, in Iowa, enormous damage was caused by a phenomenal spring which burst through an artesian well bore-hole to a height of several hundred feet, enlarging the bore 4 to 16 inches in diameter, and forming two gigantic rivers, which flowed through the town at the rate of 10 to 12 miles an hour. In the neighbourhood of Charleston quantities of sand and mud exuded from deep fissures in the earth, accompanied by loud rumbling noises, and a strong sulphurous smell pervaded the entire country. Among the later shocks those which occurred on October 23 and November 5 were the most severe, several persons being thrown down at Louisville, geysers appearing in the neighbourhood of Summerville. As in the case of the Levant, the effects of these disturbances were felt at sea, several vessels having reported experiencing shocks of earthquake off the southern coast on the 31st of August. A column of smoke, said to have been seen at sea 25 miles N. E. of Tybee Island, was attributed to volcanic agency: but more clearly traceable to seismic forces were the bursting forth in Cuba, early in September, of several new springs which formed a large lake, the overflow from which submerged several plantations and factories; and the occurrence of a severe *tremblement de terre* at Tequisixtlan, in Mexico, on September 3rd. On the 13th a shock of earthquake was felt at Sydney, Cape Breton Island, and a week later Srinagar was again visited by a prolonged earthquake, which did much damage. Early in October a heavy volcanic eruption took place on the Island of Niapu, in the Tonga group, a mountain 200 feet high being thrown up, all the villages being destroyed by earthquake shocks, and the greater part of the island covered with dust to the depth of 20 feet. This intelligence was shortly followed by the announcement of no less than seven other volcanos being simultaneously in active eruption—that of Tunqurqua, in Ecuador; the Ulbinas Peak, in Southern Peru; and the Irasu volcano, in Costa Rica, which had long been thought to be extinct; Mount Pabloff, in Alaska; the Colima volcano, in Mexico (for the third time in the year), in connection with which it is notable that a high hill in the vicinity of Chimalapa, in Mexico, has been completely riven in two by the action of subterranean forces; the White Island volcano, in the Bay of Plenty, New Zealand, which sent forth a vast column of flame and smoke, rising to 100 feet in height; and, lastly, Vesuvius, which entered on one of its phases of energetic action on October 17. On the previous day several severe shocks had been felt in Alsace and many parts of the Vosges and the Black Forest. On the 20th another prolonged earthquake was felt at Srinagar. The latest serious occurrences of the kind were at Smyrna and adjacent districts, including Chesme and Chios, on November 27, and at Tashkend on November 29, the last causing damage to many houses in the Russian quarter.

The most notable production for the year was undoubtedly Mr. Wills's adaptation of Faust at the Lyceum Theatre. Seldom has a play created such interest, and it may be justly said that for magnificence of scenery and stage realism all Mr. Irving's previous triumphs were eclipsed. The acting, too, was considered very fine all round, and both Mr. Irving and Miss Terry achieved legitimate successes in their respective parts of Mephistopheles and Margaret. The Harbour Lights at the Adelphi proved that the palmy days of Melodrama are not yet over; and notwithstanding that the play has been running for nearly twelve months it is, at the time of writing, one of the most popular of the London entertainments. Mr. Wilson Barrett produced two new plays at the Princess's—The Lord Harry and Clito—both of which were fairly successful. Farcical comedy appears to be gaining favour, and amongst those brought out during the year which have gained popularity may be mentioned The Schoolmistress at the Court, The Pickpocket at the Globe, and the Hobby-Horse at the St. James's Theatre. During the summer months no fewer than three American companies visited the metropolis, two of which, the Daly Company and the Dixey and Rice Company, scored successes at the Strand and Gaiety respectively. Sir Charles Young's play, Jim the Penman, produced at the Haymarket, proved one of the best plays seen on the London stage for many years past, and strengthened by Mr. Willard playing the principal part was, without doubt, one of the hits of the season. Mr. Charles Wyndham, at the Criterion Theatre, revived Wild Oats, and afterwards T. W. Robertson's David Garrick. In both comedies he played the principal parts with great success. The fortunes of Old Drury continued on the upward path, thanks to the astute management of Mr. Augustus Harris. His latest venture, A Run of Luck, proved to be no misnomer, and since its production in August has nightly drawn full audiences.

Nov. 30.—In Fetters, by J. P. Hurst, brought out at the Strand.

Dec. 3.—Loyal Lovers, by C. Garick and A. F. Guibal, produced at an afternoon performance at the Vaudeville.

Dec. 7.—At Toole's a new farcical play, in three acts, by J. Maddison Morton, was brought out, the principal characters being played by Mr. J. L. Toole, Mr. Ward, and Miss Eliza Johnstone.

Dec. 9.—Vanderdecken, a burlesque produced by Messrs. Lionel Brough and Willie Edouin at the Novelty Theatre. It proved a failure.

Dec. 19.—Mr. W. G. Wills's adaptation of Goethe's Faust, produced at the Lyceum before a very representative audience, including the Prince of Wales. Mr. Irving was the Mephistopheles; Miss E. Terry, Margaret; Mr. Conway, Faust; Mr. Alexander, Valentine; and Mrs. Stirling, Martha. The scenery was unanimously pronounced to be the most perfect ever seen on any stage.

Kenilworth, a burlesque by Messrs. Farnie and Reece, produced at the Avenue. Principal characters played by Miss Violet Cameron, Miss Laura Linden, Mr. J. Dallas, and Mr. E. J. Lonnen.

The Parsee Players appeared at the Gaiety.

Dec. 21.—Billie Taylor revived at the Empire.

Dec. 23.—The Harbour Lights, an original drama by G. R. Sims and H. Pettitt, played for the first time at the Adelphi. The principal parts were taken by Messrs. W. Terriss, J. D. Beveridge, J. Maclean, Howard Russell and E. W. Garden; Mesdames Millward, Mary Rorke, Maude Brennan, and H. Leigh.

Dec. 26.—The pantomime Aladdin, produced at Drury Lane by Mr. Augustus Harris. Among the performers were Mr. Herbert Campbell, Mr. Charles Lauri, Mr. H. Nicholls, Mr. H. Payne; Miss Grace Huntley, and the Sisters Leamar.

Mr. W. Holland opened Covent Garden Theatre as a Circus.

A new burlesque, Little Jack Sheppard, brought out at the Gaiety. The cast included Mr. Fred Leslie, Mr. David James, Mr. Odell; Miss E. Farren, Miss M. Hood, Miss S. Grey, and Miss Wadman.

The pantomime, Whittington and His Cat, produced at the Standard.

Jan. 2.—A new play, by Maurice Barrymore, entitled Nadjezda, brought out at the Haymarket. The cast included the author, Mr. Beerbohm-Tree, Mr. R. Pateman; Miss E. Rigl, Miss Lydia Foote, and Miss G. Drew.

Jan. 12.—Plebeians, by J. Derrick, produced at the Vaudeville.

Jan. 19.—The dramatic students gave a performance of Dryden's Secret Love; or, The Maiden Queen, at the Court Theatre.

Jan. 23.—A farce adapted from the French by C. M. Rae, entitled The Man with Three Wives, produced at the Criterion. The principal parts were sustained by Messrs. Giddens, Lytton Sothern, Blakeley, Maltby, and St. Maur; Mesdames Annie Hughes, Isabelle Evesson, and Rose Saker.

Jan. 28.—Mr. Charles Coghlan's comedy-drama Enemies, brought out at the Prince's. The principal parts were acted by the author, H. Kemble, J. G. Grahame, Fernandez, Everill, and Pateman, and Mrs. Langtry.

Jan. 30.—The Sins of Fathers, by W. Lestocq, produced at the Globe.

Feb. 3.—Miss Minnie Palmer appeared in The Little Treasure and The Ring and The Keeper at an afternoon performance at the Strand.

Feb. 4.—Miss Helen Barry appeared in A Woman of The World at an afternoon performance at the Haymarket Theatre. She was supported by Mr. Beerbohm-Tree, Mr. Brookfield, and Mr. G. Farquhar.

Faust and Loose, a parody on Faust at the Lyceum, by F. C. Burnand, produced at Toole's Theatre.

Feb. 13.—A new comedy, by Raymond Deslandes, translated by Ernest Warren, entitled Antoinette Rigaud, produced at the St. James's. The principal characters were sustained by Messrs. Kendal, Hare, and Barnes; and Mrs. Kendal, Miss Webster, and Miss L. Dietz.

The Carp, a short musical "whimsicality," by F. Desprez and A. Cellier, brought out at the Savoy.

Feb. 17.—Engaged revived at the Haymarket.

Feb. 18.—The Lord Harry, a romantic play, by H. A. Jones and Wilson Barrett, produced at the Princess's. The cast included Mr. Wilson Barrett, Mr. Willard, Mr. J. H. Clynds, Mr.

George Hudson, and Mr. G. Barrett; Miss Eastlake, and Miss L. Venne.

Feb. 27.—THE COUNTESS AND THE DANCER, by Charles Reade, revived at the Olympic. The cast included Miss Etelka Borry, Miss Edith Bruce; Mr. W. Herbert, Mr. E. Price, Mr. A. Wood, and Mr. Cecil Crofton.

March 3.—A matinée performance of PLAYING WITH FIRE given at the Haymarket. The principal parts were acted by Mr. A. Dacre, Mr. C. Brookfield, Mr. H. Kemble, Mr. A. Compton; Miss Kate Munroe, Miss M. Davis, and Miss Illington.

ROUND THE WORLD produced at the Empire; principal characters sustained by Mr. Cartwright, M. Marius, Mr. C. Collette; Miss K. Vaughan, Miss Miska, and Miss K. Chard.

March 8.—THE COLLEEN BAWN revived at the Imperial Theatre by Mr. Thornton Gordon.

THE FOREMAN OF THE WORKS, by G. Manville Fenn, produced at the Standard Theatre.

SISTER MARY, by Wilson Barrett and Clement Scott, brought out at the Brighton Theatre. The leading parts were played by Miss Lingard and Mr. Leonard Boyne.

March 11.—DOO, BROWN AND CO., by C. M. Rae, produced at the Vaudeville. Principal characters by Messrs. T. Thorne, C. Groves, Charles Glenny, F. Thorne; Miss S. Larkin, Miss Helen Forsyth, and Miss Maude Millett.

March 15.—SHE STOOPS TO CONQUER put on at the Haymarket.

LOVE AND STRATAGEM, a new play by Oswald Brand and E. W. Linging, produced at an afternoon performance at the Gaiety.

JANE SHORE, an original play, by J. W. Boulding and R. Palgrave, produced for the first time in London by Miss de Grey's Company at the Grand Theatre.

March 20.—CAMILLE took the place of THE COUNTESS AND THE DANCER at the Olympic.

March 23.—MASSE-EN-YELL-OH produced at the Comedy Theatre.

March 25.—OLIVER GRUMBLE produced at the Novelty Theatre.

Sir Charles Young's JIM THE PENMAN given at a *matinée* at the Haymarket Theatre. The cast included Mr. A. Dacre, Mr. Yorke Stephens, M. Marius, Mr. C. Brookfield, Mr. E. Maurice, Mr. F. Rodney, Mr. F. Dawson, Mr. G. Farquhar, Mr. Ben Greet; Miss H. Forsyth, Mrs. H. Lindley, Mrs. E. H. Brooke, and Lady Monckton.

March 27.—A new farce, THE SCHOOLMISTRESS, by A. W. Pinero, brought out at the Court Theatre. The principal characters sustained by Mr. A. Cecil, Mr. J. Clayton, Mr. H. Eversfield, Mr. F. Kerr; Mrs. John Wood, Miss Norreys, and Miss E. Cross.

April 12.—SOPHIA, an adaptation of "Tom Jones," by Robert Buchanan, produced at the Vaudeville Theatre. The leading parts were played by Messrs. T. Thorne, C. Glenny, G. Farquhar, F. Thorne, and Royce Carleton; Mesdames K. Rorke, S. Larkin, Lottie Venne, H. Forsyth, and Rose Leclercq.

April 19.—Professional *matinée* of FAUST at the Lyceum.

April 20.—VERACITY, by W. Parke, brought out at a *matinée* at the Gaiety Theatre.

April 24.—Madame Sarah Bernhardt commenced a series of farewell performances at Her Majesty's Theatre prior to leaving for America.

HUMAN NATURE revived at Drury Lane.

LURLINE, a burlesque by H. Farnie and R. Reece, produced at the Avenue Theatre. The principal parts played by Miss Violet Cameron and Mr. Arthur Roberts.

THE PICKPOCKET, adapted from the German by G. P. Hawtrey, produced at the Globe. Characters by Messrs. W. J. Hill, Henley, C. Hawtrey, W. S. Penley; Miss C. Grahame, Miss V. Fetherstone, and Mrs. Leigh Murray.

April 26.—Return of Mr. Toole with his company to Toole's Theatre.

May 1.—CLITO, by S. Grundy and Wilson Barrett, produced at the Princess's. The cast included Miss Eastlake, Miss C. Coote; Messrs. Wilson Barrett, E. S. Willard, C. Hudson, and J. H. Clynds.

May 7.—Shelley's tragedy, THE CENCI, given at the Grand Theatre by the members of the Shelley Society.

May 10.—THE LILY OF LEOVILLE, comic opera by Ivan Caryll, played for the first time in London at the Comedy Theatre by Messrs. H. Bracy, Hayden Coffin, C. Ashford; Miss A. Delaporte, Miss M. A. Victor, and Miss Minnie Byron.

May 20.—THE ESMONDS OF VIRGINIA produced at the Royalty by Miss Helen Barry.

May 25.—THE WIFE'S SACRIFICE, adapted from the French by S. Grundy and Sutherland Edwards, brought out at the St. James's Theatre. The principal parts were played by Messrs. Kendal, Hare, Brookfield, Cathcart, Waring, C. Cooper; Mrs. Kendal, and Miss Webster.

May 27.—The Daly Company appeared at the Strand Theatre in A NIGHT OFF.

May 29.—Mr. Charles Wyndham produced O'Keefe's comedy, WILD OATS, at the Criterion Theatre. The cast included Messrs. C. Wyndham, D. James, E. Righton, Blakeley, Giddens; Miss F. Paget, Miss A. Hughes, and Miss Mary Moore.

Messrs. Norton and Bell's American Comedy Company appeared in OUR STRATEGISTS at the Opera Comique.

May 31.—Mr. E. Dixey, in ADONIS, commenced a season at the Gaiety.

June 7.—Madame Jane Hading commenced a series of performances of French plays at Her Majesty's with MDLLE. DE BELLE ISLE.

June 12.—THE PALACE 'O PEARL, a spectacular extravaganza, brought out at the Empire.

June 14.—JACK, a new comedy, and MEPHISTO a travestie, produced at the Royalty.

June 19.—BARBARA, by Jerome K. Jerome produced at the Globe.

June 29.—FRIVOLI, comic opera by Hervé and Beatty-Kingston, brought out at Drury Lane. The cast included Mesdames Rose Hersee, Marie Tempest, Kate Munroe; Messrs. A. D. Pierpoint and Thorndyke.

June 30.—Afternoon performance of HAZE KIRKE at the Vaudeville.

July 2.—The Dramatic Students gave a representation of LOVE'S LABOUR'S LOST at the St. James's Theatre.

July 3.—THE FOOL'S REVENGE produced at the Opera Comique.

THE LITTLE PILGRIM, adapted from Ouida's "Two Little Wooden Shoes," by W. G. Wills, given at an afternoon performance at the Criterion. It was followed by a tragedy by A. C. Calmour, entitled LOVE'S MARTYRDOM.

July 5.—CLAUDIAN revived at the Princess' Theatre.

July 6.—Mr. Lionel Brough took a benefit at Drury Lane Theatre prior to his departure for America.

July 14.—FLORIAN, an opera, by Miss Ida Walter, given at the Novelty Theatre.

July 22.—Farewell performance of Mr. Wilson Barrett at the Princess's Theatre prior to his visit to America.

July 24.—Mr. Irving performed in THE BELLS at the Lyceum for the benefit of the Actors' Benevolent Fund.

July 29.—Dion Boucicault's new comedy, THE JILT, produced at the Prince's Theatre. The principal parts were sustained by the author, Messrs. J. G. Grahame, Lethcourt, Billington, J. G. Taylor, Rodney; Mesdames Thorndyke, Webster, and Myra Holme.

July 31.—The season at the Lyceum closed with 188th performance of FAUST.

The Vaughan-Conway Comedy Company appeared at the Haymarket in THE SCHOOL FOR SCANDAL.

Termination of the engagement of the Daly Company at the Strand.

TURNED UP and BLACKBERRIES produced by the Edouin Company at the Comedy.

Aug. 9.—The Compton Comedy Company commenced an engagement at the Strand with BLUE DEVILS and DAVID GARRICK.

BACHELORS revived by Mr. Hermann Vezin at the Opera Comique.

Aug. 16.—LIFE AND DEATH, a new drama by Frank Harvey, produced by the author at the Grand Theatre.

Aug. 28.—A RUN OF LUCK, by H. Pettitt and Augustus Harris, produced at Drury Lane with elaborate scenic effects. The principal characters were played by Messrs. J. G. Grahame, W. Rignold, E. W. Gardiner, and H. Nicholls; Mesdames Alma Murray, S. Eyre, Compton, and Edith Bruce.

Sept. 2.—Mrs. Conover appeared as Lady Macbeth at the Olympic, and was supported by Messrs. J. H. Barnes, J. D. Beveridge, &c.

Sept. 6.—THE RIVALS played by the Compton Comedy Company at the Strand.

Sept. 11.—FAUST revived at the Lyceum on the return of Mr. Irving and Miss Terry from America.

SISTER MARY, a four-act drama by Wilson Barrett and Clement Scott, put on at the Comedy Theatre. The principal parts were sustained by Miss Lingard, Messrs. Leonard Boyne, R. Hicks, C. Dalton, and P. Clark.

Sept. 14.—CURIOSITY, a farcical comedy by J. Derrick, brought out at an afternoon performance at the Vaudeville.

Sept. 18.—HARVEST, by H. Hamilton, produced at the Princess's. The principal characters were played by Messrs. A. Dacre, B. Thomas, C. H. Hawtrey, Yorke Stephens, W. H. Denny; Mesdames Fanny Brough, Edith Chester, Carlotta Addison, and Amy Roselle.

Sept. 25.—JIM THE PENMAN revived at the Haymarket, with Mr. Willard as Ralston, and Mr. Macklin as Percival.

DOROTHY, a comic opera by B. C. Stephenson and A. Cellier, brought out at the Gaiety. The principal parts were acted by Mesdames Marion Hood, Florence Dysart; and Messrs. H. Coffin, Redfern, Hollins, and F. Cook.

Oct. 4.—LA BERNAISE brought out at the Prince of Wales's (formerly Prince's) Theatre. The principal characters were played by Messrs. Snazelle, Dallas, Harcourt, and Lonnen; Miss Florence St. John, and Miss M. Tempest.

Oct. 6.—Afternoon performance. THE UNDERGRADUATES, a farcical comedy, by W. Outram Tristram, at the Opera Comique. The principal characters were sustained by Messrs. Arthur Greville, Yorke Stephens, Felix Morris, and L. D'Orsay; Mesdames Kate Phillips, Eva Sothern and C. Stanhope.

A HAPPY DAY, by "Richard Henry," given at an afternoon performance at the Gaiety.

Oct. 11.—INDIANA, comic opera by Audran, produced at the Avenue. The leading parts were sustained by Messrs. A. Roberts, C. Ryley, S. Wilkinson, H. Ashley; Mesdames Wadman, and P. Broughton.

THE MAGIC RING, a new comic opera by Oswald Brand, music by Immanuel Liebich, brought out at the Grand.

ELSA DENE a four-act drama, by A. C. Calmour, produced for the first time in London at an afternoon performance at the Strand.

Oct. 13.—THE NETTLE, a one-act comedietta by Ernest Warren, brought out at the Court.

Oct. 21.—Miss Grace Hawthorne appeared in the GOVERNESS at the Olympic.

Oct. 23.—An original comedy, THE HOBBY-HORSE, by A. W. Pinero, produced at the St. James's Theatre. The cast included Messrs. Hare, H. Waring, Mackintosh, and Cathcart; Mesdames Kendal, Beerbohm-Tree, Gaston Murray, Webster, and Huntley.

Oct. 27.—NOAH'S ARK, a comedy by H. Paulton, given at an afternoon performance at the Royalty.

Oct. 28.—OUR DIVA, comic opera from the French by C. M. Rae and Victor Roger, played for the first time at the Opera Comique. The principal parts were played by Messrs. Frank Celli, H. Beaumont, and Frank Wyatt; and Mesdames Amada, Effie Clements, Minnie Marshall, and Bennett.

A DARK SECRET produced at the Standard Theatre.

Nov. 1.—RHODA, comic opera, by Walter Parke and A. L. Mora, brought out at the Grand Theatre.

Nov. 6.—Frank Harvey's RING OF IRON substituted for THE GOVERNESS at the Olympic.

Nov. 10.—A SCOTCH MIST, a farcical comedy, by Edwin Sheppard, played at a *matinée* at the Vaudeville.

Nov. 13.—T. W. Robertson's DAVID GARRICK revived at the Criterion. Mr. Charles Wyndham played the title-*rôle*, and was supported by Messrs. David James, Giddens, Blakeley, and Miss Mary Moore.

Nov. 15.—Mr. Henry Irving introduced a new scene—the Witches' Kitchen—into FAUST at the Lyceum.

Nov. 17.—COERCION, a farcical comedy by W. H. Denny and T. Burnside, produced at an afternoon performance at the Gaiety.

CLARICE; OR, ONLY A WOMAN, by W. Browne and F. Roberts, given at a *matinée* at the Strand Theatre.

Dec. 1.—GLADYS, by Arthur Law, produced at an afternoon performance at the Strand. Miss Florence West played the heroine.

Dec. 2.—Afternoon performance of MY BONNY BOY, by Mr. Warren, at the Criterion.

Rowing.—The rowing season of 1886 will long be remembered as the one in which William Beach, the champion of the world and Hanlan's double conqueror, appeared on the Thames, and twice vindicated his right to the title against J. Gaudaur and Wallace Ross. Chiefly owing to the presence in this country of a very large number of Australian and American scullers, innumerable matches were decided in which, unfortunately, our English representatives did not take a very prominent part; but the racing of the year went to prove that G. Bubear of Hammersmith might be considered the fastest British sculler we possess at present. The first match of importance took place on February 4th, G. J. Perkins defeating J. Largan from Putney to Mortlake, for a stake of £200. After a short interval, on April 22nd, G. Bubear gave evidence of returning to form by easily beating W. Pearce from Putney to Mortlake, for £50 a side; and then, on the Monday in the Derby week, May 24th, Neil Matterson of Australia, considered the second best sculler in the Colony, met G. Perkins for the English Championship Cup, over the usual Thames course, and £400. Matterson led for some distance, but Perkins eventually rowed him down and won easily. On June 3rd another Australian, Christian Nelson, who had come over with Matterson, was also defeated by an Englishman, G. Bubear, from Putney to Mortlake, for £200. On June 7th, however, the Australians had their revenge, as Neil Matterson very easily vanquished D. Godwin of Battersea, from Putney to Mortlake, for £200. Another Antipodean now came on the scene, in Peter Kemp, who had arrived on May 15th with William Beach, the champion. Kemp challenged any English sculler, and was twice well beaten over the Championship course, each match being for £200. On July 19th G. Perkins defeated him, after a splendid race to Chiswick Eyot; and on the Saturday following, July 24th, G. Bubear obtained, if anything, an easier victory over the Colonial. Perkins, whose long course of training had at length begun to tell, rather foolishly consented to again scull Neil Matterson over the usual course for £400. The pair met on August 16th, and the Australian this time turned the tables without much trouble. The Championship Cup, strange to say, was not at issue in this race. The next big aquatic event of the year was the International Sculling Sweepstakes, which amounted to no less a sum than £1,975, the largest prize ever offered for a boat race, the first man receiving £1,200. Seven scullers entered, William Beach, the champion, and Neil Matterson representing Australia; John Teemer, Wallace Ross, and G. W. Lee, from America, and Perkins and Bubear, the two Englishmen. The contest was rowed in heats, on August 30th, 31st, and September 1st, between Wandsworth and Kew. In the final, W. Beach easily defeated J. Teemer (who had recently held the American Championship) from Putney to Mortlake, the champion, in each heat, exhibiting wonderful stamina and pace. On September 13th G. W. Lee beat Neil Matterson from Putney to Mortlake for £200, the race being chiefly remarkable as producing the fastest on record from Putney Bridge to Hammersmith, viz., 8 min. 42 sec. The Championship of the World match, for £500 aside, between William Beach of New South Wales, and Jacob Gaudaur, the American champion, took place from Putney to Mortlake on September 18th. After a magnificent rac in which Gaudaur, the non-favourite, caug and passed Beach at Chiswick, the Australia by sheer gameness, again took the lead, and wo by 2½ lengths in 22 min. 29 sec. Two day afterwards, September 20th, Bubear again bea P. Kemp for £200, from Putney to Mortlak after a capital race; and then, on Septembe 25th, Beach sculled another match for th Championship over the usual course, and fo stakes amounting to £1,000. His opponent wa Wallace Ross of New Brunswick, and Beach le from the first stroke and won easily. Septembe 27th saw J. Largan defeated with great ease b C. Nelson for £100, from Putney to Mortlake Edward Hanlan, the ex-champion, arriving i this country on the same day, and at once tried but unsuccessfully, to arrange a match wit Beach. As a novelty in boat-racing, a scullin handicap for prizes amounting to £300 was hel at the Welsh Harp Lake, Hendon, October 9t and 11th. Twelve scullers took part in the variou heats, Wallace Ross and Teemer being at scratch The course was three miles with three turns, G Bubear, 8 secs. start, winning the final rathe easily from J. A. Ten Eyck, 6 secs. start. As gate-money speculation, however, the affair wa a complete failure. On October 30th a double sculling handicap, from Wandsworth to Ham mersmith, was won by Teemer and Hamm (scratch), beating D. Godwin and G. Perkins (1 seconds start); and the professional racin record of the year as regards the Thames ma be said to have closed with a so-called champion ship, non-coxswain, four-oared race, from Batter sea to Hammersmith, on November 8th, i which Hanlan (stroke), Teemer, Hamm, an Ten Eyck (steerer) defeated Bubear (stroke) G. W. Lee, Wallace Ross, and Perkins (steerer) On November 29th W. Brightwell defeate Rolfe from Putney to Mortlake. The amateu season was a fairly successful one. Th Oxford and Cambridge Boat-Race, on Apri 3rd, produced a magnificent contest, Oxford stroked by H. Girdlestone, leading throug Barnes Bridge, and apparently winning easily when the Cantabs, splendidly stroked by F. J Pitman, rowed them down from the outsid station and won by nearly a length. After man years of grumbling from the competitors th course at Henley Regatta was at length altered the starting-place being fixed to below th island, with the winning-post at Poplar Point The change was in every way a great improve ment. Only two crews were allowed in a heat and the Regatta was extended to three days The racing was remarkably close and interest ing. Trinity Hall, Cambridge, the head boat o the Cam, won the Grand Challenge Cup fo eights; and the Thames R. C. four, including tw old Cambridge blues, carried off the "Stewards." F. J. Pitman, the Cambridge stroke, won th Diamond Sculls, beating the holder, W. S Unwin, the Oxonian. Later in the year Pitma won the Wingfield Sculls, from Putney to Mort lake, Unwin not starting. The Thames Club both in fours and eights, proved superior to thei great tideway rivals, the London Rowing Club at the principal regattas of the season. I October the Amateur Sculling Championship o France, on the Seine, was won by an old Henley competitor, M. Lein.

Athletics and Pedestrianism.—Although the number of Amateur Athletic Meetings during

the past year has, if anything, exceeded the record of 1885, the performances have not been of any extraordinary merit, excepting one or two events at the Amateur Championships. Fortunately, in the spring of the year the dispute between the Amateur Athletic Association and the National Cyclists' Union came to an end, each body accepting a compromise, the Amateur Athletic Association waiving their claim to control cyclists, and the National Cyclists' Union, on their part, allowing wheel events at Amateur Athletic Association Meetings to be run under Amateur Athletic Association laws. This agreement has so far worked admirably, and prevented all friction between these two powerful amateur sport-controlling organizations. Early in the season, the National Cross-Country Championship was decided on Croydon Racecourse, on March 6th, in miserable weather. Only six clubs competed. J. E. Hickman, of the Godiva Harriers, Coventry, finished first, beating the favourite, W. Snook, of the Birchfield Club. The Birchfield men, however, won the Championship with a total of 49 points. This event had an important bearing on the racing of the year, as owing to the curious running of W. Snook on that occasion, the Amateur Athletic Association subsequently permanently suspended him from competing as an amateur. On April 10th, also in very bad weather, an amateur walking race to Brighton Aquarium from Westminster Bridge resulted in a splendid performance on the part of the winner, J. A. McIntosh, of Guildford, who covered the distance in the marvellous time of 9 hours, 25 minutes, 8 seconds, a long way in front of the previous record, C. L. O'Malley's. Contrary to general expectation, Oxford beat Cambridge by 6 wins to 3 at the Annual Inter-'Varsity Athletic Sports at Lillie Bridge, on April 2nd, the most noticeable victories being H. C. L. Tindall's (Cambridge) Hundred Yards in 10¼ secs. and Quarter Mile in 51 secs. J. E. K. Cross won the One Mile for Oxford in 4 min. 28⅘ secs. A week later, at Stamford Bridge, on a bad day, Tindall established an English record for 600 yards, running the distance in 1 min. 14½ sec., and winning easily. The Amateur Championship Meeting was held in London, at Stamford Bridge, on July 3rd. The weather was extremely hot, but the temperature evidently favoured fast times. A half-caste, A. Wharton, of Darlington College, won the Hundred Yards, doing 10 secs. dead in both his trial heat and the final, a record never before achieved in England by any amateur. C. G. Wood of the Blackheath Harriers won the Quarter Mile in 49⅘ secs., and T. B. Walder of Bristol won the One Mile in 4 min. 25⅘ sec. The 120 Yards Hurdles fell to C. F. Daft of Nottingham, in 16 secs., and G. W. Rowdon of Teignmouth carried off the High Jump with 5 ft. 11⅛ in. All these performances were unbeaten during the year, and the meeting was the best as regards the combined number and quality of the competitors ever held by the Amateur Athletic Association. Late in the season, on Nov. 1st, an International Athletic Meeting was held in the Bois de Boulogne, Paris, under the management of the Racing Club of Paris. C. G. Wood carried off the 100 and 400 mètres, and H. C. Mabey, a noted English miler, won the Championship of France at 1,500 mètres. In America, L. E. Myers having turned professional, the amateur racing was devoid of interest during 1886. As regards professional pedestrianism, W. G. George, the ex-amateur, proved the hero of the year. In the winter he ran another series of three matches in New York with L. E. Myers the latter winning all three, including a one-mile event; but as the whole affair was a gate-money speculation, and the races were decided on a small enclosed track, but little heed need be taken of the English champion's defeat. On his return to England, George signed articles to run his old opponent, W. Cummings of Paisley, another series of matches, at one, four, and ten miles, each for a stake of £200. Public interest was chiefly centred in the one mile, run at Lillie Bridge, West Brompton, on August 23rd. The attendance of spectators was very large, and the weather favourable. After a magnificent race, in which Cummings tried to force the pace in the last lap, George ran the Scotchman to a standstill one hundred yards from the tape, and won easily in the extraordinary time of 4 min. 12¾ secs., a record never before equalled by any amateur or professional. Cummings won the four miles at Preston easily, in slow time, and George took the ten miles at Birmingham without being required to complete the distance, Cummings retiring after being lapped at five miles, the two latter events being very unsatisfactory performances. H. Hutchings, the champion sprinter, sailed for Australia in October, to run T. M. Malone a series of races; and W. G. George has also stated his intention of visiting Australia, to meet Malone, early in 1887. G. Hazael and C. Rowell are likely to arrange another six days' go-as-you-please competition in London before long, but it is doubtful whether these wearisome entertainments will again prove profitable.

Football.—Football, our national winter pastime, under both the Rugby Union and the Association codes, continued to increase in popularity and add to the number of its supporters last season. It is still a doubtful question whether the dribbling or the carrying game has the larger number of adherents; but, probably, taking into consideration the whole of the United Kingdom, the two styles of play are very evenly balanced. The Association game to a certain extent entered on a new phase of its existence—the professional player becoming a recognized feature of its laws; and two matches were inaugurated during the season under the cricket definition of Gentlemen *v.* Players. One of these matches at the Oval, on March 20th, when the Players won by two goals to one, was a very noticeable event, owing to the presence of the Prince of Wales, who witnessed an important football match for the first time. In consequence of the combined action of the Scottish, Welsh, and Irish branch associations, against professionals being allowed to play in international matches, England appeared likely to be excluded from putting her full strength into the field against the other international teams. The Football Association, however, stuck firmly to their intention that there should be no reservation as to the composition of international elevens, and eventually carried their point, and the England *v.* Scotland match at Glasgow, March 27th, resulted in a draw—one goal each being scored. The play, however, all through was in favour of the English side. England beat Wales by three goals to one, and Ireland by six goals to one. As a proof of the weakness of Irish Association football, it may be mentioned that England has

always beaten Ireland in this match very easily. Scotland also beat Ireland by seven goals to two, and Wales by four goals to one. Wales scored one International victory by defeating Ireland by five goals to none. After a drawn game at the Oval the Association Challenge Cup was won for the third year in succession by the Blackburn Rovers, beating the West Bromwich Albion by two goals to none. The first of the Gentlemen *versus* Players matches was won by the gentlemen by one goal to none. The South beat the North by three goals to none; and Cambridge, for the fourth successive year, beat Oxford, winning by the largest majority yet scored in this match—viz., five goals to none. Queen's Park won the Scottish Association Cup. The Rugby Union season was chiefly noticeable for the renewal of the England *v.* Scotland match, which had been discontinued in the previous year owing to a dispute. The matter, however, was at last settled, and an International board of appeal established to decide any future similar disputed point of law. The match, the fifteenth, was played at Edinburgh, and ended in a draw, neither side scoring a point. England defeated Wales by one goal and two tries to one goal; and also Ireland by a try to nothing. Scotland beat Wales by two goals and one try to nothing, and also Ireland by four goals and two tries to nothing. Wales *v.* Ireland did not take place. For the fourth successive year the South beat the North by two goals and three tries to one try; and at length, after four defeats, Cambridge managed to win an Inter-'Varsity match by two tries to nothing. Halifax won the Yorkshire Challenge Cup, beating Bradford in the final tie by one goal to nil; and the Hospital Challenge Cup was won by Guy's. The most successful clubs of the season were—Blackheath, London Scottish, Richmond, Cardiff, and Bradford. Oxford University, however, when playing their full strength, were a very powerful team. In conjunction with the Association, the Rugby Union organized two matches at the Oval on March 20th, for the benefit of the London charities. The Prince of Wales attended, and a profit of £405 was realized. In October the Rugby Union general meeting altered the method of scoring, a goal in future to count three points, and a try one point; matches to be decided by a majority of points. The meeting also passed some very stringent laws and regulations to stamp out professionalism, which had commenced to be a prominent feature in several leading country clubs. It is to be hoped the clubs will loyally support the Union in their efforts in this direction, and thus prevent the certain deterioration of the game if the professional player is allowed to become an established fact.

Bicycling and Tricycling.—The steady advance in popularity of "wheeling" was again amply demonstrated during the past season. Not only did the racing records on the cinder track and the road show a general improvement at all distances, but in every part of the country the bicycle and tricycle became more generally used, not only as a means of exercise and amusement, but for the carriage of light articles and business purposes. Immense improvements were made in the build, strength, and lightness of small safety bicycles, and also of the three-wheel machines, tandem tricycles being especially popular. In the matter of speed, the tandem tricycle, both on the road and on the path, produced some wonderful records; and probably, when more tandem races are included in the programmes of the various sports, still more remarkable performances will be accomplished. The National Cyclists' Union having come to terms with the Amateur Athletic Association, devoted all their energies to the control and regulation of wheel racing, and the stamping out of the many abuses which had sprung up in connection with the sport. So many of the fastest amateurs were known to be paid and supported by leading manufacturers of cycling machines that, after careful investigation, a large number of riders were suspended from racing in future under N.C.U. rules. This caused a considerable amount of dissatisfaction in certain quarters, and an agitation was commenced to urge the Union to do away with all distinctions between amateurs and professionals in the future. The executive of the Union, however, will probably be sufficiently powerful to prevent any such distinctly prejudicial legislation being effected. The championships of the N.C.U. were again successfully carried out, P. Furnival securing no less than three of these coveted honours, J. E. Fenlon being also a double winner. M. V. J. Webber (Isle of Wight), a young rider, of whom great things were expected after his brilliant performances in 1885, unfortunately met with an accident early in 1886, and was unable to race during last summer. On the ordinary racing bicycle, H. A. Speechly rode one mile in a race on the Crystal Palace track, in 2 min. 34⅘ secs. on July 7th; but P. Furnival, on the fast Long Eaton path, is said to have ridden the distance on August 23rd in 2 min. 32⅔ secs., and on the following day in 2 min. 30 secs.; both these were time trials, and have not been passed by the record committee of the N.C.U. As on both occasions the weather was extremely favourable, and the path in splendid order, Furnival's times are probably correct. Another most remarkable performance, which has also been rejected by the records committee, was one mile on a tricycle by G. Gatehouse (Cambridge University) in 2 min. 41⅔ secs., at Long Eaton on August 24th in a time trial. On the same ground on August 26th, Gatehouse covered twenty miles on a tricycle in 59 min. 10⅗ secs., an accepted record, and faster than the best amateur time for the distance on a regular racing bicycle. As an instance of the speed of the tricycle on the road, it may be mentioned that G. P. Mills rode 881 miles, from Land's End to John o' Groat's, in 5 days 10 hours in August, and A. H. Fletcher, on a similar machine, on June 21st covered 250½ miles in 24 hours, both being records. The Dwarf, or Safety, Bicycle records of the past year are equally remarkable. A. P. Englehart, riding a Safety, covered twenty miles on a path at Coventry, in August, in 59 min. 27 secs., a feat a few years ago considered impossible on a "racer." The twenty-four hours' road record is also held by a "Safety," the "Ivel," of the "Rover" type, with no less a distance than 294½ miles, by G. P. Mills on October 5th, beating the previous record by nearly 28 miles. The bicycle record from Land's End to John o' Groat's, also held by Mills, in 5 days 1 hour 45 min. In the professional rank R. Howell and F. Wood are still a long way in front of all their opponents, Howell having the better record for the past season in the various

championships at different distances. The great American Cycling Tournament took place as usual at Springfield, in September. No English amateur competed, but our English professional champion F. Wood rode in several races. Subsequently, two remarkable records were made on this superb American track by William A. Rowe, Yankee professional. On October 21st he rode one mile on a bicycle in 2 min. 29¾ secs., and on October 25th he covered 22 miles 150 yards in one hour. Rowe beat F. Wood, the English champion, for the World's Championship at Springfield. In America the cyclists are divided into three classes, with special races for each class, viz., amateurs, pro-amateurs or makers' amateurs, and professionals. The system might very well be adopted in this country, and thus prevent the agitation against the large number of so-called amateurs who are undoubtedly in the pay of, and subsidized by, the cycle manufacturers.

Billiards.—During the past year billiards, as a popular form of entertainment, have again held a very prominent position, and matches between the leading players were once more continued week after week in London from January to June, either at the Westminster Aquarium, Gatti's Saloon, or the Billiard Hall, Argyle Street, sometimes at all three places simultaneously. Although no one had the temerity to challenge John Roberts, jun., for the championship, on February 8—13, the champion for the first time for six years (except in championship matches), met an opponent on level terms, W. Mitchell opposing him, 15,000 up "all in" for £100 a side. The match excited a tremendous amount of interest, and notwithstanding his want of practice at the spot-stroke, Roberts won by 1,741 points. His best break was 722 (232 spots). Mitchell obtaining a record money match break, viz., 969 (321 spots). In the following week Roberts played W. J. Peall a spot-stroke match, only two balls being used, for £100 a side. Play lasted 4 hours each day for a week, and after a dreary and uninteresting exhibition Peall won with a score of 16,734 to Roberts' 11,924, the best break of the match being 906 by Peall. Previous to this, December 14—19, 1885, Roberts had given John North 4,000 in 12,000 up, spot-barred, for £200 a side, the champion just winning by 242, and scoring a then record break of 451, which he subsequently eclipsed when playing W. Cook on April 12th, by making 596 spot-barred, considered at the time to be a record almost impossible to be beaten. During the season John North fairly established his position as second only to the champion at the spot-barred game, by defeating, under these conditions, in money matches, W. J. Peall by 572, January 18—23; W. Cook by 629, February 1—6; and W. Mitchell, May 3—8, by 259, each match taking place at the Aquarium, or "Home of Billiards." Two important spot-barred tournaments were decided January 2—15, each with twelve players engaged. One at the Billiard Hall with John Roberts at scratch was won by John North, 175 points, heats 500 up, scoring 9 out of his 11 games. The other, open to second-class players only, J. Dowland scratch, heats 300 up, was won by H. Roberts (10 points) with 11 victories. Another second-class tournament, spot-barred, at Gatti's, May 11—21, Dowland again at scratch, was won by J. Owen (40), and an Aquarium spot-barred tournament, March 13—20, was carried off by J. Dowland (125), Joseph Bennett being the scratch man. At Gatti's April 5—10 a spot-barred tournament, heats 400 up, W. Cook scratch, was won by Joseph Bennett (25). At Manchester, March 15—22, a spot-barred tournament, heats 600 up, was won by A. Bennett (275). This was the only tournament of the year in which John Roberts (scratch) and W. Cook (160) both took part. Joseph Bennett defeated H. Coles and J. G. Sala in two money matches, each 10,000 up, spot-barred, the former December 29, 1885, to January 2, 1886, and the latter, February 22—27, both at the Aquarium. John Roberts, jun., was successful every week in all his 13 spot-barred matches at the Billiard Hall from October 5, 1885, to January 30, 1886, until he at last failed to concede an opponent, W. Mitchell, 4,000 in 12,000, February 1—6. Subsequently to their money match in December, 1885, North three times defeated the champion at 4,000 in 12,000 up, spot-barred. The winter season of 1886-87 commenced at the Billiard Hall, Argyll Street, Regent Street, on October 4. John Roberts, jun., the champion, playing his usual 12,000 up, spot-barred exhibition matches, giving away a third of the game or more to all the best professionals. On October 16 conceding W. Mitchell 4,000 in 12,000, spot-barred, the champion made a break of 534, which topped the previous record. This, however, he completely put in the shade with a marvellous break of 604, spot-barred, on November 17, at the Billiard Hall, when opposing W. Mitchell in a money match for £100 a side, Mitchell receiving no less than 4,500 in 12,000 up, spot-barred, Roberts winning by 194 points, after a most exciting finish. The extraordinary nature of this feat can be better appreciated when it is remembered that the record "spot in" break in a money match is only 969, by W. Mitchell. On November 8—13 the champion conceded D. Richards 6,000 in 12,000 up, spot-barred, for £50 a side, but Roberts being out of form on the first two days, Richards won by 3,019. At the Westminster Aquarium, October 13—23, a spot-barred tournament, heats 500 up, W. Cook scratch, the usual number of eight players engaged, was won by D. Richards, 150 points start. Richards was the only player who won all his seven games. Also at the Aquarium, November 1—6, in a 15,000 up, "spot in" match against G. Collins, who received 5,000 points, on a table by Messrs. G. Wright & Co., W. J. Peall credited himself with a record break of no less than 2,413, an unprecedented feat.

Cricket.—The cricket season interest of 1886 of course chiefly centred in the doings of the fifth Australian team which has visited this country. The Australian Eleven was admittedly weak in the batting department, and owing to an unexpected failure in their bowlers, a wet May, and two defeats at the very outset of the tour, the trip from a cricketing point of view was a decided failure; indeed the Colonials only won 9 of the 39 matches played, as compared to 18 victories in 1884. No less than 22 of the matches were left drawn, and in only four of these could the Colonials claim any material advantage when play ceased. Perhaps the visitors' most creditable performances were their two victories, one against the Gentlemen of England, by 7 wickets at Lords; and the other against Yorkshire, by 6 wickets, at

Sheffield. In their second match against the Gentlemen of England, at the Oval, the Australians also did remarkably well, heading their opponents' score of 471 in the first innings by 17 runs. The match, however, was eventually drawn. The largest innings made against the Australians was 558, by Lord Londesborough's England Eleven, at Scarborough, in September; the lowest total against them was 34, by the North of England, at Manchester. The Australians' smallest innings was 38, against the University at Oxford; their highest being 488, against the Gentlemen of England, at the Oval. Taking all the series of matches, only 5 centuries were scored on their side, the best being 151 by S. P. Jones, against the Gentlemen of England, at the Oval. Eleven three-figure contributions were recorded against them, 186 by M. Read for Surrey, being the best; Dr. W. G. Grace, however, three times reached three figures against them. Amongst the visitors the best averages in all matches were—batting, G. Giffen, 1,454 runs, average 25·54; S. P. Jones, 1,530 runs, average 23·58; and H. J. H. Scott, 1,298 runs, average 21·17. In the bowling department, Giffen again heads the list with 1726·2 overs, and an average of 16·16. T. W. Garrett, however, runs him very close, with 1699·1 overs, average, 17·91. The "demon" Spofforth's overs totalled only 929·3, average, 17·14; his accident at Lords in June placing him *hors de combat* for some time. Against the Antipodeans, W. G. Grace and W. W. Read head the list amongst our batsmen with 812 and 668 runs respectively; the former's average being 42·14, and the latter's 39·5, both played in 19 innings. In the bowling department the largest number of wickets is Lohmann's 39 from 479·2 overs; but Briggs' is a better analysis, with 400·1 overs, 32 wickets, average 14·28. Dr. W. G. Grace also figures well with 374·2 overs, wickets 27, average 22·23. Notwithstanding the visit of the Australians the struggle for the County Championship again excited the keenest interest, and for the fourth year in succession Notts must be awarded the pride of place, although Surrey pressed them very closely, the latter county being unbeaten up to the beginning of July. Notts, however, were not once defeated, and won 7 matches out of their 14 played. Surrey won 12 matches, lost 3, and 1 was drawn. Lancashire comes next with 5 wins 15 defeats; and Yorkshire next with 4 wins and 5 losses. Derbyshire did not win a single match. The Notts crack, Shrewsbury, can not only claim the best average of any player in county matches last season, viz., 46·1, but also the highest individual score of 227, not out. Surrey's 3 defeats were effected by Notts, Lancashire, and Sussex, but Surrey with W. W. Read can claim the largest individual number of runs, viz., 1,003; their crack bowler, Lohmann, also coming out remarkably well with 997·2 overs, an average of 15·10. Amongst the other important matches of the season must be mentioned the defeat of Cambridge by Oxford by 133; and the three defeats of the Australians by England, the Oval match resulting in a win for England by an innings and 217 runs. In their first match the Players beat the Gentlemen at Lords, by 5 wickets, and at the Oval the game had to be left drawn owing to the wet, all in favour of the Players. Including all the first-class matches, the batting averages, were:—Shrewsbury 1,404 runs, average 42·18; W. W. Read, 1,825 runs, average 42·19. W. G. Grace's is the highest aggregate of runs, viz., 1,846, giving an average of 35·26, a wonderful feat after 22 seasons of first-class cricket. The following players also exceeded the 1,000:—M. Read, 1,364; Abel, 1,221; G. C. Hearne, 1,125; Bates, 1,018; Hall, 1,005; Ulyett, 1,005. In the fifty scores of 100 and upwards the names of W. G. Grace and W. W. Read each appear four times. The bowling averages give some remarkable figures: 11 bowlers have delivered upwards of 1,000 overs, the best results being:—Lohmann, 1,715 overs, 809 maidens, 160 wickets, average 15·25; Wootton, 1,618·1 overs, 715 maidens, average 15·136; Dr. W. G. Grace, 1,525·2 overs, 618 maidens, average 19·121; Emmett, 1,339·3 overs, 667 maidens, average 12·91; Attewell, 1,295·2 overs, 736 maidens, average 13·11; Barlow, 1,238·1 overs, 653 maidens, average, 14·55; Watson, 1,188 overs, 701 maidens, average, 11·20. On August 4th, when playing for Hampstead *v.* Stoics, Mr. A. E. Stoddart, the Middlesex cricketer, credited himself with the largest score on record, viz., 485; Hampstead's full total was 814 for 9 wickets, a notable record for a one-day match. In August a team of English Gentlemen, under the captaincy of W. E. Roller, visited America, winning 8 of the 9 matches played. In September an eleven of our best English professionals, under the captaincy of A. Shaw, the Notts captain, sailed for Australia in the *Cuzco*, to play a series of matches in the Colony.

At the end of the season, a proposition was brought forward by Lord Harris, the captain of the Kent County Cricket Club, to reduce the residential qualification for a county player from two years to one. The proposal was not received favourably by the committees of the Notts, Yorkshire, Derbyshire, Middlesex, and Sussex County Clubs, and it seems unlikely that the present rule will be altered.

The Turf.—The racing season of 1886 will be chiefly remembered for the triple success of Ormonde, in the three classic races of the year; the moderate form of the majority of the three year-olds, the constant defeats of the favourites in the principal handicaps, the establishment of the £10,000 Eclipse Stakes, and the death of the "Centaur of the century," as the champion jockey, Fred Archer, has been not inaptly described. With these exceptions the turf history of the year has been devoid of any special features of interest. During the early spring Minting was generally considered almost a certainty for the Two Thousand Guineas, and was also second favourite for the Derby; but Ormonde gained such an easy victory in the first-named event, when apparently not quite wound up, that it was at once voted an impossibility for him to be beaten in the Derby, more especially when the owner of Minting declined to start his horse a second time against the Duke of Westminster's colt. Finally, with odds of 85 to 40 laid on him, Ormonde, ridden by Archer, and not by G. Barrett, as in the Two Thousand, won very easily from the Bard, who finished second. With the Bard not engaged in the St. Leger the Doncaster race was simply a matter of health for the son of Bend Or, who won in a canter with the long odds of 7 to 1 laid on his chance, and thus became entitled to rank with Wes Australian, Gladiateur, and Lord Lyon, the only other winners of the triple crown. Altogether Ormonde won ten events during the year, including the rich Hardwicke Stakes a

Ascot, value £2,438, and the Champion Stakes, with 100 to 1 laid on him, again retiring for the season with an unbeaten certificate. With the exception of winning the Grand Prix de Paris, and his second to Ormonde in the Two Thousand Guineas, Minting did not appear during the year. The fillies of 1886 were not of a very high class: Miss Jummy won the One Thousand Guineas and the Oaks, with Argo Navis second to her in each event, and also two races at Goodwood; but she was beaten a long way in the Grand Prix, and very far removed from Ormonde's class. Braw Lass entirely lost her previous season's form, and only won one small race during the year. The inauguration of the £10,000 Eclipse Stakes at the Sandown Park second summer meeting bids fair to supersede in importance all the other best known and long-established weight-for-age contests. This big prize, however, is entirely the result of the accumulated entries and forfeits of the subscribers to the stake; and as Kempton and other meetings have at once taken up the idea, a new era of big sweepstakes is likely to follow. Bendigo made his only appearance of the year in this race, and won the £10,000 easily; the three-year old Candlemas being second, and St. Gatien third. St. Gatien won the Rous Memorial at Ascot, and the Jockey Club Cup, beating Melton in the last-named event easily. Of the other Cup contests, Althorp won the Ascot Gold Cup, beating Bird of Freedom. The unlikely Despair, at a very long price, won the Royal Hunt Cup. The Bard walked over for the Goodwood Cup, and also won the Doncaster Cup very easily. In the richest handicap of the year, the Manchester Cup, the Bard, carrying 8st. 4lb., was beaten by a three-year old, Riversdale, 6st. 1lb. This race and the Derby were the Bard's only defeats during the year. Perhaps the best handicap horse of the season was Melton, who, as a four-year old, with 9st. 4lb. and 9st. 3lb. respectively, won the Leicestershire Cup and the Liverpool Autumn Cup. Stone Clink's double victory in the Northumberland Plate and the Cesarewitch proved her to be a filly possessed of staying powers of the highest order. Both Stone Clink and Sailor Prince, the winner of the Cambridgeshire, started at very outside prices in the betting. The Steward's Cup at Goodwood, another heavy betting race, was also won by a complete outsider, Crafton, who started at 40 to 1 against.

The two-year old racing of the year has left the Baron by Xenophon first favourite for the Derby of 1887. He won all his four engagements, including the Woodcote and the Astley stakes at Lewes, beating in the latter race Florentine, who subsequently won the Middle Park Plate, value £2,385, with Enterprise second. Subsequently the Duke of Beaufort's Rêve D'Or, by Hampton, beat both Enterprise and Florentine in the Dewhurst Plate. Rêve D'Or is not in the Derby. Kilwarline, Annamite, Grandison, Timothy, and Caller Herrin also performed well in various two-year-old races. Sandown Park announce a £3,000 Jubilee Handicap for 1887, as the Eclipse Stakes for this year did not fill. The Kempton Park executive have secured the enormous entry of 625, a best on record, for their £5,000 Great Breeder's Produce Stakes, to be run in 1889.

In the thirteenth year in succession F. Archer headed the list of winning jockeys with 170 victories out of 513 mounts, C. Wood coming second with 167 wins and 511 mounts; G. Barrett was third with 121 wins and 698 mounts, and F. Barrett is fourth with 94 wins. On Nov. 8th Archer shot himself when in a state of delirium and high fever, brought on by excessive wasting. This remarkable jockey during his extraordinary career rode 2,748 winners out of 8,085 mounts. His sad fate will probably induce the Jockey Club to do away with the absurdly light weights allowable in handicaps. Tom Challoner, another celebrated jockey, also died in the spring. Amongst the winning owners of the season the Duke of Westminster (chiefly owing to Ormonde's victories) stands first with £24,430; "Mr. Manton" is second with £14,173; Mr. Abington third, £11,440; M. H. Barclay fourth, £11,440; and the Duke of Beaufort fifth, £9,563. Bend Or and Petrarch take first class honours as sires, and Tomahawk, Arbitrator, and Xenophon emerge from comparative obscurity into very forward places. St. Gatien and Melton retired to the stud at the end of the season.

A few more statistics of the season may be interesting. In the list of the winning sires, Hermit, the Derby winner of 1867, who for six successive years has occupied the first place, is at length just passed by Bend Or, the Derby winner of 1880. Bend Or's stock have won between them £22,803; Hermit's produce total £22,672; Petrarch stands third, with £15,612; and Hampton comes fourth with £14,567 sterling. A noted sire, whose progeny in 1884 won £20,157, has had a very bad year, coming low down on the List with only £4,986. The values of the principal races of 1886 were The Eclipse Stakes at Sandown, £10,000; Grand Prix de Paris, £5,904; The Derby, £4,700; St. Leger, £4,475; Two Thousand Guineas, £4,000; One Thousand Guineas, £2,950; Epsom Oaks, £3,250; Epsom Grand Prize, £2,827; Middle Park Plate, £2,385; Dewhurst Plate, 1,£532; Cambridgeshire Handicap, £1,195; Ascot Coronation Stakes, £2,450; Ascot Gold Cup; £1,130; Ascot Prince of Wales Stakes, £2,425.

Lawn Tennis.—The modern game of Lawn Tennis was never more popular than in 1886. All through the summer lawn tennis tournaments were successfully carried out in every part of the United Kingdom. In the early spring, Lawford was defeated for the Covered Court Championship by a young player named E. L. Williams, but the former managed for the third time to carry off the championship of Ireland. Lawford once more defeated all comers for the All England Lawn Tennis Championship, at Wimbledon, in July, except the holder, W. Renshaw, who, for the sixth time, successfully defended his right to the title. W. Renshaw is undoubtedly a very long way the best of all the exponents of the game, and H. G. Lawford must be considered next to the champion. In the West of England Challenge Cup, at Bath, J. Dwight, the American, beat E. S. H. Browne; but immediately afterwards, at Cheltenham, for the One Hundred Guinea Challenge Cup, Browne turned the tables on the Yankee. For the Ladies' Championship, at Wimbledon, Miss Maud Watson, the holder, was unexpectedly beaten by Miss Bingley; but subsequently, at Exmouth, the latter was defeated by Miss M. Watson. The brothers W. & E. Renshaw again won the Four-handed Championship at the Wimbledon meeting.

A MERE enumeration or analysis of the contents of the Irish Government Bill, 1886, and the Land (Ireland) Bill, 1886, would convey scarcely any intelligible idea to the mind of an ordinary reader. It is therefore proposed in the following pages, before entering on the details of each Bill, to give a summary of the reasons which led to its introduction, and of the principles on which it is founded. To begin with the Irish Government Bill—

The object of the Irish Government Bill is to confer on the Irish people the largest measure of self-government consistent with the absolute supremacy of the Crown and Imperial Parliament and the entire unity of the Empire. To carry into effect this object it was essential to create a separate though subordinate legislature; thus occasion was given to opponents to apply the name of Separatists to the supporters of the Bill—a term true in so far only as it denoted the intention to create a separate legislature, but false and calumnious when used in the sense in which it was intended to be understood—of imputing to the promoters of the Bill the intention to disunite or in any way to disintegrate the Empire. Indeed, the very object of the measure was, by relaxing a little the legal bonds of union, to draw closer the actual ties between England and Ireland, in fact, to do as we have done in our Colonies, by decentralizing the subordinate functions of government to strengthen the central supremacy of natural affection and Imperial unity. The example of the effects of giving complete self-government to our Colonies would seem not unfavourable to trying the same experiment in Ireland. Some forty years ago, Canada, New Zealand, and the various colonies of Australia were discontented and uneasy at the control exercised by the government of England over their local affairs. What did England do? She gave to each of those communities the fullest power of local government consistent with the unity of the Empire. The result was that real union was established in the same degree as the apparent tie of control over local affairs was loosened. Are there any reasons to suppose that the condition of Ireland is such as to render the example of the Colonies applicable. Let us look a little at the past history of that country. Up to 1760 Ireland was governed practically as a conquered country. The result was that in 1782, in order to save Imperial unity, we altogether relaxed the local tie and made Ireland legislatively independent. The Empire was thus saved, but difficulties naturally arose between two independent legislatures. The true remedy would have been to have imposed on Grattan's Parliament the conditions imposed by the Irish Government Bill on the statutory Parliament created by that Bill; the course actually taken was that, instead of leaving the Irish with their local government, and arranging for the due supremacy of England, the Irish Legislature was destroyed under the guise of Union, and Irish representatives were transferred to an assembly in which they had little weight, and in which they found no sympathy. The result was that from the date of the Union to the present day Ireland has been constantly working for the reinstatement of its National Legislature, and has been governed by a continuous system of extraordinary legislature called coercion; the fact being that between 1800, the date of the Act of Union, and 1832, the date of the great Reform Act, there were only 11 years free from coercion, while in the 53 years since that period there have been only two years entirely free from special repressive legislation. So much therefore is clear, that Irish discontent at not being allowed to manage their own affairs has gradually increased instead of diminishing. The conclusion then would seem irresistible, that if coercion has failed the only practical mode of governing Ireland satisfactorily is to give the people power to manage their local affairs. Coming then to the principle of the Bill, the first step is to reconcile local government with Imperial supremacy, in other words, to divide Imperial from local powers; for if this division be accurately made, and the former class of powers be reserved to the British Crown and British Parliament, while the latter only are intrusted to the Irish Parliament, it becomes a contradiction in terms to say that Imperial unity is dissolved by reserving to the Imperial authority all its powers, or that Home Rule is a sundering of the Imperial tie when that tie is preserved inviolable. Imperial powers then are the prerogatives of the Crown with respect to peace and war, and making treaties with foreign nations; in short, the power of regulating the relations of the Empire towards foreign nations. These are the *jura summi imperii*, the very insignia of supremacy; the attributes of sovereign authority in every form of government, be it despotism, limited monarchy, or republic; the only difference is that in a system of government under one supreme head, they are vested in that head alone, in a federal government, as in America or Switzerland, they reside in the composite body forming the federal supreme authority. Various subsidiary powers necessarily attend the above supreme powers, for example, the power of maintaining armies and navies, of commanding the militia, and other incidental powers. Closely connected with the power of making peace and war is the power of regulating commerce with foreign nations. Next in importance to the reservations necessary to constitute the Empire a Unity with regard to foreign nations, are the powers required to prevent disputes and to facilitate intercourse between the various parts of the Empire. These are the coinage of money and other regulations relating to currency, to copyright or other exclusive rights to the use or profit of any works or inventions. The above subjects must be altogether excluded from the powers of the subordinate legislature; it ceases to be subordinate as soon as it is invested with these Imperial, or quasi-Imperial, powers.

Assuming, however, the division between Imperial and local powers to be accurately determined, how is the subordinate legislative body to be kept within its due limits? The answer is very plain,—an Imperial court must be established to decide in the last resort whether the subordinate legislature has or has not infringed Imperial rights. Such a court has been in action in the United States of America ever since their union, and no serious conflict has arisen in carrying its decisions into effect and the Privy Council, acting as the Supreme Court in respect to Colonial appeals, has been

accepted by all the self-governing colonies as a just and impartial expositor of the meaning of their several constitutions.

Next in importance to the right division of Imperial and local powers is a correct understanding of the relation borne by the executive of an autonomous country to the mother country. In every part of the British Empire which enjoys home rule the legislature consists of the Queen and the two local legislative bodies. The administrative power resides in the Queen alone. The Queen has the appointment of all the officers of the government; money bills can be introduced into the legislature only with the consent of the Queen. The initiative power of taxation then is vested in the Queen, the executive head, in practice represented by the Governor. But such a power of initiation is of course useless unless the legislative body is willing to support the executive, and grants it the necessary funds for carrying on the government. What, then, is the contrivance by which the governmental machine is prevented from being stopped by a difference between the executive and legislative authorities? It is the same in the mother country, and in every British home-rule country, with this difference only,—that beyond the limits of the mother country the Queen is represented by a governor to whom are delegated such a measure of powers as is necessary for the supreme head of a local self-governing community. The contrivance is this in the mother country:—the Queen acts upon the advice of a cabinet council; in home-rule dependencies the governor acts on the advice of a local council. If this cabinet council in the mother country, or local council in a dependency, ceases to command a majority in the popular legislative body, it resigns, and the governor is obliged to select a council which, by commanding such a majority, can obtain the supplies necessary to carry on the government. The consequence then is that in a home-rule community, if a serious difficulty arises between the legislative and executive authority, the head of the executive, the governor, refers the ultimate decision of the question to the general body of electors by dissolving the popular legislative body. It has been urged in the discussion on the Irish Government Bill that the powers of the executive in relation to the legislative body ought to be expressed in the Bill itself; but it is clear to anybody acquainted with the rudiments of legislation that the details of such a system—(in other words, the mode in which a governor ought to act under the endless variety of circumstances which may occur in governing a dependency)—never have been and never can be expressed in an Act of Parliament. But how little difficulty this absence of definition has caused may be judged from the fact that neither in England nor in any of her home-rule dependencies has any vital collision arisen between the executive and legislative authorities, and that all the home-rule colonies have managed to surmount the obstacles which the opponents of Home Rule argued would be fatal to their existence. The main principles have now been stated on which the Irish Government Bill is framed, and it remains to give a summary of the provisions of the Bill, the objects and bearing of which will be readily understood from the foregoing observations. The first clause provides that—

"On and after the appointed day there shall be established in Ireland a Legislature consisting of Her Majesty the Queen and an Irish legislative body."

This is the first step in all English constitutional systems, to vest the power of legislation in the Queen and the legislative body. Such a legislature might have had conferred on it the independent powers vested in Grattan's Parliament: but the second clause at once puts an end to any doubt as to the subordination of the Irish legislative body; for while on the one hand it confers full powers of local self-government, by declaring that the Legislature may make any laws for the peace, order, and good government of Ireland, it subjects that power to numerous exceptions and restrictions. The exceptions are contained in the third clause, and the restrictions in the fourth. The exceptions are as follows:—

"The Legislature of Ireland shall not make laws relating to the following matters or any of them:—

"(1.) The status or dignity of the Crown, or the succession to the Crown, or a Regency;

"(2.) The making of peace or war;

"(3.) The army, navy, militia, volunteers, or other military or naval forces, or the defence of the realm;

"(4.) Treaties and other relations with foreign States, or the relations between the various parts of Her Majesty's dominions;

"(5.) Dignities or titles of honour;

"(6.) Prize or booty of war;

"(7.) Offences against the law of nations; or offences committed in violation of any treaty made, or hereafter to be made, between Her Majesty and any foreign State; or offences committed on the high seas;

"(8.) Treason, alienage, or naturalization;

"(9.) Trade, navigation, or quarantine;

"(10.) The postal and telegraph service, except as hereafter in this Act mentioned with respect to the transmission of letters and telegrams in Ireland;

"(11.) Beacons, lighthouses, or sea-marks;

"(12.) The coinage; the value of foreign money; legal tender; or weights and measures; or

"(13.) Copyright, patent rights, or other exclusive rights to the use or profits of any works or inventions."

Of these exceptions the first four preserve the imperial rights which have been insisted on above, and maintain the position of Ireland as an integral portion of that empire of which Great Britain is the head. The remaining exceptions are either subsidiary to the first four, or relate, as is the case with exceptions 10 to 13, to matters on which it is desirable that uniformity should exist throughout the whole empire. The restrictions in clause 4 are:—

"The Irish Legislature shall not make any law—

"(1.) Respecting the establishment or endowment of religion, or prohibiting the free exercise thereof; or

"(2.) Imposing any disability, or conferring any privilege, on account of religious belief; or

"(3.) Abrogating or derogating from the right to establish or maintain any place of denominational education or any denominational institution or charity; or

"(4.) Prejudicially affecting the right of any

child to attend a school receiving public money without attending the religious instruction at that school; or

"(5.) Impairing, without either the leave of Her Majesty in Council first obtained on an address presented by the legislative body of Ireland, or the consent of the corporation interested, the rights, property, or privileges of any existing corporation incorporated by royal charter or local and general Act of Parliament; or

"(6.) Imposing or relating to duties of customs and duties of excise, as defined by this Act, or either of such duties, or affecting any Act relating to such duties or either of them; or

"(7.) Affecting this Act, except in so far as it is declared to be alterable by the Irish Legislature."

These restrictions differ from the exceptions, inasmuch as they do not prevent the Legislature of Ireland from dealing with the subjects to which they refer, but merely impose on it an obligation not to handle the specified matters in a manner detrimental to the interests of certain classes of Her Majesty's subjects. For example, restrictions 1 to 4 are practically concerned in securing religious freedom; restriction 5 protects existing charters; restriction 6 is necessary, as will be seen hereinafter, to carrying into effect the financial scheme of the bill; restriction 7 is a consequence of the very framework of the Bill: it provides for the stability of the Irish constitution, by declaring that the Irish Legislature is not competent to alter the constitutional act to which it owes its existence, except on those points on which it is expressly permitted to make alterations.

Clause 5 is an exposition, so to speak, of the consequence which would seem to flow from the fact of the Queen being a constitutional part of the Legislature. It states that the royal prerogatives with respect to the summoning, prorogation, and dissolution of the Irish legislative body are to be the same as the royal prerogatives in relation to the Imperial Parliament. The next clause (6) is comparatively immaterial; it merely provides that the duration of the Irish legislative body is to be quinquennial. As it deals with a matter of detail, it perhaps would have more aptly found a place in a subsequent part of the Bill. Clause 7 passes from the legislative to the executive authority; it declares:—

(1.) The executive government of Ireland shall continue vested in Her Majesty, and shall be carried on by the Lord Lieutenant on behalf of Her Majesty with the aid of such officers and such council as to Her Majesty may from time to time seem fit.

(2.) Subject to any instructions which may from time to time be given by Her Majesty, the Lord Lieutenant shall give or withhold the assent of Her Majesty to bills passed by the Irish legislative body, and shall exercise the prerogatives of Her Majesty in respect of the summoning, proroguing, and dissolving of the Irish legislative body, and any prerogatives the exercise of which may be delegated to him by Her Majesty.

Bearing in mind what has been said in the preliminary observations in respect of the relation between the executive and the legislative authority, it will be at once understood how much this clause implies, according to constitutional maxims, of the dependence on the one hand of the Irish executive in respect of imperial matters, and of its independence in respect of local matters. The clause is practically co-ordinate and correlative with the clause conferring complete local powers on the Irish Legislature while it preserves all imperial powers to the Imperial Legislature. The governor is an imperial officer, and will be bound to watch over imperial interests with a jealous scrutiny, and to veto any bill which may be injurious to those interests. On the other hand, as respects all local matters, he will act on and be guided by the advice of the Irish executive council. The system is, as has been shown above, self-acting. The governor, for local purposes, must have a council which is in harmony with the legislative body. If a council, supported by the legislative body and the governor do not agree, the governor must give way unless he can, by dismissing his council and dissolving the legislative body, obtain both a council and a legislative body which will support his views. As respects imperial questions, the case is different; here the last word rests with the mother country, and in the last resort a determination of the executive council, backed by the legislative body, to resist imperial rights, must be deemed an act of rebellion on the part of the Irish people, and be dealt with accordingly.

The above clauses contain the pith and marrow of the whole scheme. The exact constitution of the legislative body, and the orders into which it should be divided, the exclusion or non-exclusion of the Irish members from the Imperial Parliament, indeed, the whole of the provisions found in the remainder of this Bill, are matters which might be altered without destroying, or even violently disarranging, the Home-rule scheme as above described.

Clauses 9, 10, and 11 provide for the constitution of the legislative body; it differs materially from the colonial legislative bodies, and from the Legislature of the United States. For the purpose of deliberation it consists of one House only; for the purpose of voting on all questions (except interlocutory applications and questions of order), it is divided into two classes, called in the Bill "Orders," each of which votes separately, with the result that a question on which the two orders disagree is deemed to be decided in the negative. The object of this arrangement is to diminish the chances of collision between the two branches of the Legislature, which have given rise to so much difficulty both in England and the colonies. Each order will have ample opportunity of learning the strength and hearing the arguments of the other order. They will therefore, each of them, proceed to a division with a full sense of the responsibility attaching to their action. A further safeguard is provided against a final conflict between the first and second orders. If the first order negative a proposition, that negative is in force only for a period of three years, unless a dissolution takes place sooner, in which case it is terminated at once; the lost bill or clause may then be submitted to the whole House, and if decided in the affirmative, and assented to by the Queen, becomes law. The first order of the Irish legislative body comprises 103 members. It is intended to consist ultimately wholly of elec-

tive members; but for the next immediate period of 30 years the rights of the Irish representative peers are, as will be seen, scrupulously reserved. The plan is this: of the 103 members composing the first order, 75 are elective, and 28 peerage members. The qualification of the elective members is an annual income of £200, or the possession of a capital sum of £4,000 free from all charges. The elections are to be conducted in the electoral districts set out in the schedule to the Bill. The electors must possess land or tenements within the district of the annual value of £25. The 28 peerage members consist of the existing 28 representative peers, and any vacancies in their body during the next 30 years are to be filled up in the manner at present in use respecting the election of Irish representative peers. The Irish representative peers cease to sit in the English Parliament; but a member of that body is not required to sit in the Irish Parliament without his assent, and the place of any existing peer refusing to sit in the Irish Parliament will be filled up as in the case of an ordinary vacancy. The elective members of the first order sit for ten years; every five years one half their number will retire. The members of the first order do not vacate their seats on a dissolution of the legislative body. At the expiration of 30 years, that is to say, upon the exhaustion of all the existing Irish representative peers, the whole of the upper order will consist of elective members. The second order consists of 204 members, that is to say, of the 103 existing Irish members (who are transferred to the Irish Parliament), and of 101 additional members to be elected by the county districts and the represented towns, in the same manner as that in which the present 101 members for counties and towns are elected—each constituency returning two instead of one member. If an existing member does not assent to his transfer, his seat is vacated.

A power is given to the Legislature of Ireland to enable the Royal University of Ireland to return two members.

The provisions with respect to this second order fall within the class of enactments which are alterable by the Irish Legislature. After the first dissolution of parliament the Irish Legislature may deal with the second order in any manner they think fit, with the important restrictions:— (1) That in the distribution of members they must have due regard to population; (2) that they must not increase or diminish the number of members.

The transfer to the Irish legislative body of the Irish representative peers, and of the Irish members, involves their exclusion under ordinary circumstances from the Imperial Parliament, with this great exception, that whenever an alteration is proposed to be made in the fundamental provisions of the Irish Government Bill, a mode of procedure is devised for recalling both orders of the Irish legislative body to the Imperial Parliament for the purpose of obtaining their consent to such alteration (clause 39).

Further, it is right to state here that Mr. Gladstone in his speech on the second reading of the Bill proposed to provide, "that when any proposal for taxation was made affecting the condition of Ireland, Irish members should have an opportunity of appearing in the House to take a share in the transaction of that business."

Questions arising as to whether the Irish Parliament has or not exceeded its constitutional powers may be determined by the ordinary courts of law in the first instance; the ultimate appeal lies to the Judicial Committee of the Privy Council. An additional safeguard is provided by declaring that before a provision in a Bill becomes law, the Lord Lieutenant may take the opinion of the Judicial Committee of the Privy Council as to its legality, and further, that without subjecting private litigants to the expense of trying the constitutionality of an Act, the Lord Lieutenant may, of his own motion, move the judicial committee to determine the question. With a view to secure absolute impartiality in the committee, Ireland will be represented on that body by persons who are or have been Irish judges (clause 25).

The question of finance forms a separate portion of the Bill, the provisions of which are contained in clauses twelve to twenty, while the machinery for carrying those enactments into effect will be found in Part III. of the Land Bill. The first point to be determined was the amount to be contributed by Ireland to imperial expenses. Under the Act of Union it was intended that Ireland should pay $\frac{1}{17}$ths, or in the proportion of 1 to 7½ of the total expenditure of the United Kingdom. This amount being found exorbitant, it was gradually reduced, until at the present moment it amounts to something under the proportion of 1 to 11½. The bill fixes the proportion at $\frac{1}{15}$th, or 1 to 14, this sum being arrived at by a comparison between the amount of the income-tax, death-duties, and valuation of property in Great Britain, and the amount of the same particulars in Ireland. The amount to be contributed by Ireland to the imperial expenditure being thus ascertained, the more difficult part of the problem remained to provide the fund out of which the contribution should be payable, and the mode in which its payment should be secured. The plan which commended itself to the framers of the Bill, as combining the advantage of insuring the fiscal unity of Great Britain and Ireland, with absolute security to the British exchequer, was to continue the customs and excise duties under imperial control, and to pay them into the hands of an imperial officer. This plan is carried into effect by the conjoint operation of the clauses of the Irish Government Bill and the Irish Land Bill above referred to. The customs and excise duties are directed to be levied as heretofore in pursuance of the enactments of the Imperial Parliament, and are excepted from the control of the Irish Legislature, which may, with that exception, impose any taxes in Ireland it may think expedient. The imperial officer who is appointed under the Land Bill bears the title of Receiver-General, and into his hands not only the imperial taxes (the customs and excise duties), but also all local taxes imposed by the Irish Parliament are in the first instance paid. (See Clauses 25—27 of the Land Bill.) The Receiver-General having thus in his hands all imperial and local funds levied in Ireland, his duty is to satisfy all imperial claims before paying over any moneys to the Irish Exchequer. Further, an Imperial Court of Exchequer is established in Ireland to watch over the interests

of the Receiver-General, and all revenue cases are to be tried, and all defaults punished in that court. Any neglect of the local authorities to carry into effect the decrees of the Imperial Court will amount to treason, and it will be the duty of the Imperial Government to deal with it accordingly.

Supposing the Bill to have passed, the account of the Exchequer in Ireland would have stood thus:—

RECEIPTS.

1. *Imperial Taxes:*		
(1) Customs	£1,880,000	
(2) Excise	4,300,000	
		£6,180,000
2. *Local Taxes:*		
(1) Stamps.....	£600,000	
(2) Income-Tax at 6*d.* in £	550,000	
		£1,150,000
3. *Non-Tax Revenue:* (Post Office, Telegraph, &c.)	£1,020,000	
		£8,350,000

EXPENDITURE.

1. *Contribution to Imperial Exchequer* on basis of $\frac{1}{18}$th of Imperial Expenditure, viz.:		
(1) Debt Charge	£1,466,000	
(2) Army and Navy ..	1,666,000	
(3) Civil Charges.....	110,000	
		£3,242,000
2. *Sinking Fund* on $\frac{1}{18}$th of Capital of Debt.....		360,000
3. *Charge for Constabulary* *.....		1,000,000
4. *Local Civil Charges* other than Constabulary.....		2,510,000
5. *Collection of Revenue:*		
(1) Imperial Taxes.....	£170,000	
(2) Local Taxes	60,000	
(3) Non-Tax Revenue ..	604,000	
		834,000
6. *Balance* or Surplus.....		404,000
		£8,350,000

* Any charge in excess of one million was to be borne by Imperial Exchequer.

The Imperial contribution payable by Ireland to Great Britain cannot be increased for thirty years, though it may be diminished if the charges for the army and navy and Imperial civil expenditure for any year be less than fifteen times the contribution paid by Ireland, in which case $\frac{1}{18}$th of the diminution will be deducted from the annual Imperial contribution. Apart from the Imperial charges there are other charges strictly Irish, for the security of the payment of which the Bill provides. This it does by imposing an obligation on the Irish legislative body to enact sufficient taxes to meet such charges, and by directing them to be paid by the Imperial Receiver-General, who is required to keep an imperial and an Irish account, carrying the customs and excise duties, in the first instance, to the imperial account, and the local taxes to the Irish account, transferring to the Irish account the surplus remaining after paying the imperial charges on the imperial account. On this Irish account are charged debts due from the Government of Ireland, pensions, and other sums due to the civil servants, and the salaries of the judges of the supreme courts in Ireland.

Some provisions of importance remain to be noticed. Judges of the superior and county courts in Ireland are to be removable from office only on address to the Crown, presented by both orders of the Legislative body voting separately. Existing Civil servants are retained in their offices at their existing salaries; if the Irish Government desire their retirement, they will be entitled to pensions; on the other hand, if at the end of two years the officers themselves wish to retire, they can do so, and will be entitled to the same pensions as if their office had been abolished. The pensions are payable by the Receiver-General out of the Irish account above mentioned. The supremacy of the Imperial Parliament over all parts of the Empire is an inherent quality of which Parliament cannot divest itself inasmuch as it cannot bind its successors or prevent them from repealing any prior Act. In order, however, to prevent any misapprehension on this point clause 37 was inserted, the efficacy of which, owing in great measure to a misprint, has been doubted. It is enough to state here that it was intended by express legislation to reserve all powers to the Imperial Parliament, and had the Bill gone into Committee the question would have been placed beyond the reach of cavil by a slight alteration in the wording of the clause. This summary may be concluded by the statement that the appellate jurisdiction of the House of Lords over actions and suits arising in Ireland (except in respect of constitutional questions reserved for the determination of the Judicial Committee of the Privy Council as explained above), and with respect to claims for Irish Peerages, is preserved intact.

The object of the Land Bill was a political one: to promote the contentment of the people, and the cause of good government in Ireland, by settling once and for ever the vexed question relating to land. To do this effectually it was necessary to devise a system under which the tenants, as a class, should become interested in the maintenance of social order, and be furnished with substantial inducements to rally round the institutions of their country. On the other hand, it was just and right that the landlords should participate in the benefits of any measure proposed for remedying the evils attendant upon the tenure of land in Ireland; and should be enabled to rid themselves, on fair terms, of their estates in cases where, from apprehension of impending changes, or for pecuniary reasons, they were desirous of relieving themselves from the responsibilities of ownership. Further, it was felt by the framers of the Bill that a moral obligation rested on the Imperial Government to remove, if possible, "the fearful exasperations attending the agrarian relations in Ireland," rather than leave a question so fraught with danger, and so involved in difficulty, to be

determined by the Irish Government on its first entry on official existence. Such were the governing motives for bringing in the Land Bill.

To understand an Irish Land Bill it is necessary to dismiss at once all ideas of the ordinary relations between landlord and tenant in England, and to grasp a true conception of the condition of an Irish tenanted estate. In England the relation between the landlord and tenant of a farm resembles, with a difference in the subject-matter, the relation between the landlord and tenant of a furnished house. In the case of the house, the landlord keeps it in a state fit for habitation, and the tenant pays rent for the privilege of living in another man's house. In the case of the farm, the landlord provides the farm with house, farm-buildings, gates, and other permanent improvements required to fit it for cultivation by the tenant, and the tenant pays rent for the privilege of cultivating the farm, receiving the proceeds of that cultivation. The characters of owner and tenant, however long the connection between them may subsist, are quite distinct. The tenant does no acts of ownership, and never regards the land as belonging to himself, quitting it without hesitation if he can make more money by taking another farm. In Ireland the whole situation is different: instead of a farm of some 100 or 200 acres, the tenant has a holding varying, say, from 5 to 50 acres, for which he pays an annual rent-charge to the landlord. He, or his ancestors have, in the opinion of the tenant, acquired a quasi-ownership in the land by making all the improvements, and he is only removable on non-payment of the fixed rent, or non-fulfilment of certain specified conditions. In short, in Ireland the ownership is dual: the landlord is merely the lord of a quasi-copyhold manor, consisting of numerous small tenements held by quasi-copyholders who, so long as they pay what may be called the manorial rents, and fulfil the manorial conditions, regard themselves as independent owners of their holdings. An Irish Land Bill, then, dealing with tenanted estates, is, in fact, merely a Bill for converting the small holders of tenements held at a fixed rent into fee-simple owners by redemption of the rent due to the landlord and a transfer of the land to the holders. Every scheme, therefore, for settling the Land question in Ireland resolves itself into an inquiry as to the best mode of paying off the rent-charges due to the landlord. The tenant cannot, of course, raise the capital sufficient for paying off the redemption money; some State authority must therefore intervene and advance the whole or the greater part of that money, and recoup itself for the advance by the creation in its own favour of an annual charge on the holding sufficient to repay in a certain number of years both the principal and interest due in respect of the advance.

The first problem, then, in an Irish Land Bill, is to settle the conditions of this annuity in such a manner as to satisfy the landlord and tenant; the first, as to the price of his estate; the second, as to the amount of the annuity to be paid by him, at the same time to provide the State authority with adequate security for the repayment of the advance, or, in other words, for the punctual payments of the annuity which is to discharge the advance. Next in importance to the financial question of the adjustment of the annuity comes the administrative difficulty of investigating the title, and thus securing to the tenant the possession of the fee simple, and to the state authority the position of a mortgagee. Under ordinary circumstances the investigation of the title to an estate involves the examination of every document relating thereto for a period of 40 years, and the distribution of the purchase-money amongst the head renters, mortgagees, and other encumbrancers, who, in addition to the landlord, are found to be interested in the ownership of almost every Irish estate. Such a process is costly, even in the case of large estates, and involves an expense almost, and, indeed, speaking generally, absolutely prohibitory in the case of small properties. Some mode, then, must be devised for reducing this expense within manageable limits, or any scheme for dealing with Irish land, however well devised from a financial point of view, will sink under the burden imposed by the expense attending the transfer of the land to the new proprietors. Having thus stated the two principal difficulties attending the Land question in Ireland, it may be well before entering on the details of the Sale and Purchase of Land (Ireland) Bill, to mention the efforts which have been made during the last 15 years to surmount those difficulties. The acts having this object in view are the Land Acts of 1870, 1872, and 1881, brought in by Mr. Gladstone, and the Land Purchase Act of 1885, brought in by the Conservative Lord Chancellor of Ireland (Lord Ashbourne). The Act of 1870, as amended by the Act of 1872, provided that the State authority might advance two-thirds of the purchase-money. An attempt was made to get over the difficulties of title by providing that the Landed Estates Court or Board of Works shall undertake the investigation of the title and the transfer and distribution of the purchase-money at a fixed price. The Act of 1881 increased the advance to three-quarters, leaving the same machinery to deal with the title. Both under the Acts of 1870 and 1881 the advance was secured by an annuity of 5 per cent., payable for the period of 35 years, and based on the loan of the money by the English Exchequer at 3½ per cent. interest. These Acts produced very little effect. The expense of dealing with the titles in the Landed Estates Court proved overwhelming, and neither the Board of Works, under the Act of 1872, nor the Land Commission, under the Act of 1881, found themselves equal to the task of completing inexpensively the transfer of the land; further, the tenants had no means of providing even the quarter of the purchase-money required by the Act of 1881. In 1885 Lord Ashbourne determined to remove all obstacles at the expense of the English Exchequer. By the Land Act of that year he authorized the whole of the purchase money to be advanced by the State, with a guarantee by the landlord, to be carried into effect by his allowing one-fifth of the purchase-money to remain in the hands of the agents of the State Authority until one-fifth of the purchase-money had been repaid by the annual payments of the tenants. The principal was to be recouped by an annuity of 4 per cent., extending over a period of 49 years, instead of an annuity of 5 per cent. extending over a period of 35 years. The English Exchequer was to advance the money on the basis of interest at 3⅛ per cent., instead of at 3½ per cent. Though sufficient time has not yet elapsed to show whether the great

bribe offered by the Act of 1885, at the expense of the British taxpayer, will succeed in overcoming the apathy of the tenants, it cannot escape notice that if the Act of 1885 succeeds better than the previous Acts, it will owe that success solely to the greater amount of risk which it imposes on the English Exchequer, and not to any improvement in the scheme in respect of securing greater certainty of sale to the Irish landlord, or of diminishing the danger of loss to the English tax-payer.

Such being the state of legislation, and such the circumstances of the land question in Ireland in the year 1886, the Irish Government Bill afforded Mr. Gladstone the means and the opportunity of bringing in a Land Bill which would secure to the Irish landlord the certainty of selling his land at a fair price, without imposing any practical liability on the English Exchequer, and would, at the same time, diminish the annual sums payable by the tenant; while it also conferred a benefit on the Irish Exchequer. These advantages were, as will be seen, gained, firstly, by the pledge of English credit on good security, instead of advancing money on a mere mortgage on Irish holdings, made directly to the English Government; and, secondly, by the interposition of the Irish Government, as the immediate creditor of the Irish tenant. The scheme of the Land Purchase Bill is as follows:—The landlord of an agricultural estate occupied by tenants may apply to a department of the new Irish Government to purchase his estate. The tenants need not be consulted, as the purchase, if completed, will necessarily better their condition, and thus at the very outset the difficulty of procuring the assent of the tenants, which has hitherto proved so formidable an obstacle to all Irish land schemes, disappears. The landlord may require the department to which he applies (called in the Bill the State Authority) to pay him the statutory price of his estate, not in cash, but in consols valued at par. This price, except in certain unusual cases of great goodness or of great badness of the land, is 20 years' purchase of the *net* rental. The *net* rental is the *gross* rental after deducting from that rent tithe-rent charge, the average percentage for expenses in respect of bad debts, any rates paid by the landlord, and any like outgoings. The *gross* rental of an estate is the gross rent of all the holdings on the estate, payable in the year ending in November 1885. Where a judicial rent has been fixed, it is the judicial rent; where no judicial rent has been fixed, it is the rent to be determined in the manner provided by the Bill.

To state this shortly, the Bill provides that an Irish landlord may require the State Authority to pay him for his estate, in consols valued at par, a capital sum equal to 20 times the amount of the annual sum which he has actually put into his pocket out of the proceeds of the estate. The determination of the statutory price is, so far as the landlord is concerned, the cardinal point of the Bill, and in order that no injustice may be done the landlord, an Imperial Commission—called the Land Commission—is appointed by the Bill, whose duty it is to fix the statutory price, and, where there is no judicial rent, to determine the amount of rent which, in the character of gross rental, is to form the basis of the statutory price. The Commission also pay the purchase-money to the landlord, or distribute it amongst the parties entitled, and generally the Commission act as intermediaries between the landlord and the Irish State Authority, which has no power of varying the terms to which the landlord is entitled under the Bill, or of judging of the conditions which affect the statutory price. If the landlord thinks the price fixed by the Land Commission, as the statutory price inequitable, he may reject their offer and keep his estate.

Supposing, however, the landlord to be satisfied with the statutory price offered by the Land Commission, the sale is concluded, and the Land Commission make an order carrying the required sum of consols (which is for convenience hereinafter called the purchase-money, although it consists of stock and not of cash) to the account of the estate in their books after deducting 1 per cent. for the cost of investigation of title and distribution of the purchase-money, and upon the purchase-money being thus credited to the estate, the landlord ceases to have any interest in the estate, and the tenants, by virtue of the order of the Land Commission, become owners in fee simple of their holdings, subject to the payment to the Irish State Authority of an annuity. The amount of the annuity is stated in the Bill. It is a sum equal to £4 per cent on a capital sum equal to 20 times the amount of the gross rental of the holding. The illustration given by Mr. Gladstone in his speech will at once explain these apparently intricate matters of finance. A landlord is entitled to the Hendon estate, producing £1,200 a year gross rental; to find the net rental, the Land Commission deduct from this gross rental outgoings estimated at about 20 per cent., or £240 a year. This makes the net rental £960 a year, and the price payable to the landlord is £19,200 (20 years' purchase of £960, or £960 multiplied by 20), which, as above stated, will be paid in consols. The tenants will pay, as the maximum amount for their holdings, £4 per cent. for 49 years on the capitalized value of 20 years' purchase of the gross rent. This will amount to £960 instead of £1,200, which they have hitherto paid, a saving of £240 a year will thus be affected, from which, however, must be deducted the half rates to which they will become liable, formerly paid by the landlord. This £4 per cent. charge payable by the tenants will continue for 49 years, but at the end of that time each tenant will become a free owner of his estate without any annual payment. Next, as to the position of the State Authority. The State Authority receives £960 from the tenants; it pays out of that sum £4 per cent., not upon the gross rental, but upon the net rental capitalized, that is to say, £768 to the Imperial Exchequer. The State Authority, therefore, receives £960, and assuming that the charge of collecting the rental is 2 per cent., that is to say, £19 4s., the State Authority will, out of £960, have to disburse only £787 4s., leaving it a gainer of £172 16s., or nearly 18 per cent. The result then between the several parties is, the landlord receives £19,200, the tenantry pay £240 a year less than they have hitherto paid, and at the end of 49 years are exempt altogether from payment; the gain of Irish State Authority is £172 16s. a year. Another mode of putting the case shortly is as follows: The English Exchequer lends the money to the Irish State Authority at 3⅞ per cent. and an annuity of 4 per cent. paid during 49 years will, as

has been stated above, repay both principal and interest for every £100 lent at 3½ per cent. On the sale of an estate under the Bill, the landlord receives 20 years' purchase; the tenant pays £4 per cent. on 20 years' purchase of the gross rental; the Irish State Authority receives £4 per cent. on the gross rental; the English Exchequer receives 4 per cent. on the net rental only. The repayment of the interest due by the Irish Authority to the English Exchequer is in no wise dependent on the punctual payment of their annuities by the Irish tenants, nor does the English Government in any way figure as the landlord or creditor of the Irish tenants. The annuities payable by the tenants are due to the Irish Government, and collected by them, while the interest due to the English Government is a charge on the whole of the Irish Government funds; and further, these funds themselves are paid in to the hands of the Imperial officer, whose duty it is to liquidate the debt due to his master, the Imperial Exchequer, before a sixpence can be touched by the Irish Government. It is not, then, any exaggeration to say that the Land Purchase Bill of 1886 provides for the settlement of the Irish Land question without any appreciable risk to the English Exchequer, and with the advantage of securing a fair price for the landlord, a diminution of annual payments to the tenant with the ultimate acquisition of the fee simple, also a gain of no inconsiderable sum to the Irish Exchequer. In order to obviate the difficulties attending the investigation of title and transfer of the property, the Bill provides, as stated above, that on the completion of the agreement for the sale between the landlord and the Commission, the holding shall vest at once in the tenants: it then proceeds to declare that the claims of all persons interested in the land shall attach to the purchase-money in the same manner as though it were land. The duty of ascertaining these claims and distributing the purchase-money is vested in the Land Commission, who undertake the task in exchange for the 1 per cent. which they have, as above stated, deducted from the purchase-money as the cost of conducting the complete transfer of the estate from the landlord to the tenants. The difficulty of the process of dealing with the purchase-money depends, of course, on the intricacy of the title. If the vendor is the sole unincumbered owner, he is put in immediate possession of the stock constituting the price of the estate. If there are encumbrances, as is usually the case, they are paid off by the Land Commission. Capital sums are paid in full jointures; and other life charges are valued according to the usual tables. Drainage and other temporary charges are estimated at their present value, permanent rent-charges are valued by agreement, or in case of disagreement, by the Land Commission; a certain minimum number of years' purchase being assigned by the Bill to any permanent rent-charge which amounts only to one-fifth part of the rental of the estate on which it is charged, this provision being made to prevent injustice being done to the holders of rent-charges which are amply secured.

It remains to notice certain other points of some importance. The landlord entitled to require the State to purchase his property is the immediate landlord, that is to say, the person entitled to the receipt of the rent of the estate; no encumbrancer can avail himself of the privilege, the reason being that the Bill is intended to assist solvent landlords, and not to create a new Encumbered Estates Court. The landlord may sell this privilege, and possibly by means of this power of sale may be able to put pressure on his encumbrancers to reduce their claims in order to obtain immediate payment. The Land Commission, in their character of quasi-arbitrators between the landlord and the Irish State Authority, have ample powers given to enable them to do justice. If the statutory price, as settled according to the Act, is too low, they may raise it to 22 years' purchase instead of 20 years' purchase. If it is too high, they may refuse to buy unless the landlord will reduce it to a proper price. In the congested districts scheduled in the Bill the land, on a sale, passes to the Irish State Authority, as landlords, and not to the tenants; the reason being that it is considered that the tenants would be worsened, rather than bettered, by having their small plots vested in them in fee simple. For the same cause it is provided that in any part of Ireland tenants of holdings under £4 a year may object to become the owners of their holdings, which will thereupon vest, on a sale, in the Irish State Authority. Lastly, the opportunity is taken of establishing a registry of title in respect of all property dealt with under the Bill. The result of such a registry would be that any property entered therein would ever thereafter be capable of being transferred with the same facility, and at as little expense, as stock in the public funds.

Proceedings in Parliament.

It remains only to state that Mr. Gladstone moved for leave to bring in the Irish Government Bill on April 8th, 1886; and the debate continued during the 9th, 12th, and 13th of April, it being read a first time on the last of those days. The second reading was moved on May 10th, the debate continued on May 13th, 17th, 18th, 21st, 25th, 28th, 31st, and June 1st, 3rd, 4th, and 7th; on the latter day the House divided, and the Bill was thrown out. On April 16th Mr. Gladstone moved for leave to bring in the Sale and Purchase of Land (Ireland) Bill, and it was read a first time on the same day. On the 10th of June the order for the second reading was discharged, and the Bill withdrawn.

The opinions expressed in the foregoing pages are those of the writer only. He is, from his position, well qualified to give an accurate account of the Irish Bills, and we have good reason for thinking that the framers of those bills are satisfied with the representation of their purport and of the arguments in their favour contained in the above article.

WHATEVER concerns those that "go down to the sea in ships" is certain of awakening a lively interest in the minds of Englishmen. The stirring story of the sea, bound up as it is with many of the most weighty events in our national existence,—with many a memorable and hard-fought fight, and with our most remarkable conquests in the realms of commerce, —never fails to touch a sympathetic chord in the hearts of all classes.

The maritime supremacy of the British Isles, which is at once the cause and the effect of our world-encircling empire, appeals not only to the imagination, but also to the pockets of the great mass of our countrymen. The commercial prosperity of the nation is closely involved in, if not entirely dependent upon, the maintenance of our over-sea relations. Our internal manufactures and our ocean-carrying trade are so interlaced at every point that it is impossible to strike the one without injuring the other; whilst apart from the immense yearly imports which constitute this country the great emporium of the civilized world, we are dependent as a nation upon our myriad vessels for the bare necessities of existence. The shipping industries, as is well known, have severely felt the wave of trade depression which for the past few years has afflicted the commercial world. As a result some authorities have been led to prophesy the speedy decay of our Mercantile Marine and consequent decline of British ascendency on the seas, with every attendant national disaster. But nervous people who may have been thus frightened into believing that England's Merchant Navy was in immediate danger of becoming a phantom fleet, as indeed her Royal Navy is roundly asserted to have become already, may take heart of grace from a perusal of LLOYD'S UNIVERSAL REGISTER OF SHIPPING.

The *magnum opus* which bears this all-embracing title was issued last year for the first time by the far-famed Lloyd's Register Society, and we are glad to observe is intended to be an annual publication. It is in all respects a most remarkable production. Designed mainly to meet the demands of the shipping and mercantile communities throughout the world, and thus to serve all the purposes of an International Register and Directory of Shipping combined, it necessarily partakes largely of the character of a business book of reference. But it is also something more than that. The interest of the work to the public in general, and to the statesman and political economist in particular, has been greatly enhanced by the introduction of many statistical tables, containing much information that has not hitherto been accessible in any form. The value of these tables will be understood when it is stated that they have been compiled from the body of the work, which contains particulars of every seagoing vessel in the world of 100 tons and upwards, representing in the aggregate over 20,000,000 tons of shipping. It is a veritable Maritime Domesday Book for all nations. No country is too insignificant, none too far distant to be passed over. Ample record is as carefully made of the veriest infantile marine as of the great fleets of European States. Indeed, the extent of our previous ignorance on many points of vital importance in shipping matters is made vividly apparent to us as we inspect the multifarious contents of this vast storehouse of nautical knowledge. So much so, that with every desire to avoid captious criticism, we are tempted to ask why the committee of Lloyd's Registry did not long ago make use of their unrivalled organization, and the rare facilities they enjoy in every quarter of the globe, to furnish forth this international repertory.

As may be naturally expected, Lloyd's Universal Register bears welcome testimony to the proud pre-eminence of British shipping. Indeed, in the present day we are so accustomed to meet at every point of our travels such palpable evidences of the maritime supremacy of Great Britain, that many of us are inclined to accept the situation as a matter of course, unmindful of the steps by which it has been established and of the means by which it may be conserved. Even within comparatively recent times our position was vastly different. The history of Merchant Shipping is one of continuous development effected under the auspices of many nations. Each one in its turn has occupied a position of commercial ascendency more or less akin to that of Great Britain at the present time. The rise and fall of the great maritime states which have preceded us is a fascinating story; but we can here only touch, and that lightly, upon one or two of the more salient points as affecting British shipping.

From the rude hide-covered coracles of the early Britons to the magnificent steamships of the Britain of to-day is a far cry. Yet the line of descent may easily be traced by the careful student. Selden dates England's empire of the sea from the time of William the Conqueror; but this could only be true in a very limited sense, and does more credit to the writer's patriotism than his historical impartiality. At that period, and long afterwards, the commerce of England was in its infancy, and her over-sea trade was of the most unpretentious character. Up to the time of the Crusades, when the Italian Republics enjoyed the sole monopoly of the rich trade with the East, no English trader had even ventured on voyages so distant as the Levant. But the Crusaders gave a powerful impetus to English shipping, and opened up new and valuable markets for the commercial enterprise of the northern peoples. The great trading corporation of the middle ages, the Hanseatic League, also overshadowed the maritime activity of England from the 13th until well on to the end of the 16th century, when the English Company of Merchant Adventurers proved too strong for it. Similarly the Portuguese and Spanish had far outdistanced the English as maritime traders. The Spaniards especially had, even so early as the 12th century, reached a position in shipbuilding and commerce superior to that of any other country of the West. The English vessels were generally much smaller and less efficiently equipped than those of the Spaniards; but what the ships wanted in size, the English seamen made up in daring and hardihood. Chaucer, describing the English sailor of his day, says—

"Of nyce conscience took he no keep
If that he foughte, and hadde the higher hande."

These qualities found full scope in the buccaneering exploits of the period, and the sea-dogs of England established for themselves a name

for reckless courage which the lapse of time has never dimmed.

It was not until the Elizabethan era, however, that English commercial enterprise shone forth in anything approaching to its present splendour. The adventurous spirits of good Queen Bess's reign, following upon the Portuguese and Spanish circumnavigators, opened up fresh routes for the trade of England; and the boasted maritime power of Spain was completely crippled at one fell swoop by the defeat and destruction of her Armada. But in the Dutch, whom the English had now to face for the mastery of the seas, they found rivals of sterner stuff. Intrepid to a degree, and possessed of a strong commercial instinct, the Dutch had reduced their trade almost to a science. They were able to sail their ships with only one-third of the crew carried by English vessels of the same size. Their fleet was estimated by Sir Walter Raleigh to be equal in numbers to the ships of any 11 kingdoms in Christendom, including England. According to the same authority they built 1,000 ships annually, although they had not a tree in the whole country; but what are here termed ships might with more accuracy be described as fishing-boats. Borne down by the suicidal commercial policy of Charles I., the English were no match for the Dutch, whose mercantile marine had been fostered for centuries by the operation of enlightened laws. It is, therefore, not surprising to find that after one more than usually discouraging reverse, the English East India Company—which in the fulness of time was to develop into our mighty Indian Empire—was actually on the point of retiring from the field. Such was the position when Cromwell passed his famous Navigation Law, which sealed the doom of Dutch maritime supremacy. This law prohibited the importation of goods from Asia, Africa, or America into England, or any of her plantations, except in British-built ships owned by British subjects, and of which the master and three-fourths of the crew were British; and also contained stringent regulations affecting imports from European countries. A war with the Dutch resulted; but the Navigation Law, with but few modifications, remained in force for many years. Under its provisions England rapidly developed her maritime commerce, and in time acquired a monopoly of the choicest carrying trade of the world.

From the few statistics which have come down to us from this period we are able to gather some idea of the distribution of shipping then existing.

Sir Henry Petty, a well-known writer, estimated that in 1666 the total shipping of Europe amounted to 2,000,000 tons, of which he apportions 500,000 to the English, 900,000 to the Dutch, and 100,000 to the French. To the Hamburghers, with the subjects of Denmark and Sweden and the town of Dantzic, he allows 250,000 tons, and the remaining 250,000 tons he apportions to Spain, Portugal, and Italy. Another authority estimates that between the years 1666 and 1688 our merchant shipping had nearly doubled; but this appears somewhat doubtful.

The annual clearances outwards from Great Britain amounted in 1688 to 190,533 tons of English and 95,267 tons of foreign vessels, the gross value of the exports being £4,486,087. In 1701-02 the British Mercantile Marine consisted of 3,281 vessels, estimated to measure 251,222 tons, carrying 27,196 men and 5,660 guns.

The voyages of discovery undertaken in the 18th century added considerably to our knowledge of the earth's surface, and contributed to the successful navigation of distant seas, besides stimulating a spirit of enterprise and making popular the profession of the sea. Our over-sea trade was considerably developed, and the imports and exports rapidly increased manifold.

Under the combined attack of the French, Spanish, and Dutch naval forces the British tonnage clearing outwards and inwards at our ports had so diminished that, in 1782, when peace was restored, it was 615,150 tons; while in that year there were 225,456 tons of foreign clearances. But in 1785 the entries inwards and outwards had risen to 1,182,346 tons, of which only 107,484 tons were foreign vessels. In the year 1792 England possessed 600,000 tons of shipping more than before the war with her American Colonies; and in 1793, when war with France broke out, she owned 16,079 merchant vessels of 1,540,145 tons.

But the United States of America were soon to become for a time formidable competitors with the mother country for the shipbuilding and ocean-carrying trade of the world. In the year 1769, before the Declaration of Independence, the American Colonies built no fewer than 389 vessels, of 20,000 tons, and this output increased enormously in the course of years as their commerce expanded. The rate at which the United States merchant navy continued to grow appeared to mark it out as the one which was destined to take the lead from the British. In 1850 the United States' tonnage, which ten years previously had not amounted to one-half of that of Great Britain, stood at 3,485,266, whilst the British was 4,232,962, and the French and Dutch were only 688,153 and 396,124 respectively. In 1860, shortly before the Civil War broke out, the American tonnage had risen to 5,299,175, as against 5,710,968 British, 966,124 French, and 588,772 Dutch. This marvellous increase on the part of the United States was only what might have been expected, considering the immense advantages the country possessed for the rapid and economical production of ships. Her boundless primeval forests afforded inexhaustible supplies of timber for shipbuilding, whilst Great Britain was forced to import almost the whole of the wood she employed for this purpose. The consequence was that American ships were produced at considerably less cost, and as their owners and navigators were not one whit behind their English brethren in energy and enterprise, it seemed only a question of time when we should see the Union Jack supplanted in every sea by the Stars and Stripes. But the general adoption of iron instead of wood as a constructive material for ships, following rapidly upon the disturbance of trade caused by the Civil War, entirely reversed the relative positions of the two countries. Great Britain again rapidly forged ahead. With her vast mineral resources, and unfettered by the protective tariffs which bind the shipping industries of the States, she is now able to produce in overwhelming numbers the iron vessels of modern commerce at about the same price as America is able to build the obsolescent wood ships. Whilst it costs 30 per cent. less to build a wooden ship in

the United States than it does at the present day in the United Kingdom, iron vessels on the other hand can only be constructed in the States at a cost of 30 per cent. in excess of British prices. The greater durability of iron vessels is another most important point in their favour. Wooden vessels have, it is true, in some individual cases lived to a green old age. Lloyd's Universal Register contains particulars of five wood vessels that were built last century, and are still to the fore. The oldest of these is the British barque, *Truelove* of 285 tons, which was built at Philadelphia, U.S.A., so far back as 1764. But such instances are wholly exceptional. The average age of wood ships of American build has been estimated by various authorities at from 12 to 14 years. But iron vessels do not decay like wood ones. The rusting and exfoliation to which all iron structures are subject can be prevented by periodically coating the surfaces with paint, &c.; and there are iron vessels still in existence which after 20 years' hard work in the heaviest trade are still in an excellent state of preservation. It is thus we find that whilst the seagoing fleet of Great Britain has continued to increase year by year until now it covers every sea, that of America has by degrees grown small and beautifully less. In 1886 the ocean-going tonnage of the States amounted to only 2,083,002 tons, whilst the over-sea tonnage of the British Empire had risen to the magnificent total of 11,165,092 tons. And whereas but 13 per cent. of the foreign trade of the States is carried on in American vessels, fully 70 per cent. of the over-sea trade of Great Britain is done under the British flag.

We cannot find space for all the statistical tables in Lloyd's Universal Register, but we introduce two of the most important in a condensed form. Table I. is descriptive of the shipping *owned* in the several countries of the world. Taking both home and colonial British vessels, we find that their aggregate tonnage outweighs the combined tonnage of all their rivals of every clime, the British vessels, both steam and sailing, representing 52 per cent. of the whole. The preponderance of British tonnage is much more marked in the case of steamers, which are generally reckoned as being able to do three times as much carrying-work as sailing vessels of similar tonnage. The British steam tonnage represents 63 per cent. of the whole,—that is to say, that it is nearly double as much as that of the whole of the other countries combined. Even this comparison, however, gives no adequate idea of the actual extent of our superiority at the present moment. It assumes the tonnage of old steamers to be equal in value to the same amount of tonnage of the most modern vessels. Many foreign merchant navies are recruited from the residuum of our own, and in such cases the average age of the fleet will be appreciably greater than that of ours. It is obvious that in the present day, when mechanical science is nothing if not progressive, and when the novelty of one decade may become obsolete in the next, the value of a large fleet of steamers must depend to a great extent upon their age as well as their size and number. Of iron and steel sailing vessels, no less than 90 per cent. belong to British owners. Even if we deduct the Colonial portion of the total British tonnage —which it will be observed consists chiefly of sailing ships, and is after our own second only to that of the United States—the merchant navy of the United Kingdom stands out pre-eminent. France and Germany, with about the same quantity each, most nearly approach us in steam tonnage; but even they only just come within one-tenth of our steam tonnage. Both these countries, however, are making great efforts to establish an efficient mercantile marine of the most modern type, and their statesmen are stimulating the enterprise of their shipowners by freely resorting to subsidies and bounties. The operation of the granting of subsidies to French shipping is very interesting, as disclosed in the recent report of the Commissioners appointed by the French Chamber to inquire into the question. The amount paid yearly as subsidies to native shipbuilders and shipowners has risen from £150,000 for the first year to close upon £500,000 for the last year. The result of this is that French steam-tonnage has increased over 50 per cent. within the last seven years, and now stands second to Great Britain alone. It will be seen from the Table that the United States has less than 10 per cent. of the world's steam and sailing shipping, Norway under 7 per cent., and Italy 4 per cent. (all three countries owing even these percentages to their relatively heavy sailing tonnages), whilst the Dutch and the Spanish, our ancient maritime rivals, have but 2 per cent. and 2½ per cent. respectively, made up of a fair proportion of steam tonnage.

A comparison of the average size of the vessels of the several nationalities is no less instructive. It will be observed, for instance, that whilst the British sailing vessel averages over 600 tons burthen, the American ship is only 450 tons, the Dutch and Norwegian each 400 tons, and the French but 250 tons. In the steam tonnage the variation is not so great, but is equally suggestive. France and Belgium come first with an average tonnage of 1,400 tons each per iron steamer, the British and the Dutch coming next with 1,200 tons each, and Germany coming fifth with 1,000 tons average. It is further noteworthy that in the tonnage of steel steamers, representing the most modern vessels, the small state of Belgium comes out with the highest average of 1,900 tons per ship, Britain being second with 1,800 tons average.

Touching this point, Mr. W. T. Doxford, in his presidential address of October last to the North-East Coast Institution of Engineers and Shipbuilders, presented a very interesting table, constructed from Lloyd's Universal Register. This showed that whilst the 274 existing steamers of 200 tons and upwards which were built between 1856 and 1860 yielded an average tonnage of only 735 tons per steamer, the 3,006 steamers built between 1881 and 1885, inclusive, averaged 1,437 tons per ship—the latter including some 27 vessels having an average of about 6,000 tons each.

Indeed, the increase in the size of vessels during this century is quite remarkable. Even so late as 1834, over 60 per cent. of the ships entered on the Register of the United Kingdom were under 100 tons each, and but 7 per cent. of the entire vessels were over 300 tons each. The use of iron tended very materially towards the increase in the size of ships; but much progress in that direction was simultaneously being made by the United States and British North America, where the older material was still employed. The Atlantic trade in winter is

TABLE I.—SHOWING NUMBER, TONNAGE, AND DESCRIPTION OF VESSELS OF 100 TONS AND UPWARDS, BELONGING TO EACH OF THE SEVERAL COUNTRIES OF THE WORLD, AS RECORDED IN LLOYD'S UNIVERSAL REGISTER.

always a trying one, and the shipowners of North America found it advantageous to build large ships for their ocean trade, both on that account and for economical reasons. The abundance of large timber, both in the United States and Canada, was favourable to the production of ships of great tonnage, and so it came about that by the middle of the present century the Americans and Canadians built a great proportion of the largest ships afloat, which were noted as much for their excellent sailing qualities as for their dimensions and carrying capabilities. About the year 1850 the United States clippers competed very keenly with our own ships for the China trade, which in consequence of the length of voyage was in the hands of sailing ships until the opening of the Suez Canal; for the American vessels not only rivalled the British ships in point of cheapness and numbers, as already explained, but they also excelled them in speed. Modelled on the finest lines, and navigated with rare skill, the American clipper ships, by their fast passages, were rapidly acquiring a monopoly of the most lucrative carrying trade in all parts of the world. Such clippers as the *Oriental*, *Challenge*, *Sea Witch*, and *Flying Cloud* were then well known for their swift passages and general seaworthy qualities. Mr. Richard Green of Blackwall built the *Challenger* to compete with the *Challenge* in an ocean race from China, which was won by the British vessel. The success of the American clippers, however, aroused the attention of our shipowners in other parts of the country, and among those who achieved success in the attempt to maintain British maritime prestige were the Messrs. G. Thompson & Co. of Aberdeen, who started the line of "Aberdeen Clippers" at that time. In 1856 the *Lord of the Isles*, built by Scott of Greenock, beat two of the fastest American clippers of nearly double her tonnage in the tea race from Foo-choo-foo. From that time the British ocean clippers began to gain upon their American rivals in the China trade—which latter was a chief test of swift sailing and good delivery of cargo. Ultimately this trade came back entirely into our hands, and the performances of our tea clippers from 1860 to 1872 are among the most interesting events which the past century has witnessed in connection with mercantile shipping. Before further alluding to these "tea clippers" it may be of interest to mention, as indicative of the great size of many American merchant ships at the time, that the *Great Republic*, as first built, measured so much as 4,000 tons, and when altered by removal of upper works she was still of 3,400 tons, which is but 300 tons less than the *Palgrave*—the largest iron sailing ship afloat in 1886. The *Great Republic* made a passage from New York to the Scilly Isles in 13 days, which is equal to the average performance of many modern steamers.

The *Thermopylæ*, *Sir Lancelot*, *Ariel*, *Taeping*, *Serica*, *Fiery Cross*, and *Taitsing* were among the most celebrated of the clippers engaged in the China trade between the years 1860 and 1870. The two first named of these are doubtless the fastest sailing vessels that ever crossed the seas, and the *Thermopylæ*, in particular, made some extraordinary performances in sailing. It is recorded of the vessel that in one day—4th January, 1869—she made a run of 336 knots, equivalent to 380 statute miles; being at the rate of nearly 16 statute miles per hour! This is a "composite" vessel, that is, constructed with iron frames and wood planking. She is 947 tons register, her dimensions being 210 feet long, 36 feet width of beam, and 21 feet depth of hold. She made the fastest passage on record between London and Melbourne, covering the distance in 60 days, and again beat the record by accomplishing the passage from New South Wales to China in 28 days. Her run thence to London, with a cargo of tea, in the space of 91 days has never been surpassed, except on one occasion by the *Sir Lancelot*, which made the passage in 90 days. This vessel, with a beam wind, averaged during seven consecutive days a distance of slightly over 300 miles a day. Perhaps the most noteworthy incident in connection with the competition of the tea clippers was the celebrated ocean race between the *Ariel*, *Taeping*, *Serica*, *Fiery Cross*, and *Taitsing*. The three first named of these vessels left Foo-choo-foo on the same day, lost sight of each other until they reached the English Channel, and were docked in London within a few hours of each other. The time occupied from port to port on this run was 99 days. The arrivals of the other vessels were remarkably close.

But the opening of the Suez Canal for traffic in the year 1870 put an end to these sailing races from China, and materially influenced in many other ways the trade to the East and the types of ships employed in it. Work is now done almost entirely by steamer which in those days was relegated to the swift composite clipper sailing vessel. The length of the voyage is much shortened by the Suez Canal, and such facilities exist for coaling on the route that cargo steamers can easily steam to India, China, Japan, and even Australia.

We are, however, anticipating somewhat the course of events in the modern development of mercantile shipping. Although the opening of the Suez Canal made the China sailing clipper obsolete, yet the future of steam navigation was sufficiently well assured before the accomplishment of that great engineering work. Between the year 1787, when Symington's first steamboat was tried on the Forth and Clyde Canal, and 1811, when Henry Bell built his well-known *Comet*, very little was expected of the new application of steam power, but after the last-named date the invention made rapid progress. In 1821 the steamer *James Watt* was built at Greenock; the year 1827 found 81 steamers classed in Lloyd's Register, and by 1832 these were increased to 100. About the year 1835, the possibility of making a voyage by steam-power alone from New York to Liverpool was earnestly discussed, and although considered chimerical by a celebrated professor of natural philosophy at the time, yet the solution of the problem was attempted by engineers and shipbuilders on both sides of the Atlantic. Two steam vessels were built for the purpose of proving trans-Atlantic steam navigation to be commercially practicable, these being the *Sirius* and the *Great Western*. The former vessel sailed from London on the 4th April, and the *Great Western* on the 7th April, 1838. These two vessels were the pioneers of the Atlantic steam trade, and so satisfactory were their performances that, encouraged thereby, the Cunard Company was at once founded and granted the Government contract for the carriage of Her Majesty's mails across

the Atlantic. Other steamship companies were formed, and some of these competed with the Great Western and Cunard Companies for the North American trade, while others entered upon still longer ocean voyages. Among these latter were the Royal Mail Steam Packet Co. and the Peninsular and Oriental Steam Navigation Company. The steamship trade to the East Indies was at first conducted by the Peninsular and Oriental Steam Navigation Company, with two sets of steamers, one on either side of the Isthmus of Suez; but the opening of the Suez Canal in 1870 greatly facilitated the steamship traffic between European and Asiatic ports, and also resulted in the formation of lines of steamers between this country and our Australian Colonies.

The progress of steamship propulsion for the last half-century consists of a series of triumphant marches. The small wooden paddle steamers which caused so much commotion in the public mind when, in 1838, they started upon their Atlantic voyages, were quickly followed by larger and more powerful boats. These in their turn were replaced by iron steamers, and the paddle was gradually superseded by the screw as a means of propulsion. Although the Cunard Company continued up till 1860 to employ paddle steamers, the success of the screw propeller was fully established long before that time. Even so early as 1840 the *Great Britain*, the largest vessel of her time, and an iron steamer, was fitted with a screw propeller. To this historic craft the whirligig of time has brought strange reverses. Distinguished as one of the earliest vessels which led the van in steam navigation, she has recently had her engines taken out of her and been converted into a sailing vessel, and now pursues the even tenor of her way without other aid than that of the winds of Heaven. There are many interesting instances of the irony of Fate of which individual ships, like men, are the victims. Everyone knows how this is exemplified in the case of the *Great Eastern*—"Brunel's grand audacity." This premature production, whose structural success was entirely eclipsed by her financial failure, has been reserved by an unkind Fate for the undignified part of a floating Bar or a Coal Hulk! *Sic transit gloria mundi!*

Improvements have been made at different times in the marine engine and boiler, tending towards economy of fuel consumption and the attainment of higher speeds over long voyages. The low-pressure condensing-engine has been followed by the compound, and that again by the triple expansion engine, which latter has already developed into a quadruple system of expansion. With each improvement in the marine engine have followed greater capabilities in regard to ocean navigation, inasmuch as less fuel has been required per indicated horse-power, and therefore a greater propelling force has been developed in the vessel in proportion to the weight of fuel she carries.

From the early days of steam navigation until about thirty years ago, the consumption of fuel in steamships was about 5 lbs. per indicated horse-power per hour, the usual steam pressure being about 15 to 25 lbs. per square inch. The jet condenser then in use was succeeded by surface condensation, coupled with an increased steam pressure of about 25 to 30 lbs. per square inch, which effected considerable economy in fuel consumption, reducing it from 5 lbs. to about 3½ lbs. per indicated horse-power per hour; and this was followed about twenty years ago by a still further reduction of coal consumption to about 2¼ or 2½ lbs., by the use of steam pressure of from 60 to 90 lbs. per square inch in what is known as the compound engine. About five years ago the triple expansion system was introduced, employing steam of from 125 to 160 lbs. per square inch, and by this means the coal consumption was even still further reduced to from 1½ to 1¾ lbs. Very recently a quadruple system of expansion has been tried, employing steam of 180 lbs. pressure, and it is understood that in the cases experimented upon the coal consumption has been reduced to even less than 1¼ lbs. per indicated horse-power per hour. The great importance of this question of coal consumption will be apparent when it is stated that the largest of the Atlantic liners of the present day burn as much as 350 tons of coal per diem.

There still remains much to be done, and scarcely a year passes but some further step is taken nearer perfection. At the present moment the question of Forced Combustion in marine boilers is engaging the ingenuity of our engineers. This matter seems pregnant with great possibilities. In the case of one vessel now being fitted with forced draught, it is predicted that whilst the power developed will be greater, the boilers will occupy but half the usual space, and the consumption of fuel will be considerably less than that of any steamer afloat. This, it will be seen, implies not only increased economy, but also a great addition to the space available for cargo-carrying—that is, freight-earning. Another subject upon which practical experiments are going forward, is the suitability of liquid fuel for marine boilers. The apparently unlimited supplies of petroleum yielded in Russia and the United States are affecting shipping in more ways than one. Steamers of special construction, having large tanks, are rapidly coming into use for the conveyance of the oil. Russia alone has spent over a million sterling in some 100 steamers of this class, built for the greater part in Sweden.

A speed of 18 to 20 knots per hour is now not uncommon with large ocean steamers, and this speed can be maintained during many consecutive days. The voyage from the British isles to the United States is now performed in but little more than six days, as compared with three weeks or a month, the time formerly occupied by a sailing ship, and fourteen days by a steamer.

The passage to Australia, which the fleetest of the sailing clippers took 60 days to accomplish, is now performed in the short space of 34 days through the Suez Canal, and a trifle longer round the Cape of Good Hope. In the race home from China with the Spring teas—the blue ribbon of the ocean when the sailing clippers were at their height—the time has been reduced from 90 days, the shortest run of a sailing ship, to 27 days 4 hours, the unparalleled time of the *Stirling Castle*, which, in 1883, beat the China mails by some days, although they were sent by the overland route. In fact, the service of the ocean highways is in few respects, if any, inferior to the service of express trains on our railways. The "greyhounds" of the Atlantic sail with a regularity which bids defiance to the weather, and they can be depended upon with almost absolute certainty to arrive at the appointed time. Now, if ever, "the seas but join

the nations they divide." The summary of the sailings and arrivals of vessels for a year as reported in *Lloyd's List* will show how enormously ocean voyages have increased. In 1780 the number of arrivals and sailings was 6,968; in 1800 it had risen to 12,688; in 1850 it stood at 94,213; in 1860 it was 144,919; in 1880, twenty years later, it had reached 252,904; and in 1884 it was 281,700.

During the past forty years the growth of steam shipping, especially in relation to sailing shipping, has been rapid and continuous, and there can be no doubt that the mercantile supremacy of the British Isles has been enhanced by the change from sail to steam propulsion, as well as by the substitution of iron for wood as a material for shipbuilding.

But not only is Great Britain intrusted with the greater part of the carrying trade of the world, she has also become the principal shipbuilder for all nations. A reference to Table II. (reduced from the one contained in Lloyd's Universal Register) will show the vast extent to which this country has built the world's shipping. Of the total number of vessels in the Universal Register over 44 per cent. have been built in the British Empire, and 34 per cent. in Great Britain; but if we confine the comparison to iron and steel vessels, which comprise the most modern and valuable types of vessels, we obtain the astonishing proportion of over 82 per cent. built in this country. We must leave our readers to study this table, which brings out some very instructive comparisons, and will well repay perusal; but one or two points may here be emphasized. Of wood sailing ships exceeding 1,000 tons only 45 exist that were built in this country, whilst there are 478 of British Colonial production, and no less than 556 of United States build. Of wood steamers of above 1,000 tons there are two of British Colonial construction, 86 built in the United States, and only one in the United Kingdom. Three of the Colonial built and 44 of the United States built wooden ships are of more than 2,000 tons register, nine of the States ships being steamers. No other countries approach the American Colonies and the United States in the comparatively recent production of large wooden ships. Of those measuring more than 1,000 tons, Germany has 31, Italy 32, the Netherlands 19, Norway 17, and France 3.

Turning to the comparative tonnage of iron-built ships, we see that of the vessels still in existence, the United Kingdom had built 1,159 iron sailing ships and steamers of more than 2,000 tons each, no such vessel having ever been built in our Colonies. Only 71 iron sailing ships and steamers of above 2,000 tons, built by the United States, existed last year; 68 such vessels were of French build, 15 of German, 6 of Dutch, and 1 of Italian. The United Kingdom had built 95 iron ships and steamers, still in existence, of more than 4,000 tons, while America had built 1, and France 11; no other country having contributed to the existing iron ships of above that tonnage.

It further appears that the United Kingdom had built of the steel ships and steamers still in existence, no less than 133 of more than 2,000 tons, Austria had built 4, France 11, Germany 3, and the Netherlands 1.

We can only find room for a summary of the vessels built during 1885 throughout the world and in the United Kingdom respectively. From this it will be seen that of the total iron and steel tonnage built in that year this country produced no less than 86 per cent., the remaining 14 per cent., as appears from the complete table, having been built principally in Germany, France, and Holland. Of wood vessels we built no more than 7 per cent., the Colonies and the United States each building about 33 per cent., and Norway 10 per cent. Of the 24,000 tons of shipping built last year in France over 80 per cent. was of steel, a fact which is suggestive of the progressive tendencies of French shipbuilding. In Germany 24,500 tons, equal to 90 per cent. of the entire output from the shipbuilding yards of the Empire, were of steel or iron, about half of the amount being steam tonnage. In the Netherlands also about the same proportion of the tonnage, 12,000 tons, was of iron or steel construction, nine-tenths of it being steam tonnage.

A noticeable feature of the returns of shipbuilding is the increasing use of steel in place of iron for the construction of ships. As iron has superseded wood, so steel is now rapidly replacing the older metal. The composite type of vessel, which bodied forth some of the finest conceptions of the naval architect, has now become as extinct as the Dodo. Steel has many advantages which combine to render it first in the field as a constructive material. The chief one is its greater strength. Iron, even of the best quality, has a tensile strength of little over 22 tons per square inch of section. Steel, on the other hand, can with perfect safety be used up to 30 tons per square inch. This it will be seen at once admits of a reduction of 20 per cent. in the thicknesses of the scantlings of a vessel. The reduction is equivalent to about 13 per cent. more deadweight carrying capacity in a steel ship over an iron one of similar dimensions. And as the price of steel has, through recent improvements in manufacture, been reduced almost to an equality with the price of iron, the new material continues to grow in favour. Thus we find that the proportion of steel ships built in 1880 was only 7 per cent. of the total; in 1883 it had risen to 15 per cent. In 1885 the steel tonnage built amounted to 34 per cent. of the whole output.

The United Kingdom built 46 vessels of 33,684 tons for other countries during the year 1885, of which 14 vessels, amounting to 10,125 tons, were for our Colonies. Of the remainder, 7 vessels of 6,001 tons were for the Netherlands, 4 of 3,966 tons were for Sweden, 5 of 3,425 tons for Spain, and 2 of 2,116 tons were for Germany. As may be supposed, the United Kingdom does not purchase much tonnage from other countries, and since wood was superseded by iron and steel as a material for ships, the tonnage so obtained has been less than before. In 1885 our Colonies built two wooden ships for the United Kingdom of 1,067 tons, and one wood steamer of 108 tons; while, singularly enough, one iron steamer of 103 tons was built for us in France. These four ships, amounting to 1,278 tons, constitute the whole of the tonnage built for the United Kingdom by other countries in 1885. As shipbuilders for other countries, Germany occupies a foremost position after ourselves, but to a very subordinate degree, she having built 9 vessels of 5,604 tons for the Netherlands, Norway, Sweden, Spain, and Denmark. The Netherlands built two iron steamers of 830 tons; Austria built two iron steamers of 449 tons; and

France, Sweden, the United States, and our Colonies each built one ship for other countries.

A study of the contents of Lloyd's Universal Register will tend to reassure any who may have feared that our maritime supremacy was in immediate danger. Yet to those who can read between the lines there are not wanting evidences of the strenuous efforts being put forth by many nations to wrest from us the carrying trade of the world. The unexampled commercial success which we have achieved as a nation is largely due to the fact that for many years past Great Britain has been the workshop of the world. But that time is rapidly passing away. Rivals meet us on every hand, and where we have been accustomed to monopoly we now find competition of the keenest description. What is true of our trade in general applies especially to our maritime commerce. Convinced that our empire of the sea rests upon our shipbuilding pre-eminence, our Continental neighbours are employing every means at their disposal to divert the trade into their own hands. Italy has speedily followed France in the adoption of a system of liberal bounties to her shipbuilders and shipowners, whilst Germany, under the masterful mind of Bismarck, is sparing no effort to build up a home-made merchant marine. The German shipbuilders, who have already encroached upon our profitable preserves—the building of war-ships for foreign powers—now threaten to supplant us in the domain of the mercantile marine. Whether they will succeed time alone will show. But they rely not only upon their Teutonic tenacity of purpose; they have the support of the strong arm of the State. Even as we write, the *Preussen*, the first subsidized steamer built in a German yard exclusively of German materials, is speeding upon her maiden voyage to Sydney, and she will quickly be followed by many more that are now taking shape in the busy workshops of the Fatherland. The importance to England of these departures is not measured simply by the amount of tonnage turned out of continental ship-yards during the last year. Their combined production of iron and steel steam tonnage is comparatively small by the side of our own enormous output. But the significance lies rather in the fact that there should be so much tonnage now being built in countries where a few years ago there was practically none.

Maritime history, if it teaches us anything, makes one point clear—namely, that there is nothing more dangerous to a maritime state than success. Great Britain has far outdistanced all her rivals, it is true, but she must beware of overweening confidence. Throughout the wide realms of commerce there is no great field of enterprise in which the property is so movable, so utterly at the mercy of the ever-changing currents of trade, and so easily scattered from one centre to others, as shipping. Our shipbuilders and shipowners must therefore ever be on the alert and keep their eyes open to what is taking place all over the world. Such publications as Lloyd's Universal Register, which brings to a focus all that is worth knowing of our rivals in every part of the world, are of incalculable benefit; and we make no doubt that as the years roll on, and the statistical tables of the work are improved and added to, the Register will become to the shipbuilder, the shipowner, the merchant, and the underwriter what the chart is to the mariner.

One word more. When one nation after another is doing everything in their power to foster their maritime industries it surely behoves us, as the greatest commercial nation upon which the sun has ever shone, to act with prudent care. Our shipping enterprise is the foundation of much of our national success. We must therefore not allow it to be hampered, impeded, and crippled, either by the misguided enthusiasm of ignorant philanthropy, or by the electioneering crusades of doctrinaire politicians ambitious of winning their spurs in statesmanship—and who from the exigencies of our party system of government are sorely tempted to set more store by a taking electioneering cry for the country than the abiding commercial prosperity of the empire.

Despite the free and full discussions which for the last few years have been carried on through the Press and in Parliament upon the relative strength of the naval powers, we still find, even in quarters where we might least expect them, striking evidences of amazing misconception of the true bearings of the question. The general public may well be excused if they fail to follow the controversies of naval architects and officers, with their bewildering maze of technicalities and their positive assertion and contradiction of the relative efficiency of the different types of ships. Yet we should have thought that every one who had made the slightest acquaintance with the subject would at least know this—that the test of mere numbers when applied to the war fleets of the present day is perfectly fallacious. But the official apologist apparently learns nothing, and forgets nothing. Thus we find a First Lord of the Admiralty proving to his own satisfaction, by the simple enumeration of ships in commission, that the Royal Navy is more than a match for the combined forces of the three greatest naval powers! But these comforting assurances, although not without their effect upon too confiding patriots, are less likely now than ever to impose upon the public at large.

One result of the general interest awakened upon naval subjects in this country is the multiplication of reliable sources of information. Until quite recently we were largely dependent upon foreign publications for the means of comparison of our own and other navies. But all that is altered now. Perhaps the most noteworthy, as it is the most complete, of the lists that have been issued is that furnished in *Lloyd's Universal Register of Shipping*. This work sets forth with great minuteness of detail, in tables covering over 40 closely-printed quarto pages, the war ships of all nations. Disregarding the official classifications, which differ in every country, these tables present a clear common-sense arrangement such as Sir Edward Reed sought in vain in the last Parliamentary returns. The task of comparing the naval power of different nations is thus rendered as free from difficulty as any tabular statement can be expected to make it. Taking Lloyd's tables as a basis, we can ascertain pretty accurately the relative fighting forces of the principal naval powers.

War ships, as our readers must know, may be broadly divided into armoured and unarmoured vessels. First as regards armour-clads, which form the backbone of every modern fleet, we cannot here enter into the interesting question which naval designers are so fond of discussing, —the specific value to be assigned to each of the distinguishing features of the different types of vessels.

The days have gone by when the various types of vessels were the same in each country, and when the fighting value of a line-of-battle ship or frigate could be gauged by the number of guns she carried. Within the last quarter of a century every one of the principal navies has been entirely reconstructed. Indeed, in this short space of time naval architecture has undergone a greater revolution than was witnessed during the whole of the preceding centuries, for the stately wooden walls of Nelson and Howe differed but little in design from the war-galleys of antiquity. The 64-pounder gun was once thought to be the largest that could be applied in naval warfare. But since the introduction of armour-plates and long conical headed instead of round shot, the race between the resisting power of the armour and the penetrating force of the gun has been carried so far, that we now have on the one hand steel-faced armour that is capable of breaking to atoms the once celebrated chilled cast-iron shells, and on the other hand steel projectiles that can carry their destructive bursting charges through many thicknesses of that same plate. Thus there are now in existence solid armour-plates up to 22 inches thick, and these again have their counterparts in the 100 and 110-ton guns which can fire right through them. Whilst naval designers, however, have been enormously increasing the thickness of armour and the weight of guns, each one has been free to do this according to his own particular ideas. The result is the distracting variety of types of ships which now form the fighting fleets of the world. One authority extols one type of vessel; another is equally confident of the superiority of another type of ship. But for our present purpose we must leave naval specialists to agree to differ —until the actual test of a naval engagement under the altered condition of affairs shall set all doubts at rest.

We can here simply mention the several types of armour-clads in use. The *Broadside* ships represent the earliest description of armoured sea-going vessels. They grew out of the floating batteries that were called into existence by the Crimean War. Their sides were protected for the whole or greater part of their length by 4½ inches of armour. As the thickness of armour increased they were succeeded by what are termed *Central Battery* ships. In this type the protected battery, instead of extending over the ship's length, is reduced to about one-third of the length, the sides and ends of which are thickly armoured. This battery contains the heaviest guns. These vessels also possess for the most part a continuous belt armour. They, in their turn, were quickly followed by *Turret* ships. The distinct feature of this class of vessel is that the guns are worked within thickly armoured revolving turrets, which protect the gunners from an enemy's fire. They have been more largely employed in the British than any other navy, but are now giving place in every country to the French model armour-clad—the *Barbette* ship. This vessel is so called from the fact that the heavy guns are fired *en barbette* (over bank) instead of through armoured portholes, as in broadsides, batteries, and turrets. No protection is afforded to the guns or gunners by means of over-head armour, the armour-plating being generally disposed of at the water-line. In this respect the lighter armour-clads, called *Belted Cruisers*, are similar to barbette-ships. In all cases the thickness of the armour varies according to the position it occupies on the ship's side, and to the particular ideas of the designer. The area covered by armour in different types, and even in different ships of the same type, is equally variable. Thus a turret-ship may either be armoured from stem to stern, as is the *Dreadnought*, or have only a central portion of armour (called a citadel), like the *Inflexible*. Similarly a barbette-ship may be belted throughout her entire length, with or without the addition of a central portion of armour (called a casemate),

as in the case of the French vessels; or she may have only a partial belt or citadel, like the English ships of the *Admiral* class. *Protected Cruisers* have no vertical side armour at all. Their armour is confined to the horizontal and inclined decks of two or three inches of steel, which in soms cases run the entire length of the vessel, and in others cover only the vital parts of the structure amidships. Their claims to be considered as armoured vessels, in any sense of the term, are hotly disputed; but however they may be classed, there can be no doubt that heavy steel decks afford valuable protection.

In Table I. we give a summary of the armour-clads of the seven chief naval powers, including only those vessels which appear in *Lloyd's Universal Register* for 1886 as already launched. As it takes two or three years to complete an armour-clad, some vessels are thus included which could not be available for some time yet. This table conveys a fair idea of the composition of each fleet. Under the name of the country will be found the number of vessels of each type, the several types being again subdivided according to whether the vessels are built of steel, iron, or wood. There are also given the average displacement in tons of the several vessels, and the date when the oldest ship of each particular class was built. The grouping according to the material of construction, forms, as will be seen, a natural dividing line, whereby the respective ages, and consequently to some extent the efficiency, of the several ships may be roughly estimated. For, except in the case of France, all wooden vessels are old and obsolete, the iron ships are more recent, whilst the steel ships are all quite new. In the French navy, however, wooden hulls were adhered to long after every other nation had taken to iron, and thus many of the French wood vessels rank with our iron ships as regards age and efficiency of design. It is therefore unfair to strike out all wooden armour-clads, as some authorities do, in a comparison of the several navies; for whilst France is thus deprived of some of her more powerful ships, England loses but one, and other nations very few. The inherent defects of wood armour-clads, however, compel the separation of the wood from the steel or iron ships, in a table of comparison.

It is, as is well known, extremely difficult to fit wooden hulls with watertight bulkheads, which together with double bottoms form such an important feature in the construction of modern war ships of every class. As a matter of fact, the French wooden armour-clads are not subdivided, nor are they constructed with double bottoms, and in consequence they would be doomed if struck by a ram, or if a torpedo exploded under them. This fact is clearly brought out by the results of the torpedo experiments conducted last year in France and this year in England.

In the French experiment the damage done to the iron hull (having no inner skin) was so serious, that the building of the *Brennus* and the *Charles Martel*—the latest and most powerful armour-clad designs of France—was peremptorily stopped. In the English experiment the outer shell of the iron hull was locally shattered, but the inner skin was only dented, and remained quite watertight. Apparently reassured by the later experiments, the French have now practically decided to proceed with the two heavy armour-clads in question. Wooden armour-clads, it will be seen, must labour under serious disadvantages if brought into action against rams and torpedoes.

Comparing the totals in Table I. we find that

Great Britain has the appearance of possessing a sufficiently powerful fleet. Including all ships of every class, we have 58 against 44 French, 18 Italian, and 18 Russian; or neglecting ships with wooden hulls, the figures are 57 British, 24 French, 17 Italian, and 18 Russian. On the other hand, if we include the French wooden ships, many of which are of comparatively recent date, and exclude broadside ships, belted cruisers, and coast defence vessels, the numbers stand as follow:—35 English, 31 French, 8 Italian, and 11 Russian. In other words, we have 58 ships of every class, against 80 ships of every class of these three nations, and 35 seagoing armourclads as against their 50. The other three nations mentioned in the table possess amongst them 38 armour-clads, of every kind; whilst the whole of the remaining naval powers of lesser note, whose fleets are not worth tabulating, muster altogether about 20 such vessels.

These facts are very similar in character to what we glean from the usual comparative statements, and are interesting enough in themselves. But they do not furnish any practically effective comparison of the actual fighting powers of the several fleets. The usual tests of numbers and of tonnage are alike misleading unless applied with discrimination. In order effectually to compare the different fleets from a strictly practical point of view we have from *Lloyd's Universal Register* constructed tables classifying the various ships of each nationality, first, according to the strength of their armour, and secondly, according to the penetrative power of their guns. In the first of these, Table II., will be found, arranged in the order of the thickness of their armour, the number of armour-clads possessed by each country. For this purpose we have taken in each case the *maximum* armour protection of the vessels. This is practically fair to each ship, because, unless we are prepared to accurately assess the relative merits of competing designs, it must be assumed that the thinner armour in each ship is less exposed to direct fire. The thicknesses are in all cases given in inches of iron and of compound or steel armour, which is about 25 per cent. stronger than the best iron armour-plates. In Table III. we have arranged, in the order of their penetrative force, the heaviest guns carried by the armour-clads in each navy, showing also the number of vessels in which they are borne. For this purpose we have taken the Ordnance tables of Captain Orde Browne, R.A., who, however, gives somewhat higher results than those published by the German artillerists.

These tables contain in the most condensed form the *fundamental fighting qualities of the world's navies.* By means of them in their more extended form we can fight any number of battles on paper, choosing whatever ships we please and arranging them in whatever combinations we may desire; and we can predict in each case the probable result, so far as that can be said to depend upon the offensive powers of the guns on the one hand and the defensive powers of the armoured ships on the other. But in actual warfare there are of course many determining elements besides these two. Modern armour-clads may indeed be likened to the knights of old who "fought armed at all points, exactly *cap à pie.*" It was not the perfection of their panoply of mail, nor yet the superior strength of their lance, that brought them off victorious in many a combat. Perhaps a slightly firmer seat, a quicker eye, or a stronger arm, or a combination of all three, was the determining factor in the fight. So now, victory will fall to the ship which is best manned, best manœuvred, greatest in speed or excelling in handiness, in the event of an engagement between vessels of equal armour and armament. But as no careful knight of the olden time would have set his life upon "the hazard of the die" without providing himself with the best available coat of mail and weapon, so now no prudent nation should stake its existence upon the result of an engagement in which it would be represented by ships materially inferior in armour or armament to the opposing forces.

A striking illustration of the overpowering effect of superior armour and armament in naval warfare was afforded during the American Civil War. The Confederate ship *Merrimac*, rejoicing in her 4 inches of armour, which rendered her invulnerable to ordinary attack, proved, single handed, more than a match for five heavy Unionist wood frigates. But the next day she herself had to succumb to the armour-clad *Monitor*, which boasted 1 inch thicker armour, and heavier, though fewer, guns.

A comparison of the seagoing armour-clads of the several nations upon the basis of these tables is highly instructive. The table of armour, it will be seen, naturally lends itself to a division into three classes. First, we have all the very newest types of vessels with steel or compound armour of from 15 to 22 inches thick, which is equal in resisting power from 20 to 30 inches of iron; secondly, the older first-class line-of-battle ships, and a few modern ships with armour equal to from 8 to 16 inches of iron; and thirdly, the old broadsides, and a few central battery ships with iron armour not exceeding 6 inches in thickness. This last class is considered obsolete, though doubtless serviceable against the unprotected cruisers and gunboats of some continental navies not so heavily armed as our own.

It should be explained that these subdivisions are adopted as being the most convenient for the purpose of comparing the armour with the armament. They are not intended to be taken as a complete classification of armour-clads into

first and second classes. The arbitrary classification so much in vogue with some naval writers is indeed most misleading. Amongst other things it assumes that iron armour 9 inches thick is equivalent to the most modern compound or steel armour having a resisting strength of 29 inches of iron, whilst it entirely neglects the power of the guns. This is on the face of it absurd. If we could only prevail upon some ambitious potentate to buy our large fleet of weakly armoured vessels upon this classification, the lot of the Chancellor of the Exchequer would indeed be a happy one!

Comparing the most heavily armoured vessels belonging to each nation, it will be seen that whilst Great Britain has only 11 ships, France has 9 (all of iron or steel), Italy has 7, and Russia 2. Thus the French are almost on an equality with us by themselves; with Russia they are our match. France and Italy together possess half as many more. This is as far as numbers go; but it is only when we come to look into the real fighting value of these ships that the relative weakness of our navy is made fully apparent.

Taking the vessels in detail, we find from Tables II. and III. that Great Britain has 11 seagoing ships protected by armour equal to 24 inches of iron, and armed as follows:—One ship carries 2 guns which at close quarters will pierce 36 inches of iron armour; 4 ships amongst them carry 16 guns that will pierce armour 29 inches thick; 1 ship has 4 guns which will pierce 24 inches of armour; and in the remaining 5 vessels there are 16 guns that will pierce 22 inches of armour. Now what is there in the shape of armour and armament in foreign navies to compare with these? As regards armour, France and Italy head the list with 5 vessels having 22 inches of steel or compound armour; next come 4 French ships having 20 inches of armour, followed by Italy with 2 vessels of 19 inches and 3 vessels of 18 inches armour, whilst Russia has 2 ships also of 18 inches armour. These make up a total of 15 ships possessing a minimum thickness of armour of 18 inches steel, equal to 24 inches iron, as against only 11 British ships, none of whose armour exceeds this minimum thickness. It will thus be seen that to meet these powerfully armed and heavily armoured vessels Great Britain can only muster 18 guns on 5 ships that would be capable of piercing the thick armour of the five first-mentioned vessels (3 French and 2 Italian). The same guns would of course also pierce the sides of the remaining 10 foreign ships which are less thickly armoured; but in the event of these vessels being brought into action the English could only call up one additional ship—the *Inflexible*, with her muzzle-loading guns—to render assistance. The armour of these 10 vessels, although weaker than the strongest armour on the foreign vessels, is yet too thick to be penetrated even at close quarters by the sixteen 43-ton guns which the remaining 5 first-class British armour-clads carry. Sixteen guns on 7 French ships, and twenty-eight 100-ton guns on 7 Italian ships can pierce the armour of the whole of the 11 first-class British vessels.

Our position is therefore this:—There are 44 guns on 14 French and Italian ships that can pierce the armour of every English ship, whilst England possesses only 18 guns on 5 ships which could pierce the armour of every foreign ship. We have thus less than one-third of the heavy guns and a little more than one quarter of the ships!

These facts speak for themselves, and cannot be gainsaid. They show conclusively that in the event of an artillery duel between the pick of our navy and the pick of the French and Italian fleets, we should be completely overmatched at all points. Our selected ships would fall an easy prey to such an alliance; indeed, measured by the efficiency of their armour and guns, they would be overcome by a much less powerful combination. The pressing importance of these figures is accentuated by this significant fact—that naval engagements have nearly always been decisive. They have invariably ended in the sinking or disablement and capture of the vessels of the vanquished. Such is the present outlook, and it must be confessed that the prospect is not encouraging to those who believe that it is the mission of Britannia to rule the waves. But what will it be in a few years? Taking the heavy armour-clads still on the stocks when *Lloyd's Universal Register* was issued, we find that Britain is credited with 4, the *Nile*, *Trafalgar*, *Renown*, and *Sans Pareil*; France with 3, the *Hoche*, *Magenta*, and *Neptune*; Italy with 3, the *Re Umberto*, *Sicilia*, and another not named; and Russia with 1 in the *Sinop*. To these, however, should be added the *Brennus* and *Charles Martel*, with the construction of which we understand the French authorities have decided quite recently to proceed. We thus have 13 ships building for these four powers. Their particulars are as follows:—

	No. of Ships.	Average Displacement.	No. of Guns.	Armour in inches of Iron.	Penetrative Force of Guns.
Britain ..	2	12,000	8	27	29
	2	10,500	4	24	36
France ..	5	10,000	20	21	25
Italy	3	13,100	12	25	32
Russia ..	1	8,600	6	24	24

The British ships taken individually compare very well with the other vessels; but they only number 4 out of 13, being 1 less than the French and only 1 more than the Italians. When these 4 vessels are launched and added to the British list, our heavy armour-clads will only just equal those of France and Italy which are already launched; and even then our guns will not be equal to the armaments of the present existing French and Italian ships. But when the 5 new French and 3 new Italian ships come into account the existing disparity will be widened, and our present relative weakness in armour and armament only intensified to an insufferable degree. The prospect is anything but flattering to our national pride. In former days, and those not so far distant, it would have been treated as a menace to our national existence; but in these piping times of peace people are inclined to take things philosophically. Secure in our island home, we are tempted to scout the notion of a foreign foe touching these shores. It is, however, as every schoolboy knows, but 200 years since the boom of an enemy's guns was heard in the Thames. Our fleet is our first and to all intents and purposes our only line of defence. If that should fail us we are indeed undone. That it would fail us if forced to meet such a continental coali-

* Estimated penetration.

tion as might assail us is surely but too evident from the figures we have quoted.

The risk of invasion, however, is the most remote if not the least of the disastrous consequences which a naval defeat would entail upon Great Britain. As a German strategist observes, it would be found easier to bring a foreign army into this country than to get it safely out again. But short of actual invasion, we could, it is contended, if defeated upon the high seas, be made to drain to the dregs the bitter cup of despair. With our Colonies in every clime, our shipping upon every sea, we should then be vulnerable at every point. Our seagoing steam tonnage, which is about twice as great as that of all the rest of the world put together, would be completely at the mercy of our foes. Our principal food supplies would thus be cut off; our commerce would be strangled; our few stray ships that, "greatly daring," ventured out to sea, would fall a prey to the hostile cruisers scouring the Channel. Bankruptcy and starvation would stare us in the face, and Red Ruin would be our final portion. This, or something like it, is what high naval authorities predict for us if our navy were defeated, and if, as is more than likely in the event of defeat, our ships preferred annihilation to surrender. To what extent this may be true we cannot here discuss. It is a question upon which there may exist much difference of opinion. But there is one point which leaves room for little doubt. If we were fortunate enough to escape defeat at the hands of rival fleets in a naval engagement on a large scale, our commercial loss would nevertheless be sufficiently serious if only our foes possessed a few fast cruisers. Protected cruisers of great speed and powerfully armed will undoubtedly be usefully employed as auxiliaries in pitched battles. But their primary function will be to scour the sea, and swoop down upon the merchant ships and weaker cruisers of an enemy. This, indeed, forms the keynote of the naval policy of the present day in every country.

In the words of Admiral Aube, the French Minister of Marine, the motto is "*Les Alabamas! Encore les Alabamas!! Et toujours les Alabamas!!!*" There can be no mistake as to the intended employment of these *Alabamas*. They are meant to carry on a war, not of conflict, but of commerce. "England's commerce," says the inspired article in the recent impression of the *Journal des Débats*, "is her vulnerable point; threaten that and peace between the two countries is assured."

This is a matter which has an especial interest for Great Britain, with her vast interests at stake on every sea. It is obvious that even a comparatively weak maritime state could with a handful of the fastest cruisers strike a deadly blow at our sovereignty of the sea. The havoc wrought upon American shipping by the noted Confederate cruiser *Alabama* shows what powers of destruction even one vessel fitted out for such work possesses. The duty devolving upon Great Britain, as upon any State with a mercantile marine, is clear and simple. The great ocean highways must be kept open for our trade. This can only be done in one way—by catching or disabling an enemy's fast cruisers. To do this it is necessary to possess a few cruisers swifter and stronger than the swiftest and strongest of our foes. Slow steaming armour-clads are useless for such a purpose. The great speed of modern light cruisers enables them to choose their field of battle. At their own option they can show fight or a clean pair of heels. In order to convey a clear idea of the strength of the various countries in this respect we have tabulated the numbers and displacements of all cruisers of 1,000 tons and upwards having nominal speeds of not less than 16 knots an hour—grouping them according to their respective speeds. Table IV., containing this information, includes vessels presently being built as well as those already in existence, as the time occupied in building these light cavalry of the ocean is much shorter than the dreary periods swallowed up in the completion of our monster armour-clads. As already stated the speeds are nominal. To obtain the average ocean speed of any warship we must generally subtract 2 knots, and in some cases more from the official speed. By this means we shall be able to compare the cruisers with our fast passenger steamers, of whose actual performances there can be no doubt. The percentage of very swift merchant vessels is much smaller than many people imagine. It is only in the case of the great passenger lines that extreme speed is necessary. For the ordinary purposes of trade a comparatively slow steamer is often a more profitable investment. It is therefore not astonishing to find that our vast mercantile marine can boast less than 50 steamers possessing an average ocean speed of 14 knots and upwards. Of these 50 steamers about 10 have actually accomplished 16 to 18½ knots on their transatlantic voyages week after week; about 15 possess speeds ranging from 14½ to 16 knots; and the remaining 25 are credited with 14 to 14½ knots. After these comes the great mass of our mercantile marine with speeds which come gradually down till we reach about 9 or 10 knots, the average speed of a large number of our steamers.

Upon turning to Table IV. we see that there are at present 9 cruisers (built and building) having nominal speeds of 19 knots and upwards. The ten fastest merchant steamers with actual average speeds of 16 to 18½ knots would probably all be more than a match in speed for any one of these cruisers. But with the exception of these steamers, which we can count on our fingers, the whole of our merchant shipping would be at the mercy of the 9 fastest cruisers which, it will be seen, are all owned abroad. France has 2 of 6,000 to 7,000 tons, and 2 of 1,800 tons; Japan 2 of 3,800 tons; Spain 1 of 4,000 tons; Italy 1 of 2,000 tons; and Germany 1 vessel of 2,000 tons. Although, as will be seen, this country has a large proportion of the slower cruisers, we do not at present possess a single ship that could overtake any one of the 9 foreign cruisers. This is certainly not as it should be. In other respects besides speed our cruisers do not come out so well as we should expect in a comparison with the foreign ships. The displacement, if this may be taken as a standard of strength, is relatively small. Thus England has 4 protected ships of 3,600 tons and only 18 knots speed against similar French ships of 6,000 and 7,000 tons and 19 knots speed. Again, comparing the guns we find that the 4 British ships each carry two 12-ton guns, whilst the 2 Japanese ships of 19 knots each carry two 30-ton guns of the newest pattern. Next to speed and coal endurance the calibre of a cruiser's guns is the most important element, for an enemy with heavy guns is always for-

* P=Armour-protected decks. U=Unprotected ships.

midable even against armour-clads. Briefly summarized, the facts recorded in Table IV. resolve themselves into the following shape: England possesses 25 ships with nominal speeds of 16 knots and over, the greater proportion of them having only the minimum speed. Other countries own 41 vessels of the same minimum speed, many of the individual ships attaining the highest speed. These foreign vessels carry 26 guns of 20 to 30 tons, 31 guns of 8 to 12 tons, and 210 guns of 5 to 6 inches diameter. On the other hand the British ships carry only 10 guns of 12 tons, and 197 guns of 5 to 6 inches diameter. It is indeed claimed for the English guns that they are more powerful weight for weight than the continental ones. But the artillerists of every nation use equally good material to our own. Our past failures in heavy artillery so far surpass those of any other makers. Our superiority may therefore be only apparent, and almost entirely due to the overstraining as our guns. Be that as it may, there can be no two questions about our utter weakness as shown in the foregoing figures. But when we consider the programmes now being adopted by every nation our poverty in fast cruisers becomes more glaring. The French Budget Commission propose to build 6 cruisers of the first class, and 10 of the third class. Spain has adopted a programme which provides for the construction of 2 more cruisers of 4,000 tons and 8 of 3,000 tons, all of them to have a speed of 21 knots; and 10 torpedo cruisers of 1,100 and 1,500 tons with still greater speeds. The United States too have at last finally determined upon the immediate construction of several cruisers of great speed, and combining all the most recent designs. In fact, turn in what direction we may, we see the utmost activity on all sides in the acquisition of this class of vessel.

No one who ponders the striking facts brought out in Table IV. can surely fail to agree with Lord Charles Beresford, who refers in his famous memorandum to our remarkable weakness in modern cruisers.

Space forbids our entering upon a comparison of the great mass of the unarmoured fleets of the various powers. But this is not a matter that calls for much attention at our hands. The slow cruisers, sloops, gun-vessels, gun-boats, and the smaller fry which together make up the swelling totals in our own and other navies, are serviceable for a great variety of purposes. But they for the most part are obsolete, and do not take high rank in any of the primary essentials of modern war-ships. Neither have we space to do more than simply touch upon the very interesting question of the fighting powers of merchant ships. Trading vessels have many times played an important part in naval battles, and may do so again. But it is extremely doubtful whether merchant steamers, as constructed in the present day, and under existing conditions of naval warfare, can be effectively converted into war-vessels. As improvised cruisers they would suffice to meet merchant combatants. But they could be no match for the heavily protected and minutely subdivided cruisers now built and building. The practical inutility of the much vaunted watertight compartments of the mercantile auxiliaries, from whom the Admiralty expect such great assistance in time of need, was shown in the case of the steamer *Oregon*, which was sent to the bottom so quickly after colliding with a sailing vessel. It would be very unwise on our part to rely too much upon our extemporized militia of the sea to fill the place of rapid cruisers for the protection of our commerce.

Turning to torpedo flotillas, which now form such an important adjunct in all schemes for the regeneration of navies, we find, according to *Lloyd's Universal Register*, that the vessels and boats are distributed amongst the principal countries in the following manner:—

TORPEDO-FLOTILLAS.

COUNTRIES.	Great Britain.	France.	Italy.	Russia.	Germany	Austria.	Turkey.
Cruisers of 1000 tons & upwards	10	4	0	0	3	2	0
Under 1000 tons	6	8	8	2	4	4	1
BOATS:							
Large.....	80	50	60	38	31	20	17
Small.....	50	50	20	102	27	8	0
Totals....	145	112	88	142	65	34	18

This table shows that Great Britain is not now so wofully deficient in these mosquitos as she was prior to the Russian war scare of 1885. But having regard to her vast maritime interests it must be admitted that this country is still sadly lacking in this indispensable arm. So fast do we move in these matters now-a-days that Lloyd's Torpedo tables are already somewhat out of date. Several new boats of a superior description have been determined upon by different countries. France is laying down an enlarged *Scout* in the *Ouragan*, to have a speed of 25 knots, and has decided upon 20 new torpedo catchers and 100 new torpedo boats. Germany, who has already a relatively large supply of good-size boats considering her limited seaboard, has just voted £840,000 for 70 more boats for coast defence.

We have already alluded to the results of recent torpedo experiments. The French were evidently so much impressed with the results of their trial, that they are now going in more for swift cruisers and torpedo vessels and boats. Judging from the English experiment, however, it would appear that the torpedo, or rather the aggressive fish-torpedo, need not be feared as it has been, if directed against an iron or steel ship with a double skin. This is the mode of construction of at least all English armour-clads. Torpedoes may therefore be said to be still on their trial. This statement of fact carries with it the condemnation of naval authorities in this and other countries. In no mechanical art, perhaps, are its votaries such slaves to custom in its worst forms as in matters of naval construction. The sheep-like docility with which one nation follows another in many things is quite remarkable. It is, to say the least, most unbusinesslike to have spent millions sterling on torpedoes, and on ships and appliances for carrying and discharging them, without anyone ever thinking of making the simple experiments which have been already described, to ascertain the damage they can do. Now, however, that this matter has been so clearly raised, it must soon be definitely settled either one way or another. The exceedingly powerful submarine (moored) torpedoes are

doubtless most deadly, but there are means for exploding them prematurely. When this has been done, and the torpedo line has been broken, then it falls to the torpedo-boats to so act as to make the gaps impassable, and for this purpose seaworthiness and handiness will be more valuable than mere speed. Where speed would be required is on the high sea, but it is notorious that the racing machines which travel 20 knots and upwards an hour, and called torpedo-boats, are useless at sea. With the exception of the celebrated "Turnabouts," it was found impossible, on a recent occasion, even to discharge the torpedoes, though the sea was not too rough to hinder the boats from facing it. Since then the bows of the vessels have been altered, but with what result is not yet known.

A careful study of the foregoing tables must surely lead an impartial inquirer to the conclusion that Great Britain has not a navy commensurate with her manifold responsibilities in every quarter of the globe. Measured by any known standard of national requirements, our navy will not compare with that of any European power. Italy, once the mistress of the Mediterranean, is fast acquiring a navy worthy of her palmiest days. Her armoured fleet includes vessels which many consider superior in power and speed to all our own first-class ships. Indeed, at the present rate of progress the Mediterranean bids fair to become an Italian lake. Russia has been slowly but surely building ships stronger than any of ours that could enter her waters. France, our ancient trusty ally and present determined rival, appears, from her latest return, to have 105,000 tons of war-ships under construction, as against our own 116,000 tons. For this slight superiority we have alone to thank our recent heroic estimates. But will this lead, small as it is, be maintained? Cobden's oft-quoted opinion that we should, if necessary, "spend one hundred millions sterling to maintain our irresistible superiority over France at sea," was uttered when we possessed two men-of-war to her one. A quarter of a century has passed, every navy in the world has been rebuilt. But instead of constructing two for every one laid down by the French, they are now almost on a level with us. This, too, in spite of our superiority in engineering resources, in spite of our overwhelming responsibility in defenceless merchant ships, and the enormously extended coast-line of our practically defenceless Colonial Empire. When it is further remembered that within that period France has sustained the most crushing defeat in her history; that she is hampered with a National Debt exceeding our own, and by a Military Establishment more expensive than that of Germany; and that since 1870 she has on several occasions spent almost as much as England on new men-of-war—then it must be owned that we have been most culpably remiss in a matter of the most vital importance to us as a nation, a matter in which we, of all the nations of the earth, should be most actively alert.

INCOME TAX RATES FROM ITS FIRST IMPOSITION IN 1842 TO THE PRESENT TIME.

* Differential rate upon scale of incomes abolished. Incomes under £100 exempt; and incomes of £100 and under £200 per annum received an abatement of £60 from the assessment:—thus £100 paid on £40; £160 upon £100; £199 upon £139; but £200 paid on £200.

† Under £150 exempt; if under £400 the tax is not chargeable upon the first £120.

AUSTRIA-HUNGARY (Empire of).

Royal Order of St. Stephen of Hungary.—Founded 1764—Three classes.—Insignia: a green-enamelled cross, with golden rim, and containing another cross in the red-enamelled centre. On the obverse of the middle scutcheon is seen the apostolic silver cross with a golden crown, placed on a green mountain; on both sides of the cross are engraved the initials "M. T." (Maria Theresa, founder of the order), and round the red enamelled centre is inscribed the legend: "*Publicum meritorium præmium*" (Public reward for merit). The reverse of the scutcheon, which is of white enamel, exhibits a wreath of oak-leaves, within which is inscribed the legend: "*Sto. St. Ri. Ap.*" (*Sancto Stephano Regi apostolico*"). The cross is surmounted by a large Hungarian crown of gold. The ribbon of the order is crimson with green borders. The robes are of green velvet, bordered with ermine and lined with crimson taffetas. The under-garment and the head-dress are of crimson velvet, the cap being edged with ermine and ornamented with heron-feathers, placed in a red and green enamelled sheath. The collar worn by the knights of the 1st class is of gold; its links consist alternately of the initials of Saint Stephen and those of the founder, with the Hungarian crown between. The middle of the collar represents a golden eagle (the arms of the house of Austria), with the legend: "*Stringit amore*" (United by love).

Leopold.—Founded by the Emperor Francis I. in 1808.

Golden Fleece.—Founded by Philip III. the Good, Duke of Burgundy and Count of Flanders, in 1429. The Emperor is empowered by the statutes to create any number of members, provided they belong to the Catholic and ancient high nobility of the realm (if Protestants, the consent of the Pope must first be obtained). Insignia: the *collar* composed of a double chain of gold, formed of flint-stones in blue enamel with flames of fire, and the *pendant* of gold, fixed to the collar by means of a cross made of blue-enamelled flint-stone surrounded with flames of fire, and representing a fleece or sheepskin of gold held by the centre. Motto: "*Pretium laborum non vile*" (Not a bad reward for labour). The costume consists of a long robe of deep crimson velvet, lined with white taffetas, over which is thrown a long mantle of purple velvet, lined with white satin and richly trimmed with gold embroidery, containing fire-stones and steels emitting flames and sparks. On the hem, which is equally of white satin, are repeatedly embroidered in gold the words: "*Je l'ai empris*" (I have undertaken it). The head-dress is of purple velvet, equally trimmed with gold embroidery, and at the back of it is fixed a little hood. The shoes and stockings are red. This order, which is placed under the patronage of Saint Andrew, is the highest Austrian order. It came into the possession of the House of Austria when Charles V. ascended the imperial throne. On leaving Spain after his defeat by King Philip of Spain, Charles VI. of Austria took the order and its archives with him to Vienna. For many years the two countries quarrelled over the possession of the order, when it was finally agreed that the Golden Fleece should remain the common property of Austria and Spain.—Ribbon: crimson silk.

Iron Crown.—Founded 1805—Three classes—Limited to twenty knights of the 1st, thirty of the 2nd, and fifty of the 3rd.—Insignia: a golden crown, upon which is placed the double Austrian eagle in gold, bearing on the obverse a blue-enamelled scutcheon upon the breast, with the black-enamelled letter F. (Francis) on it, and on the reverse the year 1816 (that of the reconstitution of the order).—Ribbon: black, with light blue edges.

Francis-Joseph.—Founded 1849—Three classes—Unlimited number—Insignia: a red-enamelled cross of gold, the angles of the branches of which are curved; the cross is convex; between its four arms is perceived the two-headed crowned eagle in gold, partly enamelled black, and holding in his two beaks a golden chain, in the lower links of which is inserted the motto: "*Viribus unitis*" (Strength by Unity).—Ribbon: deep red.

MILITARY ORDERS.

Maria-Theresa.—Founded 1757—Three classes—Unlimited number—Insignia: a white-enamelled cross set in gold. Motto: *Fortitudini* (For valour).—Ribbon: white and crimson.

Elisabeth-Theresa. — Founded 1750 — Three classes—Limited to six knights of the 1st, eight of the 2nd, and seven of the 3rd.—Insignia: an eight-branched star of gold, the rays of which are enamelled partly red and partly white. It bears the inscription: "*Mas. There paventis gratiam perennem voluit*" (Maria Theresa wished to perpetuate regard for her parent).—Ribbon: black watered silk.

BELGIUM (Kingdom of).

Order of Leopold.—Founded 1832—Five classes: 1st, Grands-cordons; 2nd, Grands-officiers; 3rd, Commanders; 4th, Officiers; 5th, Chevaliers.—Insignia: a white-enamelled cross, with a wreath of laurel and oak-leaf between each of the four branches; one side of it bears in the centre a black-enamelled scutcheon, surrounded with a red circle between two small golden circles; on that scutcheon is inscribed the king's monogram in gold and composed of two L.L. and two R.R. intertwined; and on the other side, on a black-enamelled scutcheon, the Belgian lion in gold; round the scutcheon is a red-enamelled rim on which is inscribed in gold letters the motto of the kingdom: "*L'union fait la force.*" The cross is surmounted by the royal crown. The jewel is on silver for chevaliers and on gold for all other classes. The star of the order is worn by Grands-cordons and Grands-officiers only.—Ribbon: crimson watered silk. This order is the same for civilians as for the military, with the exception that for the latter two crossed swords are added as supporters under the crown.

In 1867 the King instituted a new order known as *Ordre du mérite civil* (Order for Civil Merit).

BRAZIL (Empire of).

Order of Pedro—Founded 1822—Three classes—Limited to twelve of the 1st, fifty of the 2nd, and one hundred of the 3rd.—Insignia: a radiating golden pentagonal star, upon which rests a five-pointed star, white-enamelled, with gold edges; every point of the star terminates with small golden balls; the whole is surmounted by an imperial golden crown.—Legend: "*Fundator del Imperio dal Brazil*" (Founder of the Brazilian Empire). In the white-enamelled centre of the star is placed a gold Phœnix, bearing within a small silver scutcheon placed and in its claws an antique crown.—Ribbon:

on his breast the letters P. I. (Pedro Imperador), green watered silk with white borders. This is the highest of Brazilian orders.

Order of the Cross of the South.—Founded 1822—Four classes.—Insignia: a white-enamelled five-branched star, resting upon a green laurel wreath, with broad edges mounted in gold, and the ten points of which terminate with small golden balls. A gold scutcheon in the centre of the obverse represents the effigy of the Emperor in relief, and is surrounded with a dark blue-enamelled ring within two golden rims; in the blue ring is inscribed the legend, "*Petrus I., Brasiliæ Imperator.*" The four stars which form the curious and beautiful constellation of the Cross of the South are exhibited in white enamel upon the sky-blue centre of the reverse, which is encircled in a dark blue-enamelled ring, in which is inscribed the motto: "*Premium bene merentium*" (Reward of the well-deserving). The whole is surmounted by the golden imperial crown.—Ribbon: sky-blue silk.

Order of the Rose.—Founded 1829. This order comprises eight real and eight honorary knights of the Grand Cross, sixteen grand dignitaries, thirty dignitaries, and an unlimited number of commanders, officers, and chevaliers.—Insignia: a white-enamelled hexagonal star, with gold edges, the six points of which bear small golden balls. Within the two upper branches of the star is inserted an imperial crown of gold; each of the branches displays a garland of three full-blown roses. The golden centre of the star contains the two letters P. A. (Pedro & Amelia) entwined, and is encircled in a dark blue-enamelled ring, in which is inscribed the motto, "*Amor e Fidelidade*" (Love and Fidelity). The gold centre of the reverse displays the date of the foundation, while in the dark blue-enamelled ring round it are inscribed the words, "*Pedro e Amelia.*"—Ribbon: light pink, with white borders.

DENMARK (Kingdom of).

Order of the Elephant.—One of the most illustrious orders of chivalry, it ranks as high as the Golden Fleece, or even the Garter. Founded at an uncertain date, which by some is given as the end of the 12th century. Its statutes were, however, altered by King Christian V. in 1693. Though the statutes originally limited to thirty the number of the knights of this order, that regulation is not now strictly adhered to.—Insignia: a white-enamelled elephant with golden tusks, a blue cloth covering a battlemented tower upon his back, and a negro upon his neck with a spear in his hand. This decoration is worn suspended by a bright blue watered broad ribbon, across the left shoulder towards the right hip. On state occasions it is worn with a golden chain, consisting of towers and elephants, with blue coverings, upon which is displayed the golden letter D. (Dania). The state robes consist of a jacket and knee-breeches of white satin, over which is thrown a crimson velvet mantle, with a long train lined with white fur; the head-dress is a black velvet hat with red and white feathers.—Motto, "*Magnanimi prætium*" (Reward of the magnanimous or high-minded).

Order of the Dannebrog.—Revised in 1671; the real date of its foundation is uncertain—Four classes—Unlimited number.—Insignia: an oblong golden cross, enamelled white, with red edges; above the cross is seen the king's initials under the royal crown, which latter is also placed in each of the angles of the cross. The obverse centre of the cross displays a crowned W. (Waldemar, the supposed founder of the order), and upon the four arms of the cross are distributed the words, "*Gud og Kongen*" (God and the King). The reverse centre displays the crowned W., and the supposed years of the foundation (1219, 1671, 1808) are inscribed in the arms of the cross.—Ribbon: white watered silk with crimson edges. The state robes of this order consist of a mantle of pale red velvet, trimmed with white fur, white breeches, white stockings and white shoes; the hat is black, with white and red feathers. On state occasions the order is worn with a gold collar, consisting of the crowned initials of Christian V. alternating with those of Waldemar and the cross.—Motto: "*Pietate & Justitia*" (By piety and justice). The name of this order signifies, flag of the Danes.

FRANCE (Republic of).

Legion of Honour.—Founded 1802—Five classes: 5th class, Chevaliers, whose number is unlimited; 4th, Officiers, limited to 4,000; 3rd, Commanders, limited to 1,000; 2nd, Grands-officiers, limited to 200; 1st, Grands-croix, limited to 80. This order was founded as a reward for civil merit or military valour.—Insignia: a star with five double-pointed branches, surmounted by a wreath of oak and laurel leaves; round the centre of the star are entwined branches of oak and laurel; the obverse side of the star bears, in its centre, the effigy of the Republic; in a small rim round this centre, and encircled between two smaller golden rims, is the following inscription: *République Française* (1870); the reverse side represents two tricolour flags, with the motto of the order: "*Honneur & patrie*" (Honour and country). This star is of silver for chevaliers, and of gold for all other ranks. This order is frequently conferred upon foreigners; but foreign members have not their names inscribed upon the official rolls, nor do they receive letters patent, but simply letters of advice.—Ribbon: crimson watered silk.

GERMANY (Empire of).

Royal Prussian Order of the Black Eagle.—Founded 1701—Originally limited to thirty knights, it is now unlimited.—Insignia: a blue-enamelled cross, each arm of which is forked; in the obverse centre of gold is displayed the monogram, "F. R." (Fredericus Rex), and a crowned black eagle, with spread wings, between each of the four arms of the cross.—Motto: "*Suum cuique*" (To every one his due). The state robes consist of an under-garment of blue velvet, and over it a velvet mantle of flesh colour, lined with sky-blue watered silk. The cross of the order is worn on state occasions with a large chain or collar composed alternately of a white-enamelled disc, inscribed with the motto and encircled in a blue-enamelled ring, displaying the initials of the founder, "F. R." (Fredericus Rex); that ring is surmounted by four royal crowns of gold, and is fixed on each side to the Prussian eagle with a thunderbolt in its claws. A black velvet hat with a white plume completes the costume.—Ribbon: orange colour. This order is never conferred on persons below thirty years of age. The knights of this order are, at the same time, knights of the first class of the red eagle.

Order of the Red Eagle.—Founded 1705; reorganized 1861—Six classes—It ranks as the

second order of the Kingdom.—Insignia: a white-enamelled Maltese cross with gold mountings; in the centre of the obverse is seen the Brandenburg red eagle, and, in that of the reverse, the initials, "F. W. R." (Frederic William Rex).—Motto: "*Sincere & Constanter*" (With sincerity and constancy).—Ribbon: white watered silk with orange stripes.

Order of the Iron Cross.—Founded 1813—Three classes—civil and military.—Insignia: a cast-iron cross with silver mountings, and bearing no inscription on the reverse; the upper part of the obverse contains the initials "F. W." (Frederic William, the founder), surmounted on a crown; the centre is adorned with three oak-leaves, below which is seen the number 1813 (year of the foundation).—Ribbon: for military merit, black watered silk with white stripes; when given as a reward for civil merit, white watered silk with black stripes.

Royal Order of the House of Hohenzollern.—Founded in 1841. It originally belonged to the Principalities of Hohenzollern, became a Prussian order in 1851, after their incorporation with Prussia—three classes—civil and military. Insignia for the military order: a gold cross, with white and black enamel. The white-enamelled centre of the obverse is encircled with an azure-blue ring, containing the legend, "*Vom Fels zum Meer*" (From rock to sea), an allusion to the extension of the House of Hohenzollern to the Baltic and to the Northern Sea. In the centre itself is figured the royal eagle, bearing upon its breast the arms of Hohenzollern. The azure-blue ring of the reverse bears the following inscription: "Der 18 Januar, 1851," the day of the foundation of the order. Its white-enamelled centre displays the royal initials. The space between the arms of the cross is filled with a golden green-enamelled, of partly (to the right side) oaken leaves, and partly (to the left side) laurel leaves. The cross is surmounted by the royal crown. Motto: "*Vom Fels zum Meer*" (From rock to sea).—Ribbon: white-watered silk with three black stripes. The insignia for civil merit consists of a royal eagle in black-enamelled gold, and displaying the Hohenzollern arms upon its breast. The motto of the order is inserted within a blue ring round the head of the eagle. The ribbon is the same as for the military order.

Order of Louisa.—Founded 1814—only one class, limited to 100 members.—Insignia: a small black-enamelled gold cross. The centre of both sides is of blue enamel, and contains, on the obverse, the letter L. with a wreath of stars round it, and, on the reverse, the figures "1813–1814." This order, exclusively reserved for ladies, is worn on the left breast with a white ribbon, having two black stripes, and tied with a bow. Reorganized in 1850, with the added dates "1848–1849." Enlarged in 1865 (by a second class), with the date "1864."

Bavarian Order of St. Hubert.—Founded 1444—Reorganized 1808—Limited to twelve knights, exclusive of the sovereign and native or foreign princes.—Insignia: an octagonal silver star, over which is fixed a cross, ornamented with silver and interwoven and mounted in gold, in the poppy-red centre of which is inscribed, in golden Gothic letters, the motto of the order: "*In treu vast*" (Constant in loyalty). The collar contains forty-two oblong links of gold, twenty-one of which represent the history of the conversion of Saint Hubert; while the twenty-one others, which are alternately red and green, represent the monogram of the motto of the order in Gothic letters. The state robes consist of the imperial mantle-dress, *i.e.*, a black collarette, a sash of the same colour, short narrow black breeches, with poppy-red garters and bows, and a short black mantle, after the old Castilian fashion, a hat and plume and a sword. To be admitted into this order it is necessary to have been at least six years a member of that of civil merit of the Bavarian crown.—Ribbon: poppy-red with narrow green stripes.

Civil Order of Merit of the Bavarian Crown.—Founded 1808—Three classes—Limited to 24 members of the 1st, 40 of the 2nd, and 160 of the 3rd.—Insignia: an octagonal white-enamelled cross, encompassed by a green-enamelled oak wreath under a golden royal crown; the centre of the obverse contains a golden crown upon white and blue rues; it is encircled with a red-enamelled ring, which displays the motto of the order, "*Virtus & Honor*" (Virtue and Honour). The golden centre of the reverse displays the effigy of the founder, and is set in a red-enamelled ring, containing the inscription, "*Max. Jos. Rex Boyvariæ*" (Maximilian Joseph, King of Bavaria).—Ribbon: blue watered silk, with narrow white borders.

Grand Ducal Order of the Vigilance or of the White Falcon of Saxe-Weimar.—Founded 1732—Three classes: 12 knights Grand-cross, 25 commanders, and 50 chevaliers. Insignia: a golden white-enamelled spread falcon with gold legs and claws, and placed upon a gold green-enamelled cross (obverse side); between the forked arms of which are seen the four pointed arms of a smaller red-enamelled cross, the points of which terminate with small white-enamelled double balls. The reverse side is white-enamelled; as for the smaller cross, it is green-enamelled. The centre of the cross represents a scutcheon, blue-enamelled, upon which is inscribed the motto of the order, "*Vigilando ascendimus;*" it is encirled with a wreath of laurel for civilians, and with an armature for the military. The cross is surmounted by a golden royal crown.—Ribbon: crimson watered silk. Lately two new classes have been added to this order.

GREECE (Kingdom of).

Order of the Redeemer.—Founded 1833—Five classes—Members, being Greek subjects, 1st class limited to 12; 2nd to 20; 3rd to 30; 4th to 120; the number of the members of the 5th class is unlimited. Foreign members of each class unlimited.—Insignia: a white-enamel cross with forked arms, connected together by a green-enamelled wreath of oaken and laurel leaves; the centre of the reverse consists of a blue-enamelled disc, in the middle of which are displayed the white-enamelled arms of the country, surrounded by the legend: "Η ΕΝ ΑΡΓΕΙ Δ' ΕΘΝΙΚΗ ΤΩΝ ΕΛΛΗΝΩΝ ΣΥΝΕΛΕΥΣΙΣ Α. ΩΚΘ'" (The 4th National Convention of the Hellenes, Argos, 1829,) which instituted the Order. Motto of the order: "Η ΔΕΞΙΑ ΣΟΥ ΧΕΙΡ ΔΕΔΟΞΑΣΤΑΙ ΕΝ ΙΣΧΥΙ" (Thy right hand is glorified with power). The obverse bears the effigy of Our Saviour, with the motto of the Order as above.—Ribbon: blue-watered silk, with white borders.

HOLLAND (Kingdom of).

The Military Order of William.—Founded 1815—Four classes—unlimited.—Insignia: a white-enamelled cross with forked arms, terminated

with small golden knobs; between each of the four arms of the cross is seen a branch of green-enamelled oaken leaves; on the four arms of the cross are inscribed the following words: "*Voor Moed, Belied, Trouw*" (For courage, zeal, and loyalty). The obverse centre of the cross is occupied by the Burgundian golden plane, and the reverse centre of it, which is blue-enamelled, contains a W. encircled with a laurel wreath.—Motto: "*Von Moed, Belied, Trouw.*" The cross is surmounted by a royal crown.—Ribbon; orange watered silk with two purple stripes.

Order of the Netherlands Lion.—Founded 1815—Three classes: Grand Cross, Commander, Knight.—Insignia: a white-enamelled cross, between the four arms of which is inserted the letter W. in gold; the blue-enamelled centre of the obverse displays the motto of the order, "*Virtus nobilitat*" (Virtue ennobles) in gold letters; the golden centre of the reverse contains the Netherlands lion in gold. The whole is surmounted by a royal crown.—Ribbon: Nassau blue-watered silk with two orange-coloured stripes. Members of the fourth class are not entitled to wear the cross. They wear a silver medal, displaying the lion on one side and the motto on the other. For them the ribbon has only one stripe. A fourth class or companionage exists, but the decoration consists of a medal. The members are termed "Brothers of the Netherlands Lion."

ITALY (Kingdom of)

Order of the Annunciada.—Reorganized under that name 1518—Only one class—Limited number.—Insignia: a gold medal representing the Annunciation, and surrounded by love-knots. The collar is of gold, and composed of love-knots alternating with the old-fashioned letters, "F. E. R. T." (the old motto of the courts of Savoy, supposed to be the initials of "*Fortitudo ejus Rhodum tenuit*" (Rhodes was kept through his valour), an allusion to the exploits of Amadeus V. against the Turks).—Ribbon: sky-blue silk. The state robes, which have frequently been modified, now consist of a garment of white taffetas embroidered with gold, a sword, a cap edged with fur, and with a long flap of sky-blue velvet, and finally of a mantle of amaranth colour, lined with blue silk and silver embroidered. This order is the first of the kingdom.

Order of the Saints Maurice and Lazarus.—Founded 1572—Five classes.—Insignia: the white-enamelled cross of St. Maurice, between the arms of which is inserted the green cross of Saint Lazarus; both crosses have a golden rim; the top part of the cross is surmounted by a golden royal crown. Ribbon: green-watered silk.

Military Order of Savoy.—Founded 1815—Five classes.—Insignia: a red-enamelled cross with golden edges, in the centre of which is inserted a white-enamelled cross, equally edged with gold; the red cross is placed in a green-enamelled wreath of laurel-leaves, the whole being surmounted by the royal crown in gold. The reverse of the cross is of gold and not enamelled, and displays the initials, "V. E." (those of the founder, Victor Emmanuel), with a crown above. Members of the fifth class of this order wear the cross of silver instead of gold.—Ribbon: sky-blue watered silk.

Civil Order of Savoy.—Founded 1831—Only one class. This order is never conferred upon foreigners. It is the most important after that of the Annunciada.—Insignia: a blue-enamelled cross with gold edges, in the centre of which is inserted a white-enamelled disc, with a golden ring round it; the obverse of the disc is inscribed with the entwined letters "C. A." (Charles Albert, founder of the order), in gold; the disc on the reverse side of the cross contains the following inscription: "*Al merito civile*, 1831" (For civil merit, 1831).—Ribbon: white-watered silk with a sky-blue stripe.

Order of the Crown of Italy.—Founded 1868—Five classes. The 1st class is limited to 60 members; the 2nd to 150, the 3rd to 500, the 4th to 2,000; as for simple chevaliers who form the 5th class, their number is unlimited.—Insignia: a white-enamelled cross, the four arms of which are connected by *lacs* of gold; the centre of the cross is adorned with the iron crown.—Ribbon: crimson-watered silk with a large white stripe.

PERSIA (Kingdom of.)

Order of the Lion and the Sun.—Founded 1808—Five classes—unlimited number of members.—Insignia: an octagonal silver star, in the centre of which is represented an enamelled disc, the sun rising upon the back of the lion. The first class of the order is, exceptionally and by special favour to high personages, set in diamonds. The star is simply of silver for those of the other four classes.—Ribbon: green.

PORTUGAL (Kingdom of).

Order of Christ.—Founded 1319—Reorganized 1789—Three classes. Limited to 6 members of the 1st, and 450 of the 2nd; the number of the members of the 3rd class is unlimited.—Insignia: a red-enamelled cross with golden rims, in the centre of which is inserted a narrow white-enamelled cross; the whole is surmounted for the members of the two first classes with an octagonal star of gold and white enamel, in the centre of which is represented in red enamel the holy heart of Christ, encircled with a wreath of green-enamelled leaves.—Ribbon: crimson-watered silk. The state robes consist of a white mantle, fastened by means of a long silken cord tied in the shape of a rosette. The star of the order is embroidered on the left side of the mantle; a red cap, sword, morocco boots and golden spurs complete the costume, in which the members of the order are also generally buried.

Military Order of St. Benedict of Aviz.—Founded between 1143 and 1147—Three classes. Limited to 6 members of the 1st and 49 of the 2nd; the number of the members of the 3rd class is unlimited.—Insignia: similar to those of the Order of Christ, with the difference that the cross is peculiar in shape, and is of green enamel without the smaller white cross.—Ribbon: green-watered silk. The state robes are the same as for the Order of Christ.

Military Order of St. James of Compostella or of the Sword.—Founded by Henry of Burgundy about 1112.—Remodelled in 1789—Three classes. Limited to 6 members of the 1st and 150 of the 2nd; the number of the members of the 3rd class is unlimited.—Insignia: a peculiarly shaped cross of red enamel set in gold and surmounted by a star similar to that surmounting the cross of the Order of Christ; that star is only worn by members of the two first classes. Ribbon: purple-watered silk. State robes similar to those of the Order of Christ.

Order of the Tower and Sword.—Founded 1832. Five classes—The number of the members of the 1st class is alone limited.—Insignia: a pen-

tagonal white-enamelled star set in gold, the branches of which terminate with small golden knobs; the obverse centre of the star is occupied by a small white-enamelled disc, representing a golden sword resting on an oaken wreath of green enamel; that disc is encircled in a ring of blue enamel, bearing the legend, "*Valor, Lealdade e Merito*" (Valor, Loyalty, and Merit). The reverse centre of the star is similarly occupied by a small white-enamelled disc, representing an open book; on one page are the arms of Portugal, and on the other the words: "*Carta Constitutional da Monarquia*" (Constitutional charter of the Monarchy); that disc is also encircled in a blue-enamelled ring, which bears the legend, "*Pelo rei e pela lei*" (For the king and the law), which is the motto of the order. The star itself rests on a wreath of acorns and oaken leaves in green enamel and gold; it is surmounted by a golden tower. This star is of silver for the members of the 5th class.—Ribbon: dark-blue watered silk.

Order of Our Lady of the Conception or of Villaviçosa. — Founded 1818 — Four classes. Limited to 12 members of the 1st class, 40 of the 2nd, 100 of the 3rd, and 60 of the 4th. Only noblemen of the most exalted rank can be admitted into this order.—Insignia: a white-enamelled star with nine branches, surrounded by golden rays, upon which are placed nine little stars of white enamel. The star itself is surmounted by a royal gold crown. The centre of the star is a disc of gold, displaying in polished gold the monogram, "M. A.;" that disc is encircled by a blue-enamelled ring, bearing the inscription, "*Padroeira do Reino*" (Patroness of the Realm), which is the motto of the order.—Ribbon: light-blue watered silk, with two white stripes.

RUSSIA (Empire of).

Order of Saint Andrew.—Founded 1698—It is placed under the patronage of the patron saint of Russia, and is the highest order of the Empire. It only contains one class of knights, and is conferred exclusively on persons of the most exalted rank.—Insignia: a blue-enamelled figure of Saint Andrew on the cross; over the hands and under the feet of the saint are seen the letters, "S. A. P. R." (*Sanctus Andreas Protector Russiæ*); the cross rests upon the black-enamelled Russian eagle, both heads of which wear a golden crown, and are surmounted by the golden and red-enamelled imperial crown. It is worn across the right shoulder towards the left hip.—Ribbon: sky-blue watered silk. The state robes consist of a long green velvet mantle, lined with white taffetas, and having silver facings, cords and shoulder-belt; of a white jacket and black velvet hat adorned with a red feather. The collar is composed of links representing alternately the cross of Saint Andrew, surrounded by red and golden flames, the initials of Peter I. (founder of the order), upon a bright blue field, encircled within trophies and the Russian eagle of gold and black enamel. The star of the order displays a golden centre, in which is seen the Russian double eagle, round which a serpent is winding itself; that centre is encompassed by a ring of bright blue enamel, containing, in Russian characters, the motto of the order: "For Faith and Loyalty."

Order of St. Katharine.—Founded 1714—Two classes. Limited to 12 members of the 1st class, and 94 of the 2nd.—Insignia: a medal enriched with diamonds, and containing the figure of Saint Katharine on one side, with the motto (in Russian): "For love and Fatherland;" and on the other side, an aerie on the top of a tower in ruins, at the foot of which two eagles, with serpents in their beaks, are represented in the act of carrying them as food to their young. Above, is the inscription, "*Æquat munia comparis*" (She is equal to the duties of a consort).—Ribbon: poppy-red. This order is exclusively reserved for ladies.

Order of Alexander Newsky.—Founded 1725—Only one class. Candidates for this order must rank at least as major-generals. The order is civil and military.—Insignia: an octagonal red-enamelled cross, encircled by four imperial eagles in gold. The white-enamelled centre of the cross represents Saint Alexander on horseback. Ribbon: flame-coloured watered silk.—Motto: "For merit from the Fatherland" (in Russian). The state robes consist of a red velvet mantle with silver facings, a jacket of silver stuff, and a black hat with a white feather.

Order of Saint Ann.—Founded 1735—Originally consisted of but one class; now composed of four classes—unlimited number of members.—Insignia: a red-enamelled cross with gold edges, the arms of which are connected by gold ornaments. The obverse centre of the cross represents the image of St. Katharine in enamel; the reverse centre, of white enamel, the initials of the saint. Motto: "*Amantibus pietatem, justitiam & fidem*" (To those who love piety, justice, and loyalty).—Ribbon: light crimson, with yellow borders.

Order of Saint George.—Military order founded 1769—Five classes. Highly esteemed in Russia, it is never conferred but for gallantry at sea or in the field.—Insignia: a white-enamelled cross with golden rim; the obverse centre is a pink-enamelled disc representing the image of Saint George and the Dragon; the reverse centre forms a white-enamelled disc, bearing the initials of Saint George in gold.—Motto: "For military merit and valour" (in Russian characters).—Ribbon: orange-watered silk with three black stripes.

Order of Saint Vladimir. — Founded 1782 — Four classes.—Insignia: a red and black enamelled cross with golden rim; the obverse centre is a blue-enamelled disc encircled with a golden ring, and representing an imperial mantle and crown, white and pink enamelled, with the initials of the saint; the reverse centre, which is enamelled black, displays the date of the foundation. Motto: "Utility, honour, & glory," inscribed in Russian characters on the star worn by the two first classes.—Ribbon: crimson-watered silk with two black stripes.

ROME (Holy See).

Order of Christ.—Founded 1319—Only one class. Is very rarely conferred, and only on the most exalted personages. Its insignia and ribbon are the same as those of the Portuguese order of the same name.

Order of Saint Gregory the Great.—Founded 1831 — Three classes. Number of members limited to 30 of the 1st, 70 of the 2nd, and 300 of the 3rd, exclusive of foreigners.—Insignia: a red-enamelled cross with forked arms, with golden rim and knobs; the obverse centre is composed of a blue-enamelled disc, representing the image of Saint Gregory; in the golden ring

round the disc are inscribed the words, "*S. Gregorius Magnus.*" The reverse disc, which is also blue-enamelled, contains the legend, "*Pro Deo & Principe*" (For God and the Chief), as also the legend, "*S. Gregorius Magnus,*" in the golden ring round it. Motto: "*Pro Deo et Principe.*"—Ribbon: crimson, with yellow borders.

Order of Saint Sylvester.—Formerly known under the name of "Order of the Golden Spur." Said to have been founded by Constantine the Great and confirmed by Pope Sylvester. Reorganized 1559. Two classes. Number of members limited to 150 of the 1st and 300 of the 2nd class (exclusive of foreigners).—Insignia: a golden, white-enamelled cross, with forked arms; between the arms are placed four golden triangles. The obverse centre, which is of white enamel, represents a golden image of Saint Sylvester, and is encircled in a blue-enamelled ring, bearing the inscription: "*Sanc. Sylvester, P. M.*" (Saint Sylvester, Sovereign Pontiff). The reverse centre, also of white enamel, displays in Roman characters the date 1841 (that of the restoration of the order), and in the blue-enamelled ring round it is inscribed the legend: "*Gregorius XVI. restituit*" (Restored by Gregory XVI.)—Ribbon: crimson-watered silk with two black stripes.

Order of Pius IX.—Founded 1847—Two classes—Limited number of members.—Insignia: an hexagonal blue-enamelled star, the obverse white-enamelled centre of which is inscribed with the words, "Pius IX." in gold; in the gold ring round it is displayed the motto, "*Virtuti et merito*" (For virtue and merit). The reverse white-enamelled centre, equally encircled with gold, contains the following inscription: "*Anno* MDCCCXLVII."—Ribbon: dark blue with two crimson stripes on each side. This, and the order of the Golden Spur, are the only two Papal orders for which special costumes exist.

SPAIN (Kingdom of).

Order of the Golden Fleece.—Is the common property of the Crowns of Austria and Spain. The Spanish order does not differ from the Austrian order.

Order of Calatrava.—Founded 1158. It is now a court distinction, and only conferred in very rare instances. It used to be one of the most important military orders of Spain.—Insignia: a red-enamelled *fleur-de-lis* cross on white-enamelled field, encompassed in a lozenge of red enamel and gold, surmounted by a golden trophy.—Ribbon: crimson-watered silk. Costume, white mantle, with the cross of the order embroidered on the left side.

Order of Alcantara.—Formerly known under the name of Order of St. Julian—Founded 1177—Reorganized 1441.—Insignia: the same as for the order Calatrava, with the difference that the cross and ribbon are green. The crest of this order is a pear-tree. Limited to those who can prove noble descent through, at least, four generations.

Order of Our Lady of Montesa.—Founded 1317. A mere courtly favour, though formerly a powerful military order.—Insignia: a red-enamelled gold-mounted cross on a white-enamelled field, encircled in a red-enamelled gold-mounted lozenge, surmounted by a golden trophy.—Ribbon: crimson-watered silk. State costume, a long white woollen mantle, adorned with a red cross, embroidered on the left breast; it is tied by means of very long white woollen cords.

Order of Charles III.—Founded 1771—Reorganized 1804—Four classes—Limited to 120 members of the 1st and 300 of the second. The number of members of the 3rd and 4th classes is unlimited.—Insignia: a cross of gold, the forked arms of which are of light-blue enamel with a white enamel rim; to the points of the forks are fixed small golden knobs; between the four arms are inserted four golden lilies. The obverse centre of the cross represents the image of the Blessed Virgin; the reverse centre displays on a field of gold the initials of the founder (Charles III.), encircled with a green-enamelled laurel-wreath. It is encompassed in a blue-enamelled ring, bearing the motto, "*Virtuti et merito.*" The cross is fixed to a green-enamelled laurel-wreath.—Ribbon: white-watered silk with light-blue borders. The state robes consist of a light-blue silk mantle, interspersed with silver stars, a blue silk undergarment with white and blue fringes, a white and blue sash, black silk breeches and blue velvet hat, *à la Henri IV.*, adorned with white or blue feathers.

Order of St. Hermengilda.—A military order—Founded 1814—Three classes.—Insignia: a white-enamelled cross with gold rim, surmounted by a royal crown. The obverse blue-enamelled centre represents the image of St. Hermengilda on horseback, holding a palm-branch in her right hand; it is encircled in a blue enamelled ring, displaying the motto, "*Premio a la constancia militar*" (Reward for military perseverance); the reverse centre exhibits the initials, "F. VII." (Ferdinand VII. the founder of the order).—Ribbon: crimson-watered silk with two white stripes.

Military Order of Saint Ferdinand.—Founded 1811—Five classes.—Insignia: white-enamelled gold-mounted cross, resting upon a green-enamelled laurel-wreath, and surmounted by a green-enamelled and gold laurel crown; the forked arms of the cross are terminated with small gold knobs. The centre of the cross represents the image of Saint Ferdinand, encircled with a blue-enamelled ring, inscribed with the motto, "*Al merito militar*" (For military valour).

Order of Isabella the Catholic.—Founded 1815—Four classes. It confers personal nobility.—Insignia: a red-enamelled cross, the arms of which are forked and thickly set in gold mountings; each fork is surmounted by golden knobs. Three golden rays are inserted between each of the four arms; the whole is fixed to a green-enamelled laurel-wreath, the obverse centre of which represents a ship at sea and a terrestrial globe, surmounted by a crown; the white-enamelled ring round it bears the motto: "*A la lealtad acrisolada*" (For the purest loyalty). The reverse centre displays on a blue-enamelled field the initials, "F. R." (Ferdinand Rex, the founder), surmounted with the figure III.; the white-enamelled ring round it bears the inscription: "*Por Isabel la Catolica*" (In memory of Isabel the Catholic).—Ribbon: white-watered silk with two orange stripes. State robes: a yellow velvet mantle, a tunic of white velvet, trimmed with gold embroidery, white shoes with golden bows, and a Spanish hat with white and yellow feathers.

SWEDEN and NORWAY (Kingdom of).

Order of the Seraph.—Said to have been founded about the year 1280. Revised 1748. Only one

class. Number of members limited to 23 natives and 8 foreigners.—Insignia: a white-enamelled cross with forked arms, with a golden rim and small golden knobs surmounting the forks; between each of the four arms is inserted a golden head with wings (the figure of a seraph); the centre of each arm is occupied by a golden patriarchal cross. The blue-enamelled obverse centre of the cross displays the initials "I. H. S." (*Jesus hominum Salvator*), the motto of the order, the H. being surmounted by a patriarchal cross; the reverse centre bears the letters "F.R.S.," the initials of King Frederic I., who revived the order (Fredericus Rex Sueciæ). The cross is surmounted by a gold royal crown. —Ribbon: light-blue watered silk. State robes: the national Swedish costume in white satin, with black cuffs, facings, buttons, and cords; white shoes with heels of black velvet, and bows instead of buckles; a round hat of black velvet, with a white ribbon and five feathers (four white and one black), at the left side; over all a mantle of black satin and white lining and collar, with the star of the order on the left side. The star, of a smaller size, is also embroidered upon the doublet. The cross of the order is appended on state occasions to a collar, consisting alternately of golden seraphs' heads and blue-enamelled patriarchal crosses, connected by double gold chains.

Order of the Sword or of the Yellow Ribbon.—Founded 1522—Revised 1748—Five classes—Unlimited number. It is a purely military order.—Insignia: a gold-mounted, white-enamelled octagonal cross surmounted by a gold crown; between the arms of the cross are four gold crowns, and above them crossed swords, entwined by their appendages. The obverse blue-enamelled centre of the cross exhibits in gold the three Swedish crowns, with a gold sword in the middle. The reverse centre of the cross displays a similar sword, with a laurel-wreath resting upon the point and surrounded by the motto, "*Pro patria*" (For the country). The costume of this order consists of robes of the old national colours: bright blue and white; with the robes, the order is worn appended to a collar, consisting of eleven golden swords, with appendages, alternating with eleven blue-enamelled helmets resting upon gold shields.—Ribbon: yellow-watered silk with blue edges.

Order of the Polar Star or of the Black Ribbon.—The date of foundation is uncertain—Revised 1748—Four classes—Unlimited number—Destined to reward civil merit.—Insignia: an octagonal gold white-enamelled cross with gold crowns in the four angles; the cross is surmounted by a royal golden crown; the blue-enamelled centre of the cross represents a golden star (the Polar Star), round which is inscribed the motto of the order, "*Nescit occasum*" (It never sets).—Ribbon black. The state robes are of crimson velvet, and the breeches of white satin. The collar is composed of a double chain of gold, between which are alternately fixed a gold and white-enamel star and a double F of blue enamel and surmounted by the royal crown in gold.

Order of Vasa.—Founded 1776—Four classes—Unlimited number.—Insignia: an oval gold escutcheon, in the white-enamelled centre of which is displayed the crest of Vasa in gold; this centre is encircled with a red enamel ring, bearing the following inscription: "*Gustaf den Tredie instiktare*, MDCCLXXII" (Gustav III., instituted 1772).—Ribbon: green-watered silk. On state occasions the order is worn with a gold chain, the links of which represent alternately gold sheaves and shields, with the Swedish arms surrounded by the attributes of commerce, the arts and agriculture, and the arms of Holstein in enamel and gold. The state robes are the national costume, in green velvet and white satin breeches, with a green velvet mantle lined with white satin.

Order of Charles XIII.—Founded 1811—Only one class—It was founded as a badge of honour for Swedish Freemasons of the higher degree.—Insignia: a gold red-enamelled cross, surmounted by a royal gold crown. The white-enamelled obverse centre of the cross bears two golden C. entwined and encircling the number "XIII." The reverse centre presents a golden masonic triangle, in the middle of which is seen a golden G. This order, which is limited to 30 members, is worn round the neck with a crimson ribbon. The members of this order also wear a red cloth or red-enamelled cross upon the breast.

Order of St. Olaf (of Norway).—Founded 1847—Four classes.—Ribbon: red watered silk with blue and white edges.

TURKEY (Empire of).

Order of the Medjidie.—Founded 1852—Five classes. The number of the native members is limited to 50 of the 1st class, 150 of the 2nd, 800 of the 3rd, 3,000 of the 4th, and 6,000 of the 5th.—Insignia: a silver star with seven rays, between which are inserted the Turkish arms: Star and Crescent. The centre of the star bears, in Turkish, the name of the Sultan, and around it, upon a red-enamelled field, the legend (in Turkish): "Zeal, honour, loyalty," and the year 1268 (1852), being that of the foundation. —Ribbon: crimson-watered silk with green borders.

Order of the Osmanieh.—Founded 1861—Four classes—Unlimited number of members. Rules the same as for the Medjidie. First class consists of star with eight rays, bearing in the centre the legend, "The one who relies on Divine assistance—Abdul Iziz Khan, Sovereign of the Ottoman Empire," in Turkish characters. —Ribbon: green watered silk with crimson borders.

Order of the Glory (Nishan-Iftikar).—Founded 1831; was abolished in 1852, when the order of the Medjidie took its place.

Order of Merit (Nishan Imtiaz.)—Founded in 1879—One single class.—Consists of a star enriched with diamonds, and bearing the crescent, with the name of the order in Turkish.—Ribbon: watered silk half-green, half-crimson. Is only conferred upon sovereigns, princes, and persons of the highest rank.

Medals of the Order of the Nishan Imtiaz.—Two classes: 1st in gold; 2nd in silver.—Bears on one side the imperial arms, and on the other the engraved name of the person to whom it is conferred. Worn on the left breast by a ribbon half-green, half-crimson.

Order of the Chefukat for Ladies—Three classes. —The first class consists of a star enriched with diamonds.—Ribbon: white watered silk, with borders half-red and half-green.

The first corps of English volunteers was raised in 1527, when Henry VIII. granted a charter of incorporation to the archers residing in and about the city of London, allowing them at the same time to adopt the title of the Fraternity, or Guild of St. George. But it was not until 1539 that the first great review of these citizen soldiers took place, on which occasion they paraded before the king at the Gate House, Westminster. When, in 1588, the Spanish Armada was daily expected to arrive off the English coast, a large number of volunteers gathered round the standard of Elizabeth at Tilbury; and although the greater part of them possessed little idea of military discipline, the members of the Guild of St. George strenuously exerted themselves in instructing the raw recruits in the rudiments of a soldier's training. Other bodies of volunteers had, simultaneously, mustered in different parts of the country, thus giving expression to that laudable patriotism which has always been so characteristic of an Englishman. The members of the Guild of St. George were at that time celebrated for their efficient archery, and for many years were frequently exercised in Finsbury Fields, and some of their butts were in existence till quite recently. When firearms came into use, their bows and arrows were discarded for heavier ordnance. They changed their quarters from Bishopsgate to Finsbury, and their name to that of the Artillery Company. In the reign of Charles II. this corps obtained permission to adopt the prefix of "Honourable," and the Honourable Artillery Company still forms a very efficient part of our citizen army; but, though serving without remuneration, it ranks between the militia and the volunteers, being held to be distinct from both.

The year 1780 found the British Empire surrounded by almost overwhelming difficulties and complications. The war of separation in America was dragging slowly on, with every prospect of the contest resulting in favour of the colonists. At the same time France and Spain were earnestly struggling to humble the pride and weaken the power of England. Pressed and harassed on all sides, though boasting of a powerful navy, our land force was absurdly inadequate for performing the duties which fell to its lot. And it was at this unprecedented crisis in our history that rumours came of a projected invasion of Ireland by the French. A movement was at once set on foot in the sister isle for raising a large volunteer force to repel the threatened descent on its shores. At first Protestants only were allowed to enrol themselves, the Roman Catholics being prevented from doing so by legal disqualifications arising from their religion; but in 1782, these having been removed, Irishmen, irrespective of creed and their political differences, marched shoulder to shoulder to meet the common enemy. Incited by such men as the Earl of Bristol (then Bishop of Derry), the Earl of Charlemont, and Lord Mornington, and having amongst its officers Flood and Grattan, the unparalleled enthusiasm of the movement resulted in almost every able-bodied Irishman answering the call to arms. But as the fear of invasion gradually died away, signs began to manifest themselves of religious and political differences in the hitherto united camp, and the ranks of the volunteers divided into two parties—one supporting the opinions of Flood, and the other those of Grattan. How this unmilitary proceeding might otherwise have resulted—even after the death of one of the faction leaders—it is impossible to surmise; but the Irish Volunteers were finally disbanded in 1804, and for various reasons the British Government has, rightly or wrongly, deemed it expedient to forbid the formation of volunteer corps in Ireland ever since.

The numerous victories of the veteran troops of France frequently caused people in Great Britain to regard a visit from Bonaparte as highly probable; and in 1799 it was proposed that a bill be introduced to Parliament giving the Government power to render compulsory the service of every able-bodied man in the event of volunteers not coming forward in sufficient numbers to obviate the necessity. But in 1803, when the intelligence reached England that a vast army had assembled at Boulogne for the avowed purpose of invading the British Isles, large numbers of volunteers rapidly enrolled themselves in all parts of the kingdom, until the grand total swelled up to no less than 460,300 men. The banishment of Napoleon to Elba in 1814, and the apparent conclusion of the war with France, offered a prospect of a lasting peace being secured, and the vast volunteer army was, in consequence, disbanded, with the exception of the Honourable Artillery Company, as well as of a few battalions which were converted into regiments of the line, now represented by the 2nd Batt. South Staffordshire Regt. (late 80th), 2nd Batt. Loyal North Lancashire (late 81st), 2nd Batt. South Lancashire (late 82nd), 2nd Batt. Shropshire (late 85th), 2nd Batt. Scottish Rifles (late 90th). A metropolitan corps, called the Duke of Cumberland's Sharpshooters, was also allowed to remain in existence, but without official favour or recognition, and this corps changed its designation in 1835 to that of the Royal Victoria Rifle Club, named after the heiress to the throne, but was subsequently compelled by the authorities to drop the prefix "Royal."

After the general disbandment of 1814, many attempts were made to obtain permission from the Government to establish a permanent volunteer army. Hans Busk, of the Victoria Rifle Club, first brought the idea under the notice of the government in 1837, and was indefatigable in lecturing and writing on the subject. In 1855 a Liverpool gentleman, afterwards known as Colonel Bousfield, formed a drill club in that city; and although he urged the Government, through Sir Duncan MacDougal, to support a volunteer scheme, his proposals were firmly declined. Offers of service received from Bristol met with similar treatment. However, the clouds which seemed to be gathering in the political horizon of Europe in the early part of 1859, aroused the authorities to the fact that it was quite time some steps should be taken for improving the defenceless condition of England; and on May 12, 1859, a circular was issued from the War Office to the Lords Lieutenant of counties, stating the terms upon which the government would advise her Majesty to accept the offers received respecting the enrolment of civilians. Immediately afterwards corps of volunteers were formed in different parts of the kingdom. On June 11, Colonel Bousfield received the first commission ever granted to a volunteer; and on the 15th of the same month he marched at the head of 120 men, efficiently

armed and equipped, to the Liverpool Exchange. The movement advanced with such rapid strides that at the first volunteer review, held by the Queen in Hyde Park on June 23, 1860, there were 18,450 members on parade; and two years later the number of volunteers in England and Scotland amounted to 150,000. In 1871 certain powers in connection with the volunteers which had until that time been vested in the Lords Lieutenant of counties, were transferred to the sovereign, and many of the volunteer corps are now linked with battalions of the line.

The volunteer year commences on Nov. 1, and ends on October 31, up to which date all returns and statistics are compiled. But owing to its being customary to issue the official returns not sooner than about six months after the expiration of the volunteer year, the latest information in regard to numbers must necessarily be extracted from the report issued in June last, stating the condition of the force on Oct. 31, 1885. The number of volunteers of the different arms in England and Scotland was then as follows:—

Light Horse	425
Artillery	45,560
Engineers	11,154
Mounted Rifles	61
Rifles	196,129
Medical Staff Corps	607
Total enrolled	253,936

Although the volunteers still give their services without receiving any monetary remuneration, they are not now required to pay for their own arms, accoutrements, uniforms, &c. The Government capitation grant is at present 30*s.* for each efficient member under the rank of a sergeant, £4 for each efficient officer and sergeant, and an additional grant of 10*s.* for each officer who passes a special examination in tactics. The Government also provides arms, and pays for adjutants and instructors. Out of the funds derived in this manner, together with private subscriptions, each corps has to furnish its own accoutrements, uniforms, ammunition, storehouses, railway fares, prizes, and other incidental expenses; and, as may readily be imagined, the expenditure of a large number of battalions exceeds their ordinary income, the deficiency having to be made up by the officers of the corps.

It is usual, but not compulsory, for volunteers to join the force for a period of not less than three years. During the first two years it is necessary to attend sixty drills, including two annual inspections; the third year nine drills (three of which must be battalion), including the annual inspection; and every subsequent year seven drills (three of them battalion), including the annual inspection. The minimum length of each drill must be one hour. As regards shooting, a recruit the first year was required to fire at a stationary target ten shots at 100 yards, and ten at 200 yards. If he failed to score forty points [a bull's-eye counts four points, a centre three, and an outer two] with these twenty rounds he was required to fire another twenty; and, in the event of the result being a second failure, he was required to make a third attempt, bringing the total number of shots expended up to sixty. This was called firing the "third class;" but in the second year, as well as in every year after, the range was extended to 200 and 300 yards. These musketry regulations remained in force to the end of October, 1886. In August last, however, a General Order was issued from the Horse Guards, stating the numerous alterations intended to be made in the Volunteer Musketry Regulations; but these were met by such strenuous opposition on the part of volunteer officers, and, it was ascertained, would have entailed so much additional expense upon volunteer corps, that the authorities deemed it advisable to again take the subject into consideration.

Captains and sergeants pass a similar examination, both being required to be familiar with the "Field Exercises" and the "Rifle Exercises." Lieutenants and corporals must be acquainted with that portion of the "Field Exercises" relating to Squad Drill, also with the positions occupied by guides and markers in the various evolutions. There are three modes of passing the necessary examination for obtaining an officer's certificate:—(a) By attending a school of instruction, in which case "*p.s.*" (passed school) is placed against his name in the Army List; (b) by being attached to a line battalion, and passing a brigade board, when "*p.*" (passed) is placed against his name; (c) by passing at the annual inspection, when the inspecting officer, a captain of regulars, and the adjutant of the volunteer battalion form the board, and "*p.*" is affixed. If an officer only pass in the subjects necessary for a subaltern, the letters are affixed to his name in the Army List in brackets, thus:—(*p.s.*), (*p.*). Non-commissioned officers pass an examination under the adjutant of their corps. In the event of a sergeant being promoted to a captaincy, it is not necessary for him to pass another examination in order to obtain a captain's certificate, and have the letter "*p.*" placed against his name in the Army List.

The examination for a Tactical Certificate embraces questions respecting cavalry, artillery, and infantry; the space covered by troops of the different arms; the time occupied in the movement of troops over a specified distance, &c. The questions also usually necessitate the drawing of rough maps, and the making of sketches. An officer who holds this certificate has an additional letter placed against his name in the Army List, thus:—"*t*" signifies that he has merely passed; "T" that he has received special mention; and (T) that he has passed the field officer's examination. As already mentioned, tactical-certificated officers obtain for their corps an extra capitation grant of 10*s.* These certificates were first granted to the volunteers in 1882, when 328 officers passed. At the end of the volunteer year 1885, 728 officers held certificates; and at the examination which took place in July last, 62 officers passed.

In the latter part of 1884 a movement was started for forming a Volunteer Medical Staff Corps; and it was desired to obtain the services of young doctors and students from the London hospitals. Immediately the idea became ventilated a number of gentlemen from Guy's, St. Thomas's, St. Bartholomew's, King's College, University, St. Mary's, and St George's hospitals offered their services; and on March 14, 1885, the first inspection of the corps took place in the presence of a large number of spectators. But it was not until April 1 following that the new corps was officially recog-

nized by the Government, and enrolled as part of the volunteer force. Several of the volunteer corps have in their ranks stretcher-bearers, in the proportion of two men to each company. The first year they are required to attend not less than nine stretcher drills and lectures on the rudiments of anatomy, bandaging, the application of splints and tourniquets, &c., and four stretcher drills and lectures every year subsequently. After passing their examination a certificate is presented to each member, and the Red Cross badge is affixed to the right arm.

The volunteer movement has never yet received that amount of support from the government, which, considering the value of the force, might reasonably have been expected. The regular army is, so far as numbers are concerned, sadly inadequate for the duties it might at any moment be called upon to perform; and without the assistance of the volunteers as a national garrison, our strength, from a military point of view, would be considerably impaired. Conscription, that evil of continental armaments, would undoubtedly require to be enforced in this country were it not for the readiness displayed by the volunteers to undergo a short term of military service. Nevertheless, the volunteer battalions are, as a rule, quite unprepared for taking the field at a short notice, being without any transport, commissariat, or proper field equipment. Until the authorities think fit to increase the capitation grant the force will remain, notwithstanding its general efficiency and enthusiasm, in its present condition of unpreparedness.

The British Musket.

In the following paper the writer has endeavoured to give a short history of the different Muskets used in the British Army from the commencement of this century to the present time, together with a brief account of the arms now in use in the principal foreign armies.

At the commencement of the century the British Army was armed with the old Flint-lock Musket, which became famous in the Peninsular War under the name of "Brown Bess." It is difficult to trace the origin of the term "Brown Bess," but it is believed to be due to the fact that the British were the first to adopt the system of browning the barrels. This was first done during the Peninsular War, so that while the French, Spaniards, and Portuguese had bright barrels, the English alone had brown. The word "Bess" was probably merely a term of endearment adopted by our soldiers, as it is well known how fond both soldiers and sailors are of giving familiar names to weapons in which they have confidence, and with which they win our battles. In these days everything is done to make the load carried by soldiers as light as possible, and nothing is more astonishing than to look back to the days of Wellington and see what enormous loads the men had to carry. The musket of that time weighed 11lbs. 4oz.; its length with bayonet fixed was 6ft., and without bayonet 4ft. 6¾in., the length of the barrel being 3ft. 3in. The charge of powder was no less than 164 grains, and the weight of bullet 483 grains. Every soldier carried 60 rounds of this ammunition, and three "Flints" were also served out with every 60 rounds. In loading, the soldier bit off the end of his cartridge, and before pouring the powder down the barrel a small portion of it was poured into the "pan," by which means the arm was primed. The objections to the flint-lock musket were that the priming could not be prevented from getting wet, and that when wet the flint did not always ignite the charge. Nevertheless, the musket as described above remained in the service without any change up to the year 1842, when it was superseded by a Percussion Musket; but a very great deal of prejudice had to be overcome before the percussion system could be introduced. The Percussion Musket of 1842 pattern was the same as that of the earlier flint-lock pattern, the substitution of a percussion for a flint-lock being the only difference; but this change in the pattern of the lock made the new musket 4ozs. lighter than the old one. Advantage was taken of this lightening of the musket to add more weight to the bayonet, which was now made to weigh 1lb. 8oz., instead of 1lb. 2oz. as formerly. As shooting weapons, both the old smooth bore muskets were extremely inaccurate. At a range of 200 yards, half the shots would miss a target 11ft. 6in. high by 6ft. wide, and accuracy of aim could not be depended upon at any range greater than 100 yards. It is true that on the introduction of the Percussion Musket the charge of powder was reduced from 164 grains to about 120 grains, but this reduction of powder-charge in no way affected the shooting, as the saving was due to the fact that there was no longer any necessity for pouring loose powder out of the cartridge for priming purposes. It was not, however, till the year 1851 that any serious steps were taken towards furnishing the army generally with a rifle instead of a smooth bore. It had long been known that in order to obtain accuracy it was necessary to give the bullet a spin so as always to keep the same point of it foremost in its track through the air. With a spherical bullet this was a matter of very great difficulty; nevertheless, various attempts had been made in this direction from time to time. The idea of rifling a barrel, with the object of giving a bullet a spin or twist, is no new one. Rifles were certainly in existence 250 years ago, but it was not till about the year 1800 that any practical steps were taken towards providing a rifle for service in the army. About that year a rifle was made called Baker's Rifle, after the name of the inventor, and issued to the old 95th Regiment—now the Rifle Brigade. This rifle had seven grooves, the twist of rifling being one turn in 136 inches; the weight of the arm was 8 lbs. 9 oz., and length 3 ft. 9¾ in.; the length of the barrel being 2 ft. 6 in., and bore ·705 in. The bullet was spherical; before being rammed down it was wrapped in a grease patch, there being a cavity in the butt for carrying these patches. The object of the patch was partly to lubricate the barrel and partly to make the bullet fit tight so as to take the rifling; but it was so difficult to force the bullet home when wrapped in its patch that a mallet was served out with each rifle so as to hammer it down. The rifle was fitted with a sword bayonet instead of with a triangular bayonet.

It is difficult to ascertain how long this rifle

remained in the service, but although it was much disliked owing to its inaccuracy of fire, as well as on account of the extreme difficulty experienced in loading it, no steps appear to have been taken in England towards discovering a more efficient weapon, whereas on the Continent various systems of rifling were being continually tried. In the year 1836 the "Brunswick Rifle," which, as its name implies, was of German origin, was introduced into the English service. This rifle was somewhat heavier than the Baker rifle, weighing 9 lbs. 6 ozs. as against 8 lbs. 9 oz., but it was about the same length, and was also fitted with a sword bayonet. The bore of the barrel was, however, considerably reduced, being ·620″ as against ·705″; there were only two grooves, and the rifling had a twist of one turn in 30 in. The peculiarity of this arm was that the bullet was "belted;" in loading, this belt was placed in the two grooves, this method being adopted to give the bullet a spin. A grease patch was also used with this rifle, which added to the difficulty of loading by making it extremely uncertain whether the belt on the bullet was properly placed in the two grooves or not. This arm, which was only issued to rifle regiments, was the first arm in the English service that was fitted with a percussion-lock, it not being till the year 1842, as has already been pointed out, that the smooth bore, with which the large bulk of the army was armed, had the percussion substituted for the flint-lock.

The Brunswick rifle remained in the service till 1851, when it was superseded by the Minié, which had sometime previously been introduced into the French Army. Up to this time rifles had only been issued to rifle regiments, but with the introduction of the Minié it was intended to withdraw the whole of the smooth bores and re-arm the whole army with rifles, adopting two patterns, a long rifle for the Infantry of the Line generally, and a short rifle for serjeants and for rifle regiments, the long rifle having the triangular bayonet, and the short rifle the sword bayonet. With the adoption of the Minié rifle a great step was made in advance; it was the first time the spherical bullet was discarded, and in its place was adopted one of a cylindro-conoidal form; the bullet had a hollow base, in which was placed an iron cup; on the explosion of the powder this cup forced the bullet into the grooves of the rifling; the grease patch was also discontinued with the adoption of the Minié rifle, lubrication being obtained by greasing the paper in which the bullet was wrapped with a mixture of tallow and beeswax. Some of the regiments in the Crimean War were armed with this rifle, but it was cumbersome and heavy, and as early as 1852 a fresh series of experiments were instituted, the result of which led to the introduction of the Enfield Rifle Pattern, 1853. The chief feature in this rifle was the large reduction made in the diameter of the bore, from 0·702″ to 0·577″. This reduction in the bore enabled the barrel to be made very considerably lighter without in any way impairing the efficiency of the arm as a shooting weapon; in fact, it shot very much better than the Minié, the bullet being better proportioned.

The Enfield rifle continued to give perfect satisfaction till the Danish War of 1864 called attention to the vast superiority of breech-loaders over muzzle-loaders. The Prussian army had, indeed, been armed with a breech-loader, the old needle-gun, or "Zundnadel-Gewehr," for very many years; but it was not till the Danish War that its superiority was manifested. There was immediately an outcry in England that our army should also be armed with breech-loaders, and it was determined to endeavour to convert the large store of existing Enfield rifles into breech-loaders, so as to give time for a thoroughly efficient breech-loader to be worked out. Experiments were made which led to the introduction of the Snider rifle. By the adoption of the Snider breech action the Enfield rifles were easily converted, and new arms on this system were also made in large numbers, so that in a few years the whole army, as well as the Militia and Volunteers, were armed with breech-loaders. But it was well understood that the introduction of the Snider was only intended to stop the gap till a more perfect and more efficient weapon could be devised. Trials on a very extended scale were conducted for some time, and in 1871 the Martini-Henry rifle was adopted as the service rifle for the whole army. Manufacture of this arm commenced shortly afterwards; the first issue was made in 1875, and in less than two years from that date the whole army was armed with the Martini-Henry rifle. This rifle was issued to the Militia a few years later, and subsequently it was also issued to the Volunteers; and it is still the arm in the hands of all our troops, both at home and abroad. The Martini action has stood the tests of campaigns in Europe, Asia, and Africa; it has been tested under every condition of climate and exposure, and although it has undoubtedly some defects, it has proved itself on the whole a thoroughly efficient breech action. The Henry barrel is vastly superior to that of the old Enfield rifle; the diameter of the bore was considerably reduced, viz., from 0·577″ to 0·45″, whereas the bullet was maintained at the same weight, and therefore, being much smaller in diameter, was necessarily much longer, thus giving it far greater power of overcoming the resistance of the air. Although this rifle possessed superior merits, it was found that most of the foreign rifles had a lower trajectory at short ranges; it was consequently determined to endeavour to improve upon the Henry barrel, so that while maintaining the superiority over foreign rifles at long ranges, it should also be superior to them at short ranges. This led to a still further reduction in the bore, and the diameter of the bore of the new barrel will be ·40″ instead of ·45″ The new rifle will still be fitted with the Martini breech action, so that the soldier will have practically the same arm as at present, but one having a barrel with far greater power than the present one as regards accuracy, lowness of trajectory and penetration. No doubt the English Government will have to adopt a magazine rifle if such an arm is taken up by the great powers of Europe.

Before closing this article it will perhaps be desirable to say a few words about the rifles in use in foreign countries. The Tables at the end give full particulars, not only as to the weight, dimensions, and other detail in connection with all the rifles which have been in use in this country since the beginning of the present century, but also as regards all the rifles in use by the leading powers in the world. It is unnecessary to give a full description of foreign

rifles, but a glance at the tables will show that the breech actions of all foreign arms are on the "Bolt" system with the exception of two, viz., the Austrian arm, the "Werndl," which has a revolving block, and the United States arm, the "Springfield," which has a turnover block. The Turkish arm, the "Peabody-Martini," has purposely been omitted from the tables, as it is practically the same as the English arm. The velocities and heights of trajectories at various ranges of all arms is also shown in these tables, and from them it will be observed what an immense superiority the new English barrel possesses over those of other countries. Want of space has unfortunately prevented the question of sights and sighting, of bayonets and sword bayonets, being touched upon in this article, but sufficient has been said to trace the history and the various developments which have been made in fire-arms in use in the British Army from the commencement of this century to the present day.

TABLE I.—LIST OF RIFLES IN THE SERVICE FROM 1800 TO PRESENT DATE.

Description of Arm.		Without Bayonet.		Barrel.						Bayonet.		Ammunition.		
		Weight.	Length.	Weight.	Length.	Diameter of Bore.	Number of Grooves.	Twist of Rifling.	Sighted up to Yards.	Weight.	Length beyond Muzzle.	Charge of Powder.	Weight of Bullet.	Lubricator.

CONSEQUENT upon the establishment of free trade in the United Kingdom, we have for some years past obtained immense supplies of food auxiliary to that produced from our own soil and pastures. Rice and maize not being grown in this country, are not, for example, deemed "auxiliary" foods. The following tables show the principal articles of food, in quantity and value, which we have in view, for the seven years, 1879 to 1885.

The countries to which we are most indebted for wheat are the United States, British India, Australasia, and Russia. Taken in the order here set down, the quantity imported from each place in 1884–85 was, in round numbers, 24,273,000 cwts.; 12,170,000 cwts.; 5,279,000 cwts.; and 11,976,000 cwts.

The following table shows the imports for the seven financial years, in quantity and value:—

IMPORTS OF WHEAT.

Year.	Cwts.	£
1879....	59,591,795	31,468,171
1880....	55,261,924	30,621,711
1881....	57,147,933	31,531,535
1882....	64,240,749	34,259,126
1883....	64,138,631	31,454,481
1884....	47,306,156	19,901,794
1885....	61,498,864	24,085,913

The total received in the seven years was 409,186,000 cwts., valued at £203,323,000. The average price of wheat per cwt., year by year, was 10s. 6¾d.; 11s. 1d.; 11s. 0½d.; 10s. 8d.; 9s. 9¾d.; 8s. 5d.; 7s. 10d.

Besides wheat there are large imports of barley and oats. They only partially enter into the food of man; but in 1885 the import of barley was 15,366,000 cwts.—value £4,532,000; oats, 13,057,000 cwts.—value £4,251,000.

"Flour of wheat," in the technical language of the Board of Trade, ranks next to wheat. The United States dominate this trade; but we obtain an appreciable amount from Germany and the Austrian States.

IMPORTS OF WHEATEN FLOUR.

Year.	Cwts.	£
1879....	10,728,252	8,501,949
1880....	10,558,312	8,706,109
1881....	11,357,381	9,205,219
1882....	13,057,403	10,662,439
1883....	16,329,312	12,344,778
1884....	15,095,301	10,163,783
1885....	15,832,843	9,650,445

The aggregate imports of 1879 to 1885 were 92,959,000 cwts.—valued at £69,235,000. The respective prices per cwt. were 15s. 10¾d.; 16s. 6d.; 16s. 2½d.; 16s. 4d.; 15s. 1½d.; 13s. 5¾d.; 12s. 2d.

The next table shows that the supply of potatoes has been very irregular. Compare 1879 and 1880 with 1884 and 1885:—

IMPORTS OF POTATOES.

Year.	Cwts.	£
1879....	9,357,179	2,696,885
1880....	9,754,514	2,847,427
1881....	4,034,673	1,097,512
1882....	2,990,709	997,120
1883....	5,149,509	1,585,260
1884....	2,444,160	824,205
1885....	2,299,934	727,806

The total quantity of this esculent was 36,031,000 cwts.; the value, £10,776,000. The price has varied between 5s. 9d. and 6s. 9d. per cwt.

Onions, though largely grown at home, find a market here from gardens abroad:—

IMPORTS OF ONIONS.

Year.	Bushels.	£
1879....	1,895,370	450,019
1880....	2,256,897	534,357
1881....	2,701,019	567,662
1882....	3,114,454	527,781
1883....	2,687,589	440,452
1884....	3,037,406	532,007
1885....	3,537,616	492,328

The imports amounted to 19,230,000 bushels, the value to £3,545,000. In 1879 they were 4s. 9d. per bushel; last year they fell to 2s. 9d.

Hops formerly were subject to a very heavy impost; now they are taxed to the same amount, which is levied in the same way, as on the British grown:—

IMPORTS OF HOPS.

Year.	Cwts.	£
1879....	262,765	1,217,938
1880....	195,986	900,891
1881....	147,559	695,297
1882....	319,620	2,962,631
1883....	129,900	1,089,246
1884....	256,777	1,615,309
1885....	266,952	1,001,728

The total quantity imported was 1,580,000 cwts.; the value, £9,483,000. An inspection of the table will show how extreme the fluctuations in this article have been. The lowest price was £3 15s. per cwt.—this in 1885; the highest £9 5s. 5d.—in 1882.

The importation of live cattle and sheep, which became possible under Sir Robert Peel's great measure, has, in view of our receiving from abroad infected flocks and herds, given rise from time to time to much heated controversy:—

OXEN, BULLS, COWS, AND CALVES.

Year.	No.	£
1879....	247,768	4,639,431
1880....	389,724	7,793,960
1881....	319,374	6,251,577
1882....	343,699	6,655,590
1883....	474,750	9,332,242
1884....	425,507	8,271,020
1885....	373,078	7,046,477

The number of oxen, bulls, cows, &c., received during the seven years was 2,574,000; the value being £49,990,000. The price of oxen and bulls was very steady, varying from £21 2s. 6d. to £22; calves from £4 10s. 6d. to £4 15s. each.

In 1882 and 1883 we reached the highest points in the imports of sheep and lambs, to be directly followed by a large falling off:—

SHEEP AND LAMBS IMPORTED.

Year.	No.	£
1879....	944,888	2,252,824
1880....	941,121	2,266,436
1881....	935,144	2,191,762
1882....	1,124,391	2,558,827
1883....	1,116,115	2,518,382
1884....	945,042	2,149,704
1885....	750,886	1,625,029

The total number imported was 6,758,000; the value, £15,563,000. In 1880 the value per head was 48*s.* 2*d.*; in 1885 it had fallen to 43*s.* 3*d.*

The importation of fresh meat from the countries which now supply us maintains a respectable level:—

BEEF IMPORTED FROM ABROAD.

Year.	Cwts.	£
1879....	812,237	1,937,428
1880....	1,017,956	2,424,943
1881....	1,068,599	2,663,526
1882....	692,383	1,785,162
1883....	1,094,008	2,894,397
1884....	1,090,739	2,798,475
1885....	1,141,866	2,798,050

During the seven years, 6,918,000 cwts. of beef were imported; valued at £17,302,000.

The price in 1879 was 47*s.* 9*d.*: it reached a maximum of nearly 53*s.* in 1838; and in 1885 it stood at 49*s.* per cwt.

Pork, that is the uncured flesh of the pig or hog, is not an article of large import:—

IMPORTS OF PORK.

Year.	Cwts.	£
1879....	441,209	691,362
1880....	409,267	684,192
1881....	381,526	681,551
1882....	290,587	583,797
1883....	376,899	761,871
1884....	337,525	620,071
1885....	383,636	689,731

The total imports were 2,621,000 cwts.; the value, £4,713,000.

Lard appears to be a much more important article than the last. However, we cannot say that it is exclusively an article of food: it has manufacturing uses:—

IMPORTS OF LARD.

Year.	Cwts.	£
1879....	840,819	1,420,881
1880....	927,512	1,852,160
1881....	854,322	2,197,166
1882....	667,153	1,866,360
1883....	853,541	2,247,016
1884....	699,827	1,535,123
1885....	871,210	1,606,485

The aggregate imports were 5,714,000 cwts.; the value, £12,725,000. In 1879 the price was 33*s.* 9*d.* per cwt.; by 1882 it had risen to 56*s.*—very nearly; in 1885 it was 36*s.* 10½*d.*

Meat not enumerated in any other table comes next. It may be fresh, or salted, or otherwise preserved:—

MEAT: FRESH, SALTED, ETC., IMPORTED.

Year.	Cwts.	£
1879....	721,161	2,130,825
1880....	720,810	2,334,790
1881....	753,738	2,154,096
1882....	761,900	2,368,496
1883....	883,249	2,562,370
1884....	972,656	2,866,539
1885....	1,128,403	3,166,269

The total imports were 5,942,000 cwts.; the value, £17,583,000. In 1885 about half the quantity was fresh or salted, the other half being preserved, but not salted. Last year the fresh or salted meat was £2 12*s.* per cwt.; meat otherwise preserved, £2 18*s.* 6*d.*

Bacon and ham form a large item in our auxiliary food supplies:—

IMPORTS OF BACON AND HAMS.

Year.	Cwts.	£
1879....	4,917,631	8,880,223
1880....	5,334,648	10,985,642
1881....	4,627,484	10,729,945
1882....	2,904,400	7,772,063
1883....	3,695,992	10,036,326
1884....	3,418,431	8,740,881
1885....	4,058,454	8,685,668

The aggregate quantity imported was 28,957,000 cwts.; valued at £65,831,000. In 1879 bacon was 34*s.* 4*d.* per cwt.: in 1882 and 1883 it stood slightly over 53*s.*; by 1885 it had fallen to 40*s.* 6½*d.* For the same years hams are entered at 43*s.* 9*d.* and 58*s.* (average of 1882 and 1883, 50*s.* 10½*d.*)

Fish make a tolerable addition to our food supplies from abroad:—

IMPORTS OF FISH.

Year.	Cwts.	£
1879....	1,160,140	1,652,957
1880....	1,343,434	1,666,710
1881....	1,530,219	2,332,605
1882....	1,239,217	2,079,181
1883....	1,295,754	2,301,966
1884....	1,336,422	2,048,800
1885....	1,520,570	1,994,614

The total quantity imported was 9,426,000 cwts.; the value being £14,077,000. In 1879 the price was 28*s.* 6*d.* per cwt.: the highest price was attained in 1883, when it was 35*s.* 6*d.*; in 1885 it was 26*s.* 3*d.*

The next commodity is one of the most remarkable in the tariff. After wheat, butter and butterine rank above all other articles of these tables in the value of its imports:—

BUTTER AND BUTTERINE IMPORTED.

Year.	Cwts.	£
1879....	2,045,399	10,379,451
1880....	2,326,305	12,141,034
1881....	2,047,341	10,866,151
1882....	2,169,717	11,350,909
1883....	2,334,473	11,773,933
1884....	2,475,436	12,543,455
1885....	2,401,373	11,563,508

The total imports were 15,800,000 cwts.; the value was £80,618,000. The price per cwt. for each year respectively was £5 1*s.* 5*d.*; £5 4*s.* 5*d.*; £5 6*s.* 2½*d.*; £5 4*s.* 7¾*d.*; £5 0*s.* 9¾*d.*; £5 1*s.* 5*d.*; £4 16*s.* 5*d.* per cwt.

IMPORTS OF CHEESE.

Year.	Cwts.	£
1879....	1,789,721	3,824,017
1880....	1,775,997	5,091,514
1881....	1,840,090	5,245,115
1882....	1,694,623	4,749,870
1883....	1,799,704	4,890,400
1884....	1,927,139	5,001,635
1885....	1,833,832	4,069,344

The import of cheese for the seven years was 12,661,000 cwts.; valued at £32,871,000. Taking the years in order, the price per cwt. was

£2 2s. 9¾d.; £2 17s. 5d.; £2 17s.; £2 16s.; £2 14s. 5d.; £2 12s. 5d.; £2 4s. 5d.

Foreign eggs come to us in very large and greatly increasing quantities. Last year we received upwards of one thousand million from foreign importers:—

NUMBER & VALUE OF EGGS IMPORTED.

Year	No.	£
1879....	766,707,840	2,295,720
1880....	747,408,600	2,235,451
1881....	756,719,160	2,322,390
1882....	813,922,400	2,385,263
1883....	940,436,160	2,732,055
1884....	993,609,000	2,910,493
1885....	1,002,788,000	2,931,237

The total imported was 6,021½ millions; valued at £17,813,000. The price during 1879 to 1885 averaged a little over 8½d. per dozen—probably a trade dozen.

Last year the number of foreign eggs retained for home consumption was between 27 and 28 per head of the population of the United Kingdom.

While complaints are made of the unremunerative character of ordinary British farming, a suggestion is frequently proffered that arable lands might be advantageously changed to pasture. The demand for dairy produce at home, beyond what native factors furnish, is enormous.

Last year the butter and cheese imports were valued at £15,630,000.

Three articles mentioned in these tables are not wholly retained for home consumption—namely, bacon and ham, butter and butterine, and cheese. The quantities retained for own use were in 1879, respectively, 3,719,381 cwts.; 2,319,237 cwts.; and 1,779,718 cwts. These are short of the quantities imported. The following summary, so far, is subject to qualification for the re-exported articles; on the other hand, articles like barley and oats, being but partially auxiliary to our food supplies, are wholly omitted.

AUXILIARY FOOD SUPPLIES:		VALUE OF IMPORTS, 1879-85.	
Wheat	£203,323,000	Pork	£4,713,000
Flour of Wheat	69,235,000	Lard	12,725,000
Potatoes	10,776,000	Meat: Fresh, Salted, &c.	17,583,000
Onions	3,545,000	Bacon and Hams	65,831,000
Hops	9,483,000	Fish	14,077,000
Oxen, Bulls, &c.	49,990,000	Butter and Butterine	80,618,000
Sheep and Lambs	15,563,000	Cheese	32,871,000
Beef	17,302,000	Eggs	17,813,000

The grand total is £625,448,000; or a yearly average of £89,350,000 sterling.

Good and Bad Seasons and Harvests,

And the Number of Cwts. of Wheat and Wheat Flour Imported to supply Deficiencies, with the Marriage Rate in England, and the Average Price of Wheat per Quarter.

Years	Harvest.	Wheat.	Price.
1844	Very good	3,552,311	51s. 3d.
1845	Deficient	583,613	50 10
1846	Ditto	8,592,458	54 8
1847	Above the average	11,810,127	69 9

THEIR ORIGIN, AND SUBSEQUENT HISTORY.

Anderson, John, and Alexander & Co., 17, Philpot Lane.—They were established about 1793, and ceased to exist in 1812.

Adey, MacGeorge & Co., 22, Old Bond Street, started in 1801, and became extinct in 1805.

Barclay, Tritton & Bevan, 56, Lombard Street.—This business was started by John Freame, at the "Three Anchors" in Lombard Street, about 1694; in 1702 the firm was Freame & Gould; in 1728, Gould & Freame; in 1736, Freame & Barclay; in 1759, Freame, Barclay & Freame; 1766, Freame, Smith & Bening; 1770, Freame, Smith, Bevan & Bening; 1776, Barclay, Bevan & Bening; 1785, Barclay, Bevan, Barclay & Tritton; 1791, Barclay and Tritton; 1810, Barclay, Tritton, Bevan & Co.; 1834 to 1865, when they amalgamated with Spooner, Attwood & Co., the style became Barclay, Bevan, Tritton, Twells & Co.; it now is Barclay, Bevan, Tritton & Co.

Biddulph, Cocks, Ridge & Co., 43, Charing Cross.—This business was started by Biddulph & Cocks about 1750; in 1776 the firm was Biddulph, Cocks, Eliot & Praed; in 1820, Cocks, Cocks, Ridge & Biddulph; from 1827 to 1845 it was Cocks & Biddulph. It was Biddulph, Cocks & Co. from 1860 until 1865, when it became Cocks, Biddulph & Co., which it now is.

Birch, Chambers & Hobbs, 152, New Bond Street.—This business was started in 1769 by Chambers, Franks, Hercy & Birch; in 1785 it was Hercy, Birch & Hobbs; in 1796, Birch, Chambers & Hobbs; in 1822, Chambers & Son, who ceased to exist in 1825.

Boldero, Lushington, Boldero & Lushington, 30, Cornhill.—The business was started by Thomas Minors, in Lombard Street, as early as 1738; in 1745 it was Minors and Boldero; in 1763, Boldero, Carter & Co.; 1787, Boldero, Adey & Co. They became extinct in 1812.

Bond, John, & Son, 2, Change Alley, were established in 1791, and stopped payment in 1831.

Bosanquet, Beachcroft & Reeves, 73, Lombard Street.—This business was started about 1770 by Bowles, Beachcroft, Brown, Reeves, Collins & Co. In 1810 it was Bosanquet, Beachcroft, Pitt & Anderdon; in 1867 they amalgamated with Stevenson & Salt; and in 1884 Messrs. Bosanquet, Salt & Co. and Messrs. Barnett, Hoare & Co. amalgamated with Lloyd's Banking Co., under the style of Lloyd's, Barnett's & Bosanquet's Bank.

Bowles, Brown, Ogden, Cobb & Stokes, 67, Lombard Street, sprang into existence in 1796, and cannot be traced after 1816.

Castell, Powell, Son & Wilson, 66, Lombard Street.—This business was established about 1759 by John Castell & Son: they failed in 1802.

Child & Co., Temple Bar, the "Marygold."—This business originated in a goldsmith of the name of Wheeler, who lived in Fleet Street in 1559. The Wheelers died out in 1663, and the business came to Robert Blanchard; in 1677 it was Blanchard & Child; in 1681 it was Child & Rogers; in 1713 it became Sir Robert Child & Co.; in 1721 it was Sir Francis Child & Co.; in 1740 it was Samuel Child & Co.; in 1752 it was Childs & Backwells; in 1756, Francis Child & Co.; in 1763, Robert Child & Co.; in 1782 the style became Messrs. Child & Co., which it has been ever since.

Coutts (Thomas) & Co., 59, Strand.—This business was started by a goldsmith named George Middleton about 1692; in 1694 Middleton & Campbell were at the "Three Crowns," in the Strand; in 1747 it became Campbell & Bruce; in 1754, Campbell & Coutts; in 1761 it was Coutts & Coutts; in 1776, Thomas Coutts & Co.; after 1822 the style of the firm became Messrs. Coutts & Co., which it has been since.

Cox, Merle & Co., 2, Cox's Court, Little Britain.—They started in 1792; in 1818, it became William Merle, Son & Co., and cannot be traced after 1821.

Devaynes, Dawes, Noble & Co., 39, Pall Mall, was started in 1756 by William Backwell, under the style of Backwell, Hart, Darell & Croft; in 1778, Croft, Backwell, Roberts & Croft; in 1782 it was Crofts, Devaynes, Dawes & Noble. They stopped payment in 1810.

Dimsdale, Baron, Sons, Barnard & Son, 50, Cornhill.—They were the descendants of Messrs. Amyand, Staples & Mercer, who started about 1762. The sign of their house was the "Golden Helmet and the Golden Bear." In 1776 Baron Dimsdale retired from the firm of Dimsdale, Archer & Co., and Sir George Cornewall retired from the firm of Cornewall, Staples & Watts. Baron Dimsdale amalgamated with Staples & Watts, under the style of Staples, Baron Dimsdale, Dimsdale & Barnard. The present style of the firm is Dimsdale, Fowler, Barnard & Dimsdale.

Dorset, Johnson, Wilkinson, Berners & Tilson, 68, New Bond Street, was started in 1785, and failed about 1797.

Dorrien, Magens, Martin & Mello, 22, Finch Lane.—They started business in 1770, and amalgamated with Curries & Co. in 1842.

Down, Thornton, Free & Cornwall, 1, Bartholomew Lane.—This firm was started by Marlar, Lascelles, Pell & Down in 1773, and stopped payment in 1825.

Drummond, Robert, Andrew, B., John, & Charles & Co., 49, Charing Cross, were established in 1712 by Andrew Drummond, and the partners have always belonged to the same family.

Edwards, Templar, Middleton, Johnson & Wedgwood, 18, Stratford Place, Oxford Street, were established there in 1794, and ceased to exist in 1816, when their business was transferred to Coutts & Co.

Esdaile, Sir James, Knt., Esdaile, Hammett, Esdaile & Hammett, 21, Lombard Street.—This bank was established in 1781. They amalgamated with Smith, Wright & Gray in 1792, under the style of Sir Jas. Esdaile, Esdaile, Smith, Wright, Hammett & Co., and they stopped payment in 1837.

Forster, Lubbock, Forster & Clark, 11, Mansion House Street.—This business was established in 1772 by Lemon, Buller, Furley, Lubbock & Co. In 1860, Lubbock, Forster & Co. amalgamated with Robarts, Curtis & Co., under the style of Robarts, Lubbock & Co.

Fuller, William, Chatteris & Co., 24, Lombard Street, was started about 1769; in 1812 the style was Chatteris, Whitmore & Co. Whitmore, Wells & Whitmore failed in 1841.

Fuller, Richard, Sons & Vaughan, 84, Cornhill.—This business was originated by Atkins, Honeywood & Fuller as early as 1737. From 1746 to 1761 the firm was Honeywood & Fuller;

it then became Fuller & Cope; and in 1778, Fuller, Son, Halford & Vaughan; in 1859 Fullers & Co. amalgamated with Sapte, Muspratt, Banbury & Co., under the style of Fuller, Banbury, Nix & Mathieson.

Glyn, Sir Richard Carr, Knt., Charles Mills, Thomas Hallifax & Co., 12, Birchin Lane.—This house was established by Vere, Glyn & Hallifax between 1740—1754. In 1773, the style became Sir Thomas Hallifax, Mills, Glyn & Mitton; in 1789, Glyn, Mills & Mitton, and subsequently many other changes; in 1851 it became Glyn, Mills & Co.; and in 1864, Glyn, Mills, Currie & Co., which has been the style ever since.

Gosling, Francis & William, & Benjamin Sharpe, 19, Fleet Street.—This business was originated by James Chambers, a goldsmith, about 1684, the sign being the "Three Squirrels." In 1707 the firm was Chambers & Nicholls; in 1713, Wanley and Cradock; in 1720, Nicholls & Fowler; 1731, A. Fowler & Rocke; in 1735, Rocke & Co.; 1739, Simpson & Ward; 1742, Ward & Gosling; 1743, Gosling & Bennet; 1764, Sir Francis Gosling & Co.; 1789, Robert, Francis & William Gosling; 1796, Gosling, Gosling & Sharpe, since which date the style has been Goslings & Sharpe.

Hammersley, Montolieu, Brooksbank, Greenwood & Drewe, 76, Pall Mall.—This firm was started by Hammersley in 1796, and the business was absorbed in 1840 by Coutts & Co.

Hankey, Joseph Chaplin, Stephen Hall, Robert Hankey, Richard Hankey, Augustus Hankey & Co., 7, Fenchurch Street.—This business was started by Henry Hankey about 1693, at the "Ring and Ball," in Fenchurch Street; but about the year 1760 they moved opposite to the sign of the "Three Golden Balls," which afterwards became No. 7. This business merged into the Consolidated Bank in 1865.

Harrison, Prickett & Newman, 1, Mansion House Street.—This business originated in 1785 in the Bank of Robert and Thomas Harrison. In 1794 the firm was Sanderson, Brenchley, Stacey, Parker & Newman; in 1814 it became Sir Charles Price, Kay, Price & Chapman; in 1833, Price, Marryat & Co., which continued to be the style of the firm until 1866, when they stopped payment.

Herries, Farquhar & Co., 16, St. James's Street.—This firm was established in 1770 by Robert Herries, and is still known by the same style.

Hoare, Henry, Henry Hugh, Charles, William Henry & Henry Merrick Hoare, 37, Fleet Street.—This business was started by James Hore, or Hoare, at the "Golden Bottle," in Cheapside, before 1677. He moved to Fleet Street in 1690, and took the sign with him. The head partner has always been of the name Hoare, and the style now is Charles Hoare & Co.

Hoare, Hill & Barnett, 62, Lombard Street.—This business originated in Humphry Stocks, or Stokes, at the "Black Horse," before 1677. Robert Stokes carried it on in 1700; in 1728, John Bland; in 1740, John Bland & Son; in 1761, Bland, Barnett & Co.; in 1826 it became Barnett, Hoare & Co., which style it continued until 1864, when the firm of Hanbury, Lloyds & Co. amalgamated with them, and the style became Barnetts, Hoares, Hanburys & Lloyd. In 1884 they amalgamated with Lloyd's Banking Co., under the style of Lloyd's, Barnett's, & Bosanquet's Bank.

Hodsoll & Stirling, 345, Strand.—This business was originated by William Hodsoll, at "The Sun," in the Strand, in 1712. Edward Hodsoll in 1770; in 1776, Hodsoll & Michell; in 1795, Hodsoll, Michell & Stirling; and in 1824 it became Sir W. Stirling, Bt., Stirling & Hodsoll, who gave up business in 1828.

Jones, Loyd, Hulme & Co., 43, Lothbury.—This business was established about 1788 by Joseph Jones & Co. In 1799 it became Jones, Loyd & Co., which continued to be the style of the firm until 1864, when they amalgamated with the London and Westminster Bank.

Ladbroke, Rawlinson, Ladbroke, Porker & Watson, Bank Building.—This was started about 1736. In 1771 the style was Sir Robert Ladbroke, Rawlinson & Porker. In 1842 the business was taken over by Glyn & Co.

Langston, Towgood & Cazalet, 29, Clement's Lane, Lombard Street, was started in 1777 by Langston, Polhill, Towgood & Amory. They amalgamated in 1811 with Rogers, Olding & Co.

Lee, George, Richard Lee & Miles Satterthwaite, 71, Lombard Street.—This business was originated by John Brassey in 1697. In 1700 it was Brassey and Caswall; in 1716, John & Nathaniel Brassey; from 1730 to 1740 it was Brassey & Lee; in 1768, Brassey, Lee & Ayton; in 1785, Ayton, Brassey, Lees & Satterthwaite; in 1835 it was Lees, Brassey, Farr & Lee, when they became extinct.

Lefevre, Curries & Raikes, 29, Cornhill, was started in 1773 by Mason, Currie, James & Yallowby; in 1781 the firm was Currie, Lefevre, James & Yallowby; in 1785, Lefevre, Curries, James & Yallowby; in 1814, Curries, Raikes & Co.; and from 1827 until 1864, when they amalgamated with Glyn, Mills & Co., the style of the firm was Curries & Co.

Mainwaring, Son, Chatteris & Co., 80, Cornhill.—The business was started in 1795 by Newman, Anderson & Lynn. In 1815 they became extinct.

Master, Dawson, Brooks & Co., Chancery Lane, was started in 1787. In 1802 it became Dawson, Brooks, Son & Dixon; in 1814, Brooks, Son & Dixon; from 1836 to 1859 the style was Dixon, Brooks & Dixon, when they transferred their business to the Union Bank of London.

Masterman, Peters, Walker, Mildred & Co., 2, White Hart Court, Lombard Street, originated probably in the house of Archer, Hyde, Maude, Watts & Co., about 1776. In 1779 the firm consisted of Mildred & Walker; in 1780 it was Mildred, Masterman & Walker; in 1863 the firm became Masterman, Peters, Mildred, Birkbeck & Co., who amalgamated with the Agra and United Service Bank in 1865, under the style of the Agra & Masterman's Bank. They suspended payment in 1866.

Marsh, Sibbald, Stracey & Fauntleroy, 6, Berners Street.—This business was started in 1796 by De Vismes, Cuthbert, Marsh, Creed & Co. They failed in 1824.

Martin, Stone & Foote, 68, Lombard Street, claim to be descended from Sir Thomas Gresham, who lived at "The Grasshopper," where the Martins still carry on the business. In 1677 the firm was Duncombe & Kent; in 1688, Richard Smith; in 1700, Andrew Stone; in 1703, Andrew Stone & Thomas Martin; in 1732 it was carried on by James Martin, Richard Surman & Richard Stone; in 1748 the partners were John Martin, Joseph Martin, R. Surman & Ebenezer Blackwell; in 1783, James Martin, Richard

Stone, John Foote & James Porter; in 1804 it was James Martin, John Martin & George Stone; from 1834 to 1844 the style of the firm was Stone, Martins & Stone; in 1852 the Stone interest became extinct, and the business has since that date been carried on by the Martins.

Moffatt, Kensingtons & Styan, 20, Lombard Street.—This business was established in 1775 by James Wickenden, Moffatt, Kensington & Boler; in 1786 it was Moffatt, Kensington & Boler, and in 1812 the firm was Kensingtons, Styan & Adams, when they stopped payment.

Newnham, Everett, Drummond & Tibbits, 2, Mansion House Street, sprang into existence in 1785, the partners being Newnham, Everett, Drummond, Tibbits & Tanner; the latter shortly retired. In 1812 the style of the firm became Everett, Walker, Maltby, Ellis & Co., which continued until 1825, when they failed.

Prescott, Grote & Prescott, 62, Threadneedle Street, was started by George Prescott, Andrew Grote, William Culverden & John Hollingsworth in 1766. In 1820 the firm was Grote, Prescott & Grote, until 1838, when it became Prescott, Grote, Ames, Baillie & Grote. The firm now is Prescott, Grote & Co.

Pybus, Call, Grant & Hale, Old Bond Street.—This firm originated in 1773 as Pybus, Hyde, Dorset & Cockell. In 1791 the firm became Pybus, Call, Grant & Hale; in 1810, Pybus, Call, Marten & Hale; in 1814, Marten, Hale & Call; in 1827 it was Sir W. P. Call, Arnold & Marten; in 1830 it became Call, Marten & Co., by which it was known until 1865, when they amalgamated with Herries, Farquhar & Co.

Ransom, Morland & Co., 56, Pall Mall.—This business was started by Ransom in 1786, who associated himself with Sir F. B. Morland & Hammersley, under the style of Ransom, Morland & Hammersley. In 1819 Sir F. Morland left the firm, when it became Ransom & Co., which continued to be the style until they amalgamated with Bouverie, Murdoch & Co., in 1856, since which time the firm has been known as Ransom, Bouverie & Co.

Robarts, Curtis, Were, Hornyold & Co., 15, Lombard Street, were established in 1792. In 1805 it became Robarts, Curtis, Robarts & Curtis; in 1818 it became Sir William Curtis, Robarts & Curtis; and from 1834 until 1860, when they amalgamated with Lubbock, Forster & Co., the firm was Robarts, Curtis & Co., since which the style has been Robarts, Lubbock & Co.

Rogers, Olding & Rogers, 3, Freeman's Court, Cornhill.—This business was started in 1766 by Welch & Rogers. In 1785 it became Welch, Rogers, Olding & Rogers; in 1811 they amalgamated with Langston, Towgood & Co., under the style of Rogers, Towgood & Co.; in 1838 it became Rogers, Olding & Co., consisting of Samuel Rogers, Olding, Sharpe, Boycott & Olding; in 1856 it became Olding, Sharpe & Co.; in 1862 Olding, Osborne & Co.; in 1866 they transferred their business to the English Joint Stock Bank, which stopped payment the same year.

Sansom, Blake & Postlethwaite, 65, Lombard Street.—Harcourt, Blake, Sansom, Postlethwaite & Tanner started this business in 1791. In 1820 the firm was Sansom & Postlethwaite, which continued until 1831, when they became extinct.

Sikes, Snaith & Co., 5, Mansion House Street.—This business probably originated with Thomas Minors in 1738, who took a partner of the name of Boldero. After many changes it became, in 1786, Boldero, Snaith, Sikes & Boldero; and in 1790 the style became Sikes, Snaith & Snaith, which continued until 1825, when they stopped payment.

Smith, Payne & Smiths, George Street, Mansion House.—This business was established at Nottingham before 1688, and in London about 1759 by Smith & Payne; the present style being Smith, Payne & Smiths.

Smith & Holt, 60, Old Broad Street.—They originated in the firm of Joseph Smith & Co., about 1799. The firm continued to be Smith & Holt until 1818; the next year it was William Holt only; and in 1824 it became Drewett & Fowler, which style continued until 1852, when they amalgamated with Barnard & Co., under the style of Dimsdale, Drewett, Fowler & Barnard.

Snow, Robert, William Sandby, John Dean Paul & Nathaniel Kinch, 217, Strand.—This business is said to have originated with Snow & Walton about 1640. In 1729 the style of the firm was Snow & Paltock; in 1754 it was Snow & Denne; in 1768 it was Snow, Denne, Denne & Sandby; in 1798, Snow, Sandby, Paul & Kinch; in 1833, Snow, Snow, Strahan, Paul & Paul; and in 1843 the style was Strahan, Paul & Bates, which continued until 1856, when they failed.

Stephenson, Batson, Remington & Smith, 69, Lombard Street.—This business originated with Knight & Jackson, about 1729. The style of the firm in 1763 became Knight, Batson & Co.; in 1766 it was Batson, Stephenson & Hoggart; in 1785, Batson, Stephenson, Grase & Glover; in 1794, Stephenson, Batson, Remington & Smith; from 1824 until they stopped payment, in 1828, the style was Remington, Stephenson, Remington & Toulmin.

Stevenson & Salt, 80, Lombard Street.—This firm was established by William Stevenson in 1788. From 1801 to 1818 the firm was Stevenson & Salt; in 1839, Stevenson, Salt & Sons, which continued until 1867, when they amalgamated with Bosanquet & Co.

Strange, Dashwood, Steward, Agnew & Co., 150, New Bond Street, originated in Walwyn, Petrie, Hassell, Ward & MacGeorge, about 1793. In 1799 it was Walwyn, Strange, Dashwood, Steward, Agnew & MacGeorge. The firm came to an end in 1802.

Taylor, Lloyds, Hanbury & Bowman, 60, Lombard Street, was started by Hanbury, Taylor, Lloyd & Bowman in 1769. It became Taylor, Lloyd & Bowman in 1784; in 1816, Hanbury, Taylor & Lloyd; from 1858 until 1864 it was Hanbury & Lloyd, when they amalgamated with Barnett, Hoare & Co.

Veres, Lucadon, Troughton, Lucadon & Smart, 77, Lombard Street, was started about 1787 by this firm. In 1805 it was Veres, Lucadon & Smart; in 1809, Veres, Smart, Baron, Hawkins & Turnbull; in 1824 it was Veres, Ward & Co.; in 1834, Vere, Sapte, Banbury & Co.; in 1856, Sapte, Muspratt, Banbury, Nix & Co.; in 1859 they amalgamated with Fullers & Co., under the style of Fuller, Banbury, Nix & Mathieson.

Walpole, Clarke & Sisson, 28, Lombard Street.—This business was started by Robert Surman in 1736. In 1754 it was Surman, Dinely & Cliffe; in 1759, Cliffe, Walpole & Clarke; 1770, Walpole, Clarke & Bourne; in 1808 this firm came to an end.

WESTON, PINHORN, GOLDING, NEWSOME & WESTON, 37, Boro', was started in 1795. In 1817 the firm was Weston, Pinhorn & Weston; 1825, Weston, Young & Bostock; in 1847, C. Young & Young; in 1849 it was transferred to the London & Westminster Bank.

WHITEHEAD & HOWARD, Cateaton Street.—This business was started in 1784 by J. & G. Whitehead. They failed in 1815.

WILKES, DICKENSONS, GOODALL & DICKENSON, 33, Poultry, was established in 1790 by Peeles, Wilkes, Dickensons & Goodall. The firm came to an end in 1805.

WILKINSONS, BLOXHAM, BULCOCK, WILKINSON & TAYLOR, St. Margaret's Hill, Southwark.—They started in 1795, and failed in 1809.

WILLIAMS, SON, DRURY & MOFFAT, 20, Birchin Lane, was started about 1771 by Raymond, Williams, Vere, Lowe & Fletcher. In 1779 the style was Lowe, Vere, Williams & Jennings; in 1786, Vere & Williams; in 1788, Vere, Williams, Son, Wilkinson & Drury; 1793, Williams, Son & Drury; 1810, Williams, Son, Moffatt & Burgess; 1819, Williams, Williams & Burgess; 1828, Williams, Deacon, Labouchere & Co.; in 1842 it was Williams, Deacon, Labouchere, Thornton & Co., and now is Williams, Deacon, Thornton & Co.

WILLIS, WOOD, PERCIVAL & Co., 76, Lombard Street.—This business originated with a goldsmith, about 1677, of the name of Thomas Williams. In 1698, Benjamin Tudman; 1708, Tudman & Child; in 1713, Child, Greene & Eades; 1718, Greene & Eades; 1735, Greene & Tysoe; in 1752, Tysoe, Willis & Reade; 1774, Reade, Moorhouse, & Co.; 1787, Willis, Wood & Co.; in 1814, Willis, Percival & Co., which was the style until 1878, when they failed.

THOMAS WRIGHT & Co., 5, Henrietta Street, Covent Garden.—It originated with a goldsmith named William Wright in 1699; then Richard Wright; in 1754, Anthony Wright; in 1775, Anthony, Francis, & Thomas Wright; in 1787, Wright, Selby & Robinson. They failed in 1841.

On the 20th of June Her Majesty will have completed the fiftieth year of her reign. A reign of fifty years has happened but thrice before in our history. Henry III. completed his year of Jubilee Oct. 27th, 1266; his great grandson, Edward III., Jan. 24th, 1377; and George III., Oct. 24th, 1810—near 500 years later. It will therefore not be out of place to give a slight sketch of Her Majesty's life, with dates of some of the chief events of her reign.

Victoria Alexandrina, Queen of Great Britain and Ireland and Empress of India, born at Kensington Palace on May 24th, 1819, is the only child of Edward, Duke of Kent, fourth son of George III., and the Princess Victoria Mary Louisa, daughter of Francis, Duke of Saxe-Coburg, sister of Prince Leopold, afterwards King of the Belgians, and widow of Emich Charles, Prince of Leiningen. At that time the probability of the infant ever occupying the throne seemed very remote. George III. was King, his eldest son George was Prince Regent, and after him his brothers, the Dukes of York and Clarence, were heirs presumptive. The Duke of Kent dying Jan. 23rd, 1820, a few months after the birth of his daughter, the general education of the Princess was directed under her mother's care by the Duchess of Northumberland, wife of the third duke. Her early years were chiefly spent at Kensington Palace, but she was much at Claremont as the guest of her uncle, Prince Leopold, where the Queen testifies that she passed the happiest days of her childhood. There were frequent trips made, too, to various watering-places; and, as the Princess grew in years, visits were paid at the country houses of some of the nobility. In May, 1825, on the occasion of the sixth birthday of the Princess, a grant of £6,000 a year was voted to the Duchess of Kent, to continue throughout the minority of her daughter, in order to defray the increasing cost of her maintenance and education: this was followed, in August, 1831, by an additional annuity of £10,000 to support the honour and dignity of the Princess as heir presumptive to the crown. Her first public appearance at Court was at the drawing-room held by Queen Adelaide, Feb. 24th, 1831. On her coming of age, May 24th, 1837, a grand state ball was given in St. James's Palace, where, for the first time, the Princess took precedence of her mother. The death of William IV., on the morning of June 20th in the same year, 1837, opened the succession to the throne to the Princess, then only eighteen. The Prime Minister, Lord Melbourne, was sent for, and a meeting of the Privy Council summoned for eleven o'clock at Kensington Palace, when the Lord Chancellor administered the usual oaths to the Queen, and her Majesty received in return the oaths of allegiance of the cabinet ministers and other privy councillors present. At the sovereign's accession the world in general, even the statesmen and officials in closest communication with court circles, knew little about her. According to Mr. Greville, the young Queen had been previously kept in such retirement by her mother—"never," he says, "having slept out of her bedroom, nor been alone with anybody but herself and the Baroness Lehzen"—that "not one of her acquaintance, none of the attendants at Kensington, not even the Duchess of Northumberland, her governess, have any idea what she is or what she promises to be." The Courts of both George IV. and William IV. were not remarkable for refinement, and the Duchess of Kent wisely resolved to keep her daughter out of their unwholesome atmosphere as much as possible.

With the accession of the Queen ended the union of England and Hanover under the same sovereigns, the latter state passing to the next male heir, her uncle Ernest, Duke of Cumberland. The proclamation of the Queen, her appearance for the first time on the throne in the House of Lords when she prorogued Parliament in person, and the magnificent festival of her coronation, which took place on June 28th in the following year, 1838, may be mentioned. Her Majesty's Civil List was settled on the recommendation of the Whig Cabinet of Lord Melbourne (after a report by a Select Committee of the House of Commons) at £385,000. As Duchess of Lancaster she draws in addition an income of about £45,000, together with an annuity of £803 from the Consolidated Fund "in lieu of prisage and butlerage of wines imported into the Duchy," and a further sum of £101 yearly as an ancient fee. The expenditure upon royal palaces inhabited, or partly inhabited by her Majesty, or inhabited by pensioned members of the royal family and aristocracy, averages £35,249; cost of royal yachts and naval charges about £39,732; cost of royal escort, military charges and orders, about £31,150. The total payments on account of the sovereign in 1885 amounted to £560,203. The private landed estates of her Majesty are stated to be as follows:—Aberdeenshire, with a rental of £2,392; Hampshire, £3,100; and Surrey, £69. In 1882 the Queen purchased Claremont from the Commissioners of Woods and Forests for £74,000. Her Majesty also possesses property at Coburg, and the villa at Baden left to her by the Princess Hohenlohe.

On the Queen opening Parliament in person, Jan. 16th, 1840, she announced her intention of marrying her cousin, Prince Albert of Saxe-Coburg-Gotha—a step which she trusted would be "conducive to the interests of my people as well as my own domestic happiness." The Queen had met her cousin for the first time in 1836. He was nearly her own age, the Queen being the elder by three months and two or three days. The marriage took place Feb. 10th, 1840. An annuity—£30,000—had been settled on the Prince Jan. 27th. Of the marriage four sons and five daughters were born:—1. Victoria Adelaide Mary Louisa, Princess Royal, born Nov. 21st, 1840, married Jan. 25th, 1858, to Frederick William, now Crown Prince of Germany; 2. Albert Edward, Prince of Wales, born Nov. 9th, 1841, married March 10th, 1863, to the Princess Alexandra, eldest daughter of Christian IX., King of Denmark; 3. Alice Maud Mary, born April 25th, 1843, married July 1st, 1862, to Louis IV., Grand Duke of Hesse-Darmstadt, died Dec. 14th, 1878; 4. Alfred Ernest Albert, Duke of Edinburgh, born Aug. 6th, 1844, married Jan. 23rd, 1874, to the Grand Duchess Marie, only daughter of the late Czar of Russia; 5. Helena Augusta Victoria, born May 25th, 1846, married July 5th, 1866, to Prince Frederick Christian of Schleswig-Holstein; 6. Louise Caroline Alberta, born March 18th, 1848, married March 21st, 1871, to John, Marquis of Lorne; 7. Arthur William Patrick Albert, Duke of Connaught, born May 1st, 1850, married March 13th, 1879, to Princess Louise Margaret, daughter of the late Prince Frederick Charles of

Prussia; 8. Leopold George Duncan Albert, Duke of Albany, born April 7th, 1853, married April 27th, 1882, to the Princess Helen, daughter of the Prince of Waldeck-Pyrmont, died March 28th, 1884; 9. Beatrice Mary Victoria Feodore, born April 14th, 1857, married July 23rd, 1885, to Prince Henry of Battenberg.

It will be convenient to introduce here some notice of the attempts that have been made from time to time upon the life of her Majesty. In not a single instance was there the slightest political significance to be attached to them. The first attempt was made on June 10th, 1840, by Edward Oxford, a potboy of seventeen, who fired two shots at the Queen as she was driving up Constitution Hill with Prince Albert, but missed in each case. At his trial the jury found him insane, and he was ordered to be kept in a lunatic asylum during her Majesty's pleasure. On May 30th, 1842, a man named John Francis, twenty-two years of age, son of a machinist in Drury Lane, fired a pistol at the Queen as she was driving down Constitution Hill, on the very spot where Oxford's attempt was made. Sentence of death for high treason was passed on him, but it was finally commuted to one of transportation for life. The very day after this mitigation of punishment became publicly known another attempt was made by a hunchbacked lad named Bean. As the Queen was passing Buckingham Palace to the Chapel Royal, Bean presented a pistol at her carriage, but before he could discharge it his hand was seized by a boy who was standing near. The pistol was found to be loaded with powder, paper closely rammed down, and some pieces of a clay pipe. Bean was sentenced to eighteen months' imprisonment in Millbank Penitentiary. An Irish bricklayer named Hamilton fired a pistol, charged only with powder, at her Majesty, on Constitution Hill, on May 19th, 1849, and was sentenced to seven years' transportation. A like sentence was passed on a man named Robert Pate, an ex-lieutenant of Hussars, who struck her Majesty on the face with a stick as she was leaving the Duke of Cambridge's residence in her carriage on May 27th, 1850. On Feb. 29th, 1872, a boy of seventeen, named Arthur O'Connor, pointed a broken and unloaded pistol at the Queen as she was entering Buckingham Palace after a drive, and was sentenced to twelve months' imprisonment and a whipping. Finally, on March 2nd, 1882, a man named Roderick Maclean fired at her Majesty when entering her carriage at Windsor station after a visit to the metropolis. Being found not guilty on the ground of insanity he was ordered to be confined during the royal pleasure.

When the Queen succeeded to the throne Lord Melbourne was Prime Minister. Although not a great statesman he was a man of a kindly, even generous nature, and in him the young sovereign found a faithful counsellor. Parliament met for the first time on Nov. 20th, 1837, and was adjourned to Feb. 1st, 1838; but the outbreak of the rebellion in Lower Canada, caused by the grievances of the French or national party, compelled the Houses to reassemble Jan. 16th. The rebellion was quickly suppressed, and Lord Durham was sent out to report on the best method of adjusting the future government of the province. The result was the union of the two Canadas in 1840, from which time discontent and insurrection have been for the most part at an end. In 1867 Canada and the other provinces of British North America, except Newfoundland, were united under the title of the Dominion of Canada. The opening of the reign saw also the general development of the railway system all over the country (1837–39), the construction of the electric telegraph (1838), the first successful attempts to make use of steam for the business of transatlantic navigation (1838), and the introduction of the penny postage (1840). Reforms were astir in almost every direction. The foundation of the colony of New Zealand was laid with success in 1839, and in Feb., 1840, by the treaty of Waitangi, first became a British possession. The suspension of transportation in the same year, 1840, ensured a career of future prosperity to our settlements in Australia. A measure to abolish in various cases the punishment of death was passed. Inquiries into the condition of our poor and labouring classes were the order of the day. A system of national education, begun in 1834 by a small annual grant towards the erection of schools, was developed in 1839 by the creation of a Committee of the Privy Council for educational purposes, and by the steady increase of educational grants. In Ireland the horrors of the Tithe War led in 1838 to the abolition of tithes and the substitution of a land tax. A Poor Law was passed in the same year, and a Municipal Reform Act two years later. But although the ministry were able to carry these and several other beneficial measures, they failed to win the confidence of the people. The condition of the manufacturing poor was deplorable, and it gave rise to the Chartist agitation for admission to equal political rights with the middle classes. For ten years (1838–48) the movement disturbed England. Events abroad added to the difficulties of the ministry at home. A war was forced on China in 1839, on its refusal to allow the smuggling of opium into its dominion. In India the occupation of Cabul during the same year (1839) ended two years later in a general revolt of the Afghans, and in the loss of a British army in the Khyber Pass. A general election in 1841 resulted in the return of the Conservatives to power under Sir Robert Peel. On Nov. 9th the Prince of Wales was born. King Frederick William of Prussia, who was one of his sponsors, came to England to attend the christening on Jan. 25th, 1842. When the new ministry assumed office there was a general confidence that the financial genius of Sir Robert Peel would quickly find some way to amend the condition of things, especially in the agricultural districts. Abroad the Government proved itself successful. Peace was made with China by a treaty which threw open five additional ports to European traders; and in India the disaster of Cabul was avenged by an expedition under General Pollock. In 1843 Daniel O'Connell and his formidable agitation for Repeal are entitled to the foremost place; but the prohibition of the monster meeting at Clontarf, on Oct. 3rd, broke his power. In India the province of Scinde was annexed to the British dominions. At the end of August the Queen and Prince Albert paid a visit to King Louis-Philippe at the Château d'Eu. A six days' tour in Belgium followed in September. During a visit of her Majesty to Sir Robert Peel at Drayton Manor, in November, the prince went to Birmingham. From Drayton Manor the royal party went first to Chatsworth, and then to Belvoir Castle. In June, 1844, the Russian

Emperor, Nicholas, paid an unexpected visit to the Queen. Another royal visit, that of the Prince of Prussia (now Emperor of Germany) in August, was followed by four subsequent visits of the Prince to England, and by the marriage, in 1858, of his son to the Princess Royal. In October, King Louis-Philippe paid a return visit to her Majesty at Windsor Castle. 1845 witnessed fresh struggles for supremacy with the natives in India, and especially with the Sikhs, who were subdued for the time in three great battles at Moodkee, Ferozeshah, and Sobraon. By a treaty concluded on March 9th, 1846, the Cis-Sutlej district and the Jullunder Doab were annexed to the English territory; the province of Cashmere, the highlands of Jummoo, and half a crore of rupees were to be given up for the expenses of the war. It was during this year that the Queen and Prince acquired "a place of their own, free from all Woods and Forests and other charming departments," by purchasing the estate of Osborne, in the Isle of Wight. In August they paid a three weeks' visit to Germany, with the special object of visiting the scenes where the prince's youth had been passed. On 2nd Sept. they left Gotha on their return, which was made by way of Antwerp, where the King and Queen of the Belgians met the royal visitors. Tréport was taken on the way back to England, and here a reception was given to the Queen and Prince by King Louis-Philippe. On July 17th had died Earl Grey, premier in the Cabinet which passed the Reform Bill of 1832, and secured the abolition of slavery.

Turning again to politics we now arrive at the story of Peel's administration in its dealing with the Corn-laws. Told in the briefest form the story is, that Peel came into office in 1841 to maintain the Corn-laws, and that in 1846 he repealed them. At first, with respect to corn, he imposed a sliding-scale of duties, which shut out foreign corn in seasons of low prices, and allowed it to come in in seasons of high prices. In his budget of 1845 he made a virtual abandonment of the principle of protection by abolishing the duties on 430 articles out of 813 then taxed. Outside parliament a great association, the Anti-Corn Law League, with Richard Cobden and John Bright as its principal spokesmen, poured forth unanswerable arguments on behalf of the entire freedom from duty on imported food. At last Sir Robert Peel, shaken by argument and moved by the difficulty of providing for an Irish famine, proposed and carried the repeal of the corn-duties in 1846. But the same day (June 25th) on which the bill was read for the third time in the House of Lords, saw also the defeat of the ministry on a Coercion Bill for Ireland. The more important measures of Peel's government may be here mentioned. The Act of 1842, which prohibited the employment of women and girls in mines and collieries, was followed by the Factories Act of 1844. An income-tax was once more laid on (1842) to enable the Prime Minister to reduce the duties on imports. The Bank Charter Act was passed in 1844.

Lord John Russell succeeded Peel as Prime Minister. For a time the Irish famine (1846–48), caused by the failure of the potato crop, occupied all his attention. He was able, however, to carry on the system of free-trade which Peel had established. The markets were thrown open to foreign as well as to colonial sugar (1846), and the repeal of the navigation laws (1847) enabled the merchant to employ foreign ships and seamen in the conveyance of his goods. Dan. O'Connell died at Genoa May 15th, 1847, in a vain attempt to reach Rome. The year 1848 was a critical time for crowned heads in Europe: Italy, Austria, and Germany were convulsed with revolutionary outbreaks which followed on the example of France. England had its own troubles from bad harvests and great commercial and financial depression. At home the chief events were the renewal and final suppression of the Chartist agitation, and the foolish attempt at rebellion on the part of the "Young Ireland" party, which was mostly composed of Protestant journalists and men of letters, with Smith O'Brien and Meagher at its head. A fresh war with the Sikhs was closed by the victory of Goojerat, Feb. 6th, 1849, and the annexation of the Punjaub on the following 29th March. The close of the session (5th Sept.) set the Queen free to go for the first time to Balmoral, a property in Aberdeenshire, which she had recently acquired on the recommendation of Sir James Clark, the Court physician. The death of Lord Melbourne occurred on Nov. 24th. In 1849, while the countries of the Continent were still agitated by revolutionary movements, trade and manufactures in England were gradually recovering, wages were rising, and the popular discontent of which the Chartists had taken advantage, was dying out. Ireland, too, had regained a temporary tranquillity. The Queen took the opportunity of visiting that country in company with the Prince (Aug.). In this year also the Prince, in conjunction with Mr. Henry Cole, projected the idea of the Great International Exhibition. To 1850 belongs the premature and much lamented close of the public career of Sir Robert Peel, who died on July 2nd from the effects of a fall from his horse while riding in St. James's Park. In the same year Louis-Philippe, ex-King of the French, died at Claremont, Aug. 26th, the guest of England. The autumn of 1850 and the greater part of 1851 were disturbed by the "No-Popery" agitation, which the Government attempted to quell by the abortive Ecclesiastical Titles Bill. The 1st of May in the latter year (1851) will always be memorable as the day on which the first Great Exhibition was opened in Hyde Park. In this year Louis Kossuth came to England, to plead by his noble eloquence the cause of Hungary and her national independence. The discovery of gold in New South Wales and Victoria brought an enormous increase of prosperity to our Australian colonies. The year 1852 has been described as "one of profound emotion, and even of excitement in England." A military spirit was exhibiting itself everywhere. An invasion from France was threatened. The Volunteer movement sprang into sudden existence; it received the sanction of the Crown early in the year, and thus became a national institution. We had, too, a Kaffir war on hand (Dec. 1850–1853). A fresh war with Burmah resulted in the annexation of the province of Pegu on Dec. 20th. A Militia Bill, introduced by Lord John Russell, overturned his ministry in Feb. Lord Derby undertook to form a Conservative administration, with Mr. Disraeli as his Chancellor of the Exchequer. A Militia Bill was carried, a new constitution was given to New Zealand, and then in the beginning of July Parliament was prorogued and the dissolution took place. On Sept. 14th the Duke

of Wellington died. The new Parliament was called together in November; but the Derby administration was defeated on the budget of Mr. Disraeli. In a few days after, the Aberdeen Coalition Ministry was formed. With Mr. Gladstone as Chancellor of the Exchequer, another sweeping abolition of duties was carried; while Lord Palmerston at the Home Office introduced such useful reforms as the ticket-of-leave system, the extension of the Factory Acts, and the shutting up of graveyards in the metropolis. But the mind of the nation was soon to be wholly taken up with foreign affairs. The attack upon Turkey by the Emperor of Russia was resisted by the allied forces of England and France. War was declared in March, 1854. The invasion of the Crimea (Sept. 14th) and the victory of the Alma (Sept. 20th) were followed by the siege of Sebastopol. On Oct. 25th was fought the battle of Balaclava; the 5th Nov. witnessed the successful defence of the heights above Inkerman. The winter tried our troops severely, encamped as they were on a bleak plateau, while the commissariat utterly broke down. This caused great indignation in England, and Lord Aberdeen was succeeded as Prime Minister by Lord Palmerston in Feb., 1855. When operations were resumed in the summer the English army was far outnumbered by its French allies, who consequently gained the greater part of the credit of the capture of Sebastopol on Sept. 5th. The war was now virtually over, the Congress of Paris opened Feb. 26th, 1856, and March 30th a treaty of peace was signed. For some time after the Crimean war the business of legislation proceeded with languor. The attention of the public was a good deal distracted from political affairs by an epidemic of new forms of crime and fraud. The trial of Joseph Wooler in the Great Burdon slow-poisoning case, the trial of William Palmer in the Rugeley poisoning case, the trial of William Dove in the Leeds poisoning case, the trial of Madeline Smith in the Glasgow poisoning case, the failure and frauds of the Royal British Bank, the frauds of Robson, Redpath, and Saward belong to the period 1855-57. An explosion by which about 189 miners perished occurred at Lund Hill, near Barnsley, South Yorkshire, on Feb. 19th, 1857. In April and May bodies were still being extricated. In India the annexation of Oude (Feb. 7th, 1856) gave rise to much discontent among the natives, which was afterwards to bear fruit. The seizure of the lorcha (or cutter) Arrow by the Chinese authorities, on the charge of piracy, was the cause of the second Chinese war (Oct., 1855—May, 1858). The policy of the Government in this matter led to their defeat in Feb., 1857; but Lord Palmerston's appeal to the country brought him back to power with a larger majority than before. The little war with Persia was concluded in April. Soon afterwards the news of the outbreak in India broke upon England with the shock of a thunderclap. A mutiny at Meerut in May was followed by the seizure of Delhi, where the native king was enthroned as Emperor of Hindoostan; by a fresh mutiny and massacre of the Europeans at Cawnpore, by the rising of Oude and the siege of the Residency of Lucknow. The revolt was not finally suppressed until Aug., 1858. At home the new parliament was engaged for some time in passing the Act for the establishment of a Court of Divorce. This year (1857) also saw the abolition of the system of transportation. In August the Emperor and Empress of the French paid a short visit to the Queen, and were entertained at Windsor. The autumn was memorable by a terrible money panic, and the failures of banks and commercial firms, which led to the suspension of the Bank Charter Act. In the beginning of 1858 Lord Palmerston introduced a bill to transfer the authority of the East India Company to the Crown. In accordance with this Act the government of the company—the famed "John Company"—formally ceased on Sept. 1st, 1858; and the Queen was proclaimed throughout India in the following Nov., the Governor-General becoming her Viceroy. Meanwhile, in Feb., Lord Palmerston was most unexpectedly defeated over the Conspiracy to Murder Bill, caused by Orsini's attempt on the life of Napoleon III.; but the administration of Lord Derby, which succeeded, proved short-lived. July saw the removal of the remaining Jewish disabilities, by which a long political and sectarian struggle came to an end. About the same time, in response to the Radical demand, the useful Conservative property qualification for members of Parliament was abolished. In Aug. the Queen, as the guest of the Emperor of the French, was present at the inauguration of Cherbourg. In Nov. Mr. Gladstone arrived at Corfu as Lord High Commissioner to the Ionian Islands, and recommended their union with Greece, which was effected May 28th, 1864. In Feb., 1859, the failure of Mr. Disraeli's Reform Bill necessitated an appeal to the country. The election brought back Lord Palmerston, whose ministry lasted till his death in 1865. On Dec. 28th died Lord Macaulay, the brilliant debater, essayist, and historian. 1860 was a year of troublous times. Some of the greatest strikes ever known in England had just broken out. The Ministry attempted great things. They undertook a complete remodelling of the Customs system; a repeal of the paper duties was proposed, and was ultimately accomplished in 1861; and a Reform Bill was brought in in March, only to be withdrawn in June. A commercial treaty with France, negotiated by Mr. Cobden, was concluded in Jan. The ratification of the treaty of Tientsin by the Emperor in Oct. ended for a time the disturbances in China. Lord Aberdeen died Dec. 14th. The civil war in America, which began with the secession of the Southern States in 1861, and ended four years later in their subjugation, reduced Lancashire to distress by its interference with the supply of cotton. Death was busy among statesmen this year. Lord (better known as Sidney) Herbert, died Aug. 2nd, and Sir James Graham, Oct. 25th. Her Majesty, too, sustained severe domestic bereavement. On March 16th the Duchess of Kent had died; on Dec. 14th the unexpected death of the Prince Consort filled the nation with profound sorrow. The opening days of 1862 were made memorable by a fearful accident at the Hartley coal-mine, Northumberland, by which 202 men and boys were buried alive. The second great International Exhibition was opened May 1st, and was remarkable for the display of products of all kinds from the Colonies, then rapidly advancing. For the next three years home politics were inactive. On April 13th, 1863, died Sir Geo. Cornewall Lewis, a successful Chancellor of Exchequer and distinguished scholar. Oct. 12th, died Lord Lyndhurst, thrice Lord Chancellor, a powerful debater, but slippery politician. The

Schleswig-Holstein question of 1863 gave rise to a resolution condemning the non-intervention policy of the Government in July, 1864. In the April of the latter year Garibaldi came on a visit to England, and was enthusiastically welcomed by aristocracy and democracy alike. On April 2nd, 1865, Richard Cobden died. An insurrection which broke out in Jamaica Oct. 11th of that year, was suppressed with undue severity by Governor Eyre, and led to the abolition of the representative constitution of the island.

On July 6th Parliament was dissolved. The elections resulted in a large Liberal majority. Lord Palmerston died on the 18th of the following October, when within two days of completing his 81st year. He was buried in Westminster Abbey with public honours on the 27th. With him the long period of political inactivity passed away. The Queen opened Parliament in person on February 1st, 1866, for the first time since the death of the Prince Consort. The new government, with Earl Russell at its head and Mr. Gladstone as the leader of the House of Commons, introduced a franchise bill "at once insignificant and unmeaning" on March 12th, and resigned on failing to carry it in July. The commercial panic had in the meantime intervened. The suspension of the great firm of Overend and Gurney had brought failure after failure with it. The famous "Black Friday," May 11th, "had made its most disastrous mark in the history of the City of London." The Bank Charter had to be suspended. The Cattle Plague, although checked by stringent measures of the Government, was still raging. Lord Derby succeeded Earl Russell as premier. Just before the adjournment of Parliament for the recess, the Atlantic Cable was successfully laid between Europe and America (July 27th). The autumn and winter of 1866–67 were memorable for the agitation for reform, which the Hyde Park Meeting of July 23rd had served somewhat boisterously to inaugurate. When Parliament opened, Feb. 5th, it was found that the new ministry had adopted the reform principle. An elaborate and complicated measure was introduced in the House of Commons by Mr. Disraeli, which, modified and amplified, became the law of the land in August, 1867. The working class at length took its place by the side of the middle and upper class. The session was scarcely over when the country was startled by the news of the daring rescue of Fenian prisoners in Manchester (Sept. 18th).

The Fenian movement, organized for the purpose of extorting independence for Ireland by force, may be said to have commenced at the close of the American War in 1865; but all attempts at insurrection had hitherto proved abortive. The scheme for the capture of Chester Castle in February of this year was anticipated by the Government. The gathering at Tallaght in March, which was to have formed a prelude to a general rising in Ireland, was dispersed by the police. On Nov. 23rd, three of the leaders of the Manchester rescue were hanged; on Dec. 13th an attempt was made to blow up the House of Detention at Clerkenwell. About the same time the trades-union outrages at Sheffield, Manchester, and other large towns, distressed and disturbed society. In the summer the Sultan of Turkey, Abdul-Aziz, honoured us with his presence, the first Sultan who ever set his foot on English soil. Early in 1868, Lord Derby, by reason of failing health, withdrew from official life, and Mr. Disraeli reached the object of his ambition by becoming prime minister. A good deal of work was got through in the session. A bill was passed to put a stop to the system of public executions; election petitions were referred to the decision of a legal tribunal instead of a Committee of the House of Commons; the House of Lords abandoned the custom of voting by proxy. In July, however, Mr. Gladstone carried his Irish Church Resolutions against the Government, and in the general election which followed the Conservatives were completely beaten. This year saw the acquisition by the government of all the lines of telegraph, and the telegraphic business made a part of Post Office routine. In April, Ireland was visited by the Prince and Princess of Wales; in August, the Queen, travelling incognita as the Countess of Kent, went to Switzerland. In the last-named month occurred the most terrible railway accident that ever happened in this country—the collision of the Irish mail train at Abergele with some waggons laden with barrels of petroleum. Thirty-three persons, unable to get out of the carriages, were burnt alive, their bodies being reduced to heaps of cinder. The successful conclusion of the expedition into Abyssinia forms not the least important event in the year's history. Lord Brougham had died May 7th at his château at Cannes. His triumphs as the champion of Law and Parliamentary Reform belong to the previous reign. The new Parliament (Mr. Gladstone prime minister) was opened Dec. 10th, but the real work of the session began on the 16th of the following February, 1869. Its first work was to be the great task of endeavouring to govern Ireland according to Irish ideas. On March 1st, the measure for the disestablishment and partial disendowment of the Irish Episcopal Church was introduced; on July 26th it received the royal assent. On Oct. 23rd, Lord Derby died at Knowsley. The Irish Land Bill, which established a sort of tenant-right in every part of the country, was brought in Feb. 15th, 1870, and became law Aug. 1st. A new and improved system of elementary education was set on foot by the Education Bill passed on Aug. 9th, which provided for the establishment of School Boards in every district, and for their support by means of local rates. On June 10th, Charles Dickens was suddenly taken away from among us. Important reforms were undertaken in the management of the navy; and the practice of purchasing promotions in the army was abolished by royal warrant on July 20th, 1871. The University Tests Bill, admitting all lay students of whatever faith to Oxford and Cambridge on equal terms, was another of the great measures carried during this busy year of 1871. Others were the Trades Union Bill, moderating the legislation which bore harshly on the workmen, and the establishment of the Local Government Board. In the summer, the Emperor of Brazil, Dom Pedro, visited our shores. The illness of the Prince of Wales in November cast a shade on the close of an otherwise prosperous year. The Geneva Convention, which met in Dec., settled a serious disagreement between this country and the United States. For the fitting out of piratical cruisers in English harbours in the name of the Southern Confederation during the Civil War,

Great Britain had to pay about £3,229,166 13s. 4d. indemnity money. 1872 was remarkable for the agitation among the agricultural labourers and the formation of their union, an event which even the first Tichborne trial, now drawing to its close, failed to throw into the shade. A fresh step in Parliamentary reform was made by the passing of a measure which enabled the votes of electors to be given in secret by means of the ballot. Meanwhile the time had come when the nation was no longer in a reforming mood. 1873 proved a trying time for the Liberal Government. The Irish Home-Rule party now came into prominence under Mr. Isaac Butt, and put them in a new difficulty. Defeated on the Irish University Bill, they resigned in March, but Mr. Disraeli prudently declined to accept office without a working majority. The Shah of Persia, Nasr-ul-Deen, came amongst us in June. By the death of the ex-Emperor of the French at Chislehurst, on Jan. 9th, a name of enormous power passed out of the living world into that of history. Nine days later died Lord Lytton, who, if he did not in every walk achieve equal distinction, yet failed in none.

Early in 1874 Mr. Gladstone suddenly resolved to consult public opinion by a dissolution of Parliament, and the return of a Conservative majority of nearly seventy members led to his retirement from office, Mr. Disraeli again becoming Prime Minister. Feb. 28th was the 188th and last day of the trial of the Tichborne Claimant for perjury. Sentence of fourteen years' penal servitude was passed. The Ashantee war—"one of the least of all our little wars"—was brought to a close in March. In May the Emperor of Russia paid a short visit to the Queen. In June, 1875, England received another dusky guest, the Sultan of Zanzibar, Seyyid Barghash. In August a collision took place in the Solent between H.M.'s steamer *Alberta* (the Queen on board) and the yacht *Mistletoe*, by which three lives on the latter vessel were lost. The domestic legislation of the government was unimportant, if we except the Artizans' Dwellings Bill (1876), the object of which was to enable local authorities to pull down houses unfit for human habitation, and rebuild on the sites. An Agricultural Holdings Act (1875) and a Factory Act (1878) may be mentioned. About this time (1877–78) the Home-Rule party, under the leadership of Mr. Parnell, who had displaced Mr. Butt, began to make its power felt in the House of Commons. The new leader availed himself of the distress caused by bad harvests in 1878–80, and of the repeal of the Convention Act in 1879, to organize the formidable Land-League movement. A change was now coming over the spirit of the administration. A new (and spirited) foreign policy was inaugurated by the purchase of the shares which the Khedive of Egypt held in the Suez Canal for four millions sterling (Nov. 25th, 1875). The Prince of Wales was sent on a tour to India in October of the same year, to engage in the congenial task of exchanging with the native princes "the presents of Europe for those of Ormus and Ind." On April 11th, 1877, the Tynewydd Pit, near Pontypridd, was flooded; but several miners were rescued by excavation, after ten days' imprisonment. The Albert Medal, hitherto only bestowed for gallantry in saving life at sea, was conferred on the heroic rescuers.

Throughout 1876 and 1877 a guarded and even hostile attitude towards Russia was maintained; and when the Russians seemed about to enter Constantinople, the British Fleet was ordered to the Dardanelles, and an Indian Contingent was brought to Malta. When a treaty was concluded between Turkey and Russia at San Stefano, Mr. Disraeli, now Lord Beaconsfield, insisted that it should be submitted to the great Powers. A general Congress at Berlin followed, which Lord Beaconsfield and Lord Salisbury attended as the representatives of England, and in the summer of 1878 the Eastern Question was temporarily set at rest by the Treaty of Berlin. Cyprus now became a British possession. The death of Earl Russell, May 28, in this year, removed from the political world the shadow of a great name. In September a fearful collision in the Thames, between the steamer *Princess Alice* and the *Bywell Castle*, brought sorrow and desolation into many an English home. Between 600 and 700 persons perished, principally women and children. Before the country had time to recover from the shock, an explosion at the Prince of Wales' Colliery, Abercarne, swept away 268 men and boys. Abroad, the repulse by the Afghans of a British mission led this year to a fresh Afghan war (Nov. 1878). The Afghans made but a poor resistance, and the British troops soon occupied Cabul. A treaty was concluded at Gandamak with Yakoob Khan, who had succeeded to power on the death of his father, Shere Ali, in May, 1879, but all its provisions were scattered to the winds by the murder of Sir Louis Cavagnari, who had been deputed as English Envoy to Cabul (Sept.) The British army promptly advanced on the capital, and on Dec. 24th Cabul was again occupied. Matters were now settling down, but the approach of the Sirdar Ayoob Khan kindled anew the flames of rebellion. This pretender, having defeated General Burrows at Maiwand in July, proceeded to invest Candahar, but he was utterly routed in his turn by General Sir F. Roberts (Sept.), who had effected the difficult march from Cabul with consummate generalship. The government of the country was ultimately left in the hands of Abd ur Rahman (July, 1880). The year 1879 began inauspiciously with the war between the British and the Zulu king, Cetewayo, owing to the refusal of the latter to make reparation for the raids by his subjects upon Natal. A force under Lord Chelmsford crossed the frontier, but was surprised and attacked at Isandhlwana on Jan. 22nd, and defeated with the slaughter of several hundred British troops. The war was continued, and on July 4th, 1880, Cetewayo was completely defeated at Ulundi and taken prisoner. In the spring of this year (1879) the Queen left England for a month's stay at Baveno, on the Lago Maggiore. Disastrous storms and floods marked the closing days of 1879. On Dec. 28th, a train passing over the Tay Bridge, Dundee, was, with the bridge, blown into the river beneath, and not a single life was saved to tell the tale. Meanwhile the Beaconsfield administration was fast losing its early popularity. There was much distress in the country, caused by bad seasons and trade failures. Ireland was again threatened with famine. The people were in no humour to bear the burden of unnecessary war. Much relief was therefore felt when Parliament was dissolved on March 24th, 1880, and the

elections began. A majority of some hundred and twenty sent the Liberals, with Mr. Gladstone for leader, back to power.

The new Parliament met May 20th, and although much hampered by the talking and the scenes consequent on the unfortunate "Bradlaugh business," not to mention Irish obstruction, the Government managed in the short session between Easter and August to carry the Burials Bills, which removed another Nonconformist disability, the Ground Game Bill, by which the occupier of land secured the right to kill ground game concurrently with the landlord or any person authorized by the landlord, and the Employers' Liability Bill. The Customs and Inland Revenue Bill, the object of which was to abolish the malt-tax and to substitute a duty on beer, formed part of a supplementary budget. The amendment of the Education Act, Mr. Fawcett's valuable Post Office Reforms, the Grain Cargoes Act, and Seamen's Wages Act were also the work of the new administration. The state of Ireland, however, soon absorbed attention. The Relief of Distress Bill passed uneventfully into law; but the Compensation for Disturbance Bill, having for its main provision that in certain districts tenants might be compensated for eviction in the case of non-payment of rent, was unceremoniously thrown out of the House of Lords by the overwhelming majority of 231. In June the King of Greece, George I., made a short stay. In South Africa the annexation of the Transvaal to the British dominions (April, 1877) had caused much discontent among the Boers, which in December of this year, 1880, took the form of open rebellion. A most disastrous campaign followed, in which the British sustained three several defeats. An armistice, proposed by the Boers, was accepted in March, 1881, and peace was finally concluded on the 22nd of the same month. By the Convention of Pretoria the Boers, while retaining self-government, acknowledged the suzerainty of Britain, and thus the Transvaal practically became an independent State. On Dec. 22nd died Mary Ann Cross, "who as 'George Eliot' is revered as the greatest of England's women of genius." The chief topics of discussion on New Year's Day, 1881, were the condition of Ireland and the trial at Dublin of Mr. Parnell and his friends for conspiracy. The Ministry re-assembled both Houses on Jan. 6th, and at once set to work at further legislation for Ireland. Two repressive measures—a Preservation of Property and an Arms Bill—became law, after a desperate fight on the part of the Parnellites; and the Government were free to introduce their "message of peace," the new Irish Land Bill, by which the whole system of Irish tenures was transformed (April 7th). After endless obstruction the Bill received the royal assent in August. The remainder of the session was devoted chiefly to army reform. By the Army Discipline Act flogging was totally abolished. The evils of the short-service system were decreased, the prospects of junior officers were improved; while by a strict method of localization more troops were ready for service at a particular moment. The efforts of Mr. Bradlaugh to take the oath, and thereby make good his entrance into Parliament, led to various discreditable scenes within and without the House of Commons. Some Conservative successes at bye-elections were ascribed rightly or wrongly to the influence of the "Fair Trade" delusion, which gave rise to much discussion during the autumn. In Ireland the triumphal acquittal of Mr. Parnell and his coadjutors had added to the strength of the agitators, while they condemned the Land Act by anticipation. The imprisonment of Michael Davitt, "the Father of the Land League," in February, and the arrests under the Coercion Act, which came into force early in March, added fuel to the flame. The Government, seeing little prospect of the Land Act being allowed fair play, availed itself of the "unexhausted resources of civilization," by lodging Mr. Parnell and five of his allies in Kilmainham Gaol. Ten days later the Land League was proclaimed as "an illegal and criminal association," but it immediately revived as the National League. On April 19th, Lord Beaconsfield passed away, full of years and of such honours as the State had to bestow. His last public utterance had been in the House of Lords on the occasion of the assassination of the Emperor of Russia in the previous March.

The session which opened Feb. 7th, 1882, was devoted, like its predecessor, almost entirely to Irish affairs. A fresh trouble was prepared for the Government by the adoption of a motion in the House of Lords for a Select Committee to inquire into the working of the Irish Land Act. In the Commons, Mr. Bradlaugh once more stood in the way of business. The release of Mr. Parnell and other "suspects" on certain conditions—jocosely referred to by the Opposition as the "Kilmainham Treaty"—gave rise to much heated debate (May). These incidents seriously interfered with the discussion on the new Rules of Procedure. It was hoped there would be more expedition after Easter; but a terrible crisis—the assassination of Lord Frederick Cavendish and Mr. Burke, the Chief and Under Secretaries for Ireland, in the Phœnix Park, Dublin, on May 6th—compelled the Government to have resort to a totally new departure. A stringent Prevention of Crimes Bill was forthwith introduced (May 11th), which on becoming law (July 12th) put a stop to the worst of the atrocities. In spite of the most extreme provocation the Ministry introduced one more remedial measure for Ireland, the Arrears of Rent Bill, which received royal assent, Aug. 18th. The other measures of the session included in the Commons the Parcel Post Bill; in the Upper House, the Married Women's Property Bill—which places the married woman precisely upon the same footing as her husband in everything relating to the ownership and disposal of property—and the Settled Land Bill were carried. The Procedure Resolutions were finally passed in an autumn session (Oct. 24th to Dec. 2nd). In the spring the Queen left England for a month's stay at Mentone: on her return she received the King and Queen of the Netherlands, and shortly afterwards visited Epping Forest, and declared it free to the public. Another royal visitor was Cetewayo, the ex-King of Zululand, who arrived in London Aug. 3rd, was kindly received by her Majesty, and restored to sovereignty over a part of his dominions. On June 16th, happened the shocking catastrophe at Victoria Hall, Sunderland, by which 183 children were smothered. On Sept. 9th died Sir George Grey, the able Home Secretary at the time of the Chartist agitation in 1848. The new Law Courts were opened by the Queen, Dec. 4th. Abroad, the Egyptian difficulty came

to a head by the uprising of the "National Party" under Arabi Pasha. On May 17th the English and French fleets were ordered to Alexandria to support the authority of the Khedive. June 11th a riot broke out in the city, and the European colony in alarm began to leave Egypt. Mercantile enterprise was checked, and it was probably owing to financial pressure that armed intervention was then decided on by Mr. Gladstone. The "Bondholders' War" began with the bombardment of Alexandria by the English fleet on July 11th, with the result that on the second day it was evacuated by the Nationalists, who, as they retired, took care to burn down the European quarter of the city. Loss estimated at £4,000,000. Finally, Sept. 10th, the campaign was ended by a night attack on Tel-el-Kebir. Cairo was saved from the fate of Alexandria by a forced march of cavalry, Sept. 14th, and Arabi was eventually banished to Ceylon. 1883 saw the long-baffled efforts of the executive to bring the Phœnix Park murderers to justice completely successful. The actual assassins were hanged; their accomplices sent to penal servitude for life. The dynamite conspirators revealed their presence in London by attempts to blow up the Local Government Board and *Times* offices (March 13th), and by explosions on the Underground Railway (Oct. 30th). These outrages necessitated the passing of a Bill for amending the Act of 1875 relating to explosives, April 10th. The severity of this measure, and of the sentences inflicted upon four of the gang in June, checked the movement for a brief while. Parliament met Feb. 15th. The debate on the address was enlivened by Mr. Forster's "impeachment speech" on Mr. Parnell. The Affirmation, or "Bradlaugh Relief Bill," as it was unkindly called by the Conservatives, failed to pass after a most eloquent speech by Mr. Gladstone. A cordial welcome, however, awaited Mr. Chamberlain's Bankruptcy Bill, which passed August 25th, as did also the English and Scottish Agricultural Holdings' Bills, after meeting with a hostile reception in the Lords. A drastic measure was the Corrupt and Illegal Practices Prevention Bill, (passed Aug. 10th), "the necessity for which," it was remarked, "had been sufficiently established by the revelations which followed the general election." Among a large number of legislative failures were such important measures as the Criminal Appeal and Code Bills, the Bill for the Reform of the Municipality of London (all three "dropped"), and a Local Government Bill for Scotland (thrown out by the Lords). Ireland had to be content with the Tramways and Public Companies Bill, a measure which comprised plans for carrying out works of public utility and for assisting emigration. The International Fisheries Exhibition, which was opened on May 12th, proved the event of the London season, while it doubtless gave considerable impetus to one of the most important of our industries. Meanwhile the prospect in Egypt grew gloomier day by day. Although the Government had repeatedly declared that the army of occupation would be withdrawn, they had overlooked the fact that the Khedive was engaged in a desperate struggle with the Arabs of the Soudan, who, led by a religious fanatic, Mahomet Achmet (the Mahdi), totally annihilated an Egyptian army under Hicks Pasha Nov. 3rd. This success the Mahdi followed up next year (1884) by cutting to pieces, at El Teb, near Suakim, Baker Pasha's rabble of Egyptians, Bashi-Bazouks, and negroes, Feb. 4th, and England now felt called upon to go to the rescue of her new dependent. About 4,000 troops under General Graham were sent, and engaged the Soudanese commanded by Osman Digna at El Teb (Feb. 29th) and Tamanieb (March 13th), but no practical result followed. In the mean time General Gordon, at the request of the Government, had left London for Khartoum on Jan. 18th to assume his old post of Governor-General of the Soudan. The main object of his mission was to effect the withdrawal of the garrison and of the Christian population in Khartoum; but in August, when all too late, it became necessary to despatch an army under Lord Wolseley to his relief. At home, 1884 brought about a further and probably final measure of Reform. When Parliament assembled on Feb. 5th, the Queen's Speech referred to the Franchise Bill and the London Municipal Reform Bill as two of the most important proposals of the session. The latter measure died a natural death, as did also Mr. Chamberlain's Merchant Shipping Bill and Mr. Broadhurst's Bill for the Enfranchisement of Leaseholds. In the Commons the Government came out of the inevitable discussion on their Egyptian policy better than was expected; in the Upper Chamber a motion of censure was carried by 181 votes to 81. The third reading of the Franchise Bill was effected in the Commons on June 26th, but the Lords would have none of it unless (so they alleged) it was accompanied by a Redistribution of Seats Act. The Ministry had therefore no alternative but to hurry on the remaining business in order to pass the Franchise Bill again in an autumn session. Meanwhile the demonstrations and counter-demonstrations had begun and continued to be held almost every day over the length and breadth of England and Scotland. Of these displays of popular opinion by far the most remarkable was that held in Hyde Park on July 21st, which numbered nearly 30,000 artizans and labourers. Parliament met again Oct. 23rd, and shortly afterwards an agreement was arrived at between ministers and the Opposition leaders. A Redistribution Bill was drafted in concert, and the Franchise Bill was passed in the Lords on Dec. 6th. The agricultural labourers were thus added to the constituencies. Domestic science was furthered by the opening of the National Health Exhibition on May 8th. The death of Mr. Fawcett, most illustrious of Postmasters-General, occurred on Nov. 6th. In December a determined attempt was made to blow up London Bridge with dynamite. The earliest days of 1885 fell upon trouble, both at home and abroad. Simultaneous attempts were made (Jan. 24th), in broad daylight, to blow up the Houses of Parliament and the Tower of London by dynamite. For complicity in these outrages, two men, Cunningham and Burton, were convicted and sentenced to penal servitude for life in the following May. On Feb. 5th, the news of the fall of Khartoum and the assassination of its heroic defender thrilled the country. A more unpropitious moment for Parliament to reassemble could hardly have been chosen. When it met (Feb. 19th) the Opposition gave notice of a vote of censure on the Government for their conduct of the Soudan campaign. The Government just escaped in the Commons by a narrow majority

of 14; in the Lords their policy found but 68 supporters. They now resolved upon "smashing" the Mahdi, but after four millions and a half had been voted for that purpose, they as suddenly changed their minds and determined to abandon the Soudan to its fate (May 11th). The Redistribution Bill had been meanwhile steadily pushed onwards, and received royal assent, May 21st. The misunderstandings with Russia and Germany did much to further impair the reputation of the Ministry; that with Russia, which arose out of the dispute about the Afghan frontier, caused a panic on the Stock Exchange (April). Defeat came at length on the Budget Bill, the Ministry resigned June 12th, and Lord Salisbury became premier for the first time. The remainder of the session was employed in passing Mr. Balfour's Medical Relief Bill, Lord Salisbury's Housing of the Working Classes (England) Bill, the Land Purchase and Labourers (Ireland) Bills, and the Criminal Law Amendment Act, a measure which may be said to be still on its trial. Scotland at last received a Chief Secretary and a Vice-President of her Education Department. Just before the prorogation, Lord Iddesleigh announced the proposal of a Royal Commission to inquire into the causes of Depression of Trade, Aug. 10th. In April the Prince and Princess of Wales paid a three weeks' visit to Ireland, and received a cordial reception in most places; the following month they opened the International Inventions Exhibition at South Kensington. The Exhibition proved hardly so attractive as its predecessors, while financially it resulted in a loss of nearly £5,000. Many eminent names are found on the death-list of 1885. The 2nd April saw the unexpected death of Earl Cairns. The veteran statesman, Viscount Halifax (Sir Charles Wood), passed away on Aug. 8th. The death of the illustrious philanthropist, Lord Shaftesbury, Oct. 1st, was mourned by all classes. The elections which came on in November were remarkable for the success of the working-men candidates. The result showed an absolute tie, provided the Home Rulers, now mustering 86 members, obeyed the instructions of their leader, and voted with the Conservatives. Suddenly it was whispered that Mr. Gladstone had become favourable to the establishment of a parliament in Ireland dealing with purely Irish affairs, and had even prepared a scheme. In the same month war was declared against the King of Burmah for persistent violation of treaties, and on the reassembling of Parliament, Jan. 12th, 1886, the annexation of his dominions was announced. A fortnight later the Salisbury Administration was defeated on the Allotments amendment of Mr. Jesse Collings, and Mr. Gladstone once more assumed the reins. It was well known that he entered office pledged to Home Rule measures. After an interval of suspense a Government of Ireland Bill was brought in on April 8th, but preceded by the resignation of two Cabinet Ministers and by the secession of numerous minor members of the Liberal party, who found themselves unable to support the measure. A Sale and Purchase of Land (Ireland) Bill followed April 16th. The first measure, the Government of Ireland Bill, was defeated on the second reading in the Commons by a majority of 30 (June 30th), and the split in the Liberal camp was for the time complete. A general election, which returned Unionists, Dissentient Liberals, and Gladstonian Liberals, restored the Conservatives to office, Lord Salisbury again becoming First Minister of the Crown. Feb. 8th of this year acquired the unenviable sobriquet of "Mob Monday," from the riots which took place in the West End after a meeting of the unemployed in Trafalgar Square. The death of Mr. Forster, April 5th, removed an occasionally useful and an always prominent, though not always popular, minister. The year's obituary also contains the name of Lord Cardwell, a name associated with the abolition of purchase in the army. The magnificent Colonial and Indian Exhibition, opened by the Queen in May, brought home to us for the first time the development and progress which have been made in the various parts of the British dominions. The Exhibition was a great success, having been visited by no fewer than 5,550,745 persons during the six months it was open. The reign of Queen Victoria will be famous for the number of honorary distinctions conferred upon meritorious persons. The orders of the Star of India, of the Indian Empire, Victoria and Albert, the Crown of India, and the Distinguished Service order, were instituted, as also the Victoria Cross for conspicuous bravery.

Supplementary Table of Events,

CHRONOLOGICALLY ARRANGED, NOT INCLUDED IN THE FOREGOING NARRATIVE.

1837, *July* 23.—First experiment with electric telegraph, between Camden Town and Euston Square Stations, by Professor Wheatstone.

—, *Nov.*—The city of Melbourne founded.

—, *Nov.*—Completion of the "Pickwick Papers" issued in parts. Charles Dickens's literary reputation established.

1838, *Jan.* 10.—The Royal Exchange destroyed by fire.

—, *June* 4.—Great Western Railway to Maidenhead opened.

1839.—King's College Hospital founded.

—, Henry Fox Talbot discovered photography.

—, The employment of dogs for draught forbidden.

1839, *Jan.* 19.—Aden bombarded and captured by the British.

—, *April* 21.—Afghan War. The British occupied Candahar.

—, *June* 18.—Eastern Counties Railway opened.

—, *July* 23.—Ghizni stormed and taken by Sir John Keane.

—, *Nov.* 3.—Chinese war commenced by naval action at Chumphee.

1840.—The new Houses of Parliament commenced.

—, Compulsory Vaccination Act passed.

—, *June* 18–20.—Benjamin Courvoisier tried for the murder of Lord William Russell—hanged.

1840, *June* 30.—Midland Railway opened.

—, *Aug.* 6.—Louis Napoleon's attempt at Boulogne.

—, *Aug.* 7.—Act of Parliament passed prohibiting the employment of climbing-boys as sweeps.

—, *Sept.* 27.—Sidon taken by Commodore Napier.

—, *Sept.* 30.—Foundation-stone of the Nelson Monument laid in Trafalgar Square.

—, *Oct.* 10.—Total defeat of the Egyptian army at Beyrout by the British, Turkish, and Austrian forces.

—, *Nov.* 3.—Acre stormed and taken by the allied forces under Sir Robert Stopford.

1841.—Sewing-machine invented by Elias Howe, of Cambridge, Mass.

—, *Jan.* 21.—The *Daily News* first published.

—, *Feb.* 26.—Canton—English take the Bogue forts.

—, *Aug.* 27.—Amoy taken from the Chinese.

—, *Sept.* 21.—London and Brighton Railway opened.

—, *Oct.* 30.—Great fire at the Tower.

1842.—Field Lane Refuge established.

—, Early Closing Association established.

—, Railway Clearing-house established.

—, *Jan.* 24.—The King of Prussia visited England.

—, *Feb.* 8.—Railway between Edinburgh and Glasgow opened.

—, *March* 10.—Chinese defeated at Ningpo.

—, *June* 18.—Nasmyth's steam-hammer patented.

—, *June* 19.—Shanghai captured by the British.

—, *July* 21.—Chin-Keang taken by the English under Sir Hugh Gough.

—, *Aug.*—The Income-tax Act passed.

—, *Aug.* 26.—Treaty of Peace concluded with China. Island of Hong Kong ceded to England.

—, *Aug.* 29.—The Queen made her first visit to Scotland.

1843.—Rebecca riots against turnpikes in Wales.

—, *Feb.* 17.—Sir Charles Napier defeated the Scinde chiefs at Meeanee.

—, *March* 25.—The Thames Tunnel first opened for foot passengers. Tunnel closed July 21, 1866.

—, *April* 21.—Death of the Duke of Sussex.

—, *Dec.* 29.—Battles of Maharajpoor and Punniar.

1844.—The Rochdale Equitable Pioneers' Co-operative Society founded.

—, Foundation of the "Ragged School Union."

—, *Feb.* 7.—South-Eastern (London and Dover) Railway opened.

1845.—A Poor Law system established in Scotland.

—, Victoria Park opened to the public.

—, *May* 24.—Sir John Franklin's third Arctic expedition sailed.

—, *June* 4.—War declared against the United States by Mexico.

1846.—The railway mania and panic year, when 272 railway acts passed.

—. General Tom Thumb (Charles Stratton) first visited England.

—, *March.*—Great commercial panic set in.

1847, *April* 15.—The Peers take possession of their new House, that portion of the "Palace of Westminster" being ready.

1847, *Aug.* 10.—Manchester made a Bishopric.

—, *Sept.* 16.—Shakespeare's house purchased, and preserved by the Shakespeare Society.

1848.—Cholera reappeared in England.

—, *April* 10.—Monster meeting of Chartists on Kennington Common; 150,000 persons sworn in as special constables (including Louis Napoleon). The military preparations were superintended by the Duke of Wellington; but the mob dispersed after a slight contest with the police.

—, *June* 13.—Louis Napoleon elected to the National Assembly for Department of the Seine and three other Departments.

—, *Sept.* 11.—Revolution in Hungary began.

—, *Oct.* 9.—Wm. Smith O'Brien, Meagher, and other Irish rebels sentenced to death; sentence commuted to transportation (pardoned in 1856).

—, *Dec.* 11.—Louis Napoleon elected President of the French Republic.

1849.—Silver florin first issued.

—, *March* 29.—Olympic Theatre destroyed by fire.

—, *Dec.* 2.—Queen Adelaide died at Stanmore Priory, aged 56.

1850, *April* 23.—Death of Wordsworth, the poet, aged 80.

—, *Aug.* 21.—The Queen visited Belgium.

—, *Aug.* 30.—Prince Albert laid the foundation-stone of the Scotch National Gallery at Edinburgh.

1851.—Lodging-houses placed under police jurisdiction.

—, *March* 10.—Opening of Owens College, Manchester, to which John Owens bequeathed £100,000.

—, *March* 30.—Sixth Census of the United Kingdom (population 27,637,761).

—, *June* 11.—Smithfield last used as a cattle-market.

—, *July* 14.—Procession of Orangemen at Liverpool; fatal riot.

—, *July* 24.—The window-tax repealed.

—, *Nov.* 13.—First submarine telegraph opened between Dover and Calais.

1852.—Great-Northern Railway opened.

—, *Feb.* 26.—Death of the poet Thomas Moore.

—, *May* 19.—Rangoon stormed by the British.

—, *July* 14.—Fierce religious riots at Belfast.

—, *Nov.* 4.—The Commons assembled in their new House.

—, *Nov.* 18.—Funeral of the Duke of Wellington.

—, *Dec.* 2.—Louis Napoleon declared Emperor of the French.

1853.—Duty on advertisements abolished.

—, The Smoke Consumption Act passed.

—, Duty on soap finally abolished.

—, *April* 16.—First Indian Railway opened, from Bombay to Tannah.

—, *May* 12.—Dublin Industrial Exhibition opened by Earl St. Germains, the Lord Lieutenant.

—, *July* 27.—Strike of London cabmen commenced.

—, *Aug.* 4.—Uniform penny receipt stamps introduced.

—, *Oct.* 15.—Great strike at Preston commenced.

—, *Oct.* 28.—Riots at Wigan among the coal-miners suppressed by the military.

1854, *March* 11.—The Queen reviewed the Baltic Fleet.

—, *June* 10.—Crystal Palace opened by the Queen.

—, *Sept.* 18.—Opening of St. George's Hall, Liverpool.

—, *Oct.*—Working Men's College established by F. D. Maurice.

1855.—Limited Liability Act passed; has been frequently amended.

—, *July* 23.—General U. S. Grant, ex-President of the United States, died.

—, *Aug.* 5.—Manchester Ship Canal Bill passed third reading.

—, *Aug.* 31.—Announced that 82,619 persons have recently died of cholera in Spain.

—, *Oct.* 1.—System of sixpenny telegrams came into operation.

DIRECTIONS FOR MAKING A WILL.—Every man having a wife or family should make his will. However small his estate, however remote may seem the probability of death, however confident that his property will pass to those he most wishes to benefit, it is an imperative duty in most cases, and is safer in every case, to protect the interest of the survivors by means of a will. When persons die intestate, having foolishly put off making a will until it is too late, their negligence may deprive those for whom they were most anxious of the very benefits which had demanded a life-long struggle to provide. Thus a widow may find to her grievous disappointment that the estate, a life policy perhaps, or a few hundreds in Consols, is not all hers, but has to be shared with a distant cousin of her husband's, whose name perhaps she had never before heard. Or it may be the eldest son of an intestate ousting all his brothers and sisters from possession of the real estate. Instances might be multiplied in which negligence, or unreasoning dislike to making a will, becomes an irreparable crime against those who have the first claim to protection. The help of a lawyer in making a will is always desirable, but is not essential. If the estate consists of real as well as personal property—*i.e.*, of lands and houses as well as money and goods—or if the will is to contain many provisions, a lawyer should always be employed. Assuming that a lawyer is not employed, a person having resolved to make a will must not regard it as a light matter, to be got rid of in a few minutes, like writing a letter, but one demanding the most serious attention. It is only after a person is dead, and cannot explain his meaning, that his will can be open to dispute. It is the more necessary therefore to express what is meant in language of the utmost clearness, avoiding the use of any word or expression that seems to admit of another meaning than the one intended. It is better to be prolix than to leave the smallest room for doubt or uncertainty, although the same name or word be repeated over and over again. Sounding phrases and carefully rounded periods are entirely out of place. Avoid the use of what may be thought "legal terms" when the same thing may be expressed in plain language. If in writing the will a mistake be made, it is better to rewrite the whole. Before a will is executed, that is, signed by the testator in presence of two witnesses, an alteration may be made by striking through the words with a pen, but opposite to such alteration the testator and witnesses should write their names or place their initials. Never scratch out a word with a knife or other instrument, and no alteration *of any kind whatever* must be made after the will is executed. If the testator afterwards wishes to change the disposition of his estate, it is better to make a new will revoking the old one, or to add a codicil to the first, which must be duly executed and attested in the same manner as the original will. *A will should, if possible, be written on one side of a single sheet of paper.* Although, of course, forms of wills must vary to suit different cases, the following directions may be found useful to those who, in cases of emergency, are called upon to draw up wills, either for themselves or others:—

TESTATOR OR TESTATRIX.—The person who makes the will is the testator, or if the will-maker be a woman, the testatrix.

ESTATE.—By this word is to be understood property of all kinds, both real and personal. Real property includes such things as freehold lands and houses, while personal property consists of money, house furniture, goods, assurance policies, stock in public companies, and the like.

RESIDUARY LEGATEES.—It is well in all cases to leave to some person or persons "the residue of my estate and effects," although it may be thought that the whole of the property has been disposed of in legacies already mentioned in the will. It should be remembered that a will operates on all property acquired after it has been made.

TO BEGIN A WILL.—A form in which a will may be commenced is:—"This is the last will of me, Thomas Smith, of Vine Cottage, Silver Street, Reading, in the county of Berks."

TO END A WILL.—After disposing of the property, the will may be ended as follows:—"And I revoke all former wills and codicils. Dated this tenth day of December, One thousand eight hundred and seventy-seven."

EXECUTION OF A WILL.—The testator should sign his name at the foot or end of the will, in presence of two witnesses, who will afterwards sign their names in his and in each other's presence. A person who has been left a legacy in the will, or whose wife or husband has been left a legacy, should not be an attesting witness. Their attestation would be good, but they would forfeit the legacy. Husband and wife may both be witnesses, provided neither is a legatee.

ATTESTING EXECUTION.—Opposite to or beneath the testator's signature should be written the attestation clause. The following form of attestation will be found sufficient:—

Signed by the testator [or testatrix, as the case may be], in the joint presence of us, who thereupon signed our names in his [or her] and each other's presence.

THOMAS SMITH
[Signature of Testator.]

William Jones, of Vine Cottage,
Silver Street, Reading.
Henry Morgan, of North Street, Reading.

It is desirable that the addresses of the witnesses should be given, as they may possibly be wanted at some future time. If the testator should be too ill to sign, even by a mark, another person may sign the testator's name to the will for him, in his presence and by his direction, and in this case it should be shown that the testator knew the contents of the document. The attestation clause should therefore be worded: "Signed by Thomas Brown, by the direction and in the presence of the testator Thomas Smith, in the joint presence of us, who thereupon signed our names in his presence and in the presence of each other, the will having been first read over to the testator, who appeared fully to understand the same." The person signing the testator's name must *not* be one of the witnesses. If by inadvertence the testator should have signed his will without the witnesses being present, then the attestation should be:—"The testator acknowledged his signature already made as his signature to his last will and testament, in the joint presence," &c.

CODICIL.—When some change is required to be made in the disposition of property as stated

in the will, the change should be embodied in a codicil. A codicil should begin:—"A codicil to my will, the said will bearing date," &c. A codicil must be dated at the end, and signed and witnessed with the same formalities as the will.

EXECUTORS.—It is usual to appoint two executors, although one is sufficient. The name and address of each executor should be given in full, as follows:—"I appoint John Jones, of number twenty-one, London Street, Ipswich, and Edward Matthews, of number seventeen, Market Street, Lincoln, executors of this my will." An executor may be a legatee under the will. Thus a child or wife to whom the whole or a portion of the estate is left may be appointed sole executor, or one of two executors. The addresses of the executors are not necessary if it is well known who are the persons intended.

APPOINTMENT OF TRUSTEES.—The form of appointment of executors will also serve when the estate is left in care of trustees, except that the persons must be designated "executors and trustees." When the estate is wholly for the children, the will may read, after the appointment of the executors and trustees:—"I give and devise all my estate and effects, real and personal, of which I may die possessed or entitled to, unto the said John Jones and Edward Matthews, upon trust for my children, in equal shares, such shares to be paid or transferred to them on attaining the age of twenty-one years."

WHO CANNOT MAKE A WILL.—A minor cannot make a will. A woman married before the 1st of January, 1883, can only bequeath property accruing to her after that date except in certain circumstances, respecting which it is advisable to consult a proctor or solicitor. But a woman married after that date can dispose by will of all property belonging to her at the time of her marriage, and of all property acquired thereafter, in all respects as if she were an unmarried woman.

REVOCATION.—A will is revoked by a subsequent will, by marriage, or by burning, tearing, or otherwise destroying the same. It is not sufficient to obliterate the will with a pen.

LAPSED LEGACIES.—If a legatee die in the lifetime of the testator, the legacy lapses and falls into the residue, excepting only in cases where the legatee is a child of the testator and leaves issue living at the testator's death.

TO ONE PERSON ABSOLUTELY.—When it is the intention to leave all the property to one person, as for instance a wife or child, the will may read:—"I devise and bequeath all my estate and effects, real and personal, which I may die possessed of or entitled to, unto my wife, Mary Smith, absolutely."

TO CHILDREN UNDER AGE.—When estates are left wholly or in part to children under the age of 21 years, trustees should be appointed to hold the property in trust for those to whom it will ultimately belong. A wife may be appointed a trustee, or may be sole trustee.

EDUCATION AND MAINTENANCE OF CHILDREN.—Executors may be empowered to apply the whole or part of the income arising from each child's share of the property to the child's education and maintenance.

TO WIFE FOR LIFE, AND THEN TO CHILDREN.—In cases where the wife is to have the income arising from the property, and the children are to share equally in the property after their mother's death, it will be necessary to leave the estate in the hands of trustees. After appointing the trustees, the will may read: "to pay the income arising from my said estate and effects unto my wife for life, and after her decease I give and bequeath all my estate and effects to be divided equally among all my children absolutely."

ALL PROPERTY TO BE INVESTED.—Executors and trustees may be empowered to sell and dispose of an estate, and after the payment of all just debts and expenses to invest the remainder as may be specified in the will. For this purpose the investments most strongly recommended will be found on page 360.

DUTIES OF EXECUTORS.—After the death of the testator, the duties of the executor may be stated briefly as follows:—To estimate the value of the property left, or get it valued. To take the will to the Probate Registry, Somerset House, or to the Probate Registry of the district in which the testator had a fixed place of abode, or to a proctor or solicitor, together with a certificate of the death or burial of the testator, and prove the will. To collect all the property of the deceased and pay all his just debts, and, if necessary, to duly advertise in certain London and local newspapers for all claims against the estate to be sent in before a specified date. Pay the legacy or succession duty. Dispose of the residue of the property as directed in the will. Executors are not obliged to act, neither is it necessary that all the executors should act: one alone is competent to prove a will and carry out its provisions. In small estates probate and letters of administration may be obtained through an Inland Revenue Office.

ADMINISTRATORS.—If an executor has not been appointed in the will, or if the executor be dead, or does not wish to act, the residuary legatee nearest of kin to the deceased, or a legatee under the will, is entitled to act and administer the will.

PROBATE DUTIES.—A scale of the government tax on probates of wills and letters of administration will be found on page 370.

LEGACY DUTY, varying according to the relationship, is payable excepting where the legatee is the wife or husband of the testator or testatrix. The 1 per cent. duties formerly payable are abolished, being now included in the affidavit stamp. If deceased died on or after 1st June, 1881, every pecuniary legacy or residue, although less than £20, is chargeable with duty. For scale of duties see p. 368.

The following is a simple form of will, in which all the property is left to one person:—

This is the will of me, Thomas Smith, of Vine Cottage, Silver Street, Reading, in the county of Berks. I give and devise all my estate and effects, real and personal, of which I may die possessed or be entitled to, unto my only son, Thomas William Smith, absolutely, and I appoint my said son executor of this my will, and I hereby revoke all former wills and codicils. Dated this tenth day of December, One thousand eight hundred and seventy-seven.

Signed by the testator in the joint presence of us, who thereupon signed our names in his and each other's presence. THOMAS SMITH.

WILLIAM JONES, of Vine Cottage, Silver Street, Reading.

HENRY MORGAN, of North Street, Reading.

PREVIOUS to 1801 there existed no official return of the population of either England or Scotland; nor was it till 1813 that statesmen had anything more than surmise to guide them respecting Ireland, and the census then taken of that country was far from correct. The estimate formed of the English population at various periods, calculated from the numbers of baptisms, burials, and marriages, was, in the years—

1570.... 4,160,221.	1670.... 5,773,646.
1600.... 4,811,718.	1700.... 6,045,008.
1630.... 5,600,517.	1750.... 6,517,035.

During the eighteenth century, manufactures attracted the rural population to towns, in consequence of which many villages were comparatively deserted. The American War and the French Revolutionary War carried off large numbers of men; and this, coupled with the removal of the rustic population, gave rise to the impression that the inhabitants of the country had decreased, and were rapidly decreasing. The first general Census in 1801 dispelled this idea, and showed that, notwithstanding all drawbacks, there were many more people than any one supposed. Since the time named there has been a fresh numbering every ten years, with the following results:—

	1801.	1821.	1831.	1841.	1851.	1861.	1871.	1881.
Eng. & W.	9,334,549	12,289,331	14,156,988	15,914,148	17,927,609	20,066,224	22,712,266	25,974,439

‡ Exclusive of the Army, Navy, and Merchant Seamen Abroad, who numbered in 1801, 442,013; in 1811, 502,536; in 1821, 289,095; in 1831, 260,191; in 1841, 202,954; in 1861, 212,194; in 1851, 250,356; in 1871, 216,080; and in 1881, 215,374.

** Incorrectly taken. † Decrease.

Briefly the Census of 1881 showed an increase of 3,262,173 persons and 572,402 inhabited houses in England and Wales; in Scotland, increases of 375,555 and 326,820; in the Channel Islands and Man, a decrease of 3,378 persons and an increase of 215 houses; but in Ireland, a decrease of 237,541 persons (or 76,420 families) and 47,272 inhabited houses; giving, after these deductions, an increase of 3,396,809 persons and 843,150 inhabited houses. The population in urban districts in England and Wales had grown more than twice as fast as that of the rural districts (19·63 per cent. against 7·42), and very nearly the same percentage prevailed in Scotland.

The French Academy is composed of 40 members, elected for life, and is the highest of the five Academies constituting the *Institut de France*. The special object of this institution is the composition of the historical Dictionary of the French language. It was founded in 1635, by Cardinal Richelieu, and re-organized in 1816. The other Academies are as follows:—

Académie des Inscriptions et Belles-lettres, founded 1663, 40 members.

Académie des Sciences, founded 1666, divided into 11 sections, each of which comprises 6 members.

Académie des Beaux-Arts, 5 sections, comprising 40 members, as follows:—painting, 14 members; sculpture, 8; architecture, 8; engraving, 4; musical composition, 6.

Académie des Sciences Morales et Politiques (for the study of questions of social and political economy), founded in 1832, 40 members, 5 sections.

All the Academies, with the exception of the Académie Française, elect a certain number of free members and of foreign correspondents.

Members of the Académie Française.

Nisard, Jean Marie Napoléon Désiré, *born* at Chatillon-sur-Seine, 1806, *elected* 28 Nov., 1850, *predecessor* De Féletz.

Legouvé, Ernest Wilfred Gabriel Jean Baptiste, *b.* in Paris, 1807, *e.* March, 1855, *p.* Ancelot.

Augier, Guillaume Victor Emile, *b.* at Valence, Drôme, 1820, *e.* 31 March, 1857, *p.* Count de Salvandy.

Broglie, Duke de Jacques Victor Albert, *b.* in Paris, 1821, *e.* 20 Feb., 1862, *p.* Lacordaire (father).

Feuillet, Octave, *b.* at Saint Lô (Manche), 1821, *e.* 3 April, 1862, *p.* Scribe.

Doucet, Charles Camille, *b.* in Paris, 1812, *e.* 6 April, 1865, *p.* De Vigny.

Cuvillier-Fleury, Alfred Auguste, *b.* in Paris, 1802, *e.* 12 April, 1866, *p.* Dupin.

Ollivier, Olivier Emile, *b.* at Marseilles, 1825, *e.* 7 April, 1870, *p.* De Lamartine.

Marmier, Xavier, *b.* at Pontarlier, 1808, *e.* 19 May, 1870, *p.* De Pongerville.

Aumale, Duke d', Henri Eugène Philippe Louis d'Orléans, *b.* in Paris, 1822, *e.* 30 Dec., 1871, *p.* Count de Montalembert.

Rousset, Camille Félix Michel, *b.* in Paris, 1821, *e.* 30 Dec., 1871, *p.* Prévost-Paradol.

Viel-Castel, Baron de, Charles Louis Gaspard Gabriel de Salviac, *b.* in Paris, 1800, *e.* 1 May, 1873, *p.* Count de Ségur.

Mézières, Alfred Jean François, *b.* in Paris, 1826, *e.* 29 Jan., 1874, *p.* St. Marc-Girardin.

Dumas, Alexandre, *b.* in Paris, 1824, *e.* 29 Jan., 1874, *p.* Lebrun.

Caro, Elme Marie, *b.* at Poitiers, 1826, *e.* 29 Jan., 1874, *p.* Vitet.

Lemoinne, John Emile, *b.* in London, 1815, *e.* 13 May, 1875, *p.* Janin.

Simon, Jules François, *b.* at Lorient, 1814, *e.* 16 Dec., 1876, *p.* De Remusat.

Boissier, Marie Louis Antoine Gaston, *b.* at Nîmes, 1823, *e.* 8 June, 1876, *p.* Patin.

Sardou, Victorien, *b.* in Paris, 1831, *e.* 7 June, 1877, *p.* Autran.

Renan, Joseph Ernest, *b.* at Tregnier, 1823, *e.* 13 June, 1878, *p.* Claude Bernard.

Taine, Hippolyte Adolphe, *b.* at Vouziers, 1882, *e.* 14 Nov., 1878, *p.* De Loménie.

Audiffret-Pasquier, Duke d', Edmond Armand Gaston, *b.* in Paris, 1823, *e.* 24 December, 1878, *p.* Bishop Dupanloup.

Labiche, Eugène Marin, *b.* in Paris, 1815, *e.* 26 Feb., 1880, *p.* Sylvestre de Sacy.

Du Camp, Maxime, *b.* in Paris, 1822, *e.* 26 Feb., 1880, *p.* St. René-Taillandier.

Rousse, Aimé Joseph Edmond, *b.* in Paris, 1817, *e.* 13 May, 1880, *p.* Jules Favre.

Sully-Prudhomme, René François Armand, *b.* in Paris, 1839, *e.* 8 Dec., 1881, *p.* Duvergier de Hauranne.

Pasteur, Louis, *b.* in Dôle, 1822, *e.* 8 Dec., 1881, *p.* Littré.

Cherbuliez, Charles Victor, *b.* at Geneva, 1829, *e.* 8 Dec., 1881, *p.* Dufaure.

Perraud, Adolphe Louis Albert, Bishop of Autun, *b.* at Lyons, 1828, *e.* 8 June, 1882, *p.* Auguste Barbier.

Pailleron, Edouard Jules Henri, *b.* in Paris, 1839, *e.* 7 Dec., 1882, *p.* Charles Blanc.

Mazade-Percin, Louis Charles Jean Robert de, *b.* at Castelsarrazin, 1820, *e.* 7 Dec., 1882, *p.* Count de Champagny.

Coppée, François Edouard Joachim, *b.* in Paris, 1842, *e.* 21 Feb., 1884, *p.* De Laprade.

Lesseps, Ferdinand Marie de, *b.* at Versailles, 1805, *e.* 21 Feb., 1884, *p.* Henri Martin.

Duruy, Jean Victor, *b.* in Paris 1811, *e.* 4 Dec., 1884, *p.* Mignet.

Bertrand, Joseph Louis François, *b.* in Paris, 1822, *e.* 4 Dec., 1884, *p.* J. B. Dumas.

Halévy, Ludovic, *b.* in Paris, 1834, *e.* 4 Dec. 1884, *p.* Count d'Haussonville.

Say, Jean Baptiste Léon, *b.* in Paris, 1816, *e.* 11 Feb., 1886, *p.* About.

Leconte de Lisle, Charles Marie René, *b.* at St. Paul, Island of Réunion, 1818, *e.* 11 Feb., 1886, *p.* Victor Hugo.

Hervé, Aimé Marie Edouard, *b.* at St. Denis, Island of Réunion, 1835, *e.* 11 Feb., 1886, *p.* Duke de Noailles.

Gréard, Vallery Clément Octave, *b.* at Vire, 1828, *e.* 18 Nov., 1886, *p.* Count de Falloux.

Permanent Secretary and Treasurer, Charles Camille Doucet.

Chef du Secrétariat et Agent Spécial, M. Julia Pingard.

Offices: Palais de l'Institut, 3, Rue Mazarine, Paris.

Section 50 of the County Juries Act, 1825, describes a juror as "A householder, or the occupier of a shop, warehouse, counting-house, chambers, or office, for the purpose of trade or commerce, and having lands, tenements, or personal estate of the value of £100."

SPECIAL JURORS.—33 & 34 Vic., c. 77, s. 6, enacts that "Every man whose name shall be in the jurors' book, and who shall be legally entitled to be called an esquire, or shall be a person of higher degree, or shall be a banker or merchant, or who shall occupy a private dwelling-house, rated or assessed to the poor rate or to the inhabited house duty on a value of not less than £100 in a town containing 20,000 inhabitants and upwards, or rated or assessed to the poor rate or to the inhabited house duty on a value of not less than £50 elsewhere, or who shall occupy premises, other than a farm rated or assessed, on a value of not less than £100, or a farm rated or assessed on a value of not less than £300, shall be qualified and liable to serve on special juries in every such county in England and Wales, and in London respectively;" and by Section 11 of the "Juries Act, 1870," it is enacted that "in making out the list of persons within their respective parishes and townships qualified to serve as jurors, the overseers shall specify which of such persons are, in the judgment of such overseers, qualified as special jurors, and shall also specify in every case the nature of the qualification and also the occupation and the amount of the rating of assessment of every such person."

EXEMPTIONS FROM SERVING AS JURORS.—Peers, Members of Parliament, Judges, Clergymen, Roman Catholic priests, Ministers of any congregation, dissenters and of Jews whose place of meeting is duly registered, provided they follow no secular occupation except that of a schoolmaster; barristers-at-law, certificated conveyancers, and special pleaders, if actually practising; attorneys, solicitors, and proctors, if actually practising and having taken out their annual certificates, and their managing clerks, and notaries public in actual practice; officers of the courts of law, the clerks of the peace or their deputies, if actually exercising the duties of their respective offices; coroners, gaolers and keepers of houses of correction, and all subordinate officers of the same; keepers in public lunatic asylums; members and licentiates of the Royal College of Physicians in London, if actually practising as physicians; members of the Royal College of Surgeons in London, Edinburgh, and Dublin, if actually practising as surgeons; apothecaries certificated by the Court of Examiners of the Apothecaries Company, and all registered medical practitioners and registered pharmaceutical chemists, if actually practising as apothecaries, medical practitioners, or pharmaceutical chemists respectively; the master, wardens, and brethren of the Corporation of Trinity House, of Deptford Strond; pilots licensed by the Trinity House of Deptford Strond, Kingston-upon-Hull, or Newcastle-upon-Tyne, and all masters of vessels in the buoy and light service employed by either of those corporations, and all pilots licensed under any Act of Parliament or charter for the regulation of pilots; the household servants of Her Majesty; officers of the Post Office, commissioners of Customs, and officers, clerks, or other persons acting in the management or collection of the Customs, commissioners of Inland Revenue, and officers or persons appointed by the commissioners of Inland Revenue or employed by them or under their authority or direction in any way relating to the duties of Inland Revenue; sheriffs' officers; officers of the rural and metropolitan police; officers of the navy, army, militia, and yeomanry, while on full pay; magistrates of the metropolitan police courts, their clerks, ushers, doorkeepers, and messengers; officers of the Houses of Lords and Commons; members of the council of the municipal corporation of any borough, and every justice of the peace assigned to keep the peace therein, and the town clerk and treasurer for the time being of every such borough, so far as relates to any jury summoned to serve in the county where such borough is situate; burgesses of every borough in and for which a separate court of quarter sessions shall be holden so far as relates to any jury summoned for the trial of issues joined in any court of general quarter sessions of the peace in the county wherein such borough is situate; justices of the peace so far as relates to any jury summoned to serve at any sessions of the peace for the jurisdiction of which he is a justice.

LEGAL TENDER OF MONEY.—The tender of Bank of England Notes is legal in England and Wales for every purpose, and by any (except by the Bank of England). No one, however, can be compelled to give change. Silver is not a legal tender for sums over two pounds, nor pence and halfpence for sums over one shilling. Farthings are not a legal tender for more than sixpence.

PRESENT VALUE OF A LEASE, FREEHOLD ESTATE, OR ANNUITY,

Per £100 clear Annual Rental or Value, without any deduction whatever.

In the following Table, compound interest at the rates of 3, 4, 5, 6, and 7 per cent. is reckoned.

Years.	3%	4%	5%	6%	7%	Years.	3%	4%	5%	6%	7%

Example 1:—What is the present value of a Lease having 37 years to run of the net annual value of £100, interest being reckoned at 4 per cent.? Answer:—1914 years' purchase, or £1,914.

Example 2:—A man, aged 42, in the receipt of a pension or annuity of £100 a year net, wishes to commute that for a present payment, interest being reckoned at 5 per cent. How much will he receive? Answer: Looking at the Table of Expectation of Life on page 320, it will be seen that the expectation for age 42 is 24 years; and from the above table an annuity certain for 24 years, interest at 5 per cent., is worth 13·80 years' purchase. The present payment required would therefore be £1,380 *approximately*.

Note to Examples 2.—This method is only approximate. The values of annuities which depend on lives of a given present age, when properly calculated according to a given mortality table and a given rate of interest, are always somewhat less than those given by the method used in this example.

The following is the scale usually charged by respectable houses for:—

SURVEY with plain plan—100 acres and under—by arrangement, according to work required. Over 100 acres, 2s. per acre and expenses; if with finished map, according to amount of embellishment.

VALUATION to fix rent—5 per cent. on first £200, and 2½ on remainder of one year's rental value and expenses.

TIMBER valuation—5 per cent. on first £100, and 2½ on the excess, and out-of-pocket expenses.

CROPPING—5 per cent. up to £100, and 2½ on the excess, and out-of-pocket expenses.

VALUATION for probate—2 per cent. on first £500, and 1¼ on the excess, and out-of-pocket expenses.

VALUATION of land—6d. per acre, and out-of-pocket expenses. No fee less than 5 guineas.

FOR THE SALE of freehold, leasehold, and copyhold houses and estates, ground leases, policies of insurance, reversions and other property, by private contract—5 per cent. on first £100, and 2½ per cent. on the excess; also, in addition, the usual commission for fixtures, furniture, and effects.

FOR THE SALE of the same by auction—2½ per cent. on the amount realized at the sale, and out-of-pocket expenses; or 1 per cent. on the reserve, and expenses, in the event of no sale being effected.

FOR THE SALE of furniture, &c., by auction—5 per cent. on the amount realized, and out-of-pocket expenses; 5 per cent. valuation of furniture, fixtures, stock-in-trade, and general effects.

FOR LETTING unfurnished houses or disposing of leases—5 per cent. on five years' rent, and same charge on any money that may be paid as premium, and for fixtures, furniture, goodwill, &c. Should the tenant afterwards purchase, the commission as above for selling will be due, less the commission for letting.

FOR LETTING furnished houses—5 per cent. on the rent payable for one year. If let for a longer period, 2½ on remainder of term.

FOR TAKING inventories and examining same—From one guinea, according to length.

FOR LETTING building land and brick earth—Building land: one year's ground rent.—Brick earth: 5 per cent. on every year's rent: extra for checking royalty.

VALUATIONS for mortgage, sale, or purchase—1 per cent. and out-of-pocket expenses on first £1,000; and ¼ per cent. on all above that sum upon the full amount of valuation.

FOR NEGOTIATING the purchase of estates, houses, and ground leases—1 per cent. on amount of purchase-money, and out-of-pocket expenses.

FOR NEGOTIATING the taking of houses—Half the above scale for letting, and expenses.

MAKING schedule of fixtures to attach to lease—From 1 to 4 guineas, or about 3 guineas per day.

FOR MAKING schedule of dilapidations, and serving notice to repair—From 2 to 5 guineas per day.

FOR SETTLING amount of dilapidations—5 per cent. on amount, and out-of-pocket expenses.

RAILWAY, School Board, Corporation, Board of Works, and other compensations—

AMOUNT OF AWARD.

£1,000	fee	18	Gs.	£5,000	fee	38	Gs.

4,000	,,	33	,,	12,000	,,	73	,,

No fee less than 7 guineas, and a fee of 3 guineas per day for attendance in London before jury or arbitrator.

MANAGEMENT of estates, including collection of rents—Tithe-rent charges, ground rents, &c., from 3 to 5 per cent.; cottage property, 10 per cent.

CHARGES ALLOWED UNDER THE BANKRUPTCY ACT, 1869.

The following charges are to be subject to variation by the trustees, with the consent of the Committee of Inspection, or of the Court where there is no committee:—

BROKERS' ALLOWANCE FOR INVENTORY AND VALUATION.

	£	s.	d.
For the first £100	2	10	0
For the next £400, per cent. ..	1	5	0
All above ,, ,,	1	0	0

(This allowance to include all expenses, and any travelling within 5 miles of the Court, and a fair copy of the inventory.

Beyond 5 miles, per mile one way	0	0	7

AUCTIONEERS' CHARGES, INCLUDING ALL EXPENSES OF SALE.

Sales by auction of goods, chattels, and effects:—£10 per cent. on the first £ 100 £ s.

After to.....	1,000 ..	5 0	per cent.
After to.....	5,000 ..	2 10	,,
After to.....	10,000 ..	1 5	,,

If the above be sold by valuation, £2 10s. per cent. on the first £1,000, and £1 5s. per cent. beyond.

Sales by auction of estates, freehold, leasehold, &c.:—

£5 per cent. on the first £ 300 £ s.

After to.....	1,000 ..	2 10	per cent.
After to.....	5,000 ..	1 0	,,
After to.....	10,000	0 10	,,

If the above be sold by valuation, half the above charges; and if not sold, the expenses to be paid, and fee to the auctioneer to be allowed as agreed with the trustee, or at the discretion of the taxing officer; or, if bought in, and subsequently sold by private contract by the negotiation of the auctioneer, half the above charges on sales by auction.

Farming stock, £5 per cent. on the first £100, £2 10s. on the remainder. When sold by valuation, half the above.

COST OF SURVEYS, dilapidations, and specifications—From £2 to £5, in discretion of taxing officer.

SALES OF STOCK BY TENDER.

Not above £ 400.....	£4	0	0	per cent.
After to 1,000.....	3	10	0	,,
After to 2,000.....	2	10	0	,,
After to 5,000.....	2	0	0	,,
Above 5,000 and upwards	1	15	0	,,

Expenses to be allowed, such as advertisements and printing, not exceeding £2, or at the discretion of the taxing officer.

Medical Fees.

UNLIKE those in most other businesses or professions, the charges made by medical men are assessed upon a sliding scale. All engaged in the profession are supposed to be equal in point of skill, and therefore entitled to charge alike, the tariff depending chiefly upon the residence of doctor or patient. A medical man living in the eastern suburbs of London will perhaps charge but half a crown or three and sixpence if waited upon by a patient, but, when he removes to the neighbourhood of Manchester Square, the fee charged for the first visit will be two guineas, and one guinea for each second or subsequent visit.

Patients are charged according to their supposed incomes, the income being indicated by the rental of the houses in which they reside. The following are the charges usually made by general practitioners:—

	RENTALS.			
	£10 to £25.	£25 to £50.	£50 to £100.	
Ordinary Visit	2*s* 6*d* to 3*s* 6*d*	3*s*. 6*d*. to 5*s*.	5*s*. to 7*s*. 6*d*.	
Night Visit	Double an Ordinary Visit.			
Mileage beyond two miles from Home..	1*s*. 6*d*.	2*s*.	2*s*. 6*d*.	
Detention per hour..	2*s* 6*d* to 3*s* 6*d*	3*s*. 6*d*. to 5*s*.	5*s*. to 7*s*. 6*d*.	
Letters of Advice....	Same charge as for an ordinary visit			
Attendce. on servants	2*s*. 6*d*.	2*s* 6*d* to 3*s* 6*d*.	3*s*. 6*d*. to 5*s*.	
Midwifery	21*s*.	21*s*. to 30*s*.	42*s*. to 105*s*.	
CONSULTANTS.				
Advice or Visit alone	21*s*.	21*s*.	21*s*.	
Advice or Visit with another Practitioner	21*s*.	21*s*. to 42*s*.	21*s*. to 42*s*.	
Mileage beyond two miles from Home ..	10*s*. 6*d*.	10*s*. 6*d*.	10*s*. 6*d*.	

Special visits—*i.e.*, of which due notice has not been given before the practitioner starts on his daily round, are charged at the rate of a visit and a half. Patients calling upon the doctor are charged at the same rate as if visited by him.

When the ordinary medical attendant is called upon to meet another in consultation, he is entitled to charge double his ordinary fee. When he himself is called in, in consultation, he is entitled to the minimum fee of 21*s*.

When more members of one family are ill at the same time, half a fee is charged for each beyond the first.

In midwifery cases the fee generally covers all charges for visits, &c., but if the illness be protracted, or if any special operation has to be performed, there is an extra charge.

If attendance on servants is paid for by employer, or if *he* send for the doctor, the charge is the same as to himself.

Certificates of health are to be charged for as visits, except where special investigation is needed, as in certificates for lunacy, insurance offices, &c., when the charge may be from half a guinea to two guineas.

Vaccination is usually charged for according to the number of visits required.

Medical bills are usually rendered once or twice a year, and contain but one amount—"Attendance and medicine," from date to date, so much—and the patient has no means of checking the correctness of the charge; but as medical men, like all others, are liable to err, there can be no reason why they should not render detailed accounts of their charges.

Population, Births, and Deaths.

Population of 31 large towns in the United Kingdom, and of 26 foreign cities, from the latest returns issued by the Registrar-General, with the annual rate per thousand of births and deaths for the year ending October 2, 1886.

It will be observed that some of the populations given in this table differ from those shown elsewhere, in consequence of the different areas selected for observation.

When a "Strange Preacher" makes his appearance at Church, the attendants not unnaturally enquire what he is, and whence he comes? To some extent he answers the latter question himself by means of that curious and apparently useless appendage over his shoulders, the Hood. This may be very plain, or somewhat striking, perhaps of scarlet cloth with a black silk lining, or of scarlet cloth with a lining of pink silk; if of white, he comes from Oxford; if with pink, he graduated at Cambridge. Hoods are not confined to clergyman of the Church of England, they are symbolic of the degrees taken at some college or university by their wearers; and an LL.D., of London, preaching at a dissenting chapel, is not less proud of his scarlet cloth, with blue silk lining, than his brother Doctor of Glasgow, whose hood is of black velvet and dark red silk. Generally speaking, the hoods most commonly seen in English churches are those of B.A. or M.A.; but Literates are now increasing, and their hood, "black, but not of silk," are difficult to distinguish from the corded silks of their more ambitious brethren. Formerly degrees were only conferred in Arts, Divinity, Laws, Physic, and Music; now they are also granted in Science, Surgery, Literature, and Engineering. Women graduates adopt the same terms as men, so that now there are not only lady Doctors, but also lady Bachelors.

Members of the Royal College of Physicians are usually called Doctors, and place M.D. after their names, but are not entitled to wear hoods unless they have received a collegiate or university degree.

The following is a list of degrees conferred in the United Kingdom, with the abbreviations made use of to designate them.

A.K.C., *Associate of King's College.* Hood: black silk, lined with mauve silk.

B.A. or **A.B.** *Bachelor of Arts.* This degree is granted by all Universities excepting those of Scotland. The Bachelor's hood is black, trimmed with white fur; *Lampeter*, border of white fur spotted with black; the *London Univ.* having instead an edging inside of russet-brown silk.

B.C.L. *Bachelor of Civil Law.* Granted by Oxford and Durham. Hood: *Oxford*, pale blue silk, white fur trimming; *Durham*, purple silk, bound with white fur.

B.D. *Bachelor of Divinity.* Granted by all Universities but London and the Queen's Univ., Ireland. Hood: *Oxford, Cambridge, Dublin, and Durham*, plain black silk; *Lampeter*, black lined with puce; *St. Andrews*, violet silk, with white satin lining; *Glasgow*, black silk, black velvet border, lined with purple silk; *Aberdeen*, black silk, red silk lining; *Edinburgh*, purple silk, with white fur border.

B. Eng. *Bachelor of Engineering*, Dublin and Queen's University, Ireland. Hood: black silk, lined with green.

B.S. *Bachelor of Surgery.* Given by Cambridge, Dublin, and London. Hood: *Dublin*, crimson silk, bound with blue, black lining.

B.Sc. *Bachelor of Science.* Given by Glasgow, Edinburgh, and London. Hood: *Glasgow*, black silk, lined with yellow silk; *Edinburgh*, black silk, green lining, white fur border; *London*, black, with inside edging of gold-coloured silk.

D.C.L. *Doctor of Civil Law.* Given by Oxford and Durham. Hood: *Oxford*, scarlet cloth, crimson silk lining; *Durham*, scarlet cashmere, white silk lining.

D.D. or **S.T.P.** *Doctor of Divinity.* Granted by all Universities but London and Queen's Univ., Ireland. Hood: *Oxford and Durham*, scarlet cloth, black silk lining; *Cambridge*, ditto, with pink silk lining; *Durham*, scarlet cashmere, lined with purple silk; *St. Andrews*, violet ditto, white satin lining; *Glasgow*, black velvet, black silk lining; *Aberdeen*, purple cloth, white silk lining; *Edinburgh*, black cloth, purple silk lining.

D. Lit. *Doctor of Literature. London.* Hood: scarlet cloth, lined with russet silk.

D.M. See M.D.

D.Sc. *Doctor of Science.* Granted by Glasgow, Edinburgh, and London. Hood: *Glasgow*, black velvet, gold-coloured silk lining; *Edinburgh*, black cloth, lined with green silk; *London*, scarlet cloth, lined with gold-coloured silk.

LL.B. or **B.L.** *Bachelor of Laws.* Granted by all Universities but Oxford, Durham, St. Andrews, and Aberdeen. Hood: *Cambridge*, same as for B.A.; *Dublin and Queen's Univ.*, black silk lined with white; *Glasgow*, black silk, dark red silk lining; *Edinburgh*, black silk, blue silk lining, with border of white fur; *London*, black silk, blue silk edging.

LL.D. *Doctor of Laws.* Granted by all Universities but Oxford and Durham. Hood: *Cambridge, Dublin, and Queen's Univ.*, scarlet cloth lined with pink silk; *London*, ditto, with blue silk lining; *St. Andrews*, scarlet cloth or silk, white satin lining; *Glasgow*, black velvet, dark red silk lining; *Aberdeen*, purple cloth, pale blue silk lining; *Edinburgh*, black cloth with blue silk lining.

LL.M. *Master of Laws*, Given by Cambridge. Hood: the same as the Camb. M.A.

L.Th. *Licentiate of Theology.* Given by Durham. Black silk, faced with velvet, and bound with purple silk.

M.A. *Master of Arts.* Granted by all Universities. *Oxford and St. Andrews*, black silk lined with red silk; *Cambridge, Aberdeen, and Edinburgh*, black silk lined with white silk; *Dublin and Queen's Univ.*, black silk, lined with dark blue; *Durham*, ditto, lined with purple silk; *London*, ditto, lined with russet silk; *Glasgow*, ditto, lined with bell-heather red silk.

M.B. *Bachelor of Medicine.* Granted by all Universities but Queen's Univ., Ireland. Hood: *Oxford*, dark blue silk, white fur trimming; *Cambridge*, black silk, white silk lining; *Dublin, Aberdeen, and Edinburgh*, black silk, crimson silk, lining and border of white fur; *Durham*, scarlet silk lined with purple, and bound with white fur; *London*, black silk, with violet silk edging; *St. Andrews*, crimson silk, lining of white satin; *Glasgow*, black cloth, lined with scarlet silk.

M.D. *Doctor of Medicine.* Granted by all Universities. Hood: *Oxford, Dublin, and Queen's Univ.*, scarlet cloth, crimson silk lining; *Cambridge*, ditto, pink silk lining; *Durham*, purple cashmere, lined with scarlet silk; *St. Andrews*, crimson cloth, white satin lining; *Glasgow*, black silk, lined with scarlet silk; *Aberdeen*, purple cloth, crimson silk lining; *Edinburgh*, black cloth, crimson silk lining; *London*, scarlet cloth, violet silk lining.

M.Eng., *Master of Engineering — Dub n.* Hood: white silk, lined with green.

M.S., M.Ch., C.M, or **M.C.** *Master of Surgery.*

Granted by all Universities but Oxford. Hood: *Cambridge*, same as M.A.; *Dublin and Queen's Univ.*, crimson silk, bound with blue, white lining; *St. Andrews*, crimson silk, white satin lining; *Glasgow*, black cloth, lined with scarlet silk; *London*, black silk, lining of violet silk.

Mus. Bac. *Bachelor of Music.* Granted by all Universities except the Scottish. Hood: *Oxford*, lilac silk, white fur trimming; *Dublin*, blue silk, white fur border; *Cambridge*, same as B.A.; *Durham*, white silk, purple silk lining, bound with fur; *London*, blue silk, white watered silk lining.

Mus. Doc. *Doctor of Music.* Granted by all Universities except the Scottish. Hood: *Oxford*, white silk brocade, lined with crimson silk; *Cambridge*, puce silk, lined with white; *Dublin*, crimson cloth, white silk lining; *Durham*, scarlet silk, purple silk lining; *London*, same as Mus. Bac.

These comprise the better known degrees. There are, however, others of rarer occurrence—viz.: The Archbishop of Canterbury has also the faculty, one of the few relics of his ancient power as Official Legate of the Pope, of granting degrees of M.A., B.D., D.D., M.D., Mus. Doc., &c., which are termed *Lambeth* degrees. The particular University at which a person has graduated is sometimes added after the letters of degree, as M.A., Oxford or Oxon; Cambridge or Cantab; Durham or Dunelm; Dub. or T.C.D. (Trinity Coll., Dublin). The colonial universities, as also the continental, are not entered in the table given above, which is restricted to a notice of such *authorized* degrees as are conferred in the British Islands. Private societies and individuals are in existence from whom fanciful and fictitious degrees can be obtained; no learning, no residence, no examination is required; indeed not any other qualification but that of cash.

The Hoods and Tippets of the various Theological Colleges may be noticed here. By the 58th Canon of 1604 such clergymen as are not Graduates (commonly called *Literates*) are bidden to "wear upon their surplices, instead of hoods, some decent tippets of black, so it be not silk." In accordance with this direction, it has been resolved by the Upper House of Convocation, that all the Theological Colleges of the Church of England have a uniform hood for their non-graduate members, to be in substance the same for all, and to be, according to the Canon, "black, but not of silk;" each College, however, being at liberty to add to the hood a coloured edging, border, or binding, by which its own students might be distinguished. This resolution, which has further been accepted at a conference of Theological College principals and tutors, held at Oxford, may therefore now be taken to be the law on this subject. The following Theological Colleges have already conformed to the resolution of Convocation, the *Lincoln* tippet being of black stuff edged with *blue* silk; *Chichester*, the same with an edging of *crimson* silk; *Truro*, an edging of white fur.

General Rules for distinguishing Hoods.—Only a very few of the multitudinous and multicoloured hoods given above are seen borne by the clergy in public worship. The most common are the B.A. and M.A., previously noticed. The B.A. of Oxford is black corded *silk*, with white fur border; the Cambridge B.A. is a more ample hood of black *stuff*, with wider border of fur. A black silk hood, with red silk inside, is the Oxford M.A. A black and white silk hood of ampler dimensions is the M.A. of Cambridge. Plain black silk would be the B.D. of Oxford or Cambridge. *Scarlet cloth* would denote a Doctor either of Divinity or Law, according to the lining. *Purple* is generally the sign of a Durham degree.

The letters appended to names in the Almanack are chiefly F.R.S., F.S.A., F.R.AST.S., indicating that the persons using them are Fellows of the Royal Society, the Society of Antiquaries, or the Royal Astronomical Society.

ONE of the revivals of the past quarter of a century has been that of the taste for ancient gold and silver ware, but especially of silver. Previous to that time there were comparatively but few persons who cared about old silver plate; most preferred that which was new, and the old was transferred to the melting-pot: but now the tide has turned, and old plate is one of the things most coveted by all persons professing to have taste. With the revival of this taste there has also grown up with it the very laudable desire to know something of the history of the manufacture and manufacturers of the plate itself. The literature of the subject is not large, but it is almost exhaustive, and for the materials of this Article readers of the Almanack are indebted to Mr. Wilfred Cripps, whose volume on "Old English Plate," published by Mr. Murray, contains nearly all that can be said upon the subject. Readers are also further indebted to that gentleman for the loan of the following illustrations, without which this paper would scarcely be intelligible.

It must be premised that *pure* gold and *pure* silver in a manufactured state do not exist; both are alloyed with a coarser metal, gold sometimes with silver, but mostly with copper; and silver invariably with the latter metal: silver thus alloyed becomes less brittle and is more easily shaped by the workman's hammer. But mixed, the metal is of less value than when pure, and as the uninformed public could have no means of testing its intrinsic value, the Government at a very early period took some steps to insure uniformity in the quantity of base metal used as alloy. So far back as the year 1180 there appears to have been a test or check upon the manufacture, and in 1260 discreet men of the craft were appointed to watch over the ware produced for sale; but not till the year 1300 was there any actual legislation, the first ordinance being that the Leopard's Head should be *marked* upon all *sterling* articles of gold and silver. The Company of Goldsmiths of London was incorporated by Edward III. in the year 1327, and the leopard's head has ever since been borne on the company's shield. In addition to London there have been Assay Offices at York, Newcastle-on-Tyne, Norwich, Chester, Exeter, Sheffield, and Birmingham. In Scotland, Edinburgh and Glasgow have had this privilege: in Ireland, Dublin alone. One of the duties imposed upon the Company is to test all articles of gold and silver, except certain small articles, and having tested them to impress the HALL MARK thereon. Sterling silver is one invariable standard, viz., 11 oz. 2 dwts. of fine silver to 18 dwts. of alloy, which, when thus mixed becomes *standard*, and a pound troy coined into sixty-six shillings gives the nominal value of 5*s.* 6*d.* to the troy ounce.* In *sterling* gold there are twenty-two carats fine to two of alloy, the value of which is £3 17*s.* 10½*d.* In order to encourage the jewellery trade other degrees of fineness are permitted, but these degrees are marked on articles sent to the "Hall" for the purpose. The value of the various *standards* per ounce troy are—

	£	s.	d.
Pure gold, 24 carats	4	4	11½
Standard, 22 carats	3	17	10½
2nd ditto, 18 carats	3	3	8½
3rd ditto, 15 carats	2	13	1
4th ditto, 12 carats	2	2	5¾
5th ditto, 9 carats	1	11	10½

From the above it will be seen that a jeweller can very well afford to sell fifteen carat "standard gold hall-marked" goods against their weight in sovereigns.

An ordinary piece of plate has the following marks:

1. That of the maker, which must be the first letters of his Christian and Surname.

2. That of the Company, the Leopard's Head.

3. That which is supposed to be the Sovereign's mark, the lion passant.

4. A letter denoting the year in which the plate is made, *e.g.* F

5. And, in the case of those articles which are chargeable with duty, the Sovereign's Head.

The maker's mark is placed upon the article by the manufacturer himself. The Sovereign's Head does not appear upon plate manufactured prior to the year 1784.

By the following table of date-marks the age of any piece of plate manufactured in London and assayed at Goldsmiths' Hall may be ascertained:

h	Lombardic, simple	1438–9 to 1457–8
C	Lombardic, external cusps	1458–9 „ 1477–8
D	Lombardic, double cusps	1478–9 „ 1497–8
b	Black letter, small	1498–9 „ 1517–8
A	Lombardic	1518–9 „ 1537–8
B	Roman and other capitals	1538–9 „ 1557–8
a	Black letter, small	1558–9 „ 1577–8
A	Roman letter, capitals.	1578–9 „ 1597–8
D	Lombardic, external cusps	1598–9 „ 1617–8

* Unlike gold, which has one fixed value, the price of silver varies considerably. In 1870 the price paid for it at the Royal Mint was five shillings and a halfpenny per ounce, while in 1885 it was purchased at 48¼ pence. At this price there was a profit, *Seigniorage*, of no less than 36 per cent. upon all the silver coined.

Italic letter, small	1618–9 to 1637–8
Court hand	1638–9 „ 1657–8
Black letter, capitals ..	1658–9 „ 1677–8

Old English, small....	1856–7 „ 1875–6
Roman letter, capitals.	1876–7 „ 1895–6

Each Assay Office has its distinguishing mark in lieu of the Leopard's Head of Goldsmiths' Hall, and its own cycle and chronological alphabet. The type and the shape of shield on which the letters are impressed change with each cycle.

The learned virtuoso who a hundred years hence may wish to examine his plate, will be sorely puzzled to know whether that marked A was manufactured in the year 1796 or in 1876, the chief difference being the form of the shield. For 1876 he must carefully look for the Sovereign's head, and although the Lions appear remarkably alike (there is also a difference in the Leopard's Head, one being crowned and the other not), he will be fortunate indeed if the stamp be sufficiently distinct for identification; but probably few persons will care for the plate manufactured during the last twenty years of George III.

[Hall marks used from 1756 to 1815.]

1883	44,185	191,573	71,264	13,096	320,118
1884	31,145	155,280	44,255	11,510	242,190
1885	19,838	137,687	39,395	10,724	207,644

In regard to the nationalities of the above the number of English was 126,260; Scotch, 21,367; Irish, 60,017 in 1885.

Of English origin alone the number of persons who emigrated from 1852 to 1885 was 2,750,276; Scotch, 568,790; Irish, 2,496,674.

There is a large influx every year of immigrants from abroad: the number in 1879, so far as recorded, was 53,973, and in 1885, 85,468.

French Metrical System of Weights and Measures.

The Metrical System is based upon the length of the fourth part of a terrestrial meridian. The ten-millionth part of this arc was chosen as the unit of measures of length, and called a *Mètre*. The cube of the tenth part of the mètre was adopted as the unit of capacity, and denominated a *Litre*. The weight of a litre of distilled water at its greatest density was called a *Kilogramme*, of which the thousandth part, or *Gramme*, was adopted as the unit of weight. The multiples of these, proceeding in decimal progression, are distinguished by the employment of the prefixes *deca*, *hecto*, *kilo*, and *myria*, from the Greek, and the subdivisions by *deci*, *centi*, and *milli*, from the Latin :—

* Millions and hundreds of thousands; the last three figures omitted: *e.g.*, the weight of Tea in 1880 was 158,570,334 lbs., the quantity of Spirits in the same year, 35,764,464 gallons.

On the morrow of St. Martin (12th November) certain high officials, usually the Lord President of the Council, the Chancellor of the Exchequer, the Lord Chancellor, several Judges, the Clerk of the Council, and others, assemble in the Court of the Queen's Bench Division of the High Court of Justice, and after certain ceremonies have been gone through, three gentlemen are nominated for the office of Sheriff for every one of the counties of England and Wales, except Middlesex, the Sheriff of which is elected by the citizens of London; Cornwall, nominated by the Prince of Wales as Duke of that county; and of Lancaster, by the Queen as Duchess. The three names, engrossed upon a parchment roll, are afterwards brought before Her Majesty, who then, with a golden bodkin, pricks through the parchment against one name for every county. The name thus pricked is usually the first on the list. The following is a list of the gentlemen thus nominated whose names stand first upon the roll:—

Bedfordshire.—James Poole Wagstaff, of Manor House, Potton.

Berkshire.—Sir Richard Francis Sutton, Bart., of Benham House, Newbury.

Buckinghamshire.—Charles Meeking, of Richings Park, Colnbrook.

Cambridge and Huntingdon (shires).—Hon. Charles William Fitzwilliam, of Alwalton.

Cheshire.—James Tomkinson, of Willington Hall, Tarporley.

Cornwall.—

Cumberland.—Thomas Hartley, of Armathwaite Hall, Cockermouth.

Derbyshire.—Frederick Charles Arkwright, of Willersley.

Devonshire.—John Blyth-Coham Fleming, of Coham, Highampton.

Dorsetshire.—William Ernest Brymer, of Ilsington House.

Durham.—Gerald Percy Vivian Aylmer, of Walworth Castle, Darlington.

Essex.—John Lionel Tufnell-Tyrell, of Boreham House, Boreham.

Gloucestershire.—Sir Lionel Edward Darell, of Fretherne Court, near Stonehouse.

Herefordshire.—Henry Higgins, of Thinghill, Hereford.

Hertfordshire.—Henry Wilson Demain Saunders, of Fanshaws, Hertford.

Kent.—Lieut.-Col. Charles Arthur Madan Warde, of Squerryes Court, Westerham.

Leicestershire.—William Edward John Basil Farnham, of Quorndon House.

Lincolnshire.—Sir Hickman Beckett Bacon, Bart., of Thonock Hall.

Monmouthshire.—Edmund Davies Williams, of Maesrudded, Blackwood, near Newport.

Norfolk.—Sir Alfred Jodrell, Bart., of Bayfield Hall.

Northamptonshire.—Howard Henry Howard Vyse, of Boughton Park, Northampton.

Northumberland.—Ralph Atkinson, of Angerton, Morpeth.

Nottinghamshire.—Benjamin Huntsman, of West Retford.

Oxfordshire.—Philip James Digby Wykeham, of Tythrop House.

Rutland.—George Fydell Rowley, of Morcott.

Shropshire.—Sir Offley Wakeham, Bart., of Rorrington Lodge, Chirbury.

Somersetshire.—Thos. Marriott-Dodington, of Horsington House, Wincanton.

County of Southampton.—William Ingham Whitaker, of Pylewell Park, Lymington.

Staffordshire.—George Fox, of Elmhurst, Lichfield.

Suffolk.—Robert Hervey Munroe Elwes, of Stoke College, Clare.

Surrey.—The Hon. Francis Henry Baring, of Banstead Park.

Sussex.—Lieut.-Col. Thos. Faulconer Wisden, of the Warren, Broadwater.

Warwickshire.—Thomas Henry Goodwin Newton, of Barrels Park, near Henley-in-Arden.

Westmoreland.—John E. Hassell, of Dalemain.

Wiltshire.—Clement Walker Heneage, of Compton Bassett, Calne.

Worcestershire.—William Edward Everitt, of Finstall, Broomsgrove.

Yorkshire.—Saml. Cunliffe Lister, of Swinton.

Wales, North and South.

Anglesey.—Sir Richard Henry Williams Bulkeley, Bart., of Baron Hill, Beaumaris.

Breconshire.—Richd. Crawshay, of Tymawr, near Abergavenny.

Cardiganshire.—Alban Lewis Gwynne, of Mynachty.

Carmarthenshire.—Fredk. Arthur Gerwyar Jones, of Pantglas, near Llandilo.

Carnarvonshire.—Francis Wm. Alexander Roche, of Portmadoc.

Denbighshire.—Henry Davis Pochin, of Bodnant Hall, Conway.

Flintshire.—Thomas Bate, of Kelsterton.

Glamorganshire.—Tudor Crawshay, of Bowvilstone House, Cardiff.

Merionethshire.—Edward Evans Lloyd, of Moel-y-Garnedd, Bala.

Montgomeryshire.—Charles Whitley Owen, of Tronfraith.

Pembrokeshire.—Frederick Lewis Lloyd Phillipps, of Penty Park.

Radnorshire.—Francis Lyndon Evelyn, of Kinshaw Court, Presteign.

OLD AND NEW STYLE.

The Gregorian, or Roman, reform was at once adopted by those European nations which were in communion with Rome. Protestant nations did not so readily accept even an improvement emanating from Rome, and Greece and Russia still adhere to the Old Style. England adopted the New Calendar by Act of Parliament, 24 George II. c. 23, passed in 1751. The change took effect in the following year, 1752, which was a leap year; the 3rd day of September was made the 14th, and thus the earth was, so to speak, pushed forward eleven days to overtake the sun. In some places the populace rioted, under the impression that they had been cheated out of so many days' wages. Another change was made by the same Statute. For 400 years previously, the civil and legal year had begun on the 25th March (*Annunciation, B. V. M.*). On the 1st of January, 1753, the commencement of the year was transferred to that day.

In citing dates of events occurring between January 1 and March 25, and between 1582 and 1752, it is customary to insert both the civil and historical year. As, *e.g.*, Charles I. was executed, January 30, 164$\frac{8}{9}$, or 1648–9. The revolution in England took place in February, 168$\frac{8}{9}$, or 1688–9. The lower, or the last, figure always indicates the historical year, according to our present computation.

I.—STATUTES.

1. *Burial Grounds (Scotland) Amendment Act.*—By this Act Scotch parochial boards are empowered to sell exclusive rights of burial over the whole of any burial ground instead of over only one-half as was formerly provided. The extension of the boards' powers is stated in the Act to have been rendered necessary by experience (49 Vict. c. 21).

2. *Contagious Diseases Acts Repeal Act.*—This statute briefly sweeps away what have been known as the Contagious Diseases Acts, with all their arbitrary rules and regulations (49 Vict. c. 10).

3. *Crofters' Holdings (Scotland) Act.*—This Act, which of course only possesses interest for Scotch crofters and their landlords, provides that a crofter shall not be removed from his holding except for the breach of certain conditions set forth at length. Provision is also made for the appointment of a crofters' commission (three in number), whose duties may include the fixing of fair rents and the enlarging of the crofters' holdings. Crofters may also claim compensation for improvements, and are empowered to apply to the Fishery Board for Scotland for loans for the purchase and equipment of fishing boats. The Act was intended to obviate the discontent which had existed for some time amongst the crofters of the Highlands and Islands of Scotland (49 & 50 Vict. c. 29).

4. *Customs Amendment Act.*—The duties on wine are altered by this enactment, which also gives Her Majesty the Queen power to prohibit at her discretion the importation into the United Kingdom of foreign coin (49 & 50 Vict. c. 41).

5. *Customs and Inland Revenue Act.*—This Act contains a provision of which the expediency was much insisted upon in Parliament. It is, that in the case of a person who brews beer merely for his own domestic use, and not for sale, and who occupies a house whose annual value does not exceed £8, no licence shall be required, and the beer shall be exempt from duty (49 Vict. c. 18).

6. *Extraordinary Tithe Redemption Act.*—From the date of the passing of this statute extraordinary tithes on newly cultivated hop-gardens, orchards, &c., are abolished. Power is also given to landowners and others to redeem such charges by paying the amount of their capital value to the parties entitled to it in the manner specified by the Act. The agitation during the year on the part of landowners in Kent and elsewhere which led to this reform will be remembered (49 & 50 Vict. c. 54).

7. *Guardianship of Infants Act.*—This important Act, which applies to Scotland as well as to England, introduces several changes in the common law. The first of interest is that on the death of the father of an infant, the mother, if surviving, is to be the guardian of the infant, either alone or jointly with any guardian appointed by the father or the Court of Chancery. This provision abolishes the old exclusive right of a father to appoint a guardian to his child; and another alteration is that which gives a mother power to appoint a guardian to an infant after her death, to act jointly with the father if the Court should think that the latter is not fit to be the sole guardian of his children. In the case of a divorce or judicial separation, moreover, the guilty party may be decreed to be a person unfit to have the custody of the children of the marriage, and in that case he or she will not be entitled as of right to their guardianship upon the death of the other parent (49 & 50 Vict. c. 27).

8. *Idiots Act.*—This Act provides for the reception of idiots and imbeciles into hospitals, institutions, and licensed houses, which must be registered under the Act, and be subject to the supervision of the Lunacy Commissioners. It does not, however, apply to lunatics (49 Vict. c. 25).

9. *Incumbents of Benefices Loans Extension Act.*—This statute extends the time for the repayment of loans granted by the governors of Queen Anne's Bounty (for the augmentation of the maintenance of the poor clergy) to incumbents of benefices to any period not exceeding twenty years. The income of the benefice must be shown to have materially diminished, and the consent of the patron must have been obtained (49 & 50 Vict. c. 34).

10. *International Copyright Act.*—In September, 1885, an international conference was held at Berne, at which a convention was agreed to, for giving to the authors of literary and artistic works first published in one of the countries which were parties to the convention, copyright in their works throughout all the other countries. This Act carries that agreement into effect, and accordingly both foreign countries and the colonies may be brought by Her Majesty's Order in Council within the scope of the International Copyright Acts. The country in which a work was really first produced may be determined by Order in Council, and a most important section enacts that when a work is first produced in a foreign country, the author shall have the right of preventing its unlicensed translation in the United Kingdom. The doctrine of reciprocity between the agreeing countries is the key-note of the Act (49 & 50 Vict. c. 33).

11. *Intoxicating Liquors (Sale to Children) Act.*—Every licence-holder who sells or allows to be sold any intoxicating liquor to be consumed on the premises to any child under the age of thirteen is liable to a penalty not exceeding 20s. for the first and 40s. for any subsequent offence (49 & 50 Vict. c. 56).

12. *Lunacy (Vacating of Seats) Act.*—This statute provides a procedure by which the seat of any member of the House of Commons who may have been received into a lunatic asylum shall be declared vacant (49 Vict. c. 16).

13. *Marriage Act.*—The hours for the solemnization of marriages are extended by this Act. From eight o'clock in the morning to twelve at noon were the legal hours previously, but they now are from eight o'clock in the morning to three in the afternoon—an addition of three hours (49 Vict. c. 14).

14. *Marriages Validity Act.*—This is a short enactment, to the effect that when a marriage has been solemnized after the publication of banns, it shall not be deemed invalid because one of the parties was resident in Scotland at the time of the publication of the banns (49 Vict. c. 3).

15. *Married Women (Maintenance in case of Desertion) Act.*— Under this Act a married woman who has been deserted by her husband may summon him for a sum (not exceeding £2 a week) for maintenance, the payment to be enforced in the same way as the payment of money under an order of affiliation. No order, however, is to be made where the wife has been guilty of adultery, unless the adultery has been condoned (49 & 50 Vict. c. 52).

16. *Medical Act.*—This statute contains several technical regulations of no general interest regarding the admission of persons to medical practice. It also provides for the registration of colonial and foreign practitioners with recognized diplomas, thus obviating the necessity of discussing a point often raised in police courts, *i.e.*, whether a person representing himself to be a qualified medical practitioner is so qualified under any foreign diploma he may claim to possess (49 & 50 Vict. c. 48).

17. *Metropolitan Police (Compensation) Act.*— This Act provides for the payment of compensation to persons whose houses or property were damaged in the notorious West End riots of the 8th February, 1886. The amount of compensation is to be settled by a police receiver, and paid out of the police rates. There is an appeal to an arbitrator appointed by the chairman of the Metropolitan Board of Works, but no other proceedings than those provided by the Act can be taken for compensation (49 Vict. c. 11).

18. *Parliamentary Elections (Returning Officers) Amendment Act.*—This statute gives a right of appeal against the taxation of costs in Parliamentary elections by any judge or officer to the Queen's Bench Division of the High Court of Justice in England, or to the Common Pleas Division in Ireland (49 & 50 Vict. c. 57).

19. *Drowned Persons Interment Act.*—Interment in churchyards or parochial burying-grounds is provided by this Act for human bodies which may be discovered in any tidal or navigable waters as well as the sea, bodies cast up by which were provided for as far back as 1808 (49 Vict. c. 20).

20. *Removal Terms (Scotland) Act.*—This statute only applies to Scotland, and settles the terms of entry to and removal from houses in that country (49 & 50 Vict. c. 50).

21. *Riot (Damages) Act.*—This Act, which may be said to be the complement of one already mentioned (17), provides compensation out of the police rates for persons whose houses or property may be damaged in a riot. The claims are to be made to the police authorities of the district, who are empowered to fix the amount of the damage. The owners of any machinery, and the churchwardens or managers of any church, school, hospital, or public institution are entitled to the benefit of the Act (49 & 50 Vict. c. 38).

22. *Shop Hours Regulation Act.*—Under this important statute, which was passed owing to the strong pressure of public opinion, any person under the age of eighteen years is not to be employed in a shop for a longer period than seventy-four hours (including meal-times) in the week, and employers are bound to post up in their shops a notice to this effect. The penalty for infringing the Act is 20s. for each offence, but the actual offender is the party liable to it, and not the mere occupier of the premises if he used due diligence (49 & 50 Vict. c. 55).

II.—Cases.

1. *Adulteration—False Representation—Sale of Food and Drugs Act,* 1875.—A false representation as to the nature and quality of an article made before its sale is not an offence under the above Act if the real nature and quality of the article is disclosed when the sale is completed. In this case a milkman had stated that he was selling "new milk," but when the sanitary inspector wanted to buy some, he admitted that it was old, and was discharged (*Kirk* v. *Coates*).

2. *Bankruptcy—Fraudulent Preference—Threat of Criminal Proceedings.*—A commercial traveller in the employment of a firm of wholesale grocers, and also a customer of theirs, was in their debt, and under a threat of criminal proceedings, handed to them just before his bankruptcy, several unopened chests of tea which had been received by him from them. He also executed a mortgage in their favour. It was held that the transaction was not void as a fraudulent preference, inasmuch as it was carried out under a threat (*Re Boyd*).

3. *Bill of Sale—Form—Bills of Sale Act,* 1882. —In this case the giver of a bill of sale was stated in it to be the beneficial owner of the goods. The Court of Appeal held that this made the bill of sale void, as it was not in accordance with the form given in the above statute. The court also decided a matter of great importance to lenders and borrowers under this kind of security, namely, that any bill of sale is void where its difference from the statutory form gives it a legal effect either greater or smaller than it would have if drawn in that form, or if it is calculated to mislead. The case may be termed the leading case for the protection of the givers of bills of sale (*Ex parte Stanford; Re Barber*).

4. *Contract—Life Insurance—Wagering—Illegality.*—Here a son effected two policies on the life of his father in which he had no insurable interest, and paid weekly premiums. The father afterwards gave the insurance company notice that he objected to the policies, and the son also gave them notice that they were at an end, and claimed the return of the premiums. The court, however, decided that he could not recover them, as the policies were "wagering policies," and therefore illegal (*Howard* v. *Refuge Friendly Society*).

5. *Copyright—Book—Photographic Album.*— This was a case of a good deal of importance to dealers in fancy goods. It was held that a photographic album called "The Castle Album," with a list of the castles represented by coloured drawings and a short description of them covering only a part of the page, was not a book within the meaning of the copyright law, and that the proprietor of the album would, moreover, have to show that it was exclusively known in the market as "The Castle Album" before he could claim an injunction (*Schove* v. *Schmincke*).

6. *Design—Registration—Agent of Foreign Manufacturer.*—A party who was sole agent and consignee of toys manufactured in the United States by an American company, registered in his own name the designs in accord-

ance with which some of the toys were manufactured. The company had authorized him to register in his own name, but had not assigned to him the designs nor the right to apply them to goods, the only arrangement being that he was their agent for sale in the United Kingdom. Under the circumstances it was decided that he was not the "proprietor" of the designs under the Patents, Designs, and Trade-marks Act, 1883, and that the registration in his name must be expunged (*Re Guiterman's Designs*).

7. *Divorce—Queen's Proctor—Material Acts not brought before the Court—Parties.*—In this notorious case two important points of law were decided. The first was, that the Queen's Proctor is entitled to intervene in a divorce suit for the purpose of showing that the finding ought to have been the other way in consequence of material facts not having been brought before the court. The second was, that when once a co-respondent has been dismissed from a suit, he has no right to take part in any subsequent proceedings (*Crawford* v. *Crawford and Dilke, the Queen's Proctor showing cause*).

8. *Election Law—Parliamentary Vote—Disqualification—Alien.*—Persons born in Hanover of Hanoverian parents, and not naturalized, are aliens, and have no right to vote at Parliamentary elections, although their names are upon the register (*Re Stepney Election Petition; Isaacson* v. *Durant*).

9. *Husband and Wife—Criminal Libel by Husband—Prosecution by Wife.*—A wife cannot prosecute her husband for a personal libel on herself, nor can she give evidence against him in the case. The reason is that such a prosecution is not for the protection or security of her separate estate according to the provisions of the Married Women's Property Acts (*Reg.* v. *Lord Mayor of London and Vance*).

10. *Justice of the Peace—Search Warrant—Criminal Law Amendment Act.*—Under the provisions of the celebrated statute passed last year for the better protection of females, powers of search are given to any justice of the peace who (upon information made before him on oath by any parent or person who in his opinion is acting in good faith in the interest of any woman or girl) has reasonable cause to suspect that that woman or girl is unlawfully detained for immoral purposes by any person in any place within his jurisdiction. This case decided that an action will not lie against a person who has induced a justice to issue a warrant if that person acted *bonâ fide* and without malice, although he might have had no reasonable or probable cause for suspicion (*Hope* v. *Evered*).

11. *Marriage—Dissolution of—Moral Pressure—Threats.*—A marriage into which a party has been forced by moral pressure and threats can be annulled according to the law of this country as free consent is necessary to this as to any other contract (*Scott* v. *Sebright*).

12. *Marriage—Illegal Solemnization—Penal Offence.*—This was a rare and peculiar case. The defendant, the Rev. J. H. Latrobe Bateman, was condemned to eighteen months' imprisonment with hard labour for solemnizing a marriage between two young persons without a licence, and without publishing the banns (*Reg.* v. *Bateman*).

13. *Master and Servant—Wrongful Dismissal—Misconduct.*—The plaintiff was a confidential clerk in the employment of the defendants, who were merchants having large home and foreign dealings in the way of buying and selling stocks, &c. The plaintiff was in the habit of speculating on the Stock Exchange, and when the defendants discovered this they dismissed him from their employ. The Court of Appeal held that they were justified in so doing, as a servant should not be permitted to do anything incompatible with the proper performance of his duty to his master (*Pearce* v. *Foster*).

14. *Trade-mark—Registration—Fancy word.*—A word such as "Melrose," when used to designate a particular commodity, may be purely a "fancy" word with reference to that commodity, although only a geographical name. Therefore it may be registered as a trade-mark as a "fancy word or word not in common use" under the provisions of the Patents, Designs, and Trade-marks Act, 1883 (*Re Van Duzer's Trade-mark*).

CRIMINAL CONVICTIONS, 1870 to 1885.

For indictable offences; in addition to those summarily convicted, or imprisoned for want of sureties.

Year.	England and Wales.	Scotland.	Ireland.
1870	12,953	2,400	3,084
1871	11,946	2,184	2,257

1885	533,429,560	61,125,422	36,912,150	631,467,132	1885

THE totals of bills, cheques, and drafts passed through the Clearing House since 1869, printed below, may be looked upon as a record of the rise and fall in trade not only in England, but throughout the civilized world.

The science of Economics shows that nations must, to a certain extent, share each other's good or bad trade. In a time of prosperity a nation is richer, and therefore able to buy more of the commodities of other nations, but in a period of depression its purchasing power is restricted, and, in consequence, foreign exports diminish, unless it happen that other fields are extended, or new ones discovered.

Banking being the chief channel through which money is passed from hand to hand, and from one country to another, and London being the chief centre of commerce, the sums passed through the London banks, and by them through the Clearing House, must necessarily reflect the fluctuations in trade.

The Clearing House returns are so enormous as to render it difficult to grasp a year's increase or decrease in them by the bare statement of so many millions more or less; in the accompanying tables they have therefore been analyzed, the daily averages taken, and the variations calculated per cent. The difference is shown between any year and the mean of the ten years ending 1878, and the proportions of the annual totals cleared on the "Special Days" worked out.

The large returns on the "Fourths of the Month" are caused by a great proportion of trade bills being dated on the first of the month, the legal three days' grace making such bills fall due on the fourth. Thus a three months' bill dated 1st January becomes due on 4th April; therefore all goods bought on these conditions would be paid for by bills falling due on "Fourths."

"Consols Settling Days" are those days on which the bulk of transactions in Consols are adjusted.

On the "Stock Exchange Settling Days" nearly all dealings in foreign, colonial, and commercial bonds, stocks, and shares are settled; in some instances accounts stand over until next day. These days are here called "Days following Stock Exchange Settling Days."

The "Ordinary Days" are those left after deducting the 72 "Special Days," and of course reflect the ordinary business.

TOTALS AND ANALYSIS OF THE BILLS, DRAFTS, AND CHEQUES PASSED THROUGH THE LONDON CLEARING HOUSE FROM 1869 TO 1885.

Year.	On the Fourths of the Month (one in each month).	On the Consols Settling Days (one in each month).	On the Stock Exchange Settling Days (two in each month).	On the Days following Stock Exchange Settling Days (two in each month).	On Ordinary Days.	Totals for the Year.

EXCLUSIVE OF BULLION, INTO AND FROM THE UNITED KINGDOM, 1884–85.

AGAIN a very serious falling off is to be noted in the foreign trade of the country, the trading of 1885 being no less than £43,614,503 below that of 1884, and nearly ninety millions less than that of 1883. British merchants find themselves supplanted in the markets of the world. At home, too, while so many thousand people are complaining of having no work to do, we allow the foreigner to come in and supply us with goods which ought most unquestionably to be made in this country. Amongst the goods so purchased may be mentioned cotton yarn and manufactures £1,100,000; glass £1,650,000; iron manufactured £2,346,000, partially manufactured £1,220,000 more; porcelain and earthenware £503,000; manufactured silks, velvets, ribbons, &c., to the value of nearly £10,000,000; woollen yarn and manufactures of various kinds, nearly £10,000,000 more. These are facts worthy of consideration, they are creditable to the industry and perseverance of the foreigner, but are discreditable to ourselves. The totals for the two years were :—

Total Imports (1884)	£390,018,569
" " (1885)	370,967,955
Decrease in 1885	£19,050,614
Total Exports (1884)	£295,967,583
" " (1885)	271,403,694
Decrease in 1885	£24,563,889

Putting exports and imports together, the total foreign trade of the United Kingdom was :—

Total Imports and Exports (1884)..	£685,986,152
" " (1885)..	642,371,649
A decrease in 1885 of	£43,614,503

The total value of the trade carried on with the following countries in 1884 and 1885 is thus stated :—

TOTAL IMPORTS.

FOREIGN.	1884.	1885.

Exports of British Produce and Manufactures.—During the year 1885 the following were among the most important articles of British produce and manufacture exported to our colonies and foreign parts, giving the total value:—

Alkali (soda chiefly)		£1,955,790
Apparel, ready-made		4,161,150
Arms, ammunition, &c.		1,811,975
Bags and sacks, empty		779,876
Beer and ale		1,645,333
Biscuit and bread		502,379
Books, printed		1,143,509
India-rubber manufactures		910,763
Railway Carriages, Trucks, &c.		1,038,736
Cement		811,000
Chemicals and dye-stuffs		1,945,574
Coals		10,022,496
Naphtha, and similar products		857,243
Corn, grain, and meal		329,250
Cotton yarn		11,865,294
Cotton manufactures—		
" White or plain	£30,565,477	
" Printed, &c.	17,706,137	
" Lace, &c.	2,376,837	
" Stockings, &c.	519,346	
Sewing Cotton	2,365,998	
Hosiery and small wares	1,572,557	
Total of all cotton manufactures, &c.		55,111,593
Earthen and china ware		1,838,163
Furniture, cabinet, and upholstery		649,658
Herrings		1,521,891
Glass, plate, flint, bottles, &c.		966,211
Haberdashery, &c.		2,308,939
Hardware and cutlery		2,851,920
Hats		1,111,546
Implements and tools of industry		876,490
Leather, tanned, unwrought		1,701,511
" Boots, &c.		2,307,618
Linen manufactures		4,961,093
" Yarn		986,538
Jute manufactures, including yarn		2,176,387
Manures, including chemical manures		1,726,993
Medicines, drugs, &c.		842,725
Oil, seed		1,534,747
Painters' colours and materials		1,222,888
Paper and stationery		2,435,909
Pickles, vinegar, confectionery, &c.		1,324,625
Skins and furs of all sorts		840,784
Soap		472,438
Spirits		872,338
Sugar, refined		762,183
Steam-engines		3,724,799
Machinery (not steam-engines)		7,362,070
Other iron and steel manufactures, including raw material		21,710,738
Copper, brass, lead, tin, zinc, &c.		4,455,405
Telegraphic wires and apparatus		770,054
Silk manufactures, yarn, &c.		2,334,431
Wool, sheep and lambs'		933,612
Woollen and worsted yard		4,382,898
" manufactures		18,847,053

There are in England, including "Her Majesty's" (Master, the Earl of Coventry), of which there are 40 couples, the kennels being at Ascot Heath, 12 packs of Staghounds, containing between them 299 couples of hounds; besides two packs in Ireland, with 70 couples. The following are the Masters, the Kennels, and the numbers of the principal packs of Staghounds (with over 20 couples each):—

Pack.	Couples.	Master.	Kennels.
County Down	35	Capt. R. W. B. Ker, M.P.	Montalto, Ballinahinch, county Down.
Devon and Somerset	26	Viscount Ebrington, M.P.	Exford, Minehead, Somerset.
Enfield Chase		Colonel A. P. Somerset	Enfield Court, Middlesex.
Mid Kent	23	Mr. Herbert Leney	Waterringbury, near Maidstone.
Norfolk	25	Mr. R. A. Barkley	Palgrave, Diss.
Rothschild's (Lord)	30	Lord Rothschild	Ascott, Leighton Buzzard.
Surrey	36	Mr. Nickalls	Nutfield, Redhill, Surrey.
Ward Union	35	Committee	Ashbourne, county Meath.

Of Foxhound packs, there are no less than 156 in England and Wales, containing 5,925 couples of hounds; in Scotland, eight packs, with 289 couples; and in Ireland, 18 packs, with 635 couples. The following are the packs of Foxhounds containing 50 couples of hounds or more:—

Pack.	Couples.	Master.	Kennels.
Albrighton	50	Sir T. F. Boughey, Bart.	Whiston Cross, Shiffnal.
Atherstone	54	Mr. W. E. Oakeley	Witherley, Atherstone, Warwickshire.
Badsworth	58	Mr. C. B. E. Wright	Badsworth, Pontefract.
Beaufort's (Duke of)	75	Duke of Beaufort, K.G.	Badminton, Wilts.
Bedale	50	Mr. G. W. Elliott	Low St., Bedale, York.
Belvoir	62	Duke of Rutland, K.G.	Belvoir Castle, Grantham, Lincoln.
Berkeley	60	Lord Fitzhardinge	Berkeley Castle, Gloucestershire.
Bicester and Warden Hill	55	Lord Chesham	Stratton Audley, Bicester, Oxon.
Blackmoor Vale	71	Mr. M. Guest	Charleston Horethorne, Sherborne, Dorset.
Bramham Moor	50	Mr. G. L. Fox	Bramham Park, Tadcaster.
Brocklesby	55	Earl of Yarborough	Brocklesby Park, Uiceby, Lincoln.
Burton	50	Mr. R. E. Wemyss	Reepham, Lincolnshire.
Cottesmore	58	Mr. W. Baird	Barleythorpe, Oakham, Rutland.
Craven	60	Sir R. F. Sutton, Bart.	Walcot, Hungerford.
Crawley and Horsham	50	Col. A. M. Calvert	West Grinstead, Sussex.
Croome	50	Mr. E. Walter Greene	Kynnersley, Severn Stoke, Worcester.
Essex	50	Mr. L. W. Arkwright	Harlow, Essex.
Essex Union	50	Mr. P. A. W. Carnegie	Billericay, Essex.
Fitzwilliam, The	54	Hon. T. W. Fitzwilliam	Milton, near Peterborough.
Galway's (Lord)	55	Lord Galway	Grove, Retford, Nottinghamshire.
Garth's (Mr.)	60	Mr. T. Garth	Haines Hill, Twyford, Berkshire.
Goodwood	61	Earl of March	Goodwood.
Grafton	53	Lord Penrhyn	Wakefield Lawn, Stony Stratford, Bucks
H. H. (Hampshire)	55	Mr. A. H. Wood	Ropley, Alresford.
Hambledon	50	Mr. W. Long	Droxford, Bishop's Waltham, Hampshire.
Hertfordshire	54	Captain W. Peacocke	Kenesbourne Green, Luton.
Heythrop	55	Mr. A. Brassey	Chipping Norton, Oxon.
Holderness	51	Mr. A. Wilson	Etton, near Beverley.
Meynell	75	Mr. R. C. Pole & Mr. Bass, M.P.	Sudbury, Derbyshire.
North Cheshire	57	Captain E. P. Yates	Forest Kennels, Northwich.
North Staffordshire	56	Marquis of Stafford	Trentham, Stoke.
North Warwickshire	50	Mr. F. Lort Phillips	Kenilworth.
Oakley	58	Mr. T. B. Miller	Milton Ernest, Bedford.
Old Berkeley	56	Mr. H. Cox	Chorley-Wood Common, Rickmansworth.
Old Berkshire	50	Col. Van de Weyer	Kingston, Abingdon.
Percy's (Earl)	50	Earl Percy	Greenrigg, Lesbury, Northumberland.
Petworth	50	Lord Leconfield	Petworth Park, Sussex.
Portsmouth's (Earl of)	54	Earl of Portsmouth	Eggesford, N. Devon.
Puckeridge	56	Mr. F. C. Swindell	Braughing Ware, Herts.
Pytchley	55	Mr. H. Langham	Brixworth, Northampton.
Quorn	55	Captain Warner	Quorndon, Loughborough.
Rufford	50	Mr. T. H. Bayly	Rufford, Ollerton, Newark.
South Berks	70	Mr. J. Hargreaves	World's End, Reading.
Southdown	55	Hon. C. Brand	Ringmer, Lewes, Sussex.
Southwold	50	Mr. E. P. Rawnsley	Belchford, Horncastle, Lincolnshire.
South Notts	50	Earl of Harrington	Gedling, Notts.
Tynedale	50	Mr. J. C. Straker	Stagshaw, Corbridge, North.
Vale of White Horse	55	Mr. C. A. Hoare	Cricklade, Wilts.
Warwickshire	53	Lord Willoughby de Broke	Kineton, Warwick.
West Kent	55	Hon. R. Nevill	Warren House, Otford, Sevenoaks.
Wynnstay	50	Sir H. W. Wynn, Bart.	Wynnstay, Ruabon.
York and Ainsty	50	Mr. E. Lycett Green	Acomba, York.
Zetland (Earl of)	55	Earl of Zetland	Aske, Richmond, Yorkshire.
IRELAND.			
Kildare	53	Major R. St. L. Moore	Jigginstown, Naas, county Kildare.
Limerick Co.	50	Mr. J. G. Gubbins	Bruree, Kilmallock, county Limerick.
Meath	70	Mr. J. O. Trotter	Nugentstown, Kells, county Meath.
SCOTLAND.			
Earl of Eglinton's	50	Earl of Eglinton	Eglinton Castle, Irvine, Ayr.

Besides Foxhounds, there are 118 packs of Harriers and Beagles in England and Wales, with 1,770 couples, 35 packs in Ireland, with 573 couples; and four packs in Scotland, with 70 couples.

This gives a total of over 19,000 hounds maintained in the United Kingdom exclusively for hunting purposes.

CLOSE SEASON FOR GAME, WILD BIRDS, &c.

The following Table gives the "close" time for different kinds of Game for England, Scotland, and Ireland, during which it is illegal to pursue the game mentioned, all dates inclusive:—

Game.	England.	Scotland.	Ireland.
Black Game or Heath Fowl.	11th Dec. & 19th Aug., 11th Dec. & 31st Aug., in Somerset, Devon, and New Forest.	11th Dec. & 19th Aug.	11th Dec. and 19th Aug.
Bustard....	2nd Mar. & 31 Aug.	None.	11th Jan. & 31st Aug.
Deer, Male .	None.	None.	1st Jan. & 9th June.
,, Fallow	None.	None.	Michaels. & Dec. 31.
Grouse or Red Game	11th Dec. & 11th Aug.	11th Dec. & 11th Aug.	11th Dec. & 11th Aug.
Hare	None.	None.	21st Apr. & 11th Aug.
Heath or Moor Game	None.	As "Muir-fowl."	11th Dec. & 11th Aug.
Landrail ..	As "Wild Birds."	As "Wild Birds."	11th Jan. & 19th Sep.
Muirfowl, or Ptarmigan	None.	11th Dec. & 11th Aug.	11th Dec. & 19th Aug.
Partridge ..	2nd Feb. & 31st Aug.	2nd Feb. & 31st Aug.	11th Jan. & 19th Sept.
Pheasant ..	2nd Feb. & 30th Sept.	2nd Feb. & 30th Sept.	2nd Feb. & 30th Sep.
Quail.....	As "Wild Birds."	As "Wild Birds."	11th Jan. & 19th Sep.

It is unlawful to kill pheasants, partridges, grouse, moor game, or hares on a Sunday or Christmas Day.

In England hares, rabbits, woodcock, snipe, quail, landrail, and heath or moor game (and the eggs of swan, wild duck, teal, and widgeon) are protected under the Game Laws, though no close-time is fixed for them by those laws. In Scotland the same remarks apply to deer and hares, to the first four birds, and to wild duck; in Ireland to all these five birds, with the further addition of widgeon, teal, and plover. The close-time for these birds (except quail and landrail in Ireland, for whose close-time see above) is, under the Wild Birds' Protection Act, 1880, from 2nd March to 31st July, both inclusive, throughout the United Kingdom, except the Island of St. Kilda. The penalty for killing any wild bird in such close-time, or for selling or having in possession between the 16th March and the 31st of July, both inclusive (unless the killing can be proved to have occurred at a time and place to which the Act does not apply), is a reprimand and costs for the first offence, and 5s. and costs for each bird for every subsequent offence. In the case, however, of the undermentioned birds, the penalty is £1 for each bird for each offence:—

American quail.	Colin.	Dotterell.
Auk.	Cornish chough.	Dunbird.
Avocet.	Coulterneb.	Dunlin.
Bee-eater.	Cuckoo.	Eider-duck.
Bittern.	Curlew.	Fern-owl.
Bonxie.	Diver.	Fulmar.
Gannet.	Owl.	Sheldrake.
Goatsucker.	Ox-bird.	Shoveller.
Godwit.	Oyster-catcher.	Skua.
Goldfinch.	Peewit.	Smew.
Grebe.	Petrel.	Snipe.
Greenshank.	Phalarope.	Solan Goose.
Guillemot.	Plover.	Spoonbill.
Gull (except Black-backed).	Ploverspage.	Stint.
	Pochard.	Stone Curlew.
Hoopoe.	Puffin.	Stonehatch.
Kingfisher.	Purre.	Summer snipe.
Kittiwake.	Razorbill.	Tarrock.
Lapwing.	Redshank.	Teal.
Lark.	Reeve or Ruff.	Tern.
Loon.	Roller.	Thicknee.
Mallard.	Sanderling.	Tystey.
Marrot.	Sandpiper.	Whaup.
Merganser.	Scout.	Widgeon.
Murre.	Sealark.	Wild duck.
Night-hawk.	Seamew.	Willock.
Night-jar.	Sea parrot.	Wimbrel.
Nightingale.	Sea swallow.	Woodcock.
Oriole.	Shearwater.	Woodpecker.

Offenders refusing their names and addresses are liable to a further penalty of 10s.

The Secretary of State in Great Britain, or the Lord Lieutenant in Ireland, has power to vary or abolish the close-time for any bird or birds in any county by order to be published in the *Gazette*. Such orders have been made for the county of Lincoln, the Isle of Ely, the Liberty of Peterborough, and the county of Huntingdon, where the close-time is from 15th March to 31st August; for Essex, from 15th March to 1st August; and for Northumberland from 1st March to 11th August. Within the limits of the Exe Fishery District in Devonshire, shags or cormorants are exempted from the close season.

The Act does not apply to any person shooting on his own land, or authorizing anyone so to shoot, any wild bird not included in the above list.

SEASONS FOR HUNTING AND GROUND GAME SHOOTING.

There is no statutory close-time for fox hunting or rabbit shooting, nor is there, except in Ireland, for deer or hares; but there is an "unwritten law" which the sportsman respects as much as he does the enactments of Parliament. November 1st is the recognized date for the opening of the fox hunting season, which continues till the following April. Otter hunting lasts from mid-April to mid-September. The period for deer hunting or stalking varies from about Aug. 12 to Oct. 12 for stags, and from Nov. 10 to the end of March for hinds. Hares are in *best* condition in January, February, and March.

CLOSE-TIME FOR SALMON.

I. England and Wales.

Under the Salmon Fishery Acts, salmon—(the word "Salmon" includes all migratory *salmonidæ*)—are protected, and a close-time is fixed for England and Wales, including the Esk in Dumfries, during which fishing for salmon is prohibited. The close-time for nets begins on 1st September, and ends on 1st February; and for rods it begins on 2nd November, and ends on 1st February. The commencement and termination of the close season may be varied by a bye-law by the local boards of conservators (see p. 594), but it must never begin for nets later than

1st November, nor be less than 154 days. For rod and line a minimum close-time is 92 days, which must commence not later than 1st Dec.

For putts and putchers the annual close season is from 1st September to 1st May, which cannot be altered by bye-law.

The following are the cases in which these dates have been varied by bye-law:—

Close-time for	Nets.	Rods.
Avon & Stour.	15 Aug. to 1 Feb.	2 Oct. to 1 Feb.
Taf and Ely ..	31 Aug. to 30 Apr.	15 Nov. to 30 Apr.
Teify	—	20 Oct. to 1 Feb.
Ayron	—	15 Nov. to 14 Feb.
Yorkshire	—	16 Nov. to 28 Feb.
Dart & Exe ..	1 Sept. to 1 Mar.	2 Nov. to 1 Mar.
Teign	,, to 2 Mar.	21 Nov. to 2 Mar.
Towy	,, to 15 Mar.	2 Nov. to 15 Mar.
,, (Between Carmarthen Bar and St. Govin's Head)	,, to 30 Ap.	,, ,,
Ouse (Sussex).	,, to 1 Apr.	1 Nov. to 1 Apr.
Usk & Rumney	,, ,,	2 Nov. ,,
Stour (Kent)..	,, to 1 May.	,, to 1 May.
Severn (in Borough of Shrewsbury) only	,, to 15 Jun.	—
Lune (tidal) ..	8 Sep. to 1 Mar.	15 Nov. to 1 Mar.
,, (non-tidal)	15 ,, ,,	
Eden (below Old Sandsfield)..	10 Sep. to 10 Feb.	10 Sep. to 10 Feb.
,, rest of district	—	16 Nov. to 15 Feb.

Coquet.....	,, to 25 Mar.	,, to 31 Jan.
W. Cumb'rland	,, to 31 Mar.	14 Nov. to 10 Mar.
Conway	,, to 30 Apr.	15 Nov. to 30 Apr.
Ogmore	,, ,,	,, ,,
Clwyd & Elwy	,, to 15 May	,, to 15 May
Axe	20 Sep. to 30 Apr.	20 Nov. to 30 Apr.
Taw & Torridge.	21 Sep. to ,,	16 Nov. to 31 Mar.
Avon & Erme..	1 Nov. to 4 Apr.	15 Nov. to 4 Apr.
Camel	,, ,,	1 Dec. to 30 Apr.
Fowey*	,, ,,	,, ,,

No fresh salmon may be sold between 3rd September and 1st Feb., except such as can be proved to come from parts beyond the seas, or to have been taken, if in the United Kingdom, in legal netting season and in legal manner. Salmon, dried, pickled, or cured abroad, or, if within the United Kingdom, between 1st Feb. and 3rd November, may be sold after that date. The onus of proof that the fish were caught out of the United Kingdom, or, if within the Kingdom, that they were caught during the legal netting season by legal means, or that, if pickled, they were pickled between 1st Feb. and 3rd Nov., lies with the person selling or exposing for sale. The exportation of salmon is prohibited between 3rd September and 30th April, unless it can be proved that the salmon exported or entered for exportation was caught during the time at which its sale would be legal in the United Kingdom: the *onus probandi* lies with the person exporting.

The capture and sale of "unclean" salmon, *i.e.*, salmon recently spawned or full of spawn, are prohibited under heavy penalties. Roe may not be used as a bait in salmon angling.

A weekly close season, during which net-fishing for salmon is prohibited, is fixed in England from noon on Saturday to 6 a.m. on Monday. This close-time may be varied by the Local Conservancy Boards, provided it is not less than 42 hours, nor more than 48 hours, and that it is fixed between Friday at midnight and noon on Monday.

II. Scotland.

In Scotland the annual close-time must not be less than 168 days. It is, for nets, from 27th August to 10th February, and for rods, from 1st November to 10th February, except as follows:—

Close-Time for	Nets.	Rods.
Add, Aray, Eckaig, N. & S. Esk, Fyne, Ruel, Shira.	1 Sept. to 15 Feb.	1 Nov. to 15 Feb.
Beauly, Dunbeath, Forth, Lossie, Nairn, Ness, Spey, Kyle of Sutherland.	27 Aug. to 10 Feb.	16 Oct. to 10 Feb.
Bervie, Carradale, Fleet, Garnock, Girvan, Inner, Iorsa, Irvine, Laggan, Luce, Sorn, Stinchar, Ugie, Ythan, and rivers of Orkney, Harris, & Uist.	10 Sept. to 24 Feb.	1 Nov. to 24 Feb.
Annan, Nith.	ditto	15 Nov. to 24 Feb.
Rivers of Shetland	ditto	16 Nov. to 30 Jan.
Urr	ditto	30 Nov. to 24 Feb.
Rivers of Bute	1 Sept. to 15 Feb.	16 Oct. to 15 Feb.
Thurso.....	27 Aug. to 10 Feb.	15 Sept. to 10 Jan.
Halladale, Strathy, Naver, Borgie, Hope.	Do. do.	11 Sept. to 11 Jan.
Tay*.....	21 Aug. to 4 Feb.	11 Oct. to 4 Feb.*
Findhorn	27 Aug. to 10 Feb.	11 Oct. to 10 Feb.
Tweed.....	15 Sept. to 14 Feb.	1 Dec. to 31 Jan.

The weekly close-time for nets is between 6 p.m. Saturday and 6 a.m. Monday; and, for rods, on Sundays. The Esk, in Dumfries, is included under the English Salmon Acts.

III. Ireland.

In Ireland the close-time for salmon applies also to trout. The netting close-time must never be less than 168 days. Many variations of the close season have been made, of which it is impossible to specify all the details here; the following list, however, shows the general close-time in force in the different districts. With

* In Fowey below Lostwithiel only.

* R. Earn close-time for rods is from 1 Nov. to 4 Feb.

the exception of certain tributaries in some of the districts, the close-time is as follows (all dates inclusive). The second column shows the point of delimitation on the coast between the various districts, which include all rivers, &c., within their respective coast-limits.

District.	Coast Limits.	Cl.-T. Net.	Cl.-T. Rod
Dublin ..	Skerries ..... to	16 Aug. to 1 Feb.	1 Nov. to 31 Jan.
Wexford ..	Wicklow..... to	16 Sept. to 19 Apr.	1 Oct. to 14 Mar.
Waterford	Kiln Bay..... to	16 Aug. to 31 Jan.	1 Oct. to 31 Jan.
Lismore ..	Helvick Head to	16 Aug. to 31 Jan.	31 Oct. to 31 Jan.
Cork.....	Ballycotton H. to	16 Aug. to 14 Feb.	13 Oct. to 14 Feb.
Skibbereen	Galley Head .. to	16 Sept. to 30 Apr.	1 Nov. to 16 Mar.
Bantry ..	Mizen Head .. to	1 Oct. to 30 Apr.	1 Nov. to 16 Mar.
Kenmare	Crow Head .. to	16 Sept. to 31 Mar.	1 Nov. to 31 Mar.
Killarney	Lamb Head .. to	1 Sept. to 30 Apr.	31 Oct. to 30 Mar.
Limerick..	Dunmore Head to	1 Aug. to 11 Feb.	31 Oct. to 31 Jan.
Galway ..	Hags Head .. to	1 Sept. to 15 Feb.	16 Oct. to 31 Jan.
Ballinakill	Slyne Head .. to	1 Sept. to 15 Feb.	1 Nov. to 31 Jan.
Bangor ..	Pigeon Point.. to	1 Sept. to 15 Feb.	1 Oct. to 30 Apr.
Ballina ..	Benwee Head to	13 Aug. to 15 Mar.	16 Sept. to 31 Jan.
Sligo.....	Coonamore .. to	1 Aug. to 16 Jan.	1 Oct. to 31 Jan.
Ballyshannon	Mullaghmore to	19 Aug. to 1 Mar.	10 Oct. to 28 Feb.
Letterkenny	Rossan Point to	20 Aug. to 3 Feb.	2 Nov. to 31 Jan.
Londonderry	Malin Head .. to	1 Sept. to 14 Apr.	16 Oct. to 28 Feb.
Coleraine	Downhill..... to	20 Aug. to 3 Feb.	20 Oct. to 15 Mar.
Ballycastle	Portrush..... to	15 Sept. to 17 Mar.	2 Nov. to 31 Jan.
Dundalk..	Donaghadee .. to	20 Aug. to 31 Mar.	1 Nov. to 28 Feb.
Drogheda	Clogher Head	17 Aug. to 30 Jan.	30 Sept. to 30 Jan.

In Ireland the weekly close-time is fixed at 48 hours, from 6 a.m. Saturday till 6 a.m. Monday.

CLOSE-TIME FOR TROUT AND CHAR.

The capture of trout and char in England and Wales is prohibited between 2nd October and 1st February, except in Norfolk and Suffolk, where, under a local Act (the Norfolk and Suffolk Fisheries Act, 1877), the conservators have fixed the close-time for trout, for nets only, at from 10th September to 25th January; and except in the Thames, when the close season is from 10 Sept. to 31 March.

By an Act passed in 1876, the trout and char close-time may be varied by bye-law by local boards of conservators, so, however, that it does not commence earlier than the 2nd September nor later than the 2nd November, and is not less than 123 days. The following dates have been fixed under this Act. In the districts marked * the close-time, as altered, applies only to trout.

*Eden ..	1 Sept. (rods 16 Oct.) to last Feb.
Severn ..	in boro' of Shrewsbury, 1 Sept. to 15 June (for nets only).
*Taf, Ely	20 Sept. to 1 Feb. (for rods and nets).
*Cleddy ..	29 Sept. to 1 Mar. (ditto)
*Ogmore .	30 Sept. to 28 Feb. (ditto)
*Teign ..	1 Oct. to 2 March (ditto)
*Ayron ..	1 Oct. to 15 Mar. (ditto)
Derwent (Cumb.)	1 Oct. to 10 Mar. (ditto) Except Char in Crummock & Buttermere, 1 Nov. to 30 June.
*W. Cumberland.	1 Oct. to 31 March (for nets). 1 Oct. to 10 March (for rods).
*Avon & Erme ..	1 Oct. to 28 Feb. (rods and nets).
*Wye....	2 Oct. to 1 Mar. (rods and nets).
Seiont, Gwrfai, &c.	Trout, 2 Oct. to 1 Mar. (rods & nets). ,, in Rs. Braint and Cefni, 15 Oct. to 1 March. Char, 22 Oct. to 1 Mar. (rods & nets).
*Kent ..	2 Oct. to 1 Mar. (for rods and nets).
*Dart....	2 Oct. to 28 Feb. (ditto)
*Dee	14 Oct. to 14 Feb. (for rod & line only).
*Coquet..	1 Nov. to 3 Mar. (for rod & line only).

In Scotland there is no close-time for trout and char. In Ireland the close-time for trout is the same as for salmon. This may be altered, but not shortened, by the Inspectors. For pollen, however, the close-time is fixed by the Pollen Fishery (Ireland) Act, 1881, from 1st November to 31st January.

CLOSE-TIME FOR FRESHWATER FISH.

By the Freshwater Fisheries Act, 1878, a close-time for "freshwater fish" (which are defined for this purpose to include all kinds of fish, other than pollen, trout, and char, which live in fresh-water, except those kinds which migrate to or from the open sea) is fixed from 15th March to 15th June, both inclusive, for all parts of England and Wales except Norfolk and Suffolk. The penalty for taking or selling freshwater fish in that period is £2 for a first, and £5 for a subsequent conviction. The close season, however, does not apply to fish taken in private waters by leave of the owner, in public waters by leave of a Board of Conservators, or taken (with the leave of the owner if in private waters) for bait or for scientific purposes. Fishery districts may be wholly or partially exempted from this close-time with the sanction of the Secretary of State, and the Avon & Stour, Avon & Erme, Wye, Eden, and Towy fishery districts have been so exempted; also the Kent & Levon, Severn & Yorkshire districts, as regards pike, the Usk as regards eels, and certain parts of the Severn as regards other fish than grayling. In Norfolk and Suffolk close-times have been fixed for various fish under the Norfolk and Suffolk Fisheries Act, 1877, from March 1 to June 30. By an Act of 1886 the close season for freshwater fish above referred to is declared not to apply to fishing for eels, otherwise than by angling. But for these fish a separate close-time exists (so far as fixed engines in salmon rivers are concerned) in England from January 1 to June 24; in Ireland, with one or two exceptions, from January 11 to June 30. In the Severn, elvers, or the fry of eels, are protected between 1 Jan. and the last day of Feb., and between 26 April and 24 June. In

the Thames, between 1 March and 31 May, eels may not be taken by any other means than by weels, bucks, or baskets.

PROTECTION OF CRABS AND LOBSTERS.

Under the Fisheries (Oyster, Crab, and Lobster) Act, 1877, it is prohibited to buy or sell crabs under 4¼ inches, measured across the largest diameter of the back, or lobsters under 8 inches, measured from tip of beak to end of tail when spread out flat.

CLOSE-TIME FOR OYSTERS.

By the Fisheries (Oyster, Crab, and Lobster) Act, 1877, a close-time for "Deep-Sea Oysters" is fixed from the 15th June to 4th August; and for all other kinds of oysters, from 14th May to 4th August. This Act applies to England and Scotland, but not to Ireland. By the Sea Fisheries Act, 1868, fishing for oysters is prohibited from the 16th June to the 31st August inclusive, in that part of the English Channel comprised between a line drawn from the North Foreland Light to Dunkirk, and a line drawn from the Land's End to Ushant—the territorial seas of England and France alone being excepted. This close-time, however, cannot be enforced till the Convention between England and France, included in the Act, is ratified; and till that is done, the Convention concluded in 1839, which prohibits oyster-fishing in those limits from 1st May to 31st August, is to remain in force so far as French fishermen are concerned. In Ireland, the Act 5 & 6 Vict. cap. 106, prescribes that no oysters may be taken between 1st May and 1st September, though this close season has been varied by the Inspectors of Fisheries in the following cases:

Tralee Bay.....	11th Mar. to 31st Oct.
Galway Bay.....	1st Jan. to 30th Nov.
Strangford Lough	1st Mar. to 31st Aug.
Achil Sound, Clew Bay	2nd April to 30th Sept.
Sligo, Ballisodare and Drumcliffe Bays ..	30th April to 1st June.

Taking oysters from licensed beds is made larceny.

Licences for Shooting and Fishing.

Game and Gun Licences.—A licence is required by every person who hunts, shoots, or takes game, except persons (in Great Britain) taking woodcock and snipe with nets or springes; rabbit-warren proprietors, or others, on enclosed land, killing rabbits; persons hunting deer, or hares, with hounds; owners or occupiers, or their servants, killing deer on their own land; beaters and others, not holding guns, attending holders of game licences. Occupiers of enclosed land, or owners, having the right to kill game, may themselves kill hares, or authorize others to do so, without a licence, but such authority must be limited to one person at a time in any one parish, and must be registered with the clerk of the Justices of the Petty Sessional Division in which the land is situate. Even when the quarry is not what is legally known as "game," a "gun" licence is necessary. A game licence, however, covers a gun licence, and soldiers, sailors, volunteers, or constables on duty, or at practice, or occupiers of land, or their servants, killing or scaring birds or vermin need not take out a gun licence. The rates of duty are given, at p. 368.

Salmon Licences.—It is not so generally known that in salmon fishery districts in England and Wales, and in Ireland, it is necessary to take out a licence to fish for salmon. In Scotland no such licence is needed. A licence is available only in the district, and for the season, in which it is issued. The rates on nets, and other like instruments, range from £20 downwards in England and Wales, and from £30 downwards in Ireland. In the latter country the rate on draft nets, the kind most commonly used, is £3; in England and Wales it varies from about £5 to £2. The rate of licence duty on a rod-and-line is £1 in all parts of Ireland. In England and Wales different rates are charged in different districts, as follows (an asterisk signifies that lower rates of duty are chargeable for short periods, or for certain parts of the district):—

*Derwent.....	20/-
*Lune	20/-
Ribble	20/-
*Dee	20/-
Clwyd & Elwy..	20/-
*Conway	20/-
*Dovey	20/-
*Ayron	20/-
*Teify	20/-
Usk	20/-
*Wye.....	20/-
Avon and Erme	20/-
*Dart.....	20/-
*Teign	20/-
Exe.....	20/-
Axe.....	20/-
Frome	20/-
Avon and Stour	20/-
Ouse (Sussex)	20/-
Yorkshire.....	20/-
Tees	20/-
*Tyne	20/-
*Eden	21/-
*Seiont	21/-
Dwyfach	21/-
Towy.....	21/-
*Ogmore	21/-
*West Cumberland	10/6
*Kent and Leven ..	10/6
Taff and Ely	10/6
Rumney	10/6
Taw and Torridge ..	10/6
Cleddy	10/-
Severn	10/-
Fowey	10/-
Trent.....	10/-
Esk (Yorkshire) ..	10/-
Avon, Brue, & Parret	7/6
Tamar and Plym ..	7/6
Rother	5/-
Wear	5/-
Coquet	5/-

Trout Licences.—In some districts in England and Wales licences for fishing for trout are necessary. A licence to fish for salmon covers the right to fish for trout, but persons not holding a salmon licence, and fishing for trout or char, exclusively of salmon, in the following districts, must take out a licence for the former:—In the Taff and Ely, Rumney, Usk, Wye, Severn, Stour, Wear, and Coquet the duty is 1*s.* on each rod and line. In the Yorkshire Esk, 1*s.* 6*d.* In the Eden*, Kent, Teify, Towy, Avon, Brue, Parret*, Dart, and Tyne*, 2*s.* 6*d.* In the Camel and Fowey, 3*s.* In the Cleddy*, 3*s.* 6*d.* In the Clwyd and Ebury*, 4*s.* 6*d.* In the Derwent* (Cumb.), Seiont*, Ayron*, and Avon and Stour, 5*s.* In the Avon and Erme*, and Dart*, 10*s.* In those districts marked * licences for short periods are issued at lower rates. Licence duties are also payable on nets, ranging from £5 downwards. In Ireland and Scotland no trout licences are necessary.

Fishery Districts, Boards of Conservators, and Inspectors.

ENGLAND AND WALES.—The administration of the laws of close season, &c., for salmon and trout is placed by the Salmon Fishery Acts, 1861 to 1876, in the hands of local boards of conservators appointed for the purpose. By the Freshwater Fisheries Act, 1878, Fishery Districts may be formed, and Boards of Conservators appointed for waters containing trout; and by the Freshwater Fisheries Act, 1884, power is given to make Fishery Districts for freshwater fish only, and "freshwater fish" are defined for the purposes of that Act to be all fish except salmon living temporarily or permanently in fresh water. Under these various powers Boards of Conservators have been appointed for 48 Fishery Districts in England and Wales. The limits of the Fishery Districts, with the names of the clerks to the various Boards, are given in the following list:—

[The districts generally include all rivers running into the sea between the points named, and in the cases marked † also include the sea for a distance of three miles from the shore, or to the mid-channel in estuaries, where the distance is less than six miles across, as in the case of the Solway, the Bristol Channel, and the Humber.]

NAME OF DISTRICT.	COAST LIMITS OF DISTRICT.	ADDRESS OF CLERK.
†Eden	Junction of R. Esk to Skinburness Pnt	T. H. Hodgson, Carlisle.
†Derwent	Seaton to St. Bee's Head	T. C. Burn, Cockermouth.
†West Cumberland	St. Bee's Head to Haverigg Point	J. Webster, Whitehaven.
Kent and Leven	Haverigg Point to Waron	S. H. Jackson, Ulverston.
†Lune	Warton to Blackpool	T. Ball, Lancaster.
†Ribble	Blackpool to Formby Point	T. J. Backhouse, Blackburn.
Dee	East Boundary of Cheshire to Air Pnt.	G. S. Carr, Chester.
Clwyd and Elwy	Air Point to Rhos Bay	P. Browne, Rhyl.
Conway	Rhos Bay to Aber	C. T. Allard, Llanrwst.
†Seiont	Garth Point to Llanelhaiarn Pt., to Twyn y Parc Pt., in Anglesey	R. J. Davids, Carnarvon.
†Dwyfach	Llanelhaiarn Point to Criccieth	T. Roberts, Portmadoc.
Dovey	Criccieth to Cynvelin	W. R. Davies, Dolgelley.
†Ayron	Carreg Tipog to New Quay Head	T. H. Maddy, Aberayron.
†Teify	New Quay Head to Dinas Head	H. W. Howell, Aberayron.
Cleddy	Dinas Head to St. Govin's Head	R. T. P. Williams, Haverfordwest.
†Towy	St. Govin's Head to Worm's Head	W. M. Griffiths, Carmarthen.
†Ogmore	Porthcawl to Cold Knap	S. H. Stockwood, Bridgend.
†Taff and Ely	Cold Knap to Bute Dock	R. Y. Evans, Cardiff.
†Runney	Bute Dock to Ty ton y Pill	Colonel Lyne, Newport.
†Usk	Ty ton y Pill to Collister Pill	C. R. Lyne, Newport.
†Wye	Collister Pill to Lydney Pill	E. Owen, Builth.
†Severn	Lydney Pill to Avon Battery	J. Stallard, junior, Worcester.
Avon, Brue, & Parret	Avon Battery to County Boundary	T. F. Barham, Bridgwater.
Taw and Torridge	West Boundary of Somerset to ditto of Devon	W. H. Toller, Barnstaple.
Camel	West Boundary of Devon to Peel Pt.	J. R. Collins, Bodmin.
Fowey	Peel Point to Ram Head	W. Pease, Lostwithiel.
Tamar and Plym	Ram Head to Stoke Point	C. V. Bridgman, Tavistock.
Avon and Erme	Stoke Point to Start Point	G. R. Lidstone, Kingsbridge.
Dart	Start Point to Hope Ness	A. Pike, Totnes.
Teign	Hope Ness to Clerk Rock	S. Hacker, Newton Abbot.
Exe	Clerk Rock to Ottermouth	B. J. Ford, Exeter.
Otter	Ottermouth to Beer Head	F. R. Jeffery, Ottery St. Mary.
Axe	Beer Head to Portland Bill	W. Forward, Axminster.
Frome	Portland Bill to Hampshire Boundary	P. E. L. Budge, Wareham.
Avon and Stour	W. Boundary of Hants to Hurst Castle	R. D. Sharp, Christchurch.
Ouse (Sussex)	Portobello to Seaford Head	F. Holman, Lewes.
Rother	Fairlight to Dungeness	T. J. Smith, Rye.
Stour (Kent)	North to South Foreland	F. G. Haines, Canterbury.
†Ouse and Nene	West Boundary of Norfolk to Lapwater Hall	—
Welland	Lapwater Hall to Western Point	S. B. Sharpe, Market Deeping.
†Witham	Western Point to Gibraltar	H. Snaith, Boston.
†Trent	Ingoldnell's Point to Trent Falls	C. K. Eddowes, Derby.
†Yorkshire	Trent Falls to Thorney Beck	J. H. Phillips, Scarborough.
†Esk (Yorkshire)	Thorney Beck to Skinningrove Beck	W. Brown, Whitby.
Tees	Skinningrove Beck to Hardwick Hall	M. B. Dodds, Stockton.
†Wear	Hardwick Hall to Souter Point	C. Smart, Sunderland.
†Tyne	Souter Point to Newbiggin Point	R. Gibson, Hexham.
†Coquet	Newbiggin Point to Hawick Burn	C. Verey, Alnwick.

There are also certain bodies created by local statutes, having authority over the fisheries, *e.g.*, the Thames Conservancy Board, the Lee Conservancy Board, the Conservators of the Medway, and the Conservators of the Norfolk and Suffolk Fisheries.

These Boards have power to make bye-laws, not only for the regulation of salmon-fishing, but also, during the salmon close-time, for the regulation of other kinds of fishing which are prejudicial to the Salmon Fisheries; and heavy penalties are fixed for infractions of such bye-laws. They also have power to make bye-laws for the protection of the freshwater fisheries for trout and "coarse" fish. They are also empowered to issue licences for fishing for salmon, trout, and char (see p. 593). The exercise of these powers is subject to the approval of the Board of Trade as the "Central Authority," under whom three Inspectors of Fisheries are appointed: viz.:—

Chief Inspector, A. D. Berrington.

Inspectors: C. E. Fryer and H. N. Malan.

SCOTLAND.—In Scotland there are 123 Fishery Districts, nearly each separate river forming a district of itself, but only 31 Boards of Conservators. The powers of these Boards are limited to the Salmon Fisheries; the administration of the law being subject to the general supervision of the Fishery Board of Scotland, acting under the Secretary for Scotland.

Inspector of Salmon Fisheries, A. Young, III, George Street, Edinburgh.

IRELAND.—In Ireland there are 22 districts, embracing between them the whole country, each with a separate Board of Conservators. The list of districts is given at p. 592. The Inspectors of Fisheries, subject to the Lord Lieutenant, have power to make bye-laws and regulations under the Salmon Fishery Acts.

Inspectors: Sir Thos. F. Brady, Major J. Hayes, and Alan Hornsby, Dublin Castle.

Seasonable and Unseasonable Fish.

THE following table shows the periods when the different kinds of edible fish mostly in use are "in season" and "out of season."

The asterisk (*) signifies that the fish are then in their prime; the dagger (†) signifies that the fish may be obtained, but are not at their best; the double dagger (‡) signifies that it is "close-time" as fixed by statute.

(*a*) This is for sea crayfish. River crayfish can be obtained in the spring, summer, and autumn. It is a moot point whether it is legal to take freshwater crayfish from March to June.

(*b*) Foreign oysters can be sold in the close season, and are to be had almost all through the year.

(*c*) In the close season salmon from Holland and also from certain British rivers where fishing is permitted later in the year than usual, are largely sold.

Tithe Commutation.

The following table gives the average prices of wheat, barley, and oats per imperial quarter every year since the passing of the Tithe Commutation Act. The prices upon which the Act was based being: wheat, 7*s.* 0½*d.* per bushel; barley, 3*s.* 11½*d.*; and oats, 2*s.* 9*d.*; or per quarter, 48*s.* 6*d.*, 32*s.* 10*d.*, and 23*s.* 1*d.* The average for the past seven years is taken up to the Thursday next before Christmas Day, is taken every year, and the result published in January. The average Tithe Rent Charge for the whole fifty years is £102 9*s.* 9½*d.*, and for the past ten years, £103 13*s.* 5¾*d.*

Experiments with various electric and compressed air motors continue to be made, but so far have failed to prove that they can compete with horse and steam power.

The growth of tramway enterprise in 1885 was not so important as in previous years. The reason for this is probably due to the investing public having been discouraged by the notorious manner in which some of the more recent steam tramways have been overburdened with capital by their promoters. The importance of tramways in the metropolis is now shown by the fact that in 1885 the various London companies carried a grand total of 126,000,000 passengers, and secured a gross revenue of nearly 800,000.

RAILWAYS AND THEIR HISTORY.

The earliest reference to railways on the plan of making a distinct surface and track for wheels is found in Roger North's "Life of Lord Keeper North," where it is stated that at Newcastle-on-Tyne, in 1676, the coals were conveyed from the mines to the banks of the river "by laying rails of timber exactly straight and parallel; and bulky carts were made with four rollers fitting those rails, whereby the carriage was made so easy that one horse would draw four or five chaldrons." One hundred years afterwards—viz., about 1776—Mr. Carr constructed an iron railroad at the Sheffield Colliery.

Railways, or tramways of wood, upon which waggons were propelled by animal power, were thus in use as early as the seventeenth century, but it was not until near the beginning of the present century that iron was substituted for wood. James Watt first conceived the idea of utilizing steam for locomotion. This was probably about 1780. George Stephenson, however, was the first to introduce steam locomotive power into practical use. This was in 1825, the jubilee celebration of which event took place under the auspices of the North Eastern Railway Company at Darlington in September, 1875.

The first Act obtained for the construction of a railway was that of the Surrey Iron Railway Company in 1801, for a railway from Wandsworth to Croydon. In 1804 an Act was passed "for making and maintaining a railway or tramroad from the town of Swansea into the parish of Oystermouth, in the county of Glamorgan, and for the hauling or drawing of waggons or other carriages passing upon the said railway or tramroad with men, horses, or otherwise." The original application was for a canal, but the canal was dropped after the second reading. On the 24th February, 1804, Trevethick's patent locomotive steam engine was tried at Penydarran, near Merthyr, and conveyed along a tramroad 10 tons of bar iron,

* As a matter of printing convenience, the tables illustrating the British Railway System have been placed out of their proper position.

and about 70 persons, a distance of 9 miles. The application passed the third reading as a railway or tramroad. The word "otherwise" was evidently intended to cover the use of Trevethick's engine, and this Act may therefore be considered the first in which steam was contemplated as the motive power. The line is now known as the Swansea and Mumbles Railway. Then followed the Carmarthenshire, the Kilmarnock and Troon, the Severn and Wye, the Berwick and Kelso, the Gloucester and Cheltenham, and other small undertakings, about twenty in number altogether, with an aggregate of 250 miles, and an authorized capital somewhat under a million. It is almost unnecessary to add that animal power only was contemplated in their working. The Stockton and Darlington Act was obtained in 1821, mileage 54, and capital £102,000; and it is remarkable that, while animal power was to be relied upon for working the line, the clause in the Act states with men and horses "or otherwise." George Stephenson came upon the scene immediately after this Act was obtained, was appointed engineer of the line; and at his urgent request, Edward Pease, the promoter, applied for a new Act empowering the company to work the railway with locomotive engines. Great opposition was encountered, but the bill finally passed in 1823, when the construction of the line was rapidly proceeding. The 27th of September, 1825, was fixed upon for the opening day, and amid many prognostications of evil the programme was successfully carried out. The speed attained did not average more than five miles an hour, but the practical application of steam for traction purposes was realized. The engine used upon the occasion, driven by Stephenson himself, and named the "Locomotion," has been preserved, and is still in the workshops of the North Eastern Company. No carriages were provided for the special accommodation of passengers using the line until some weeks after the opening. This line, the germ it may be called of the railway system, proved a great success financially and otherwise. Nevertheless, the employment of locomotives remained almost unknown to the public at large until the opening of the Liverpool and Manchester line, five years later. The Monkland, opened in 1826, was really the first to follow the example of the Stockton and Darlington, and several other small lines—including the Canterbury and Whitstable, a remarkable undertaking, worked partly by fixed and partly by locomotive engines—quickly adopted the new traction power. The inauguration of the Liverpool and Manchester line in 1830, attended as it was with a tragic result, was the first to impress upon the people that a revolution in travelling had really taken place; and even then the aid of the press, powerfully and influentially invoked, failed to arouse anything in the shape of enthusiasm. Royal patronage was not bestowed upon the opening ceremony, although eagerly solicited. To the great minds of the time, however, the event assumed more than ordinary importance, and it is reported that the impression made upon Lord Brougham's contemplative mind forced a tear from his eye. The next scheme was for a line from London to Birmingham, the largest that had yet been projected. A great struggle took place with landowners and other influential personages, opposed not only to this Bill in particular, but to the introduction of railways generally. Undaunted courage and persever-

ance on the part of the promoters prevailed, and the Bill, which was rejected in 1832, passed in 1833, but not until landowners and others had been conciliated by having the price originally estimated for their land, &c., doubled and even trebled. The expenses of carrying this Bill, which was probably the most momentous parliamentary campaign in the history of railways, were over £70,000. The line was opened throughout in 1838, and the first train accomplished the distance at an average speed of over twenty miles an hour. The tide of public opinion was now fairly turned, and ran as strongly in favour of, as it had before been against, railways. The London and Greenwich, London and Southampton, the Great Western, Birmingham and Derby, Bristol and Exeter, Eastern Counties, Manchester and Leeds, Midland Counties, North Midland, South Eastern, London and Brighton, Birmingham and Manchester, and Edinburgh and Glasgow, together with a large number of small Bills, were all passed in four years from the passing of the London and Birmingham Bill, and before that line was opened. Thus in four or five years was witnessed the laying of the foundations of nearly all the existing great trunk lines of railway in this country.

The expenditure incurred in securing legislative authority to construct railways was enormous. The Parliamentary costs of the Brighton railway averaged £4,806 per mile; of the Manchester and Birmingham, £5,190 per mile; and of the Blackwall, £14,414 per mile! The solicitors' bill for the South Eastern railway contained 10,000 folios, and amounted to £240,000. These few facts, however, afford but a feeble idea of the reckless wastefulness of capital on railway undertakings. It is universally allowed that, under a better policy, not only a much better railway system might have been provided, but a saving might have been effected of at least fifty millions.

Up to 1840, inclusive, notwithstanding the delays and difficulties which surrounded railway projectors, even in the earliest stages of legislation, 299 Acts, authorizing the construction of 3,000 miles of line, had been passed. The inevitable reaction set in, and in 1841–2–3 only a few small Bills were passed by the legislature. The public mind in the mean while was greatly exercised in connection with the lines already opened. The Liverpool and Manchester, the London and Birmingham, and other leading concerns were paying ten per cent. dividends, and some of the smaller lines were yielding even larger returns. Attention was naturally drawn to the remunerative character of this class of property, and the supply of railway shares became far below the demand. Projectors came forward with abortive schemes, eager to supply a want which seemed insatiable. A flood of new projects appeared before the public, and the Legislature even, labouring apparently under the general excitement, encouraged promoters by relaxing or withdrawing the general opposition which had previously been offered. In 1844, 797 miles were authorized; in 1845, 2,883 miles; and in 1846, the prodigious total of 4,790 miles, under no less than 272 Acts, obtained parliamentary sanction. The succeeding years saw some abatement, but still there were 1,663 miles passed in 1847, and 300 in 1848. These figures illustrate the rise and fall of the great fever known as the "railway mania." At least four times as many schemes came before the credulous and overweening public as ever came to receive legislative deliberation, and between the close of the 1845 session and the opening of that for 1846, no less than 1,300 projects were brought out. It was calculated that even the small parliamentary deposits required to be lodged with each Bill would aggregate to something like sixty millions. The coolest and most practical heads were absolutely carried away in the prevailing excitement. It gradually dawned upon the minds of reflecting people, that of the £600,000,000 required, a vast proportion were mere paper projects or competitive schemes, alike unnecessary and uncalled for. At the instigation of the Government, probably, the screw was applied, the bank rate was raised from two to four per cent. within a month, the alarm spread, shares fell, and even consols dropped eight per cent. The collapse soon followed: much money was lost, and a deal of wisdom gained.

General legislation relative to railways was introduced about 1840. The lines that had been constructed previous to this were established under Special Acts. Their wonderful increase, considering the obstacles placed in their way by the aristocracy and landowners, until they saw the land and the property in the vicinity of the

lines rapidly improving in value, originated a new species of legislation. More than anything else in the nature of public or private enterprise, it was beginning to be felt that the railways were instrumental in promoting the interests not only of the rich, but perhaps even in a greater degree the interests of the community at large. The enormous development of the trade of the country was ascribed to the instrumentality of railways. It is not wonderful, therefore, that a new branch of law for their regulation was introduced. The variety and repeated alterations in the railway laws showed the difficulty of dealing with the various and often conflicting interests concerned. The Railways' Regulation Act of 1840, the first of the General Acts, provided for a month's notice being given to the Board of Trade before opening; for returns of traffic to be made by the companies, as also of accidents involving personal injury; for government inspection of works; for the approval of bye-laws, &c. Afterwards were passed Acts for their better regulation, and for the conveyance of troops, 1842, the Railways' Further Regulation Act of 1844, the Railways Clauses Consolidation Act, 1845, and the Canal and Railway Carriers Act of the same session. Then followed legislation on the leasing and sale of railways, on the gauge, on cheap trains, passenger duty, &c. In their civil and commercial importance, and the enormous interests they represented, railways soon came to occupy the attention of leading minds of the day, and an active part in their administration was shared by members of the Government and of both Houses of the Legislature. The railway interest has continued powerfully represented. At the present time about 50 members of the Upper House are upon the direction of our railways, and at least 130, or one-fifth, of the members of the House of Commons are officially connected with them. This does not, however, represent the aggregate power of the railway interests in the Legislature, for much larger numbers hold more or less a pecuniary stake in the lines.

The number of persons employed in working the railways of the United Kingdom is about 370,000. This does not include those employed in the construction of new lines. The numbers dependent upon those thus actively employed must be very large. And when we consider the vast numbers besides who are indirectly employed in private establishments, administering to the requirements of the companies in iron-works, engine and carriage works, printing, and so forth, the social dependence upon their existence must be something considerable in the public economy. At the close of last year there were in use upon the railways 15,196 locomotive engines, 33,658 carriages for the conveyance of passengers, 12,561 other vehicles attached to passenger trains, 464,153 waggons for the conveyance of live stock, minerals, and general merchandise, and 12,173 miscellaneous vehicles. There is over £815,000,000 of capital sunk in

RAILWAYS IN 1885.

The report to the Board of Trade shows that the year 1885, like its predecessor, was comparatively unsatisfactory to railway shareholders. There was a further decrease of net earnings and of dividends to be recorded. The diminution arose in less part from goods traffic than it did in the previous year, but there was still some diminution of goods traffic, and which for the two years is considerable, while the fact of diminution being so long continued, there being a further falling off in the current year, is itself unusual in English railway history. A diminution in working expenses has compensated the shareholders to some extent for a diminution of traffic receipts, but not altogether.

Notwithstanding the somewhat unsatisfactory state of business for the past year or two, there is again an increase in the amount of capital invested to be taken note of. The increase is of somewhat smaller amount than for the last two or three years, having been £14,000,000, whereas in the previous year it was £16,000,000, and in 1882 was over £22,000,000. The increase is still considerable, seeing that for a year or two the earnings of the companies have rather been diminishing than otherwise. The proportions of the different descriptions of capital remain as before, viz., ordinary 37 per cent., guaranteed and preference 38 per cent., and debentures 25 per cent. It was remarked, as usual, that one year with another the dividends on the various descriptions of capital remain at about the same rates. This is due to the fact of the steadiness of the proportions of the different descriptions of capital to each other, and the slight amount of change in the net earnings. A diminution is unfavourable, especially to the ordinary shareholders, on whom the loss almost exclusively falls. During the last two years the average dividend on ordinary capital has fallen materially, although the average percentage of

net earnings on the total capital cannot be said to have been seriously affected.

The traffic receipts of the year show a total decrease of £900,000, made up of a decrease of £800,000 in goods traffic and £200,000 in passenger traffic, compensated in part by an increase of £100,000 in miscellaneous receipts, the latter due in a great measure to the railway share of the Parcels Post revenue. The diminution of railway earnings was rather more serious in 1885 than it was in 1884. Contrary to the experience of 1884, when the decline was mainly in the mineral traffic, the decline is now mainly in the general merchandise receipts. The question of course arises, whether the decline is to be attributed to a falling off of business, or merely to a diminution of rates charged for the same business. It is not quite so clear as it was a year ago that there has been some diminution of actual business. This diminution was then apparent on an examination of the tonnage of goods and minerals conveyed compared with returns as to the quantity of pig-iron and coal produced in the United Kingdom, and the quantity of iron ore imported into the United Kingdom. But although the diminution in 1884 as compared with 1883 has not been made up in 1885, still there is no evidence of any serious further diminution, but rather the reverse. Having regard to the general mineral statistics of the United Kingdom, the diminution in receipts from mineral traffic may be assumed to be a decrease due, almost exclusively, to the diminution in the charges for conveyance. Broadly speaking, it may be said that the figures for the last two years show a certain decline in business done both in mineral and general merchandise traffic, but the decline was most marked in minerals in the year 1884, and in the case of general merchandise in the year 1885.

As regards passenger traffic, it is noticed that the diminution which has taken place is almost exclusively in first and second class. The third class receipts, although they have fallen off, have diminished only slightly, this being in accordance with the experience of a good many years back. For the first time a difference is made by the fact of there being an actual decrease in the third class receipts, but the decline is less marked than in the other classes where, as had often been noticed, the decline has been going on for some time. The preponderance of third class traffic continues to be more and more marked.

The Midland Railway Company took the initiative in passenger traffic reforms, having run third-class carriages by all trains from 1st April, 1872; afterwards, from 1st January, 1875, greatly reducing the first-class and abolishing second-class fares.

traffic again show a diminution last year as compared with the previous year. Altogether there is a decrease of nearly 1½*d.* per train mile, while the diminution as compared with a period of eleven years amounts to about 9*d.* per train mile. There seems no doubt, therefore, that both in passengers and goods, but chiefly in passengers, railway companies are doing more work for the public than they formerly did for the same money.

A considerable reduction of working expenditure is to be set against the diminution of traffic receipts. The amount of the decrease is over £400,000, so that finally the net earnings are diminished by £537,000 only. This decrease in working expenditure has again taken place along with an increase in the train mileage run, so that the cost per train mile again shows a diminution, viz., from 31·59*d.* in 1884 to 30·93*d.* in 1885. This decrease in working expenditure per train mile has been going on for several years. In every item, except rates and taxes, a marked diminution is shown. The changes in the items of expenditure help to justify the statement that there has been a general decline in money prices and wages during the last ten years.

The decrease in net earnings is so considerable as to affect seriously the dividends on ordinary capital, which has to bear not only the loss of net earnings but the increased payments that have to be made on account of the annual interest on the additional guaranteed, preferential, and debenture capital. As a consequence, while the net earnings on capital declined last year from 4·16 to 4·02 per cent., the dividends paid on ordinary capital declined from 4·34 to 4·04 per cent., the decline in the dividend paid on ordinary capital since 1882 being from 4·73 per cent. The dividend on ordinary capital would have further declined but for the fact that on the whole the ordinary shareholder during the last few years has been benefiting by the reduction in the rate of interest on other descriptions of capital. The rate on preferential and guaranteed capital has in fact steadily declined since 1880 from 4·35 to 4·17 per cent., and the rate on debenture stocks has also been declining. The bulk of the ordinary capital of railway companies receives dividends ranging between 3 and 7 per cent., the amount of such capital being in fact over 70 per cent. of the total.

The rate of dividend on ordinary capital is actually more than one-eighth less than it was in 1883, and is very little more than it was in the former year of great depression, viz., in 1879. Allowing that the period is a depressed one, the result may not be considered very unsatisfactory to railway shareholders. The minimum is no lower than it was in 1879, and if the present period of depression is followed by years like 1880 and 1883 those interested in railway companies will be able to put the good years against the bad. It is also a matter for satisfaction that the falling off in business indicated by the figures is still not very considerable, although the fact of the falling off being so long continued is somewhat unusual. It remains to be seen to what extent the year 1886 will show a further decline on the whole, or an improvement compared with its predecessor.

RAILWAY ACCIDENTS.

To the public generally one of the most interesting points in connection with the working of the railways is the increased immunity from accident, as evidenced by the great decline for a considerable number of years past in the charges paid by the companies by way of compensation for personal injury to passengers. In 1875 the cost per train mile of compensation for personal injury was 0·44*d.*, whereas in 1885 it was 0·11*d.* only per train mile. In loss and damage of goods, similarly, the cost in 1875 was equal to 0·32*d.*, whereas in 1885 it was 0·16*d.* only per train mile. One of the chief causes of increase of cost in railway working in the period has been the general adoption of the block system, and of the system of interlocking points and signals, on which the Board of Trade have insisted. But against any direct increase of expenditure from this cause there may fairly be set this reduction in the item of compensation from injuries. The reduction, in fact, represents almost a pure gain to the railway companies.

The general report of the Board of Trade upon the accidents which occurred upon the railways of the United Kingdom during the year 1885 shows that the total number of persons killed in the working of the railways during the year was 957, and the number of injured 3,467. Of these numbers, 102 killed and 1,129 injured were passengers, but of these only 6 were killed and 436 injured in consequence of accidents to or collisions between trains; the deaths of the remaining 96 passengers and the injuries to 693 were due to a variety of other causes, but more

especially to a want of caution on the part of the individuals themselves. Of the remainder, 451 killed and 2,117 injured were officers or servants of the companies or of contractors; of suicides there were 51; of trespassers, 250 were killed and 126 injured; of persons passing over the railway at level crossings, 58 were killed and 21 injured; and of other persons from miscellaneous causes, 41 were killed and 74 injured. In addition to the above, 40 persons were killed and 3,555 were injured from accidents on the companies' premises, which cannot be considered as "railway accidents," as they were not connected with the movement of railway vehicles. The proportions of passengers killed and injured during the year from all causes were one in 6,835,421 killed, and one in 617,549 injured. These are by far the lowest numbers ever recorded; while those killed and injured from causes beyond their own control are also very much less than in any previous year.

The number of inquiries directed by the Board of Trade has also considerably decreased, 60 accidents having been reported upon by the inspecting officers as compared with 105 in the previous year. Each head under which accidents are classified has declined. From engines or vehicles meeting with obstructions or leaving the rails, or from defects in permanent way or works, there were 7 accidents; from boiler explosions, failures of axles, or other defects in the rolling stock, 6; trains entering stations at too great a speed, 4; collisions of all kinds, 34; and other accidents, 9. Not a single accident is recorded for the last three years from trains meeting in opposite directions, nor from collisions at level crossings of two railways, nor from trains on fire. Forty-one accidents were attributed to negligence, want of care, or mistakes, 13 to inadequate or unsuitable brake-power, 8 to defective arrangements of signals, points, or looking apparatus; 7 to defective construction of road or works, and 7 to excessive speed. Of the 60 investigated accidents, 7 occurred on the London and North-Western, 4 on the Caledonian, 4 on the Great Western, and 3 each on the Great Eastern, Great Southern and Western, Metropolitan, Metropolitan District, and Midland. General accidents to servants of railway companies show that 36 were killed and 267 were injured whilst employed in coupling and uncoupling vehicles; 102 were killed and 969 injured whilst employed in various shunting operations, 12 were killed and 59 injured by falling between the train and platform; 107 were killed and 126 injured whilst working on the permanent way and sidings; and 79 were killed and 108 injured whilst walking, crossing, or standing on the line, on duty. There has been a steady decrease during the past twelve years in the proportion of servants killed and injured to the number employed. In 1885 the proportions were 1 in 768 killed and 1 in 163 injured, whereas in 1875 the proportions were 1 in 334 killed and 1 in 70 injured. An idea of the relative amount of risk run by the various

RAILWAY SPEED.

Great Eastern	Liverpool Street	Harwich	70¼	1 40	42¼

NOTE.—The greatest performance in running is probably that of the "Charles Dickens," an engine belonging to the London and North Western Company, which runs from Manchester to Euston and back daily, Sundays, &c., excepted. It is worked by two drivers, who take charge on alternate days. The daily run is 367 miles.

classes of railway servants will be gathered from a statement on page 609. The accidents to persons other than passengers or servants appear also to be on the decrease. Such accidents are generally due to the want of caution on the part of the persons themselves, but it is a question whether if better gates and fences were provided and more stringent rules enforced so great a loss of life need occur.

It is observed generally that the large decrease in the number of accidents and collisions, and in the number of casualties to passengers and servants which has taken place in the working of the traffic during the past year, is due to the continued care and attention of the officers and servants of the companies, to the laying of additional lines of way, the enlarging and re-arranging of stations, the extension of the interlocking and block systems, the adoption, as yet only experimentally, of electrical contrivances for the prevention of mistakes in block working, and lastly, the larger use of continuous brakes on passenger trains.

The Board of Trade continue to call special attention to two points, viz., the block system, and efficient continuous brakes. As regards the block system it seems that, while much progress has been made, there are still deficiencies, especially in Scotland and Ireland. There appears to be no satisfactory reason why it should not at once be fully adopted upon all passenger lines. As regards continuous brakes, although considerable progress has been made in the adoption of new and improved brakes, it is still observed that the employment of such brakes is far from universal; that where new brakes have been adopted, or are being adopted, they frequently do not comply with the essential conditions which have been so often laid down; and above all, that the different companies, instead of employing one uniform brake possessing those conditions, are adopting different brakes, so that those brakes become inefficient on trains in which, as is necessarily now so common, the rolling stock is interchanged and mingled.

BLOCK SYSTEM.

The amount of progress that has been made in the adoption of the absolute block and interlocking systems is considerable. The proportion in which the signal and point levers had been interlocked was 91 per cent. in England, 77 per cent. in Scotland, and 49 per cent. in Ireland. The amount both of block and interlocking on some railways in England and Scotland is, however, still short of what is necessary for safe working; whilst in Ireland it may be said that the progress made is far from satisfactory. It appears that since 1873, when 6,217 miles out of 16,082 miles then opened were so worked, the block system has been largely extended, and that at the end of 1885 this system had been adopted on 14,185 miles out of 18,069 miles open for traffic. The proportions of line worked on the block system at the end of 1885 were 90 per cent. in England, 80 per cent. in Scotland, and 20 per cent. in Ireland.

CONTINUOUS BRAKES.

In several cases the good effects of continuous brakes have been specially mentioned, whilst in other cases the accidents and collisions might, according to the statements in the reports of inquiries, have been either prevented or their effects mitigated had the trains been fitted with quickly-acting continuous brakes, automatic in their action, instead of those with which the trains were fitted. It appears that 41,747 vehicles used in passenger trains had been fitted either with continuous brakes or with pipes only for running with vehicles so fitted, and that 9,500 vehicles remain to be so fitted. Brakes apparently complying with the conditions laid down by the Board of Trade are fitted to 25,292, or 50 per cent. of the vehicles running in passenger trains. Those only complying with some of the conditions are fitted to 16,455, or 32 per cent. The application of continuous brakes of the various descriptions has increased from 19 per cent. in 1878 to 82 per cent. in 1885, or at an average rate per annum of about 7 per cent.

RAILWAY COMPENSATION.

It is satisfactory to have to record a continued steady decline in the amount paid by way of compensation for personal injury to passengers. There is not a single company of any importance that has not claims constantly coming in for the most trivial injury, nevertheless the total is not more than half what it was a few years ago. A summary of the amounts paid last year by the principal companies, and the amount of compensation paid for the loss and damage of goods is as follows:—

COMPENSATION—	*Passengers.*	*Goods.*
Great Eastern	£19,394	£9,933
Great Northern	7,813	10,771
Great Western	5,688	29,229

systems into crowded centres of London and other large urban areas. The Act has been received by the railway companies with indifference, its provisions being regarded as partial so far as free and untaxed locomotion is concerned, and nothing less than total repeal of all taxation is the universal desire of the railway proprietors and authorities. To the public generally, and more especially to the working classes, who obtain a direct remission of the passenger tax, and for whom additional workmen's trains have to be provided by the railway companies, the Act is of very great benefit.

The Act, which took effect 1st October, 1883, provides that fares not exceeding the rate of one penny per mile shall be exempt from duty, but fares for return or periodical tickets shall be exempt from duty only where the ordinary fare for the single journey does not exceed that rate. Duty shall be payable at a reduced rate of two per cent. on fares exceeding the rate of one penny a mile between stations within one urban district. Such district will contain not less than one hundred thousand inhabitants, and must be of a continuous urban as distinguished from a rural or suburban character.

If at any time the Board of Trade have reason to believe that upon any railway a due and sufficient proportion of accommodation is not provided at fares not exceeding a penny a mile, or that such proper and sufficient trains are not provided for workmen going to and returning from their work, at such fares and at such times between six in the evening and eight in the morning as appear to the Board of Trade to be reasonable, steps may be taken to compel the company to provide such accommodation and fares.

Provision is also made in the Act continuing the companies' powers as to special mileage and exceptional charges, and also enlarging their powers in dealing with the charges over distances which include fractions of a mile over a quarter of a mile. The Queen's forces, including officers or men in the navy or naval volunteers, or in the regular, reserve, or auxiliary forces of the army, or in any police force when conveyed by railway on any occasion for the public service, are, when travelling in bodies under one hundred and fifty in number, to be charged three-fourths the rates for ordinary passengers; when over that number, at half rates. The Act does not extend to Ireland.

RAILWAY SERVANTS' RISKS.

Some idea of the relative amount of risk run by the different classes of railway servants is afforded by the following table, which shows the number of men employed in various occupations, and the number of fatal accidents and injuries to each class, in the year 1884:—

Class of Servants.	Number Employed.	Number Killed and Injured in 1884.		Proportion to the Number Employed.	
		Killed.	Injured.	Killed.	Injured.
Breaksmen and Goods Guards	7,407	53	447	1 in 139	1 in 17
Gatekeepers	1,605	10	8	1 ,, 160	1 ,, 200
Permanent-way men	37,840	125	154	1 ,, 303	1 ,, 245
Firemen	12,795	31	152	1 ,, 422	1 ,, 84
Engine-drivers	12,874	27	138	1 ,, 476	1 ,, 92
Porters and Shunters	48,070	97	732	1 ,, 495	1 ,, 65
Inspectors	3,518	7	34	1 ,, 502	1 ,, 103
Passenger guards	5,902	6	68	1 ,, 983	1 ,, 87
Ticket collectors, &c.	2,060	2	8	1 ,, 1,030	1 ,, 257
Pointsmen and signalmen	19,012	18	49	1 ,, 1,056	1 ,, 390
Labourers	70,405	41	84	1 ,, 1,717	1 ,, 840
Station Masters	6,165	3	6	1 ,, 2,055	1 ,, 1,027
Mechanics	55,940	20	39	1 ,, 2,797	1 ,, 1,434

Working Men's Clubs

Are defined to be for purposes of social intercourse, mutual helpfulness, mental and moral improvement, and rational recreation. It is held by the Registry office that a Working Men's Club may be established for one only of these specified purposes. Thus, for instance, music being deemed a form of rational recreation, registry has been granted to brass band clubs. To entitle to the privileges of the Act it must presumably be composed of working men, and rules will not be registered where the institution appears to be intended for a wealthier class. They are subject to all the provisions of the Friendly Societies Acts, with the following exception, viz.: the power of nomination at death for sums not exceeding £50 does not extend to their members; they are not subject to the obligation of periodical valuation; by permission of the Inland Revenue a certain number of clubs supply refreshments to their members without payment of licence duty; but as this forms no part of the purposes defined by the Act, no rules providing for it are registered, the practice being regulated by bye-laws, drawn up in a form and approved of by the Inland Revenue. Where colourable Working Men's Clubs exist only for the purpose of carrying on the liquor trade, its registry under the Acts may be suspended or cancelled, on the ground that it exists for an illegal purpose. Model rules have been drawn up by the Working Men's Club and Institute Union.

The construction of Railways in India, which commenced in 1853, has at various periods been conducted on three different principles: (1) by the employment of companies under a system of guarantee; (2) by the State itself through its own officials; and (3) by assisted companies with or without a guarantee or subsidy from the State. Three of the lines constructed on the old system of guarantee (the East Indian, the Eastern Bengal, and the Scinde, Punjaub, and Delhi) have been purchased by the Government. The total length of railway open in India at 31st December, 1885, was 12,208 miles, and the capital expenditure was £166,146,651. The gross receipts for 1885 amounted to £17,989,625, the working expenses to £8,863,294, and the net revenue to £9,126,331. The net earnings yielded a return of 5·84 per cent. per annum upon the invested capital. The total number of passengers carried in the year was 80,864,779, yielding £5,538,126; the aggregate tonnage moved amounted to 18,925,385 tons, the receipts from which were £11,915,375. The average cost of the 5½ feet gauge and of the mètre gauge lines have been, respectively, £16,752 and £6,616 per mile of line. From the commencement of operations up to Dec., 1885, a gross sum of £64,650,921 has been advanced as interest by the State to the Guaranteed Companies, and up to 30th June, 1885, the total net earnings of these railways, exclusive of half of any surplus profits realized, amounted to £38,506,292, leaving a net amount of £26,144,629, which has been paid by the State. The surplus profits realized during the year 1885 amounted to £785,866.

The rolling stock in use on all Indian railways consists of 2,974 engines, 6,870 passenger carriages, 52,217 goods waggons, and 3,318 other vehicles. The number of persons employed is 215,866, including 4,375 Europeans.

A marked feature of railway construction in India is the number of important large bridges at present in progress. One over the Hooghly, near Calcutta, consists of a central span of 120 feet and two side spans of 540 feet each. One over the Ganges, at Benares, consists of seven spans of 356 feet each; while one over the Indus, at Sukkar, has in it one span of the enormous width of 790 feet.

Regulations respecting Passports.

Applications for Foreign Office Passports must be made in writing, and enclosed in a cover addressed to "The Chief Clerk, Foreign Office, London," *with the word* "Passport" *conspicuously written on the cover.* The rules are numerous and stringent, too long for insertion in the Almanack. The easiest mode of obtaining a passport is through a banker to whom the applicant is known; he can obtain it without much trouble or inconvenience. The following particulars may be of service to British born subjects:—

The charge is 2*s.*, whatever number of persons may be included.

Passports are issued at the Foreign Office between the hours of 11 and 4 on the day following that on which the application for the passport has been received at the Foreign Office.

The bearer of every passport granted by the Foreign Office should sign his passport as soon as he receives it; without such signature either the *visa* may be refused, or the validity of the passport questioned abroad. Travellers who may have an intention of visiting the Russian Empire at any time in the course of their travels, are particularly and earnestly advised not to quit England without having had their passports *visés* at the Russian Consulate in London, 17 Great Winchester Street, E.C. Persons proceeding to Cuba, Portugal, or Turkey, should also have their passports *visés* at the Spanish Consulate, 21, Billiter Street, E.C.; at the Portuguese Consulate, 8, St. Mary Axe; and at the Consulate-General of the Sublime Porte, 42, Old Broad Street, E.C., respectively. Travellers about to proceed to any other country need not obtain the *visa* of the Diplomatic or Consular Agents of such country resident in the United Kingdom.

Although British subjects are now free to enter Belgium, France, Germany, Holland, Italy, Denmark, Sweden, and Norway without passports, and the rules about passports have been virtually relaxed in other countries, nevertheless, British subjects about to visit the Continent are recommended not to omit to provide themselves with passports, for even in those countries where they are no longer obligatory, they are found to be convenient, as offering a ready means of identification, and more particularly when letters have to be claimed at a *poste restante.*

Colours of Government "Blue Books."

The English official colour is ..	*Blue*
The French	*Yellow*
The German	*White*
The Austrian	*Red*
The Italian	*Green*

For the use of Overseers, Churchwardens, Vestry Clerks, Magistrates' Clerks, and Town Clerks, Superintendent and District Registrars, Coroners, and Municipal and Parochial Officers and Citizens generally, showing the days when certain Official Duties are to be performed; also the days when Inland Revenue Licences expire.

SUNDAY.—*In all computations of time the rule of law is, that Sunday counts as no day. All acts, therefore, which fall to be done upon a Sunday should be performed the day previous unless there is statutory provision to the contrary. Every meeting or adjourned meeting of any vestry or corporation, whether ecclesiastical or civil, or of any public company, for the nomination, election, appointment, swearing-in, or admission of any officer or officers, or for the transaction of any other secular affair of such vestry, corporation, or company, and every other meeting of a public and secular nature, which according to any Act of Parliament, or according to any charter, grant, constitution, deed, testament, law, prescription, or usage whatsoever, is or shall be required to be held on any Lord's Day, or on any day which shall happen to be on a Lord's Day, shall, by* 3 & 4 *Will. IV. c.* 31, *be held on the Saturday next preceding or on the Monday next ensuing, at the like hour with like form and effect as if the same had been held on such Lord's Day; and every matter transacted at any such meeting or adjourned meeting held upon any Lord's Day shall be absolutely void and of none effect to all intents and purposes whatsoever: provided always, that when no such nomination, election, appointment, swearing-in, or admission shall have taken place on such Saturday, every person whose term of office would have expired on any such Lord's Day shall continue in office, and exercise and enjoy all powers and privileges, until the Monday next ensuing, in the same manner as if such Monday had been the customary day of nomination, election, appointment, swearing-in, or admission. In the case of Bills of Exchange that fall due upon a day of rest such as Sunday, Good Friday, Christmas Day, or some day appointed for a solemn fast or day of thanksgiving, presentation for payment should be made on the business day preceding such day of rest. Bills of Exchange falling due on a Bank Holiday are not payable until the following day (see* 34 & 35 *Vict. c.* 17), *and when the last day of grace is a Sunday, and the second day of grace is appointed as a Bank Holiday, such bills are due and payable on the succeeding business day (see* 45 & 46 *Vict. c.*61).

January.

1 Holiday on the Stock Exchange, and Bank Holiday in Scotland.

The Land Tax, Income Tax, and the Duties on inhabited houses are due on this date; so are dog licences, licences for carriages, male servants, and for using armorial bearings. These licences must be taken out before the end of the month, or within twenty-one days after first becoming liable to duty.

Lists of Voters in Parliamentary Boroughs and Counties come into force as the Registers for the ensuing year.

Watch Committee of Town Council to transmit to Secretary of State a copy of all rules and orders made since 1st October for the regulation and guidance of constables or policemen.

Between the 1st of this month and the 31st March, the Medical Officer of each workhouse and district to visit every pauper lunatic not in an asylum; and between the 1st and 7th day of this month such Medical Officer to make a report to the Clerk to the Guardians, or to the Overseers, of his visits during the preceding quarter, which report, within three days after its receipt, shall be transmitted to the Commissioners in Lunacy, and a copy to the Clerk to the Visitors of the asylum for the county or borough in which the union or parish is situate.

Clerk to Guardians on this day, or as soon after as may be, to make out an annual list of all lunatics chargeable to the parish, and on or before the 1st February to transmit copies to the Commissioners in Lunacy, Local Government Board, Clerk to Visitors of asylums, and Clerk of the Peace of the county, or Clerk to the Justices of the borough.

Return of Paupers relieved on 1st January to be made to Local Government Board.

3 Quarter Sessions to be held during this week. At these Sessions the Justices may name two of their body to fix the time for holding the next general Quarter Sessions, so that such time shall not be earlier than the 7th March nor later than the 22nd April, and to give notice of the day so fixed by advertisement in such newspapers as shall be directed by the Justices so assembled. But when no other day is so fixed, the Sessions to be held in the week next after the 31st of March. Should the 31st of March fall on a Sunday, "the next week after" is that beginning April 7th.

7 Registrars of Births and Deaths to transmit to Overseers, on or before this day, a return of all male persons dying within a parish included in a parliamentary or municipal borough between the 15th September, or the date when the preceding return was made, and the 31st December.

Last day for Medical Officers to send quarterly list of pauper lunatics to Clerk to Guardians.

Solicitors, conveyancers, special pleaders, and draughtsmen in Equity in *Ireland* must renew their certificates between this date and Feb. 5.

8 Last day for report on condition of Lunatic Asylums to be laid before the Justices. Clerk to Committee of Visitors to transmit a copy of such report to Commissioners in Lunacy within 21 days.

Insurances due at Christmas must be paid.

Last day for Clerk to Guardians to send quarterly lists of lunatics to Commissioners in Lunacy, and copies to Clerk to Visitors.

11 Hilary Law Sittings commence.

Bankers' returns to be delivered at the Stamp Office not later than to-day.

15 Registrars to apply on or before this day to the officiating minister of every church and other place of worship in which marriages may be solemnized within their sub-districts, for certified copies of all entries of marriages solemnized, or for certificates of "No Registry," during the quarter ended 31st December, 1886. Registrar to deliver these, on or before the 20th of this month, to the Superintendent Registrar.

Registrars of Dioceses to send to the General Register Office yearly lists of licensed chapels.

20 Registrars to deliver to Superintendent Registrars, on or before this date, certified copies of Births, Deaths, and Marriages entered by them during the quarter ended 31st December, 1886.

29 Last day for Clerk to Visitors of Asylums to transmit report to Commissioners in Lunacy.

30 Owners of property, to entitle them to vote in the election of Guardians, either in person or by proxy, must sign and give Overseers the statement required by 4 & 5 Wm. IV., c. 76, containing the particulars set forth in the 7 & 8 Vict., c. 101, s. 15.

Last day for Coroners of boroughs to transmit to the Secretary of State returns in writing of inquests held by them during the preceding year.

Last day for Superintendent Registrars to transmit to Registrar General copies of Births, Deaths, and Marriages for quarter ended 31st December.

Railway Companies, on or before this day, if required, to transmit to the Clerk of the Peace of the counties through which the railway may pass, a copy of their annual account prepared in accordance with 8 & 9 Vict. c. 20, s. 107.

February.

1 Within the first seven days of this month Justices of the Peace to issue precepts to Overseers, requiring lists of men qualified to serve as Parish Constables, if the Court of General or Quarter Sessions of the county have by resolution determined that it is necessary that one or more Parish Constables should be appointed for any parish within the jurisdiction of such court. Overseers to summon vestry meeting within fourteen days, and to furnish such lists before the 24th March.

Within the first 21 days of this month the Clerk of the Peace of every county, and the Town Clerk of every borough, to transmit to Secretary of State a printed copy of Register of Voters.

Last day for Clerk to Guardians to transmit copies of annual list of pauper lunatics to Commissioners in Lunacy, Local Government Board, Clerk to Visitors of Asylums, and Clerk of the Peace, or Clerk to the Justices of a borough.

5 On or before this day Overseers of every parish containing a population exceeding 2,000 persons, to enter in a book the names and addresses of all persons claiming as owners or proxies to vote in the election of Guardians. Between this day and the 10th, at reasonable hours, the Overseers to allow any person to peruse such book without fee.

Last day to renew certificates of Solicitors, Conveyancers, and Draughtsmen in Equity in *Ireland*.

15 Last day for objecting to claims of owners to vote for election of Guardians.

19 Last day for Town Clerks to publish a notice of election of Auditors and Revising Assessors.

Last day for Clerks to Guardians to give notice to Overseers of day for hearing objections to owners' votes for election of Guardians.

Between this day and 1st of March, Chairman of Local Board to publish a notice in the Form L, in Schedule 4 of the Public Health Act, 1875, and signed by him, of the time within which claims and objections respecting the register of owners and proxies for the district are to be made. A copy of such notice to be inserted in some local newspaper, and affixed at the places where parochial notices are usually posted.

On or before this day the Clerk of the Peace of every county, and the Town Clerk or other officer having charge of Register of Parliamentary Voters, to transmit a printed copy of such register to the Secretary of State.

25 Between this day and 1st March, Clerk to Guardians to provide for revision of list of proxies in election of Guardians.

26 Railway Companies to furnish accounts to Board of Trade.

Last day for Corporations aggregate, Joint Stock, or other Companies to send to Overseer, for entry in the Rate-book, the name of the officer who is to vote in the election of Guardians.

Two days at least before the 1st of March the Mayors of boroughs to publish notices of the situation of polling-places for the election of Auditors and Revising Assessors.

March.

1 Between this date and 1st August, persons shooting or taking wild birds are liable to penalties under the Wild Birds Protection Act, 1880 (43 & 44 Vict. c. 35).

Claims of owners and proxies to vote in Local Board elections, and objections to owners and proxies, to be sent to the Chairman of the Local Board on one of the first six days of this month.

From this day to the 21st of this month, copies of lists of men qualified to serve as Parish Constables to be in the custody of Overseers, and to be open to the perusal of inhabitants of the parish or township without payment, such lists to be affixed to doors of churches and chapels on the first three Sundays in this month.

On or before the 15th of this month, the Returning Officer in the election of Guardians (the Clerk to the Guardians) shall prepare and sign a notice of the ensuing election, which shall be in one of the forms No. 2 in Schedule A to the General Order of the Local Government Board of the 14th of February, 1877, and cause such notice to be published in the following manner:—

1st. A printed copy of the notice shall be affixed on the principal external gate or door of every Workhouse in a Union or separate parish under a Board of Guardians; or, where there is no such workhouse, on the external gate or door of the building in which the Board-room of the Guardians is comprised, and such notice shall be renewed, if necessary, until the 9th of April.

2nd. Printed copies of the notice shall likewise be affixed in such places as are ordinarily used for affixing notices of parochial meetings.

Town Council of borough, on or before this date, to transmit to Secretary of State a statement of receipts and expenditure up to last audit.

Two Auditors and two Revising Assessors are to be chosen for each Municipal Corporation.

On this day Mayors of boroughs to name some one member of the Council to whom, jointly with the Auditors, the Treasurer of the borough is to submit his accounts in this month and in September; and the Treasurer is to submit his accounts, made up from the 1st of September to the 1st of this month, to such member and Auditors to be examined and audited.

5 Last day for sending to Chairman of Local Board a list of owners and proxies claiming to vote at Local Board elections.

14 Between this date and the 1st August any person exposing or offering for sale, or having in his control or possession, any wild bird killed or taken in the United Kingdom since the 1st of this month, is liable to penalty under the Wild Birds Protection Act, 1880 (43 & 44 Vict. c. 35).

15 Last day for publication by Clerks to

Guardians of notice of election of Guardians, and first day for sending in nomination papers.

16 Not later than this day the Chairman of Local Board shall close the revision of register of owners and proxies: revised register shall continue in force for the next twelve months.

20 Within fourteen days from this date a special sessions to be held for appointment of the days for the holding of not less than eight nor more than twelve special sessions for executing the purposes of the Act relating to Highways (5 & 6 Will. IV. c. 50).

Railway Companies to pay quarterly instalments of Income Tax on or before this day.

24 Last day for inspection of lists of persons qualified to serve as Parish Constables. Overseers to send such lists to the Justices, who are to hold special sessions for the appointment before the 9th of April.

25 Quarter Day. Union accounts to be made up to the end of the week nearest to this date. Returns made to Local Government Board under Local Taxation Returns Act, 1877, by Corporations, Local Boards, Burial Boards, and other local authorities to be made up to this date.

Highway accounts, made up to this date, to be submitted to Highway Boards at their first meeting. Surveyors of Highways and Waywardens to be elected.

Half-yearly accounts of School Boards to be made up to this date.

On this date, or within fourteen days next after, Overseers of the Poor to be nominated and appointed by Justices.

Churchwardens and Overseers shall, within fourteen days after other Overseers have been appointed to succeed them, deliver to such succeeding Overseers a just, true, and perfect account in writing of all sums of money in their hands, as required by 17 Geo. II. c. 38, s. 1.

Medical Officer of Unions entitled to be paid any extra fees, to make out his quarterly account to this day, and lay the same before the Guardians: his claim shall be deemed to accrue at the expiration of one calendar month following this day, but the Guardians may pay it earlier.

Overseers, on or before this day, to distinguish in the Rate-Book the names of all ratepayers who have been rated to the Poor-rate for the whole year, and have paid the Poor-rates assessed for one whole year, except those rates made or become due within the last six months.

The Overseers, and every Collector appointed for a Parish, to make up their accounts to this day, and deposit them at some house within the parish seven days at least before the audit, for the inspection of the rate-payers.

Certificates of Notaries Public in *Ireland* expire on this day.

26 District Medical Officers to notify at the commencement of this quarter to the Board of Guardians the paupers whose names have been inserted in the permanent medical relief list for a period of six months; advise as to the continuance of such paupers in such list, and take the directions of the Board thereon.

Last day for sending in nomination papers to the Returning Officer of persons nominated to be Guardians.

28 On this date, or as soon after as may be practicable, Returning Officer to make out list of persons nominated as Guardians, and to cause a copy to be suspended in the Board-room of the Guardians, and another to be affixed on the principal external gate or door of the building in which the Board-room is comprised.

31 The following licences expire on this day:—To keep a Refreshment House, Hawkers'.

April.

1 In the months of April and May, or one of them, Overseers are to ascertain with respect to all property in their parishes which comprises a dwelling-house, whether any man is entitled to be registered as a voter in respect of a household qualification by reason of his being an inhabitant occupier. The Overseers are to enter in the Rate book, in a separate column, the name of every man so entitled, and the description of the dwelling-house.

Watch Committee of Town Council to transmit to Secretary of State a copy of all rules and orders made since 31st Dec. for the regulation and guidance of constables or policemen.

Between the 1st of this month and the 30th June, the Medical Officer of each workhouse and district to visit pauper lunatics not in asylums. (*See* January 1.)

Keepers of Common Lodging Houses to limewash the walls and ceilings thereof in the first week of the month.

Treasurer of borough to submit his accounts for audit this month, in accordance with Local Taxation Returns Act, 1877.

2 Last day to appoint days for holding special sessions under the Highways Act.

4 Returns of assessed taxes made to this date.

Quarter Sessions to be held during this week. (*See* Jan. 4.)

6 Commencement of the Financial year.

7 Last day for Medical Officers to send quarterly lists of lunatics to Clerk to Guardians.

The Returning Officer in the election of a Local Board is, not later than this day, to cause the voting papers to be collected by persons appointed by him. Papers not collected may be delivered to him personally before 12 o'clock on the day or first day appointed for the examination and casting up of votes.

Registrars of Births and Deaths to transmit to Overseers, on or before this day, a return of all male persons dying within a parish included in a parliamentary or municipal borough during the three months ending 31st March.

Last day for Justices to nominate Overseers of the Poor.

9 Returning Officer in the election of Guardians shall on this day cause one of the voting papers prepared for the election to be delivered to the address of each ratepayer, owner, and proxy qualified to vote. Every person qualified to vote who shall not have received a voting paper shall, on application before twelve o'clock at noon on the 9th of April, to the Returning Officer at the place specified in the notice of election, be entitled to receive a voting paper, to fill it up in the presence of the Returning Officer, and deliver it to him.

On this day at the latest, and on as many succeeding days as may be necessary, the Returning Officer in the election of a Local Board is to attend at the place appointed and ascertain the validity of the votes by examination of the rate books and such other books and documents as he may think necessary, and by examining such persons as he may see fit. He shall cast up such of the votes as he thinks to be valid, and shall ascertain the number of such votes for each candidate. He shall then

cause a list to be made of the candidates, together with (in the case of a contest) the number of votes given for each and the names of the persons elected, and shall sign and certify the list, and deliver it, together with the nomination and voting papers, to the Local Board at their first meeting, the list during office hours to be open to public inspection, together with all other documents relating to the election, for six months after, without fee or reward.

Fire insurances due Lady Day must be paid.

Last day for Clerk to Guardians to send quarterly lists of lunatics to Commissioners in Lunacy, and copies to Clerk to Visitors.

12 The Returning Officer in the election of Guardians shall cause the voting papers to be collected, subject to provisions in the General Order of the Local Government Board, 14th February, 1877, Arts. 17 and 18.

13 The Returning Officer in the election of Guardians on this day, and on as many days immediately succeeding as may be necessary, shall ascertain the validity and number of votes for each candidate by an examination of the rate books, registers, and such other documents as he may think necessary, and by examining such persons as he may see fit. On this day, or as soon after as may be practicable, he shall make a list containing the names of all the persons nominated, and the names of the duly elected Guardians, and in the case of a contest the number of votes given for each, shall sign and certify the same, and shall deliver such list, together with the poll-book and all the nomination and voting papers which he shall have received, to the Board of Guardians at their next meeting, who shall preserve the same for a period of not less than two years. The nomination and voting papers and poll-books shall, during the six calendar months next following such delivery, be open between the hours of 10 and 6 on any day except Sunday, to the inspection of any person who may have nominated, or may have been nominated, at the election, or any person appointed in writing on behalf of either of them.

15 Poor Law Guardians of Unions continue to act as such until this day in each year, notwithstanding their successors may have been elected previously; and from and after this day every guardian newly elected for a Union shall act as such guardian for the ensuing year. At first meeting held after this date the Guardians to appoint the Union Assessment Committee.

The Returning Officer in the election of Local Boards is to make all his arrangements for the conduct of the election, so as to ensure its completion and the ascertainment of the result on or before this day, when the retiring members go out and newly elected members take office.

On this day, or within seven days preceding, Clerks of the Peace and Town Clerks to send their precepts to the Overseers.

Registrars to apply on or before this day for certified copies of all entries of marriages solemnized during the quarter ended 31st March.

19 Easter Law Sittings commence.

20 Last day for Registrars to deliver to Superintendent Registrars copies of entries of Births, Deaths, and Marriages for previous quarter.

21 Hilary Law Sittings end.

28 Last day for Superintendent Registrars to transmit to Registrar-General certified copies of entries of Births, Deaths, and Marriages for quarter ended 31st March.

30 Waywardens continue in office until this day, when their successors are to come into office. (See sec. 11 of 41 & 42 Vict. c. 77.)

May.

2 Election of Vestrymen and Auditors under the Metropolis Local Management Act to take place during this month.

During this month and next owners may be compelled by the Surveyors of Highways to cut down trees growing in hedges near highways ordered to be widened.

Local Authorities in counties and boroughs to send to Secretary of State copies of orders made under Ballot Act as to polling districts.

Bank Holiday in *Scotland:* see 34 & 35 V. c. 17.

14 Between this day and the 4th of August, a person shall not sell, expose for sale, or buy for sale any description of oysters other than those known as "deep-sea oysters."

15 Licences for Beer Retailers and Retailers of Wine and Spirits in *Scotland* expire.

18 Within sixty days from this date the half-yearly receipts for interest to savings-banks are to be made out and allowed.

24 Queen's Birthday.

28 Last day for Friendly Societies to make returns to the Registrar of Friendly Societies of accounts for 1886.

June.

1 Annual returns of rates, taxes, tolls, and dues levied for local purposes, required by Local Taxation Returns Act, are to be furnished to the Local Government Board in this month.

Where any poor rate due on the 5th of January last, from an occupier in respect of premises capable of conferring the franchise for a borough, remains unpaid on this date, the Overseers whose duty it may be to collect such rate shall, on or before the 20th of this month, unless such rate has previously been paid, give or cause to be given a notice in the form C 1, set forth in Schedule 2 (for Counties), and in the form C 1, set forth in Schedule 3 (for Boroughs) of the Registration Act, 1885, that such occupier will not be entitled to have his name inserted in the List of Voters in respect of premises in his occupation unless he pays, on or before the 20th of July next, all poor rates which have become due from him in respect of such premises up to the 5th of January last.

5 Where an owner of small tenements who has become liable to pay the poor-rates under the Poor-Rate Assessment and Collection Act, 1869, omits or neglects to pay before the 5th day of June in any year any rate, or any instalment thereof, which has become due previously to the preceding 5th of January, and has been duly demanded by a Demand Note delivered to him, or left at his usual or last known place of abode, he shall not be entitled to deduct or receive any commission, abatement, or allowance to which he would otherwise be entitled under the Act, but shall be liable to pay, and shall pay, such rate or instalment in full.

7 Trinity Law Sittings commence.

15 Sale of oysters prohibited. (*See* May 14.)

20 Overseers to publish notice in the Form B, set out in Schedules 2 and 3 to the Registration Act, 1885, stating that no person will be entitled to have his name inserted in any list of voters in a county or borough, unless he shall by 20th July next pay all rates and taxes due in respect of the year preceding the 5th January last.

Last day for Overseers to publish notice in

Form No. 2 to Schedule 2 to the Registration Act, 1885, requiring County Ownership Voters before the 20th July next to send in claims to vote.

Copies of the ownership portion, and no other, of the Register of Voters in Parliamentary elections for counties to be affixed to church doors by Overseers for two Sundays at least, there to remain not later than the 25th July.

Railway Companies to pay quarterly instalments of Income Tax on or before this day.

24 Quarter Day. Medical Officers of Unions entitled to be paid any extra fees to make out their accounts quarterly to this day, and lay the same before the Guardians. (*See* March 25.)

Sheriffs of London and Middlesex elected.

25 District Medical Officers at the commencement of this quarter to notify to the Board of Guardians the paupers whose names have been inserted in the permanent medical relief list for a period of six months.

27 Quarter Sessions to be held during this week.

28 Coronation Day.

July.

1 The manner in which Overseers are required by the Registration Acts to publish the ownership portion of the register and the lists, notices, and documents directed to be published, is as follows:—They are to fix a copy thereof (each copy being first signed): (*a*) on or near the outside of the outer door, or of the outer wall near the door, of every church and public chapel in their parish or township, including chapels which do not belong to the Established Church; (*b*) if there is no such church or chapel, then in some public or conspicuous situation in their parish or township; and (*c*) if their parish or township is wholly or partly situate in an urban sanitary district and not in a Parliamentary borough, then in or near every public or municipal or parochial office, and (having first obtained the authority of the local postmaster, or if he refuses, of the Postmaster-General), in some public and conspicuous position in or near every post office and telegraph office; (*d*) also in or near every public or municipal or parochial office in their parish or township.

Watch Committee of Town Council to transmit to Secretary of State a copy of all rules and orders made since 31st March for the regulation and guidance of constables or policemen.

On this day at the latest the Board of Trade to lay before Parliament a Report respecting the applications to them, and their proceedings under the Electric Lighting Act, 1882.

Between the 1st of this month and the 30th of September, the Medical Officer of each workhouse and district to visit pauper lunatics not in asylums. (*See* January 1.)

Licences for dealing in Game expire.

Special Sessions for Licences to deal in Game to be held during this month.

2 Return of paupers relieved on 1st July to be made to Local Government Board.

5 The following licences expire on this day:—Appraiser, auctioneer, house-agent, beer-dealer, for sale of table-beer to be drunk off the premises, house agent, for sale of spirits and tobacco on board packet boats, dealer in plate, rectifier and compounder of spirits, dealer in spirits, for use of still or retort, retailer of sweets and made-wines, dealer in sweets or made wines, manufacturer of tobacco and snuff, for dealing in and selling tobacco and snuff, manufacturer of vinegar, dealer in foreign wines.

7 Last day for Medical Officers to send quarterly lists of lunatics to Clerk to Guardians.

9 Last day to pay Fire insurances due on Midsummer Day.

Last day for Clerk to Guardians to send quarterly lists of lunatics to Commissioners in Lunacy, and copies to Clerk to Visitors.

15 Registrars to apply on or before this day for certified copies of all entries of marriages solemnized during the quarter ended 30th June.

20 The Clerk of the Peace in every county, riding, or division shall, on or before this day, issue his precept to the Churchwardens and Overseers of the several parishes, and the Overseers of the several townships, requiring them to make out, before the 1st September next, a true list of all men residing within their respective parishes and townships, and qualified and liable to serve on juries, and specify in the list the persons qualified as Special Jurors.

Last day for Registrars to deliver to Superintendent Registrars copies of entries of Births, Deaths, and Marriages for previous quarter.

Last day for County Voters to send to Overseers their claims to vote.

Last day for Occupiers in counties and Householders in boroughs to pay poor rates due in respect of the year preceding 5th January last, so as to be retained on Register of Voters.

Registrars of Births and Deaths to transmit to Overseers, on or before this day, a return of all male persons dying within a parish included in a parliamentary or municipal borough during the period between 1st April and 15th July.

22 Overseers to make out list of persons disqualified as occupation voters by reason of the non-payment by the 20th of the poor rates due on the preceding 5th January. Such list to be open to public inspection until 5th August.

25 On or before this day Overseers to remove copy of Register of Ownership voters from the places where it has been published.

A person entered in respect of lodgings on the Register of Voters for parliamentary and municipal elections for boroughs, and desirous to be entered on the next register in respect of the same lodgings, should, on or before this date, send his claim to be so entered to the Overseers.

30 On or before this day the Overseers are to make out the list of ownership claimants, that is to say, a list in the form No. 3 in the second Schedule to the Registration Act, 1885, of all persons who, on or before 20th July, have delivered or sent to them their claims to be registered as county voters.

On or before this day Overseers are to ascertain from the Relieving Officer acting for their parish or township the names of all persons who are disqualified from being inserted in the lists of voters by reason of having received parochial relief, and the Relieving Officer is bound to produce at such place in the parish or township, and at such times as are required by the Overseers, the books in his possession containing the names of such persons.

On or before this day Overseers are to add on the margin of one copy of the ownership portion of the Register for their parish or township, and on the margin of the list of ownership claimants, the word "objected" before the name of every person therein whom they have reasonable cause to believe to be not entitled to be regis-

tered in the new Register; and the word "dead" before the name of every person therein whom they have reason, from the returns sent by the Registrars of Births and Deaths, or from their own knowledge, to believe to be dead. If it appears that any person is entered in the ownership portion of the Register for the parish or township in respect of a £50 rental qualification, the Overseers are to add the word "objected" before the name of such person, and to insert his name in the occupiers' list.

On or before this day Overseers are to make out the following lists of voters, according to the circumstances of the parish or township:—(*a*) The occupiers' list in counties; that is to say, a list of all persons entitled by reason of the occupation of property situate wholly or partly within their parish or township, to be registered as voters in respect of a £50 rental, a £10 occupation, or a household qualification. (*b*) The occupiers' list in boroughs; that is to say, a list of all persons entitled to be registered as parliamentary voters in respect of a £10 occupation or a household qualification, or to be enrolled as burgesses of the said municipal borough. (*c*) The reserved rights list; that is to say, a list of all persons entitled to be registered as parliamentary voters in respect of any right reserved by Section 31 or 33 of the Reform Act, 1832. (*d*) The old lodgers' list, that is to say, a list of all persons who, being on the Register of Voters previously in force for a parliamentary borough in respect of residence in lodgings, have, on or before 25th July, claimed to have their names inserted in the lists of parliamentary voters in respect of residence in the same lodgings. (*e*) A list of all persons who are entitled, in respect of the occupation of property, to be elected Councillors or Aldermen of the said municipal borough, but are not entitled to be on the Burgess Roll thereof. (*f*) The Burgess List; that is, a list of all persons entitled to be enrolled as Burgesses for a municipal borough.

Last day for Superintendent Registrars to transmit to Registrar-General certified copies of entries of Births, Deaths, and Marriages for quarter ended 30th June.

Pawnbrokers' licences expire to-day; also licence to kill game, and to carry a gun.

August.

1 On or before this day Overseers are to sign one of the copies of the ownership portion of the Register and the list of ownership claimants, and of each of the lists specified under date 31st July, as the case may be, and to cause a sufficient number of copies of such list to be written or printed, and to publish in their parish the said portion of the Register with their marginal additions and the said list signed by them. The Overseers are also to publish at the same time the corrupt and illegal practices list. The Overseers are also to keep a copy signed by them of each of such lists, and a copy of the ownership portion of the Register, which during the first fourteen days after publication are to be open to public inspection. They are also to keep a copy of the list of defaulters in payment of assessed taxes, sent to them by the Collector of taxes, open to public inspection at any time between 10 a.m. and 4 p.m. on every day, except Sunday, during the next fortnight, without fee, and to deliver copies thereof on payment after the following rate:—

Not exceeding 100 names					0s. 6d.
Exceeding 100 and not exceeding 200					1 0
,,	200	,,	,,	300	1 6
,,	300	,,	,,	400	2 0
,,	400				2 6

On this day, or on any day until the 20th inclusive, a person desirous of having his name entered in the lodgers' list must send in his claim to the Overseers.

Bank and General Holiday.

5 Last day for inspection of list of persons who have not paid poor rates due January 5.

11 Between this day and the 31st registered voters and claimants may inspect rate books, and make extracts therefrom for any purpose relating to any claim or objection.

12 Trinity Law Sittings end.

20 Last day for giving notices to Overseers of objections to persons on the Register.

Last day for persons omitted from list of Occupiers in counties to send in their claims to the Overseers, and last day in boroughs to claim to vote in parliamentary and municipal elections.

25 On or before this date Overseers are to deliver copies of all lists to Clerks of the Peace and Town Clerks.

On or before this day Overseers in counties and boroughs to make out claim lists; that is to say, lists containing the name of every person who has claimed on or before 20th August to have his name inserted in any list of voters for their parish or township, making separate lists of—

COUNTIES: (*a*) Persons claiming to be registered in the occupiers' list; (*b*) Persons claiming to be registered as lodgers, but not comprised in the old lodgers' list.

BOROUGHS: (*a*) Persons claiming to have their names inserted both among the parliamentary voters for a parliamentary borough and the burgesses for a municipal borough; (*b*) Persons claiming to be inserted in a list of parliamentary voters only, but otherwise than as freemen or lodgers; (*c*) Persons claiming to be inserted in a list of parliamentary voters as lodgers, but not comprised in the old lodgers' list; (*d*) Persons claiming to be inserted in the list of burgesses only; (*e*) Persons claiming to be entitled to be elected Councillors or Aldermen, but not entitled to be on the burgess roll; (*f*) Persons claiming to be omitted from the corrupt and illegal practices list.

Overseers to sign and publish the lists of persons claiming to be entitled to vote in Parliamentary elections in counties and boroughs, and of persons whose claims so to vote are objected to. The Overseers to keep a copy of such lists, which, with the original notices of claims and objections, are to be open to public inspection at any time between 10 a.m. and 4 p.m. on every day except Sunday, up to and including the 8th Sept., and copies are to be delivered to any person on payment after the rate referred to under date 1st Aug.

Last day for Town Clerk to make out and publish lists of freemen claiming to vote, and those objected to. Such list to be kept open for perusal till the 8th September.

31 Railway companies to furnish accounts to Board of Trade.

Last day for Overseers to make out list of men qualified and liable to serve on Juries.

September.

1 Licences for the manufacture and sale of playing cards and of patent medicines expire to-day.

Clerks to Boards of Guardians are, four weeks

at least before the 29th of September, to estimate the probable expenditure in the relief of the Poor, and other charges by the Guardians on behalf of the Union, and estimate the probable balance due to or from each parish at the end of the current half-year; apportion the sums to be contributed by the several parishes comprised in the Union, and prepare the orders on the Overseers or other proper authorities of the several parishes for the payment of such respective contributions, which orders shall be laid before the Guardians for their consideration a reasonable time before the expiration of the current half-year. The Guardians shall make the orders at the commencement of each half-year ending at Lady-day and at Michaelmas.

Last day for Overseers to make out the "Burgess List," and to deliver a copy to the Town Clerk. A true copy is also to be kept by Overseers for perusal by any person without payment of any fee at all reasonable hours for the last seven of the first fifteen days of Sept.

6 List of Jurors to be affixed to doors of churches and other places of public worship on the 4th, 11th, and 18th of this month.

8 Town Clerk to cause a copy of "Burgess List" to be fixed on or near the outer door of the town hall on every day during the week next preceding the 15th inst.

Last day for inspection of lists of claims and objections and for inspection of the original notices of claims and objections.

10 Last day for transmitting to Town Clerk or to Clerk of the Peace, according to the form prescribed in Schedules 2 & 3 of the Registration Act, 1885, declaration as to misdescription in list of Parliamentary Voters or in Burgess List of name or place of abode of any person entered on the list, or in respect of whom there is any error in or omission from the list. The declaration to be open, free of charge, to public inspection at the office of the Town Clerk, or the Clerk of the Peace as the case may be, between 10 a.m. and 4 p.m. on every day except Sunday before the 15th of September, and the Town Clerk shall deliver copies thereof on payment of fourpence per folio of 72 words.

15 Between this date and last day of October Courts for revision of lists of Voters (boroughs) to be held by Revising Barristers. Clerk of the Peace to attend Revising Barrister's first Court, and Overseers to attend courts for their respective districts and parishes, produce list of voters, and answer questions.

Last day for persons whose names have been omitted from "Burgess List," and for persons objecting to any name in such list, to give notice to the Town Clerk.

Registrars of Births and Deaths to transmit to Overseers, on or before this day, or at such other time as shall be appointed by the Revising Barrister, a return of all male persons dying within a parish included in a parliamentary or municipal borough during the period between the 16th of July and the time when such return is made.

20 Between this date and the last day of October, Courts for revision of lists of Voters (counties) to be held by Revising Barristers, but by sect. 4 of the Registration Act, 1885, those Courts may be held within the period prescribed for boroughs, and seven days' notice of each Court is sufficient.

Railway Companies to pay quarterly instalments of Income Tax on or before this day.

23 Last day for Town Clerk to make out list of persons claiming to have their names inserted in "Burgess List," and of names objected to. Copies of such lists to be affixed on door of Town Hall until 30th inst.

Within the last seven days of this month the Justices in every division in England and Wales are to hold a special sessions for receiving and examining the jury list, when the Churchwardens and Overseers are required to attend, and the lists, when approved, are to be forwarded by the Justices' Clerk to the Clerk of the Peace.

24 Sheriffs of London and Middlesex to be sworn in.

29 Quarter Day. Union accounts to be made up to end of week nearest this date.

Half-yearly or yearly accounts of School Boards to be made up to this day.

The Lord Mayor of London to be chosen.

30 District Medical Officers to notify, at the commencement of this quarter, to the Board of Guardians the paupers whose names have been inserted in the permanent medical relief list for a period of six months.

The following licences expire on this day: Brewer of beer, maker of methylated spirit, retailer of methylated spirit, hawker's half-yearly.

October.

1 On or before this day every body corporate or unincorporate chargeable with the duty of 5 per cent. on the annual value, income, or profits of its real and personal property, shall deliver to the Commissioners of Inland Revenue a full and true account of all property in respect whereof such duty shall be payable, and of the gross annual value, income, or profits thereof accrued in the year ended the preceding 5th of April. The term "body unincorporate" is defined by sect. 12 of the Customs and Inland Revenue Act, 1885, to include "every unincorporated company, fellowship, society, association, and trustee, or number of trustees, to or in whom respectively any real or personal property shall belong in such manner, or be vested upon such permanent trusts, that the same shall not be liable to legacy duty or succession duty."

Between the 1st and 15th, the Mayor and Revising Assessors to hold courts to revise Burgess Lists under Municipal Corporations Act, three clear days' notice being given. Revised list to be kept by Town Clerk; persons therein entered to be entitled to vote from 1st November.

Watch Committee of Town Council to transmit to Secretary of State a copy of all rules and orders made since 30th June for the regulation and guidance of constables and policemen.

Between the 1st of this month and the 31st December, the Medical Officer of each workhouse and district to visit pauper lunatics not in asylums. (*See* January 1.)

The Justices of every county, and the Watch Committee of every borough, on some day in this month, are to transmit to the Secretary of State, for the year ended 29th September last, a statement of the number of offences reported to the police within such county or borough, the number of persons apprehended by the police, the nature of the charges against them, the result of the proceedings taken thereupon, and any other particulars relating to the state of crime within such county or borough.

Assessment Sessions Valuation (Metropolis) Act, 1869.—For the purpose of hearing appeals under this Act against any valuation list in the metropolis, the Justices of the Peace shall, at the

time specified in this Act, assemble and hold a Court of General Assessment Sessions. The Justices who are to form the Court of General Assessment Sessions shall be appointed annually as follows:—Three Justices of the Peace of the County of Middlesex (of whom the Assistant Judge of the Court of the Sessions of the Peace of the said county shall be one) shall be appointed by the Court of General Quarter Sessions, or General Sessions of the Peace for the County of Middlesex. Two Justices of the Peace of the County of Surrey shall be appointed by the Court of General or Quarter Sessions of the Peace for the County of Surrey. Two Justices of the Peace of the County of Kent shall be appointed by the Court of General Sessions for the County of Kent. Two Justices of the Peace of the City of London shall be appointed by the Court of the Mayor and Aldermen of the City of London in the Inner Chamber. The said Justices shall be appointed in October in every year, or at such other time as may be from time to time fixed by the appointing body. They shall hold office for twelve months beginning on the 1st of November, and any casual vacancy may be filled up by the appointing body.

Keepers of Common Lodging Houses to limewash the walls and ceilings thereof in the first week of this month.

7 Last day for Medical Officers to send quarterly list of lunatics to the Clerks to Guardians.

10 The following licences expire on this day:—Beer retailer, cider retailer, distiller of spirits, retailer of spirits in England and Ireland, retailer of sweets and made-wines (being a publican), for dealing in and selling tobacco and snuff (being a publican), retailer of foreign wine.

Last day for Clerk to Guardians to send quarterly lists of lunatics to Commissioners in Lunacy, and copies to Clerk to Visitors.

14 Fire insurances due at Michaelmas must be paid.

15 Registrars to apply, on or before this day, for certified copies of all entries of marriages solemnized during the quarter ended 30th Sept.

17 Quarter Sessions to be held during this week.

20 Last day for Registrars to deliver to Superintendent Registrars copies of entries of Births, Deaths, and Marriages for previous quarter.

On or before this day, Town Clerk to cause "Burgess Lists" to be completed and copied into one alphabetical list.

22 Last day for Town Clerks to publish a notice of election of Councillors.

Last day for sending in nominations of councillors.

24 Michaelmas Law Sittings commence.

31 Last day for Superintendent Registrars to transmit to Registrar-General certified copies of entries of Births, Deaths, and Marriages for quarter ended 30th September.

Certificates of writers to the signet, solicitors, agents, and notaries public in Scotland, and of conveyancers, special pleaders, and draughtsmen in equity in England expire on this day.

Short licences to kill game expire.

November.

1 Burgesses are to elect persons qualified to be Councillors to supply places of those going out of office. Upon this day one-third of the whole number of Councillors to go out; such proportion to consist of those longest in office without re-election. Nominations must be sent in seven days at least before the day of election.

The burgess-roll, made up from revised lists of burgesses for any municipal borough, shall come into operation on this day, and shall continue in operation up to 31st October, 1888.

Holiday at Bank Transfer Office and Stock Exchange.

9 On this day, at noon, the Council of every borough is to hold a quarterly meeting; the first business being to elect a Mayor of such borough. The Mayor so elected shall continue in office for one whole year.

12 Sheriffs nominated in the Queen's Bench Division for appointment at end of January, 1888.

14 Certificates of notaries public in England expire on this day.

17 Between this date and December 15th, solicitors, proctors, and notaries public in *England* must renew their certificates.

20 Within sixty days half-yearly receipts for interest to savings banks to be made out and issued. Within nine weeks savings banks are to publish annual statement of accounts.

27 Last day for depositing plans and books of reference in the Private Bill Office of the House of Commons and with Clerks of the Peace.

Last day to renew certificates. (*See* Oct. 31.)

December.

1 Time expires for lodging declaration with Registrar of Solicitors for certificates.

Clerks of Union Assessment Committees to send in this month the totals of the gross estimated rental and rateable value of the property included in the valuation lists of the several parishes to the Clerk or respective Clerks of the Peace of the county or counties within which such parishes may be situate.

15 Latest day for delivering notices, &c., to owners and occupiers affected by private bills.

19 Railway Companies to pay quarterly instalments of Income Tax on or before this day.

21 Election of Common Councilmen in the City of London.

Michaelmas Law Sittings end.

23 Latest day for leaving petitions, declarations, &c., at Private Bill Office.

25 Quarter Day.

27 Bank and General Holiday.

District Medical Officers to notify to the Board of Guardians at the commencement of this quarter the paupers whose names have been inserted in the permanent medical relief lists for a period of six months.

Medical officers of Unions entitled to be paid any extra fees, to make out their accounts quarterly to this day, and lay the same before the Guardians.

31 Clerk of the Peace to deliver, on or before this day, County lists of voters to the Sheriff of the county, and Town Clerk to deliver Borough lists to the Returning Officer of the borough.

Railway Companies to prepare an annual abstract of receipts and expenditure for year to 31st December, or some other convenient day in each year, and, if required, transmit a copy thereof, free of charge, to Overseers of parishes through which the railway runs.

Assessment Clerks to make out valuation returns.

Latest day for leaving estimates, lists of occupiers, &c., at Private Bill Office.

The following licences expire on this day:—Horse dealers, male servants, carriages, a horse or mule (not for business purposes), dogs, and to use armorial bearings.

The Howard Vincent Map of the British Empire

By T. B. JOHNSTON, Geographer to the Queen.

Showing the Possessions throughout the World of the British People in 1886; their Extent, Population, Revenue, Steamboat Routes with Distances, Royal Navy Stations, and Coaling Stations over the World.

With an Inset Chart of the World, showing the Extent of British Possessions in 1786.

This Map has been designed to show the British People, in all Public Institutions, Free Libraries and Schools, what the BRITISH EMPIRE is, and its great commercial value to the MOTHER COUNTRY.

Size, 72 by 63 inches. Price, on cloth, stained rollers, and varnished, £1 1*s.*; on cloth, mahogany rollers, and bound with silk up the sides, £1 11*s.* 6*d.*; on cloth, folded up in four divisions, and in titled box case, £1 11*s.* 6*d.*

Accompanied by a Handbook, with Reduced Map (*Gratis*). Copies of the Handbook can be had separately, price 3*d.* each.

For full details of W. and A. K. Johnston's Wall Maps, Wall Illustrations, Atlases, Terrestrial and Celestial Globes Scientific Works, &c., &c., see their Catalogue, which is posted Gratis to any address.

A MOST APPROPRIATE GIFT BOOK.

THE DAILY ROUND.

Meditation, Prayer, and Praise.

ADAPTED TO THE COURSE OF THE CHRISTIAN YEAR

POCKET EDITION, super-royal 32mo, cloth, red edges, 3s.; Persian roan, gilt edges, 4s. 6d.; morocco, 6s.

LARGER EDITION, foolscap 8vo, cloth, red edges, 4s. 6d.; Persian roan, gilt edges, 6s.; morocco, 9s.

THERE ARE ALTOGETHER TEN DIFFERENT EDITIONS.

"The Daily Round" contains a passage of Scripture adapted to the Season, a suggestive Comment, a Meditation, a Devotion, and a Verse for Every Day in the Year. It is the only work of the kind which so completely and successfully carries out the teaching of the Church of England. Warm, devout, yet sober, calm, and uncontroversial.

"Nearly every bishop of all schools of the Church of England has expressed approval of 'The Daily Round.' To each day of the Church's year is devoted a single page, not of a sermon, nor of prayer, but of meditation, and each page has five parts—some words of Scripture, a statement of what those words mean, some thoughts and reflections on practical points, three or four lines of a short and well-conceived collect, and a verse of a hymn. Even a slow reader need not devote more than five minutes per diem to each page, and we shall not be surprised to find 'The Daily Round' growing into a companion to the Prayer Book, as dearly loved in our times as 'The Whole Duty of Man' was esteemed in the days of our great-grandfathers."—*Examiner.*

OUR DAILY LIFE: Its Trials, Duties, and Difficulties. Short Practical Essays. Fcap. 8vo, cloth, 4s. 6d.

DEVOTIONAL READINGS for FAMILY PRAYER. Adapted to the Course of the Christian Year. With a Form of Responsive Devotions for the Household for Every Day in the Week. Vol. I. MORNING. Vol. II. EVENING. Two Volumes, imperial 32mo, cloth, 6s.; Turkey Roan, gilt edges, 9s.

THE UNCANONICAL AND APOCRYPHAL SCRIPTURES: Being the Additions to the Old Testament Canon which were included in the Ancient Greek and Latin, with Additional Matter found in the Vulgate and other Ancient Versions, Introductions to the several Books and Fragments, Marginal Notes and References, and a general Introduction. By the Rev. W. R. CHURTON, B.D., Canon of St. Albans, and Examining Chaplain to the Bishop. Large post 8vo, pp. 608, cloth, 7s. 6d.

THE GOSPEL STORY: A Plain Commentary on the Four Holy Gospels, containing the Narrative of our Blessed Lord's Life and Ministry, in Simple Language. By the Rev. W. MICHELL, M.A. Two Vols., fcap. 8vo, 6s.

"An admirable work for the Nursery, or for reading at Family Prayer."

THE HOLY COMMUNION: Its Nature and Benefits. With a Notice of some common Objections to receiving it, and an Explanation of what is required of them who come to the Lord's Supper. In Plain Language. By the Rev. W. H. RIDLEY. Cloth, 7d.; or fine paper, 1s.; neatly bound, 2s.

THE NARROW WAY: A Complete Manual of Devotion for the Young. With a Guide to Confirmation and Communion. *Two Hundred and Forty-fifth Thousand.* Cloth, price Sixpence; or Large Type, price One Shilling.

London: J. WHITAKER, and all Booksellers. [175

"Guardian, London," is all the address necessary for Telegrams. [210

Oxford University Press.

The Archbishops and Bishops of the Church of England, and a large number of eminent Clergymen and Ministers, concur in recommending

THE OXFORD BIBLE FOR TEACHERS.

The Additional Matter has been carefully Revised and Enlarged from time to time by Dr. STUBBS, Bishop of Chester, Dr. EDWIN PALMER, Archdeacon of Oxford, Dr. ANGUS and other eminent scholars. The Scientific Information was prepared under the supervision of Professors ROLLESTON, WESTWOOD, LAWSON and EARLE—names of the highest authority in their several departments.

The ARCHBISHOP of YORK.—"THE OXFORD BIBLE FOR TEACHERS in some of its forms should be in the hands of every teacher."

Rev. C. H SPURGEON.—"If you want to buy a new Bible, and want the *VERY BEST*, write for a list of the OXFORD BIBLES FOR TEACHERS."

The TIMES.—"The whole has been done with admirable completeness."

The PALL MALL GAZETTE.—"Every Bible Student knows it to be the best collection of Biblical information ever brought together in so small a compass."

In various Sizes and Bindings.

Special attention is directed to the Editions,

PRINTED UPON THIN INDIA PAPER, of

THE OXFORD BIBLE FOR TEACHERS.

BOOKSELLER.—"These books are not only beautiful, they are curiosities. They are all printed upon very thin India paper, opaque, very legible, and very light."

PUBLISHERS' CIRCULAR.—"The texture of the paper is so fine, that the volumes are reduced to the smallest bulk which can possibly be attained."

THE INDIA PAPER used for the Oxford Thin Editions of Bibles and Prayer Books is a speciality of the Oxford University Press, and is **used exclusively for Oxford Books.** Its characteristics are extreme opaqueness, great toughness, softness and an agreeable tone. It may be used for years without becoming injured by wear; and the material is so opaque that it **can be made to a degree of thinness only limited by the possibilities of printing. The OXFORD INDIA PAPER has been manufactured in order to meet the popular demand for thin books, and is admitted to be without a rival.**

THE SALE OF

THE OXFORD BIBLE FOR TEACHERS

ALREADY EXCEEDS

THREE QUARTERS of a MILLION.

OXFORD PRAYER BOOKS.

WITH OR WITHOUT HYMNAL COMPANION, OR HYMNS A. & M.

May be had in every variety of Leather Bindings.

BOOKSELLER.—"The really splendid finish of the Oxford Bindings, added to the well-known superiority of the Oxford printed books, places these specimens of taste and ingenuity much above the ordinary standard of Presentation Prayer Books."

Full particulars at all Booksellers'.

The Special Attention of the Public is directed to

CASSELL & COMPANY'S MAGAZINES.

The SPECTATOR says:—"So much trouble is taken with these periodicals, so much ability is at the disposal of the conductors, that it is difficult to bestow the praise which is really deserved without seeming extravagant."

FOR SUNDAY AND GENERAL READING.

The Quiver. *Monthly, 6d.*

"'The Quiver' is best of all the magazines devoted to Sunday reading."—*Saturday Review.*

FOR THE HOUSEHOLD.

Cassell's Family Magazine. *Monthly, 7d.*

"The stories in 'Cassell's Family Magazine' are good, the pictures are clever, the selection of subjects is strikingly varied; it contains a variety of useful information, and altogether a glance through the pages shows that their contents are unusually attractive."—*Times.*

A NEW HIGH-CLASS MAGAZINE FOR LADIES.

The Lady's World. An Illustrated Magazine of Fashion and Society. *Monthly, 1s.*

"The magazine promises to take at once a prominent place in the front rank of the monthlies which are devoted almost exclusively to ladies. The plates are good, while the letterpress reaches a high literary standard."—*Graphic.*

CHILDREN'S CELEBRATION of the QUEEN'S JUBILEE, see

"Little Folks" Magazine for JANUARY,

price 6*d.*, containing particulars of a Grand **Prize Scheme**, specially arranged in connection with the QUEEN'S JUBILEE CELEBRATION.

"The extraordinary popularity of 'Little Folks' has placed it beyond both rivalry and criticism."—*Queen.*

FOR EVERY CULTIVATED HOME.

The Magazine of Art. *Monthly, 1s.*

*** *A Photogravure, Etching or Steel Plate is given with* **each Monthly Part** *of the New Volume.*

"The exquisite beauty of the engravings in 'The Magazine of Art' and the excellence of the letterpress should carry the magazine into every home where Art is appreciated."—*Standard.*

FOR THE HOMES OF THE PEOPLE.

Cassell's Saturday Journal. *Weekly, 1d.; Monthly, 6d.*

"Assuredly the people get value for their money in 'Cassell's Saturday Journal.' It is full of instruction, entertainment and sensation."—*Times.*

STANDARD ENGLISH DICTIONARIES

THE IMPERIAL DICTIONARY OF THE ENGLISH LANGUAGE. A Complete Encyclopædic Lexicon; Literary, Etymological, Scientific, Technological and Pronouncing. By JOHN OGILVIE, LL.D. New Edition, carefully Revised and greatly Augmented. Edited by CHARLES ANNANDALE, M.A., LL.D. Illustrated by above 3,000 Engravings on Wood. In Four Volumes, imperial 8vo, cloth, £5; or half-morocco, £6 6*s*.

"For our own part, so far as vocabulary and treatment are concerned, we should not wish for anything better than the new 'Imperial.' . . . The etymology is clear and concise, and the illustrations are copious, appropriate, and well executed."—*Times*.

"A monument of patience, industry, and good work. It is copious, it is trustworthy; it is beautifully illustrated, and it is admirably printed on good paper. . . . It will be for many years the most serviceable and most highly valued of English dictionaries."—*Saturday Review*.

A CONCISE ENGLISH DICTIONARY: Literary, Scientific, Etymological and Pronouncing. Based on the New Edition of OGILVIE'S Imperial Dictionary. By CHARLES ANNANDALE, M.A., LL.D. Containing a copious Vocabulary with careful Definitions; Explanations of Phrases, Proverbial Expressions, &c.; Brief Notes on Synonyms and Grammatical Constructions; and useful Appendices. Fcap. 4to, cloth, 10*s*. 6*d*.; half-morocco, 15*s*.

"The 'Concise Dictionary' stands first—and by a long interval—among all the one volume English Dictionaries hitherto published."—*Academy*.

THE COMPREHENSIVE ENGLISH DICTIONARY: Explanatory, Pronouncing and Etymological. Containing all English Words in present use, numerous Phrases, many Foreign Words used by English Writers, and the more important Technical and Scientific Terms. By JOHN OGILVIE, LL.D. Illustrated by above Eight Hundred Engravings on Wood. Super-royal 8vo, cloth, 25*s*.; half-morocco, 32*s*.

"This is unquestionably the best dictionary of the English language, of its size and scope, that has yet appeared."—*Nonconformist*.

THE STUDENT'S ENGLISH DICTIONARY: Etymological, Pronouncing and Explanatory, in which the Words are traced to their ultimate Sources, the Root or Primary Meaning inserted, and the other Meanings given fully, according to the best usage. By JOHN OGILVIE, LL.D. Illustrated by about Three Hundred Engravings on Wood. Imperial 16mo, Roxburgh, 7*s*. 6*d*.; half-calf, 10*s*. 6*d*.

"This is the best etymological dictionary we have seen at all within moderate compass."—*Spectator*.

A SMALLER ENGLISH DICTIONARY: Etymological, Pronouncing and Explanatory. Comprising all purely English Words in common use; also Lists of Affixes and Prefixes, Abbreviations, and Latin, French and Italian Phrases. By JOHN OGILVIE, LL.D. Imperial 16mo, cloth, red edges, 2*s*. 6*d*.; Roxburgh, 3*s*. 6*d*.

"We know no dictionary so suited for school use as this; it supplies a want which teachers have long felt."—*British Quarterly Review*.

"Swansea, you may depend upon it, is destined to become the Ocean Port of England."—Sir H. HUSSEY VIVIAN, Bart., M.P.

SWANSEA HARBOUR TRUST.

The Prince of Wales Docks, inaugurated by T.R.H. the Prince and Princess of Wales, possess the longest and deepest Lock in the Bristol Channel, which is Lighted by Electricity, and approached through a new Deep-sea Channel.

Swansea Harbour is a free Port for seven days for ships in commission not earning freights, doing nothing. It is the most westerly Port, the first in the Bristol Channel, and is most advantageously and pleasantly placed at an angle of two hills, on both sides of the river, and on the margin of a beautiful bay off the Atlantic.

There are many private wharves within the Docks and Harbour, and the Great Western, Midland, and L. & N. W. Railways tip Coal, from the same fields as supply the port of Cardiff, directly into ships, and discharge cargoes immediately on and off their respective lines of Railway, quite independent of the Harbour Trust and of each other; the Rhondda and Swansea Bay Railway is also partly opened for traffic.

The affairs of the Harbour, Docks, Low Level Railways, and Estate, are administered by a Public Trust, representing all interests, such as that of the Shipowners, Merchants, Manufacturers, the Corporation, and large Landed Proprietors.

The Prince of Wales Docks, recently constructed for ships of the largest burthen, and the North and South Docks, though of older date, are all supplied with the most modern Hydraulic Appliances for swift despatch. The Docks are surrounded by some twenty-three miles of Railway, connecting the Docks themselves and the great Railway systems, viz., the Great Western Railway, London and North-Western Railway, and Midland Railway, which enter Swansea by independent routes. The Quays, upwards of three miles in length, are furnished with 19 Hydraulic Lifts, capable of shipping 10 tons of Coal per minute upon occasion.

The Mumbles Lighthouse, first lighted in 1794, belongs to the Trust, and is maintained without any extra cost to shipping, as a Ship Signal Station; it is connected with the Post Office System of Telegraphs, which gives Shipowners the command of all the South Wales Ports, and *vice versa*; vessels calling for orders can communicate with their owners without lowering a boat; good and sheltered anchorage being found under the Mumbles Head at any state of the tide, free of tolls, dues, pilotage, and other such charges.

The Registered Telegraphic Address in the General Post Office Place Book is "Swansea Bay Signal Station."

A Telephone is in work between Cardiff and Newport and the Harbour Offices at Swansea, thence to the Mumbles Lighthouse and Ship Signal Station.

The quantity of Copper smelted in the local Works turned out in a year is about 21,000 tons, of the value of £1,500,000; one year's value of the Gold, Silver, Yellow Metal, and Lead is authoritatively given as £250,000. The Landore Siemens' Steel Works on the banks of the River employ 1,300 men. The Spelter, or Zinc, manufactured in Swansea, forms 19-20ths of the whole production of the Kingdom, of the total annual value of £350,000. The Tin and Terne plates made within a radius of four miles of Swansea is reckoned at five million boxes a year, valued at £2,500,000 sterling. Tersely put, there are over One Hundred Works of 36 varieties within a radius of four miles of Swansea Harbour.

The net Tonnage of Shipping cleared from the Harbour in the year 1885, compared with 1876, bearing in mind that the largest increase has been in the net Tonnage of

Steamers, was 58·77 per cent., the increase in the Tonnage of the Steamers in the same period being 188·18 per cent. The Tonnage of Imports shows an increase of 34·31 per cent., and of Exports 71·43 per cent., the Gross Revenue from the foregoing showing an increase of 68·77 per cent.

The Steamers of 750 tons net register and upwards in the year 1885, as compared with 1877, have increased by 255 in number and 288,552 in tons, their proportion to the total Tonnage cleared out of the Harbour being 25·82 per cent. in 1885, against 1·89 only in 1877, due to the accommodation provided by the Deep Sea Channel.

The average Harbour and Dock Rates on Shipping upon the whole clearances was 6·32*d.* per ton in the year 1885, and the Wharfage, Craneage, and other charges average 4·07*d.* per ton weight on the total Imports and Exports in one year.

The Swansea Harbour Trustees have now reduced their rates, assimilating them to those in force at the neighbouring Ports in the Bristol Channel, averaging 5*d.* per ton upon last year's shipping.

Vessels bound foreign entering en route to take Cargo and (or) Bunkers, and (or) to discharge special small quantities of Cargo, not exceeding altogether their Registered tonnage, where full foreign dues have been paid at the original loading Port, pay tonnage rates according to Schedule on the tonnage of Cargo and Bunkers loaded and (or) discharged.

The direct loadings for America have risen from nothing in 1880 by gradual steps to 82 first-class Steamships in 1885, and 78 for the nine months of the year current.

Vessels entering the Wet Docks for the purpose of Dry Docking, and clearing out to sea without using the Dock waters, except in passing through, are free.

All vessels enter the Docks directly, and do not have to wait turn in the Roadstead or Basins.

Partial Statistics of Swansea's trade, published elsewhere, are not always to be depended upon; for example, the Iron and Steel Exports from Swansea given as 4,979 tons for the year 1883 were in truth 80,320, which sprang to 168,928 tons in the year 1885. The Exports in this particular for the nine months of the present year show an increase of 27 per cent. over the first nine months of the year 1885.

Cargoes of every description are landed and warehoused on warrant, or forwarded by railway, with great expedition. The Docks, Quays and Warehouses possess perfect and rapid Railway Communication to all parts of the Metropolis and the Manufacturing Districts of the Kingdom; also Communication by large First-class Steam Vessels with Cornwall, Bristol, Glasgow, Liverpool, London and Belfast, almost daily.

The population of Swansea, the Metallurgical centre of the world, last census was 100,000, doubled in 20 years.

The number and tonnage of the vessels entered and cleared in 1885 was **9,764** in number, and **2,350,337** in net registered tons.

Sir H. Hussey Vivian, Bart., M.P., when laying the central stone of the Lock of the Prince's Dock, remarked that:—"The geographical position of Swansea is manifestly as good as it possibly can be. The distance from Lundy Island to the Pier Head at Swansea is 40 miles, while to the Bute Docks it is 65, and 75 to Newport. Taking into consideration the time of the tide flowing, and presuming a vessel to sustain a speed of ten knots from Lundy, one-third of the vessels passing up the Channel would save a tide by coming to Swansea. A vessel coming into Swansea would leave Swansea seven hours sooner than Cardiff, and be that much further on the way."

Any vessel that can enter the Docks at Cardiff can upon the previous tide enter the Swansea Docks.

HARBOUR OFFICES,
SWANSEA, *15th October*, 1886.

ROBERT CAPPER,
General Superintendent.

"THE COALS AT SWANSEA ARE OF GREAT EVAPORATIVE POWER."

THE LONDON AND COUNTY BANKING COMPANY, LIMITED,

Opens DRAWING ACCOUNTS with Commercial Houses and Private Individuals, upon the plan usually adopted by other Bankers.

DEPOSIT ACCOUNTS.—Deposit Receipts are issued for sums of Money placed upon these Accounts, and Interest is allowed for such periods and at such rates as may be agreed upon, reference being had to the state of the Money Market.

CIRCULAR NOTES AND LETTERS OF CREDIT are issued payable in the principal Cities and Towns of the Continent. Letters of Credit are also issued payable in Australia, Canada, India, China, the United States, and elsewhere.

The *Agency* of Foreign and Country Banks is undertaken.

The Purchase and Sale of Government and other Stocks, also of English and Foreign Shares are effected. *Dividends, Annuities, &c.*, are received for Customers of the Bank.

Great facilities are afforded to the Customers of the Bank for the receipt of money both from and in the Towns where the Company has Branches.

The Officers of the Bank are bound not to disclose the transactions of any of its Customers.

CURRENT ACCOUNTS are kept in conformity with the practice of London Bankers. In cases where a remunerative Balance is not maintained, a Charge for Commission is made. Parties keeping Current Accounts have the facility of having approved Bills discounted—of obtaining Loans upon negociable Securities—of depositing Bills, Coupons, &c., for collection—and of lodging with the Bank Deeds and other valuable property in Fireproof Strong-Rooms for safe custody.

DEPOSIT ACCOUNTS.—Money, in amounts of £10 and upwards, is received from the public generally, subject to 7 days' notice of withdrawal, and Interest is allowed thereon at the current rate of the day; the Bank notifying any change in the rate of Interest by Advertisement in one or more of the leading London Newspapers. If the money be withdrawn within a fortnight, no Interest is allowed. Persons having Current Accounts can transfer any portion of their Credit Balance to Deposit Account.

The AGENCY of COUNTRY and FOREIGN BANKS, whether Joint Stock or Private, is undertaken by the Bank. LETTERS of CREDIT, payable at any of the chief Commercial Towns and Cities of the World, are granted; also Mercantile and Marginal Credits. CIRCULAR NOTES are issued by the Bank, addressed to all, and payable at any, of the places on the Continent where the Bank has an appointed Correspondent. DIVIDENDS, &c., on Government and other Stocks, Annuities, Pensions, &c., are received for customers of the Bank without charge; the Purchase and Sale of Stocks, Shares and Securities are also undertaken; and every description of Banking business is transacted. The Officers and Clerks of the Bank are pledged not to disclose the transactions of any of its Customers. [233

NOTES FOR INVESTORS

BY

WILLIAM CORNFORTH,

Stock and Share Broker,

4, QUEEN VICTORIA STREET, LONDON, E.C.

I. It is seldom wise to subscribe to New Companies. There are a few exceptional cases. I shall not hesitate to submit to my clients any New Company of which I *know* the soundness, and which is likely to be a great success; but such exceptional recommendation will be very rare. Enquiries as to value of new issues are answered without charge, and during the pas year many clients who requested information have been saved from applying for shares now standing at a heavy discount.

II. ***In purchasing Shares, remember the need of being able easily to dispose of same.*** It is *almost impossible* to sell some shares at any price. I therefore make it a rule to recommend only such Shares as can be sold on Stock Exchange. *Attention to this will save many losses and much chagrin.*

III. Beware of Preference Shares much puffed, and of Debentures greatly pressed. Do not be over-confident because a Company is called a "TRUST" that you may be certain of its soundness.

IV. As to Mines! The utmost caution is needed. Money placed in Mining Shares is risked: but if this is clearly understood, small investments may be made with fair chance of large profits.

V. As to liability: Discriminate. Take a Bank like the London and County Bank; or an equally sound though smaller institution, the City Bank; with immense accumulated funds—well managed—with a Directorate of unimpeachable integrity and commercial aptitude; or an Insurance Company like the North British and Mercantile, or Commercial Union, with *Millions sterling* of Invested Funds. In these cases liability is *nominal.* But in weak Companies—with unknown men as directors—or needy adventurers in that position—*beware!*

VI. I can confidently recommend as safe and good investments, Shares in such companies as:—London and County Bank: London Joint Stock Bank: City Bank: North British and Mercantile Insurance Company: Liverpool, London and Globe Insurance Company: Commercial Union Insurance Company; average yield in these about 5 per cent. Full particulars sent on application. Also particulars as to *smaller shares* in some Companies, and of Shares depressed in value but worth buying for good rise. Enquiries as to any Company answered.

VII. I bear in mind that my clients invest their own money, and am always willing to act on definite instructions. In suggesting particular Shares, I have no personal interest whatever to serve. I think of my client's interest *first*, and yet am quite aware that following this rule I shall succeed in building up my own business.

All Railway and Foreign Stocks bought, sold and carried at close market prices. No tape dealing.

Bankers:—CITY BANK.

References:—In every large town in England.

PROMPTNESS AND DESPATCH MAY ALWAYS BE RELIED UPON.

Correspondence is invited. Every communication is treated as absolutely Confidential.

300 GUINEAS REWARD.

H. H. and Co. renewed their offer at the EDINBURGH INTERNATIONAL EXHIBITION, 1886, as at the INTERNATIONAL EXHIBITION of 1862, also at Paris, 1867, and again at Vienna in 1873, to any person who could pick their Locks (then and now on exhibit and supplied to the Public) with their Patent Combined Protectors, but the challenge then made was not accepted, although the Locks were examined by several mechanics. These were the only Locks exhibited under actual challenge to pick.

N.B. Skilled mechanics accepting the above offer are expected to master Eight Lever Locks as a qualification. H. H. and Co., not being eligible to exhibit at the Inventions Exhibition, 1885, again make the above offer as a test of the non-pickability of their Combined Protector Locks.

WESTMINSTER BRANCH—1, Great George Street, S.W.

LIFE DEPARTMENT.

In the selection of an office in which to effect Life Assurances, the important points for consideration are :—

I. SECURITY.
II. THE RATES OF PREMIUM CHARGED.
III. THE CONDITIONS OF ASSURANCE.
IV. THE PROFITS TO THE ASSURED UNDER PARTICIPATING POLICIES.

It is claimed for the ALLIANCE that its large Capital, the amount of its Reserves, and the character of its Investments, afford security of a very high order.

The Rates of Premium will be found moderate, and the Conditions of Assurance most favourable to the Assured.

The Reversionary Bonuses resulting from the distribution of Profits ascertained at the close of the year 1883, allotted to Policies of Five years' standing, range from about £1 12*s.* per cent. per annum on the Sum Assured under Policies effected at age 20,
to £3 16*s.* per cent. per annum „ „ „ at age 60.

FIRE DEPARTMENT.

Fire Policies are granted on the usual terms.

The Directors are open to entertain applications for Agencies from parties who are in a position to introduce business of a high class. Life and Fire Proposal forms, Prospectuses, and Statements of Accounts, may be had on application to the Head Office of the Company, or to any of the Branch Offices.

LOANS are granted on the security of Life Interests, Freehold Property, and Rent Charges. [74

Patrons—{ HIS GRACE THE ARCHBISHOP OF CANTERBURY.
HIS GRACE THE ARCHBISHOP OF YORK.

President—THE RT. HON. AND RT. REV. THE LORD BISHOP OF LONDON.

Vice-President—THE LORD HARRIS.

Chairman—THE VERY REV. THE DEAN OF WESTMINSTER.

Physician—DR. STONE.

Actuary—FRANK B. WYATT, ESQ.

Secretary—MATTHEW HODGSON, ESQ.

Open to the Clergy and their Lay Relatives.

THE SOCIETY OFFERS THE FOLLOWING ADVANTAGES:

1. Absolute Security.
2. Economy of Management; No Agents being employed or Commission paid.
3. Low Rates o Premium and Liberal Surrender Values.
4. Claims Paid immediately on Proof of Title.
5. No Shareholders; all Profits being the Property of the Assured.
6. The Profit arising from the exceptionally low Rate of Mortality proved beyond doubt to prevail amongst the Clergy.

Extract from the Report of the Directors submitted to the Members at the Annual General Meeting, on Thursday, 15th July, 1886:—

FINANCIAL INFORMATION.

ACCUMULATED FUNDS	£3,378,123
ANNUAL INCOME	357,427
TOTAL AMOUNT OF CLAIMS upon Death paid during 57 years	2,707,129
TOTAL AMOUNT ASSURED by 8,844 existing Life Assurances	7,675,837
The NEW ASSURANCES effected during the year amounted to	287,620
Yielding an ANNUAL PREMIUM INCOME of	8,931
The Amount added to the Society's Accumulated Fund during the year was	105,547

[217

The Clergy Mutual Assurance Society.

The Society's experience, as regards the Mortality during the past five years, has been again extremely favourable, even more so than during the previous quinquennium, the amount paid on death having been only £741,830, as against an expectation of £1,097,802 according to the Carlisle Table, on which the Society's rates of Premiums were based.

The rate of Interest has been well maintained, and the expenses of management have been kept within moderate limits.

As a consequence of these favourable circumstances it has been found, after the most stringent valuation of the Society's Assets and Liabilities, that there remains a surplus of £573,000 over and above the amount necessary to be retained for the due fulfilment of the Society's contracts.

The Directors have decided, on the advice of their Actuary and Consulting Actuary, to reserve the sum of £87,000, and to divide amongst the Assured Members, by way of Bonus, no less a sum than

£486,000.

The following is an example of the effect of successive Bonuses on an Assurance for £1,000 *effected in the year* 1846 *at the age of* 35 *next Birthday:—*

Annual Premium	paid in the years	1846 to 1850 ...	£26	10	0
Do.	do.	1851 to 1855 ...	24	1	0
Do.	do.	1856 to 1860 ...	22	2	10
Do.	do.	1861 to 1865 ...	18	16	3
Do.	do.	1866 to 1870 ...	14	8	5
Do.	do.	1871 to 1875 ...	7	9	8

In 1876 the Premium was finally extinguished, and an addition of £44 made to the Sum Assured.

In 1881 there was made a further addition of £167; and in 1886 a further addition of £205.

Thus, although the total amount paid in Premiums is only £567 0s. 10d., the Amount Assured has been increased from £1,000 to £1,416. Moreover, should the Life survive to the 1st June, 1891, a further large addition will be made to the Amount Assured.

Upwards of £2,105,000 has now been divided amongst the Assured Members by way of Bonus.

Annual Cost of an Assurance of £1,000, with Full Profits.

Age next Birthday.	£	s.	d.
25	20	1	8
30	23	3	4
35	26	10	0
40	31	1	8
45	36	3	4

FINANCIAL POSITION on the 30th June, 1886.

The **Annual Income** for the Year then ending was	£316,164
The **Assurance Fund** at that date was...	£2,715,760
The **New Policies** in the Year were 570 in number, assuring ...	£360,153
The **New Annual Premiums** thereon amounted to	£13,624
The **Total Claims by Death** paid to date amounted to	£5,161,872
The **Subsisting Assurances and Bonuses** were	£6,849,646

DISTINCTIVE FEATURES.

Credit of half the first five Annual Premiums allowed on whole term Policies on healthy Lives not over 60 years of age.

Endowment Assurances granted, without Profits, payable at death, or on attaining a specified age.

Invalid Lives assured at rates proportioned to the risk.

Non-Forfeitable Policies granted, the Premiums being all paid during a limited number of years.

Immediate Settlement of Claims.—Claims paid immediately on proof of death and title.

Non-Profit Premiums lately reduced.

New and Liberal Conditions of Assurance (*see* New Prospectus).

BONUS.

The Profits are divided quinquennially, and Policies participate in proportion to the number and amount of Premiums paid on them during the Quinquennium. Persons who effect new Policies before the end of June next will therefore be entitled, at the Division in January, 1892, to one year's additional share of Profits.

The New Bonus Report, Prospectus, and every information on application.

SUMS ASSURED	£7,476,983
ACCUMULATED FUNDS (*including paid-up Capital of £167,867*)	£2,930,098
Being just 40 per cent. of the Sums Assured and Bonus.	
SUBSCRIBED CAPITAL	£1,500,000
ANNUAL INCOME	£339,265

The following figures show the progress of the Company :—

In 1877 the Assurance Fund, invested upon first-class securities, was equal to 32 per cent. of the Sums Assured and Bonus added thereto ; and to Eleven times the amount of the Annual Premiums payable.

In 1882 to 36 per cent. of the Sums Assured and Bonus added thereto ; and to Thirteen times the Annual Premiums payable.

In 1885 to 37 per cent. of the Sums Assured and Bonus added thereto ; and to Thirteen times the Annual Premiums payable.

In June, 1877, the amount of Profits declared by the Company was...	£183,883
In December, 1882...	£218,182

In addition to the Bonus declared periodically, interim Bonuses *are given on Policies of five years old and upwards which become claims between any two valuations, thereby practically securing to the Assured an Annual Bonus.*

During the past 38 years the Company has paid in Claims	£8,141,532
And divided Bonuses amongst the Assured, exclusive of those taken in Reduction of Premium, amounting to	£1,077,794

ENDOWMENT ASSURANCE—Investment and Insurance combined.

Special attention is called to the very favourable rates of Premium charged by this Company for "Endowment Assurances," *under which Class the Sum Assured is payable on attaining a certain age, or at the previous death of the Assured, whichever event may happen first. It will be seen that this class of Assurance combines the principle of Investment with that of Life Assurance, and thereby meets a need which is often felt by Insurers. These Policies may be taken out With or Without Profits.* [195

EMPLOYERS' LIABILITY ASSURANCE

CORPORATION, Limited.

Premium Income, £148,995. Assets, £2,062,597. Expenses of Management, £10,259.

At the last division of Profits in 1885 the sum of **£339,325 was divided as Bonus**, leaving a balance of undivided profit of £89,823.

LIFE ASSURANCE.—AN INVESTMENT.

An Endowment Assurance, *i.e.*, one payable at a fixed age, say 60, or earlier, in the event of death, combines the advantages of a safe investment for annual savings, with the protection of immediate assurance.

TABLE of the TOTAL ADDITIONS made up to December 31st, 1884, to POLICIES of £1.000 each.

Age at Entry.	NUMBER OF PREMIUMS PAID.						Age at Entry.
	Forty.	Thirty-five.	Thirty.	Twenty.	Ten.	Five.	
	£ s.	£ s.	£ s.	£ s.	£ s.	£ s.	
20	*1,022 0	* 876 0	* 736 0	431 0	191 10	103 0	20
30	*1,167 0	* 978 10	* 819 0	464 10	211 0	112 0	30
40	*1,343 10	*1,124 10	* 939 10	525 10	232 0	124 0	40
50	——	*1,355 0	*1,126 0	*626 10	276 10	147 0	50
60	——	——	——	*836 10	372 0	197 10	60

In the cases marked * the Bonuses, if surrendered, would be more than sufficient to extinguish all future premiums, and the Policy-holders would still be entitled to share in future profits.

LIFE DEPARTMENT.

The last Quinquennial Valuation was made on the basis of the Institute of Actuaries' (HM & HM5) Tables of Mortality and 3 per cent. interest, the net premiums only being valued, and the whole of the loading reserved. The sum of **£175,228** was divided as a Bonus among 5,052 participating Policies assuring, exclusive of existing bonus, **£4,321,144**, the annual premiums payable under which amounted to **£132,533 2s. 2d.**

The exceptional security offered by the paid-up Capital of **£1,000,000** has attracted a large amount of non-participating business to the Company, and the profit derived from it during the five years was more than sufficient to pay the sum of **£40,000** which the Proprietors took as their share of the surplus, and which was the sole benefit which they received from the Life business in return for the guarantee afforded by the unusually large paid-up Capital of the Company. The Policy-holders in the "Guardian" have, therefore, the security of a Proprietary Company with the Profits of a Mutual Society.

The full Bonus Report and Prospectus will be forwarded on application.

LIFE FUND (1885), £2,177,000. LIFE INCOME, £288,000.

FIRE DEPARTMENT.

Insurances effected upon Property at Home and Abroad at Moderate Rates.

Losses by Lightning are made good by the Company.

FIRE FUND (1885), £539,000. FIRE INCOME, £453,000.

The Directors are prepared to consider Applications for Agencies. [82

The Capital of the LAW FIRE INSURANCE SOCIETY, amounting to **£5,000,000**, was subscribed before the Society commenced business in 1845, by nearly One Thousand Gentlemen connected with the profession of the Law; the shares are now held by a body of Shareholders comprising some of the highest and most influential members of the profession; and the success which has attended the operations of the Society is founded on the eligible character of the risks constituting the bulk of its business, and the promptitude and liberality with which its engagements have always been met.

In order to meet covenants requiring continuance of Rent, notwithstanding destruction of Buildings by Fire, the Society will grant Insurances on Rent, the amount being specified in the Policy.

Attendance given at the Office of the Society daily from Ten till Four (Saturdays Ten till Two), where parties may obtain any further information respecting the terms on which Insurances may be effected.

POLICIES NOW IN FORCE	**£9,600,000**
FUND ACCUMULATED and invested in FIRST-CLASS SECURITIES	**3,890,000**
POLICY CLAIMS PAID	**8,700,000**

The ASSOCIATION employs NO AGENTS, and pays NO COMMISSION in any shape, for the introduction of Policies. Its expenses are small, being less than 3 per cent. of its annual income from premiums and interest.

An investigation of its affairs is made every year, and the surplus is applied, first in reducing the premiums until they are extinguished, and then in increasing the sum assured. The first seven premiums are payable in full, and the reduction begins with the eighth. During the last 30 years this reduction has *increased*, on the average, at the rate of about One per Cent. per annum, and as the mortality among its members continues to be much within the estimate, and the funds of the Society are invested at a higher rate of interest than is assumed in the Valuations, it is expected that the premiums may be still further reduced.

PREMIUMS commenced before July, 1879 (4th Series), are this year reduced			**70 per cent.**
" " " 1876 (3rd Series),	"	"	80 "
" " " 1865 (2nd Series),	"	"	95 "
" " January, 1856 (1st Series),	"	"	100 "

And, as the reduction of premiums in the First Series can be carried no further, an addition of five per cent. of the annual premium has been this year made to the sum assured.

The Corporation has granted Fire, Life and Marine Assurances for more than a Century and a-half; during that long period it has endeavoured to introduce into its practice all the real improvements that have from time to time been suggested, and to afford every facility for the transaction of business.

Of the Share Capital the sum of **£448,275** has been paid up. The Funds in hand exceed **£3,400,000.**

Claims under Life Policies are payable at once upon proof of death and title being furnished to the satisfaction of the Court of Directors.

Copies of the Accounts, pursuant to "The Life Assurance Companies Act, 1870," can be had on application personally or by letter. [248

LONDON AND LANCASHIRE LIFE ASSURANCE

COMPANY. ESTABLISHED 1862.

Head Office: LONDON—66 & 67, Cornhill, E.C.

Board of Direction.

Chairman—Col. KINGSCOTE, C.B. *Deputy-Chairman*—Alderman Sir THOMAS DAKIN.

Hon. EVELYN ASHLEY.

R. BARCLAY REYNOLDS, Esq.
SAMUEL GURNEY SHEPPARD, Esq.

Assistant-Secretary—G. W. MANNERING.
Manager and Actuary—WILLIAM PALIN CLIREHUGH.

PROGRESS OF THE COMPANY

During the Past Ten Years to 31st December, 1885.

YEAR.	NEW BUSINESS.		NET PREMIUM INCOME.	INVESTED FUNDS.
	Sums Assured.	New Premiums.		
1875	£244,720	£7,769	£43,866	£135,537
1880	453,687	15,459	70,939	222,745
1885	582,675	21,853	117,076	422,539

It will thus be seen that in ten years the New and Net Premium Incomes have trebled, whilst the Funds show an increase in the same proportion.

Moderate Rates. Liberal Conditions. Undoubted Security.

THE MUTUAL LIFE ASSURANCE SOCIETY exists solely for the benefit of its Members; and as it has no other interests to serve—no Shareholders or Guarantors to share in the profits and provide with dividends—all the regulations are framed with the object of securing to the Members the greatest benefits to be derived from an equitable system of Life Assurance.

The Funds amount to more than 14 times the Annual Premium Income, and are equal to 42 per cent. of the total sums assured; a degree of strength possessed by very few Offices.

A Policy in this Society is ABSOLUTELY FREE AND INDISPUTABLE after it has been in force five years, and the life assured has attained the age of 30; the due payment of the ordinary Annual Premium stated in the Policy being then alone necessary to secure to the Member or his representatives the full benefits of the assurance. [86

ESTABLISHED 1870.

THE MUTUAL FIRE INSURANCE CORPORATION

(LIMITED) ISSUES

BONUS POLICIES

Entitling the holders to have them Renewed every Sixth Year Free of Charge, provided no Losses have been paid under them during the previous five years.

These Policies will be charged the usual Premiums, and, being in the Non-Members' Class, will be *absolutely free from any liability.*

All the Profits made belong to the Members.

The Liability of a Member is strictly limited to double the amount of the Premium paid or payable by him during the current year.

The Association has been formed mainly for the purpose of enabling Employers of labour to protect themselves against the liabilities of the "EMPLOYERS' LIABILITY ACT, 1880," which are of a very serious character, and also to cover all Accidents to Workpeople during the hours of labour; and for this class of business especially it is felt that the *Mutual System* is alone the true one in the interest of insurers. Every description of Insurance against Accidents is undertaken, except that of Coal Mining, in a collective form.

The fidelity of Employes guaranteed. Ordinary Accident Policies issued.

The Association will be worked as far as possible on the lines of the Mutual Fire Insurance Corporation. The premiums, which will be thoroughly classified, are as low as appears to be compatible with security, and *any surplus*, after the payment of losses, expenses, and interest to guarantors, *will remain the property of the members;* the experience of the Association will enable it from time to time to rectify and adjust these classifications. The Association has been formed with the full belief that it will bring to its insurers similar advantages to those which the members of the Mutual Fire Insurance Corporation, Limited, have received during the sixteen years of the existence of that Company. Income for Year	3,272,662

THE LATEST ADVANCE IN LIFE INSURANCE.

NON-FORFEITING LIMITED-TONTINE POLICIES.—These Policies combine the Non-Forfeiture features, originated by the NEW YORK LIFE in 1862, with the Privileges and Profits of its popular "Tontine Investment Policy." The popularity attained by this Company's Non-Forfeiture Policies, and the gratifying results, as well as popularity of its Tontine Investment Policies, have led the NEW YORK LIFE to *combine the essential features of both* in its Non-Forfeiting Limited-Tontine Policy. This Policy, **which provides against loss in case of default in payment of premium after three years, by the guarantee of a Paid-up Policy, is now confidently offered by this Company.**

THE NEW YORK LIFE INSURANCE COMPANY issue a Special Contract. Among the valuable features are Endowment, Insurance, Annuity, Immediate Payment of Death Claims, no Suicide Clause, no Restriction as to Residence or Travel after two years.

ANNUITIES.—This Company grants ANNUITIES upon more favourable rates than British Companies, the higher rate of interest obtained by their investments in first-class American securities enabling them to do so.

RATE FOR £100 ANNUITY.

LIFE DEPARTMENT.

The principles on which this Company was founded, and on which it continues to act, combine the system of Mutual Assurance with the safety of a large Protecting Capital and Accumulated Funds, and thus afford all the facilities and advantages which can prudently be offered by any Life Assurance Office. Under these principles the business of the Company continues rapidly to increase. *Ninety per Cent.* of the *Whole Profits* is divided among the Assurers on the Participating Scale. The *Profits* are divided every five years. *Policies are Indisputable* after Five years. *Annuities* of all kinds are granted, and the rates fixed on the most favourable terms.

Prospectuses and every information can be obtained at the

FIRE DEPARTMENT.—Insurances are granted on Property situate in all parts of the British Dominions and in most Foreign Countries, at rates which are computed according to the actual risk incurred. The Company has already paid over **Five Millions Sterling** in the settlement of Claims under its Fire Policies.

LIFE DEPARTMENT.—The Company offers the advantages of perfect Security, with great Economy in management and Moderate Rates of Premium. The total expenses in the year 1885 were slightly under 7½ per cent. of the Income from Premiums and Interest, or excluding Commission paid to Agents, less than 3¾ per cent.

In the Participation Branch, the whole of the ascertained surplus at each valuation belongs to the Assured. The amount for the Quinquennium ending 31st December, 1885, was sufficient to provide a **Bonus of £1 10s. per cent. per annum** upon the sum Assured, or £7 10s. per cent. for the whole Quinquennium, besides leaving **£4,352** to be carried forward.

The Annual Income from Premiums exceeds	£114 500
From Interest on Investments exceeds	52 500
The Invested Fund exceeds	1,320,000
Bonuses have been added to the Policies exceeding	900,000

The whole of the Profits are divided among the Members every five years.

The Association includes among its 20,000 Members EVERY CLASS OF SOCIETY.

FAMILY POLICIES.—By the "Married Women's Property Act," passed in 1870, a married woman may effect assurances on her own life or the life of her husband, or a man may assure his life specially for the benefit of his wife and children; and such policies are not affected by bankruptcy, and cannot be taken by creditors, &c.

By the new table of limited number of payments, Policies are not forfeited even by the non-payment of Premiums.

HALF-PREMIUM SYSTEM.—Assurances may be effected on the HALF-PREMIUM system for the first five years without debt or interest. Or, ONE-THIRD of the Premiums may be left at interest during the existence of the Policy. By this latter system an Assurance for £900 may be effected for the same present outlay as would assure £600 only.

FREE or PAID-UP POLICIES.—Assurers of five years' standing, under tables A 1, A 2, A 3, and F, or who have paid not less than £30 on their Policies, *and whose age shall not exceed 60 years*, may, if they desire to discontinue their Premiums, receive a FREE or PAID-UP POLICY payable at death FOR THE WHOLE OF THE AMOUNT CONTRIBUTED, up to the sum originally assured.

November, 1886. JNO. EDWD. GWYER, *Secretary*.

Prospectuses and every information on application at the Chief Office, 27, MOORGATE STREET, London, E.C., or to the Agents.

THE PROVIDENT CLERKS' AND GENERAL GUARANTEE ASSOCIATION, Limited.

Subscribed Capital, £100,000. Called-up and Paid, £60,000.

This Association issues GUARANTEE POLICIES for situations of trust. It is specially authorised to guarantee the Employés of the Government. By an arrangement with the PROVIDENT CLERKS' MUTUAL LIFE ASSOCIATION, all persons Assuring their Lives with that Association, in connection with a Guarantee, will be enabled to effect the latter at a considerable reduction of Premium. This arrangement has been so framed as to be advantageous to both institutions.

Prospectuses, Forms of Proposal, &c., may be obtained of the Agents, or at the Chief Office,

61, COLEMAN STREET, E.C.

H. B. BRAIN, *Secretary*.

THE PROVIDENT CLERKS' And GENERAL ACCIDENT INSURANCE COMPANY, Limited.

Subscribed Capital, £50,000.

The Insurances granted by the Company are chiefly comprised in the following classes—provision for special cases being made on application at the Chief Office, 61, Coleman Street, E.C.

1. Insurance against Accidents of every kind, with or without allowances during entire or partial disablement.
2. Insurance against Railway Accidents only.
3. Insurance against Fatal Accidents during a Voyage.

EMPLOYERS' LIABILITY ACT.—The liability under this Act can be covered by special arrangements for Insurance.

To Assurers with the PROVIDENT CLERKS' MUTUAL LIFE ASSOCIATION and the PROVIDENT CLERKS' AND GENERAL GUARANTEE ASSOCIATION, Accident Policies are issued at reduced rates.

61, COLEMAN STREET, E.C. H. B. BRAIN, *Secretary*. [250

Joint Secretaries—WILLIAM C. MACDONALD and FRANCIS B. MACDONALD.

Insurances against Loss by Fire and Lightning are effected by the PHŒNIX Company upon every description of Property, in all parts of the World, on the most favourable Terms. *The experience of over a Century* has proved the promptitude and liberality with which its engagements are always met by this Company; and the importance of its relations with the Public may be estimated from the fact that, since its establishment, it has paid in discharge of Claims for Losses more than

FIFTEEN MILLIONS STERLING.

Rates and Particulars of Insurance may be obtained at the Chief Offices, Lombard Street and Charing Cross, and from the respective Agents of the Company throughout the kingdom. [146

THE STANDARD
LIFE ASSURANCE COMPANY.

Established 1825.

Governor—His Grace the DUKE OF BUCCLEUCH AND QUEENSBERRY, K.T.

London Board of Directors.

R. ORR CAMPBELL, Esq., Chairman of the National Bank of India.

EDMOND K. BAYLEY, Esq., 2, Lancaster St. Hyde Park, and Rookwood, Roscommon.

CHARLEY HEMERY, Esq., 28, Threadneedle St.

J. R. BOYSON, Esq., 26, Inverness Terrace, Hyde Park.

J. C. DIMSDALE, Esq., Banker, 50, Cornhill.

STEUART MACNAGHTEN, Esq., Chairman of the Southampton Dock Company.

Manager and Actuary—SPENCER C. THOMSON, B.A. Cantab.
General Secretary for England—HENRY JONES WILLIAMS.
Resident Secretary at West End Office—JOHN O'HAGAN.

THE STANDARD is one of the largest and most influential of British Offices, being established on a wide and popular basis, with connections throughout the whole of the British Dominions.

The business has steadily increased from the commencement, the present position of the Company being as follows:—

Sums Assured	**£20,000,000.**
Annual Revenue	**£900,000.**
Accumulated Fund	**£6,500,000.**

Besides the careful management of the whole business by the Directors, the features which above others have contributed to the Company's popularity and success are the *liberality* with which the Directors treat all Policy-holders, and the *readiness* with which they adopt all real improvements which experience suggests in Life Assurance practice.

Among the Advantages offered by the STANDARD COMPANY are:

Moderate Premiums; Free Whole-World Residence; Unchallengeable Policies; Revival of Policies in Arrear on very favorable terms; Surrender Values of Fixed Amount or a Fully Paid-up Policy in Exchange; Perfect Security; and Early Payment of Claims.

The Surplus Fund is divided every Five years, and already **Four and a half Millions** Sterling have, as the consequence of careful management, been added to Policies over and above the original sums assured for.

LONDON—83, King William St., E.C., and 3, Pall Mall East, S.W.
EDINBURGH—3 and 5, George Street (Head Office).
DUBLIN—66, Upper Sackville Street.

The Medical Officer attends daily at the LONDON OFFICE, 83, King William Street, at Half-past One.

ANNUAL INCOME . . . . £265,000.

FIRE DEPARTMENT.

The Directors are ready to receive Proposals for insuring Property generally, in Great Britain and Ireland, at equitable rates, and according to the risk to be protected.

LIFE DEPARTMENT.

Four-fifths of the Office Profits are appropriated to the benefit of the Assured every Five Years, thus giving them nearly all the advantages of a Mutual Company, but without any risk or liability whatever.

During the last Forty Years the BONUS has averaged upwards of

One Pound Ten Shillings per Cent. per Annum on the Sum Assured.

The published Accounts give the fullest details as to the position of the Society.

Established over 60 Years.

CAPITAL £500,000. ACCUMULATED FUND £866,761. ANNUAL INCOME £160,796.

Trustees:
W. H. HARRISON BROADLEY, Esq. The Right Hon. Lord DERWENT. The Right Hon. Lord WENLOCK.

LIFE DEPARTMENT.—*IMPORTANT AND LIBERAL CONCESSIONS.*

Immediate Payment of Claims. Claims become payable *immediately on proof of death and title.*

World-wide Freedom of Travel, &c. Parties insuring with the Company are, after the first year, freed from the restrictions which have hitherto obtained in regard to Suicide, death by duelling, or by the hands of Justice; also freedom *to reside and travel anywhere* is granted, provided the parties are over 25 years of age, do not belong to the Military or Naval Profession, and are able to declare at the time of proposing that they have no intention of going abroad.

Policies Indisputable. Subject to these reservations, and the age being admitted, the Company's Policies are practically indisputable on any ground whatever, except fraud, after the first three years.

Free right of Revival of Lapsed Policies. In the case of Policies which have lapsed through the non-payment of the Premium within the usual 30 days of grace, there shall be the power on the part of the Assured to revive the same at any time within six months on payment of the overdue premium and interest at Five per cent. per annum, and *without any fine or fresh proof of health.*

Fixed and Liberal Surrender Values. For the benefit of Insurers who may be under the necessity of discontinuing their Policies a scale of increased liberality has been adopted, which, whilst full and equitable at all ages, will be found especially advantageous in the case of the older Policies.

Full Surrender Value automatically placed to Assured's credit. The omission to pay the premium when due does not deprive the Assured of the right to the full Surrender Value of his Policy, which, whether applied for or not, is placed to the credit and at the disposal of the parties interested.

Right to Intermediate Bonus. Bonus Policies becoming Claims between two quinquennial divisions of Profits are entitled to an intermediate Bonus calculated at the rate of two-thirds of the Bonus declared at the division immediately anterior to the death.

FIRE INSURANCES effected by the Company on the most moderate terms, according to the nature of the risk.

Patron—Her Most Gracious Majesty THE QUEEN.
Vice-Patron—H.R.H. the DUKE of CAMBRIDGE, K.G., G.C.M.G.
President—His Grace the DUKE of ARGYLL, K.G., K.T., F.R.S.

Honorary Rewards are granted for Saving Life from Drowning in all British Possessions.

Pecuniary Rewards are granted within an area of Thirty Miles around the Metropolis.

During the Skating Season experienced Icemen are provided to prevent loss of life in the various waters about London; and Boats are in daily attendance, morning and evening, to prevent fatal results attending Accidents to the enormous number of Bathers in the Serpentine.

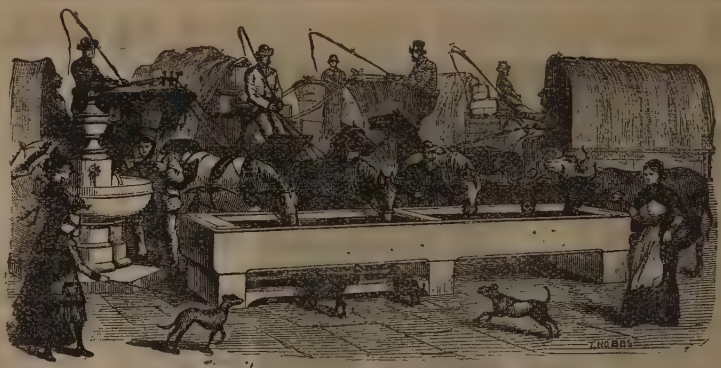
Upwards of Three Hundred Places in and around London are furnished with Life-Saving Apparatus to rescue persons from Drowning.

The Society has for the past five years encouraged Swimming competitions with "reference to Saving Life from Drowning," and Prizes are annually given for proficiency in them at various leading Schools and Training Ships selected by the Committee.

The Society is known throughout all the civilised world, but the pecuniary support it receives is quite inadequate to its usefulness, and it is necessary to remind the inhabitants of London that during a severe winter the Society has to incur a large outlay in finding ice-boats, ladders and ropes, for the protection of those who venture on dangerous ice; also for the wages and equipment of Icemen.

Life Governor ..... TEN GUINEAS. Annual Governor ..... ONE GUINEA.

Donations or Subscriptions will be thankfully received by Capt. I. W. HOME, Secretary, at the Offices, 4, Trafalgar Square, London, W.C.; or by Messrs. DIMSDALE & Co., Bankers, 50, Cornhill. [126



METROPOLITAN

"Dr. Barnardo's Homes"

FOR DESTITUTE BOYS AND GIRLS.

Former Presidents— { The Right Hon. the late EARL CAIRNS.
The Most Hon. the MARQUIS OF LORNE, P.C., K.T.

President for 1886–7—The Right Hon. the LORD POLWARTH.

Vice-President—The Right Hon. the LORD KINNAIRD.

Treasurer—WILLIAM FOWLER, Esq., 35, Cornhill, E.C.

Bankers— { LONDON AND SOUTH WESTERN BANK (Bow Branch).
DIMSDALE, FOWLER and Co., 50, Cornhill, E.C.

THESE "Homes," besides doing a vast amount of general Mission work, now feed, clothe, and provide a Christian and Industrial Training for **over 1,600 Poor Children**, and have since their formation rescued more than **8,000** Destitute Boys and Girls.

In connection with these Institutions there are now **Forty-two Cottage Homes for Girls**, forming a Village upon *the Family system*, at Ilford, Essex; a **Home for Little Boys** at Jersey; a **House for Babies** at Hawkhurst, Kent (under the Presidency of H.R.H. Princess Mary Adelaide, Duchess of Teck), and another at Bow; and **Three large Homes for Boys and Girls** in the East of London. There is also now being rebuilt a **Hospital for Sick Children**, containing Sixty Beds, under skilful professional care; and a **Hotel for Young Workmen** who have left the Homes; whilst a **Labour House for Destitute Youths** too old to enter the Boys' Home, and a **Servants' Home for Older Girls** are in operation. An **Emigration Department**, consisting of **Distributing Homes** at Peterborough, Ontario, and at Toronto, Canada, is also actively employed.

These "Homes" present some *special features* which distinguish them from all others in the Metropolis, not the least remarkable being that Poor Children are sought for *by night and day* in the Lodging Houses and other miserable haunts of the Homeless Poor.

Really Destitute Children *are always eligible*, and may be sent to the Office at any time. Other cases not so urgent are, if brought under notice, carefully inquired into, and decided upon as speedily as possible.

Children are admitted irrespective of differences of age, sex, or creed, and in spite of physical defects that frequently lead to their being rejected elsewhere.

No voting or promise of money payments is ever required to obtain admission for a suitable, *i.e.*, a destitute case. ***There is No Endowment, and the whole work is dependent solely upon the Free-will Offerings of the benevolent.***

£16 will support a healthy child for a whole year in any of our London Homes;

£15 will keep a sick Boy or Girl in our Children's Infirmary, or at our Seaside Convalescent Home, for Six Months;

£8 10*s.* will pay for the complete outfit and passage money of any little one emigrated to our Branch Homes in the Colonies;

£1000 will pay for a Wing of the Infirmary, still urgently needed to complete the GIRLS' VILLAGE HOME, Ilford, Essex.

The "Homes" are always open to Visitors, except on Saturday afternoon and Sunday; but the best time to see the Stepney Home is between 2.30 and 5 p.m., when the Workshops and Schools are in operation. The Girls' Village can be reached by train from Liverpool Street Station to Ilford, starting at 1.5 p.m. daily.

The Committee earnestly appeal for help from all those who pity destitute children, wherever found.

All Communications should be addressed to

DR. T. J. BARNARDO, 18 to 26, Stepney Causeway, London, E. [289

EAST LONDON HOSPITAL for CHILDREN

AND DISPENSARY FOR WOMEN,

SHADWELL, E.

FOUNDED 1868.

Patrons—

Her Royal Highness PRINCESS LOUISE, Marchioness of Lorne.

Her Royal Highness the PRINCESS MARY ADELAIDE, Duchess of Teck.

President—The Viscount ENFIELD.

Chairman—CHARLES CHESTON, Esq. *Vice-Chairman*—CHAS. A. PRESCOTT, Esq.

Treasurer—EDWARD S. NORRIS, Esq., M.P.

This Hospital being *almost entirely dependent upon Voluntary Contributions* for its support, the Managing Committee earnestly appeal to the benevolent, for that generous help which is so much needed.

Last Year's Receipts, £6,699 5*s*. Last Year's Expenditure, £6,850 11*s*. 3*d*.

During the past year (1st May, 1885, to 30th April, 1886), **950** Children were received as In-Patients, and **14,460** Women and Children were treated as Out-Patients, making a total of **15,410** of the Sick Poor to whom the benefits of this Charity were dispensed. The Hospital maintains **92** Cots, and is open for inspection every day from 10 till 6.

Subscriptions and Donations will be thankfully received by the Bankers, The ALLIANCE, Bartholomew Lane, E.C.; Messrs. DIMSDALE, Cornhill; Messrs. COUTTS, Strand; Messrs. PRESCOTT & Co., Threadneedle Street, and by

ASHTON WARNER, *Secretary*. [102

DR. STEPHENSON'S HOMES.

THE CHILDREN'S HOME & ORPHANAGE

FOR THE RESCUE AND NURTURE OF ORPHAN AND NEGLECTED CHILDREN OF BOTH SEXES.

Chief Offices: BONNER ROAD, VICTORIA PARK, E.

Principal—Rev. T. B. STEPHENSON, B.A., LL.D.
General Treasurers—J. BARLOW, Esq., J.P., and J. E. VANNER, Esq.
Secretary—Mr. J. PENDLEBURY, M.A.

Branches at Edgworth, near Bolton; Hamilton, Ontario; Milton, Kent; Ramsey, Isle of Man; Princess Alice Orphanage, New Oscott, near Birmingham.

In connection with London Branch: Gordon Hall Mission, Children's Mission, Girls' Protection Agency, Girls' Parlour, Servants' Free Registry, Working Girls' Lodge, our own Hospital.

The Home receives Children of any age, of any sect, without election. It is conducted on the Family system; is a Religious and Industrial Institution; is a Training School for Christian workers; *is dependent on Voluntary Contributions.*

Within the last eighteen years, upwards of 2,000 Children have received the benefits of this Institution. About 700 are now in residence.

About £16 will pay the expenses of a child in the Home for a year.

The applications on behalf of Children in the greatest distress, and the utmost moral peril, are very numerous and very distressing.

Cheques and Post Office Orders should be made payable at Chief Office, to

T. B. STEPHENSON, *Principal.* [171

ASYLUM FOR FATHERLESS CHILDREN.

Reedham, near Caterham Junction, Surrey.

Patron.—Her Majesty THE QUEEN.
Treasurer.—HENRY SPICER, Esq.
Bankers.—Messrs. BARCLAY, BEVAN & Co., 54, Lombard Street, E.C.
Office.—35, FINSBURY CIRCUS, E.C.

An Unsectarian Institution for the Maintenance, Clothing and Education of Fatherless Children, from all parts of the kingdom, who are received between the ages of ***six months*** and eleven years, and retained until they are 15.

Upwards of 300 orphans are now in the Asylum.

Their requirements entail a yearly expenditure of at least £8,000, but only £2,500 of that amount is provided by annual subscriptions.

The large balance is dependent upon Donations and Legacies, as ***the Charity has neither endowment nor property of any description*** to aid it. Help from the benevolent public is therefore urgently needed and earnestly requested. The Secretary will be pleased to give any further information.

JOHN R. EDWARDS, *Secretary.* [34

THE HOSPITAL FOR SICK CHILDREN,

GREAT ORMOND STREET, BLOOMSBURY,

And CROMWELL HOUSE, HIGHGATE.

ESTABLISHED 1852.

Chairman—Lord ABERDARE.
Lady Superintendent—Miss C. J. WOOD.

The Committee very earnestly solicit Contributions towards the current expenses of the Hospital. **172** Beds are maintained, viz.:—120 Beds at the Hospital, and 52 at the Convalescent Branch, Highgate. Upwards of **1,000** Out-patients are seen weekly at Great Ormond Street.

The Charity is ***not endowed,*** but depends ***entirely upon Voluntary support.*** ADRIAN HOPE, *Secretary.* [264

THE ORPHAN WORKING SCHOOL.

Senior School: **HAVERSTOCK HILL.** | Junior School: (Alexandra Orphanage) **HORNSEY RISE**
Convalescent Home: **MARGATE, KENT.**

Patrons—Her Majesty THE QUEEN, Their R.H. THE PRINCE AND PRINCESS OF WALES.
President—Field-Marshal H.R.H. the DUKE OF CAMBRIDGE, K.G.
Treasurer—Sir WILLIAM MCARTHUR, K.C.M.G. | *Sub-Treasurer*—WILLIAM HOLT, Esq., V.P.
Secretary—Mr. JONADAB FINCH, 73, Cheapside, E.C. | *Collector*—Mr. JOHN BEDWELL.

This Charity was instituted in the City of London, May 10th, 1758.
The First School was at Hoxton—1758 to 1773.
The Second School was in the City Road—1773 to 1847.
The present building at Haverstock Hill was erected in 1847.
The Junior School, THE ALEXANDRA ORPHANAGE, was Amalgamated with THE ORPHAN WORKING SCHOOL, January 1st, 1877.
Total number of Children now maintained, **602.**
More than **4,000** Children have received its benefits.

CONTRIBUTIONS WILL BE THANKFULLY RECEIVED.

Annual Subscription for One Vote at each Election	£0	10	6
Ditto ditto for Two Votes ditto	1	1	0
Life Donation for One Vote ditto	5	5	0
Ditto for Two Votes ditto	10	10	0

The Votes increasing in proportion to the Contributions.

Life Presentation	262	10	0

Presentation of a child without Election, amounts varying according to age.

ELECTIONS.—The Elections occur in the months of January and July in each year. Forms of application and all needful information may be obtained at the Office, between the hours of Ten and Four. On Saturdays the Office is closed at Two o'clock.

Subscriptions, Donations and all Communications should be forwarded to Mr. JONADAB FINCH, *Secretary*, 73, Cheapside, London, E.C. [42

INFANT ORPHAN ASYLUM,

WANSTEAD.

Patron—HER MAJESTY THE QUEEN.

Bankers—Messrs. WILLIAMS, DEACON & CO.

THIS INSTITUTION maintains and educates the Orphans of persons once in prosperity, from their EARLIEST INFANCY until Fourteen or Fifteen Years of age.

It has received 3,506 Fatherless Children already. Sixty-five were admitted last year.

Elections will be held in May and November this year. Sixty Children will be elected.

Forms of Nomination can be obtained at the Office.

Nearly the whole of the Yearly Income arises from Voluntary Contributions. *Assistance is therefore urgently needed*, and will be thankfully acknowledged.

THE GORDON BOYS' HOME

(The National Memorial to General Gordon),

Temporarily located at FORT WALLINGTON, FAREHAM, HANTS.

OFFICES—20, COCKSPUR STREET, LONDON, S.W.

President.—H.R.H. THE PRINCE OF WALES, K.G.

Chairman of Committee.—Field-Marshal LORD NAPIER OF MAGDALA, G.C.B., G.C.S.I.

The Home (now temporally located at Port Wallington), when fully developed, will accommodate about 500 boys, chosen from the homeless and destitute, between the ages of 14 and 16, and give them a training, up to the age of 18, which will fit them alike for civil life in this country or its Colonies, and for service in the Army, Navy, or Mercantile Marine.

CONDITIONS OF ADMISSION.—1. The Candidate must be from 14 to 16 years. 2. He must not have developed, nor be likely to develop, such physical infirmity as would disqualify him for service in the Army or Navy, or for a Civil career in the Colonies or elsewhere, which would require active bodily exertion. 3. He must, in the opinion of the Committee, be really poor and unprovided for. 4. He must not have been convicted of crime. Whole or part payment of the sum (£22 per annum) necessary for the boy's maintenance will, in the majority of cases, be required; but *free admission* will be granted to such a number of deserving boys as can be provided for out of the general income of the Home.

There are now 85 Boys in the Home, and this number will be gradually increased as funds will permit.

Subscriptions are received by THE LONDON AND WESTMINSTER BANK, 1, St. James's Square, S.W.; Messrs. DIMSDALE & FOWLER, Cornhill, E.C.; THE LONDON AND SOUTH-WESTERN BANK, 27, Regent Street, S.W.; and by the Secretary, at the Office, 22, Cockspur Street, S.W., from whom any further information can be obtained.

G. A. BEATY-POWNALL, Lt.-Colonel, *Secretary.* [191

HOMES FOR LITTLE BOYS,

FARNINGHAM AND SWANLEY.

Patrons—The PRINCE and PRINCESS OF WALES. *President*—The EARL OF ABERDEEN.
Treasurer—W. H. WILLANS, Esq., 3, Copthall Buildings, E.C.
Secretary—Rev. A. O. CHARLES. *Deputation Secretary*—Rev. H. J. BERGUER.
Bankers—Messrs. SMITH, PAYNE & SMITHS, 1, Lombard Street, E.C.

The Cottage Homes at Farningham are for 300 Little Boys, who are homeless, or in danger of falling into crime. They are clothed, fed, educated, and taught a trade, and then sent out into the world to earn an honest livelihood.

The Orphan Homes at Swanley are for 200 Fatherless Boys, who are wholly maintained and educated, and receive technical instruction to fit them for a working life.

Funds are urgently needed, and the Committee very earnestly appeal for Donations, Annual Subscriptions, Congregational Collections, and Bequests to enable them to carry on this Christian work.

All communications should be addressed to the London Offices, to the Secretary,

Rev. A. O. CHARLES, Bank Buildings, Ludgate Circus. [206

FIELD LANE REFUGES AND RAGGED SCHOOLS, &c.

Vine Street, Clerkenwell Road. FOUNDED 1842.

President—Right Hon. the EARL OF ABERDEEN, K.P. *Treasurer*—WILFRID A. BEVAN, Esq., 54, Lombard St., E.C.
Bankers—Messrs. BARCLAY, BEVAN & CO., 54, Lombard St., E.C.; Messrs. RANSOM & CO., 1, Pall Mall East, S.W

The Committee make an earnest Appeal for a continuance of support. Visitors record cases of "no work" continually, the greatest distress prevails, and it is therefore earnestly hoped that this appeal will be liberally responded to, so that the deserving poor and their children may, if possible, be kept from complete destitution.

Maintains and Benefits upwards of 3,000 Weekly.

His Royal Highness the DUKE OF CONNAUGHT has characterised this work as 'A perfect network of charitable operations—an immense boon to the poor."

The late EARL OF SHAFTESBURY, K.G. (the late President of the Institution), said: "His Royal Highness had not said a word too much—every word he had uttered was well-merited by the Institution and those who conducted it."

Supported by Voluntary Contributions. Funds are urgently needed to sustain the operations of the Institution.

Contributions will be thankfully received by the Treasurer, Bankers, or by

PEREGRINE PLATT, *Secretary*, Vine Street, Clerkenwell Road. [263

HELP WANTED FOR RAGGED SCHOOLS.

THE Committee of the **RAGGED SCHOOL UNION** earnestly appeal for **AID** in support of the 190 affiliated Ragged Schools and Missions, with their regular attendance of 50,000 of the poorest City children. The buildings are planted in the most crowded localities, and are used for Sunday and Bible Schools, Day and Infant Free Schools, Week Night Schools for rough lads and girls, Industrial Classes, Mothers' Meetings, Gospel Mission Services, Band of Hope, Temperance Meetings, Ragged Churches, Creches, and other Christian, Social, and Recreative agencies for relieving the wants and brightening the lives of the poor children and their parents.

Much is done also in Clothing, Feeding, obtaining Situations, Home Visitation and Emigration. Over 1,000 poor children have through the summer of 1886 enjoyed a fortnight's change and fresh air in the country, either in the Cottages or the separate HOLIDAY HOMES.

Contributions are earnestly solicited for the

GENERAL FUND (for Rent of Schools, Teachers' Salaries and General Expenses). *Bankers*.—Messrs. BARCLAY & CO., 54, Lombard Street, E.C.

BENEVOLENT FUND (for Food, Clothing, Fresh Air for Weaklings, Day in the Country, &c. &c.).—*Bankers*, Messrs. BARCLAY & CO., 54, Lombard Street, E.C.

SHAFTESBURY FUND (for New Buildings and Extensions).—*Bankers*, Messrs. RANSOM & CO., 1, Pall Mall East, S.W.

Money Orders should be made payable at the Post Office, 369, Strand, W.C.

Secretary.—JOHN KIRK. *Offices*.—EXETER HALL, STRAND, W.C. [44

EVELINA HOSPITAL FOR SICK CHILDREN.

SOUTHWARK BRIDGE ROAD, LONDON, S. E.

Supported by Voluntary Contributions.

This Hospital was established in 1869 to receive and treat Sick Children of the Poor, without distinction of creed.

There are 60 cots in the Hospital, and last year 328 children were received as In-Patients, while 12,010 were treated as Out-Patients, the total number of attendances being 40,842.

The Hospital is open every day from 2 till 4 o'clock for the inspection of Visitors.

The Committee of Management urgently appeal for Subscriptions or Donations to meet the necessary expenses of this Charity.

Contributions will be thankfully received by the Secretary at the Hospital, or they may be sent to the Bankers, Messrs. SMITH, PAYNE & SMITHS, 1, Lombard Street, E.C.

Copies of the Annual Report, with full information, will be gladly forwarded on application.

T. S. CHAPMAN, *Secretary.* [179

NORTH EASTERN HOSPITAL FOR CHILDREN,

HACKNEY ROAD, E.

CONVALESCENT HOME, Freemasons Road, Croydon.

President—J. G. BARCLAY, Esq. | *Chairman*—Lord F. J. FITZROY. | *Treasurer*—W. L. BARCLAY, Esq.
Bankers—Messrs. BARCLAY, BEVAN & Co., 54, Lombard Street, E.C.

This Hospital was established in 1867 for the Relief of the Sick Children of the Poor. It is situated in the densely-populated districts of Shoreditch, Bethnal Green, Hackney, Haggerston, and Hoxton. 653 In-Patients and 13,801 Out-Patients (all Children under 12 years of age) were relieved during 1885. The attendances of Out-Patients amount, on the average, to nearly 1000 each week.

The NEW WARDS, opened by H.R.H. the DUCHESS of CONNAUGHT, are in full operation, and the 55 Beds always occupied; and there is still an increasing demand for much larger accommodation. The Committee therefore make an Earnest Appeal for Aid to enable them to maintain and increase the work of Relief carried on at this Hospital. Annual Subscribers of £2 2s. may recommend One In-Patient and Five Out-Patients yearly. Donors of Twenty Guineas become Life Governors, and are entitled to a similar number of Tickets annually for Life. Collecting Boxes for Children may be had on application to the Secretary.

City Office: 27, CLEMENT'S LANE, LOMBARD ST., E.C. ALFRED NIXON, *Secretary.* [125

VICTORIA HOSPITAL FOR CHILDREN,

Queen's Road, Chelsea, S.W., and Churchfields, Margate.

Patroness—H.R.H. THE PRINCESS LOUISE (Marchioness of Lorne).
President—The Right Hon. THE EARL CADOGAN.
Chairman of Committee—HARVIE M. FARQUHAR, Esq. *Treasurer*—MARTIN R. SMITH, Esq.

The Hospital has relieved, since it was established in 1866, to 31st December, 1885, 7,411 In-Patients, and 326,608 Out-Patients.

Has now 72 Beds, viz., 60 at the Hospital, and 12 at the Convalescent Branch at Margate.
Is quite *Unendowed*, and *entirely dependent on Voluntary Support.*
Is *National* in its character, Patients from all parts, and of every religious denomination being admitted.
Is in **urgent need of Funds.**
Is *Open Daily* for the inspection of Visitors from 2 till 4 o'clock (Winter), and from 2 till 5 o'clock (Summer).

THE WORK OF THE HOSPITAL FOR THE YEAR 1885:—

In-patients treated	549	In and Out-Patients treated at the Hospital and afterwards sent to the Convalescent Home at Margate	143
Of whom were cured and relieved	209 203	Out-Patients treated	3,737
Died	49	Representing Attendances	30,898
Incurable	43		

Subscriptions and Donations will be most thankfully received and acknowledged by Captain BLOUNT, R.N., Secretary, at the Hospital; and by the Bankers, Messrs. HERRIES & Co., 16, St. James's Street, S.W. [238

HOME FOR INCURABLE CHILDREN,

2, MAIDA VALE, W.

Patrons—H.R.H. The PRINCESS CHRISTIAN; H.R.H. The DUCHESS OF CONNAUGHT; H.R.H. The PRINCESS MARY, Duchess of Teck.
President—H.R.H. The DUKE OF CONNAUGHT AND STRATHEARN, K.G.
Treasurer—F. AYLMER LLOYD, Esq.
Bankers—Messrs. HOARE, 37, Fleet Street, E.C.; ALLIANCE BANK, 239, Regent Street, W.

This Institution, founded in 1875, was the first of its kind in the Metropolis, and, it is believed, in the United Kingdom. It is still nearly the only one devoted *exclusively* to the maintenance, care, and medical treatment of Children (up to the age of sixteen) suffering from Chronic or Incurable Complaints of an aggravated character. It combines the advantages of a Home and a Hospital.

Ninety-four Children have been received, and **Thirty** are still under treatment. A small Weekly Payment is required for each child; but the expenses of such a Charity are necessarily very large, and the Committee ***appeal earnestly for help*** in carrying on and extending the work. Visiting hours, 3 to 5 p.m. daily.

L. S. LLOYD, *Hon. Sec.* [38

HELPLESS

BRITISH HOME FOR INCURABLES,

CLAPHAM.

HOPELESS

A NATIONAL CHARITY, & UNSECTARIAN.

In addition to those in the Home, there are 270 Incurable Sufferers each receiving £20 a Year.

HOMELESS

These helpless ones our care and pity claim
A grant from treasures of our heart and wealth
Will buy a world for them whose feeble aim
Oft points at little joys unknown to health.

ONE MILLION SHILLINGS REQUIRED

By End of Year.

SUPPORT URGENTLY NEEDED.

For particulars apply to R. G. SALMOND, *Secretary*, 73, Cheapside. [117

The EARLSWOOD ASYLUM

FOR IDIOTS AND IMBECILES.

RED HILL, SURREY.

Open to Cases from all Parts of the Kingdom.

THIS NATIONAL ASYLUM, established in 1847, now affords protection to nearly **600** inmates, and everything that kindness and science can suggest is employed to ameliorate their condition.

Eligible Cases are admitted by the Votes of the Subscribers for 5 years, and in many instances are allowed the advantage of a re-election for a second 5 years.

At each Half Yearly Election there are generally nearly **One Hundred and Eighty Applicants** seeking admission, of whom the Board can only elect 30 to 40, owing to want of sufficient Funds for a larger number.

Provision is made for the reception of **Private Cases**, on payments regulated by the Board of Management.

The Board ***earnestly ask for additional aid.*** The expenses are heavy, owing to the general helplessness of the poor inmates.

AN ANNUAL SUBSCRIBER has *one vote* at each Election for each Half a Guinea contributed. A LIFE SUBSCRIBER has *one vote* at each Election for each Five Guineas contributed.

COLLECTING BOXES and CARDS will be gladly supplied, and votes given in proportion to the amount collected.

The last Report and other Pamphlets may be had gratuitously on application.

H. GERARD HOARE, Esq., *Treasurer.*

Offices: 36, King William Street, E.C. WM. NICHOLAS, *Secretary.* [150

The HOSPITAL for WOMEN

SOHO SQUARE, LONDON, W.

ESTABLISHED 1842.

The Hospital for Women was the first established, in this or any other country, exclusively for the treatment of Diseases peculiar to Women.

This National Institution is entirely dependent upon *Voluntary Contributions*, which are *most urgently needed.*

In addition to the Free Wards, the New Wing, opened in 1869, is available for those able to contribute a weekly sum towards their maintenance.

Patron—H.R.H. THE PRINCE OF WALES, K.G.
President—THE DUKE OF WESTMINSTER, K.G.
Bankers. { Messrs. BARCLAY, BEVAN & Co., 54, Lombard Street, E.C.
Messrs. RANSOM, BOUVERIE & Co., 1, Pall Mall East, S.W.

DAVID CANNON, *Secretary.* [39

CITY OF LONDON LYING-IN HOSPITAL,

CITY ROAD, E.C.

Patroness—Her Grace ELIZABETH, DUCHESS OF WELLINGTON.
Treasurer—A. J. ROBARTS, Esq. *Bankers*—Messrs. ROBARTS, LUBBOCK & Co.

This Hospital, which was Instituted in 1750, affords Medical and Surgical treatment to poor Married Women, both as In and Out Patients, also for the Training of Midwives and Monthly Nurses.

Patients delivered last year, **1,550**; delivered in the Hospital since 1750, **55,120.**
The average expenditure exceeds the reliable Income by over £500.

New Annual Subscriptions especially solicited.

R. A. OWTHWAITE, *Secretary.* [304

THE NEW HOSPITAL FOR WOMEN,

222, MARYLEBONE ROAD, N.W.

THE PHYSICIANS ARE WOMEN.

Treasurer—Mrs. WESTLAKE, River House, Chelsea Embankment.
Hon. Sec.—Miss VINCENT, 6*c*, Hyde Park Mansions, W.
Physicians—Mrs. ANDERSON, M.D., Mrs. ATKINS, M.D., Mrs. MARSHALL, M.D., and Mrs. DE LA CHEROIS, L.K.Q.C.P.I. *Assisted by a Consulting Staff of Physicians and Surgeons.*
Assistant Physician—Miss C. HITCHCOCK, L.K.Q.C.P.I.

This Hospital is established to enable poor women to be attended by *fully qualified Doctors of their own sex.* Twenty-six Beds are made up. During the past year 217 Patients were treated in the wards, and 4,336 attended as Out-Patients. In-Patients pay a weekly amount, according to their means. Out-Patients 6*d.* on entrance, and 2*d.* each visit afterwards.

The Hospital being Unendowed, Donations and Subscriptions are earnestly solicited.

Bankers—BANK OF ENGLAND, Burlington Gardens, W.

MARGT. M. BAGSTER, *Secretary.* [291

QUEEN CHARLOTTE'S LYING-IN HOSPITAL

And Midwifery Training School,

MARYLEBONE ROAD, LONDON, N.W.

FOUNDED 1752. INCORPORATED BY ROYAL CHARTER, 1885.

Dependent upon Charity for Support.

Patron.—Her Majesty THE QUEEN. *Vice-Patron.*—H.R.H. The PRINCESS OF WALES.
President.—The Right Hon. Viscount PORTMAN.

OBJECTS OF THE CHARITY.

1. To provide an Asylum for the Delivery of Poor Married Women, and also of Deserving Unmarried Women *with their first child.*
2. To provide skilled Midwives to attend poor Married Women in their Confinements at their own homes.
3. The Training of Medical Pupils, Midwives and Monthly Nurses.

This is not merely a Hospital for poor women resident in the Metropolis. Its work is limited to no district; the help it affords is open to all, and Patients are constantly being received from remote parts of the country.

It is the only Lying-In Hospital in the N. and N.W. Divisions of the Metropolis, and the demands upon it by the poor of these Districts is very great.

The long-continued distress among the labouring population has caused a very great increase in the number of poor women applying for admission, so much so that the Hospital Building has been found too small to accommodate them, and it has therefore been enlarged by the Construction of a New Wing. This Extension was opened by their Royal Highnesses the PRINCE and PRINCESS OF WALES on June 25, 1886, and increases the number of beds from **54** to **81**.

The work cost £5,000, and in order to meet this expenditure nearly half the funded property of the Charity had to be sold. ***Contributions*** towards the ***Commemoration Fund*** for making good this loss of Capital, and ***Annual Subscriptions*** to enable the Governors to meet the augmented yearly expenditure necessarily entailed by the enlargement of the Hospital, are most earnestly entreated.

A Midwifery Training School is incorporated with the Charity, which, being *the largest Lying-In Hospital in Great Britain*—receiving nearly 900 In-Patients annually, besides having a large Out-Patient maternity—possesses exceptional advantages for training purposes. During 1885, fifty-six Medical Pupils were admitted to the practice, and nineteen Midwives and one hundred and forty Monthly Nurses were trained.

For full particulars respecting the Training School, Fees, &c., application should be made by letter to the undersigned. THOMAS RYAN, *Secretary.*

FORM OF BEQUEST OF MONEY, &c.

I give and bequeath to the Treasurer or Treasurers for the time being of a Corporation called the President and Governors of Queen Charlotte's Lying-in Hospital, 191, Marylebone Road, N.W., the sum of *
to be applied in and towards carrying on the charitable objects of that Institution; and I direct that the said sum be paid, free of Legacy Duty, and that the receipt of the Treasurer for the time being of the said Corporation shall be a sufficient discharge to my Executors for the payment of the same.

* *The sum to be expressed in words at length.* [43

ESTABLISHMENT FOR GENTLEWOMEN DURING TEMPORARY ILLNESS.

90, HARLEY STREET, W.

Under the Patronage of HER MAJESTY THE QUEEN, H.I.H. and H.R.H. the DUKE AND DUCHESS OF EDINBURGH and the ARCHBISHOP OF CANTERBURY.

This House is now open for the reception of Patients requiring Medical and Surgical treatment, which is here given gratuitously by Eminent Practitioners. The weekly charges for Board and Lodging, with Nursing and Attendance, vary from £1 1s., to £2 5s. 6d.

Applications for admission to be addressed to Lady Superintendent, 90, Harley Street, W.

Additional Subscriptions and Donations will be most gratefully received. [37

FRIENDLESS AND FALLEN.

Girls received recommended by Clergy, Missionaries, &c.
The above Asylums provide for **Two Hundred Inmates.**
Donations may be sent direct to the Bankers, LLOYDS BARNETTS and BOSANQUETS BANK, City, 60, Lombard Street, E.C.; WEST, 54, St. James' Street, Piccadilly; FRANCIS NICHOLLS, Esq., (of the Committee), 14, Old Jewry Chambers, E.C.; or the Secretary.
200, Euston Road, N.W. EDWARD W. THOMAS, *Secretary.* [309

HOMES OF HOPE,

4, 5 & 6, Regent Square, Gray's Inn Road, London, W.C.

The Homes were established for the less degraded class of Penitent Young Women.

Special efforts are made on behalf of Mothers with their first infants, who are really the most hopeful class of the fallen, and are generally greatly to be pitied.

A Home has been opened for the reception of such young women, before they become mothers, as are unfitted, from their previous good character and position, to mix with others. The applications for admission are painfully urgent.

Funds are greatly needed. WM. HORNIBROOK, *Secretary.*

Bankers—LONDON & WESTMINSTER, Bloomsbury Branch, High Holborn. [235

BRITISH ASYLUM for DEAF and DUMB FEMALES

Office:—27, RED LION SQUARE, W.C. **LOWER CLAPTON.**

ESTABLISHED 1851. (*Certified under 25th and 26th Vict., c. 43.*)

Under the Patronage of H.R.H. the PRINCE of WALES, K.G., H.R.H. the PRINCESS of WALES, &c.
President—His Grace the ARCHBISHOP of CANTERBURY.
Treasurer—The Hon. PASCOE CHARLES GLYN. *Bankers*—Messrs. GLYN, MILLS & Co., Lombard St.
Secretary—W. T. HILLYER, Esq.

OBJECTS.—*a.* To receive, educate, or continue the education of Adult Female Deaf Mutes from 10 years of age.
b. To give industrial training and religious instruction, with a view to enable Female Deaf Mutes to gain a livelihood and occupy some useful position in life.
c. To provide a Home for those who from incapacity, infirmity, or age are unable to do anything towards their own maintenance.

An Annual Election of Inmates, free for three years, takes place in June. Inmates are also admitted by payment of a small annual amount for maintenance and instruction. [116

LONDON CITY MISSION.

Funds urgently Needed.

Bankers—Messrs. BARCLAY, BEVAN & CO., 54, Lombard St., E.C.

The object of this Society, established 1835, is to evangelise the masses in the Metropolis, by carrying the Gospel to every house, garret, and lodging-house, and beseeching men to be reconciled to God through our Lord and Saviour Jesus Christ. The number of Missionaries is now 464. Every missionary visits once a month about 650 families, or 2,900 persons. They also meet constantly about Half a Million Working Men in Factories and elsewhere.

Special Missionaries have been appointed to various classes, amongst others to the Bakers, night and day Cabmen, Omnibus men, Canal boatmen, Soldiers, Sailors, and the Criminal classes, besides Foreigners from all parts of the world.

SUMMARY OF WORK DURING 1885–1886.

Visits and calls paid	3,253,737
New Communicants	1,952
Drunkards reclaimed	2,240
Induced to attend Public Worship	5,381
Adults visited who died	8,008
Of whom visited by the Missionary only	1,783

A large addition to the number of Missionaries is needed at once. It is estimated that over a Million of the Working Classes in London never attend any place of Public Worship.

All Communications to be addressed and Subscriptions sent to the Secretaries, 3, Bridewell Place, London, E.C.

F. A. BEVAN, *Chairman.* [152

LONDON COTTAGE MISSION

Instituted in the year 1870.

Offices: 44, FINSBURY PAVEMENT, LONDON, E.C.

This Society is supported by Voluntary Contributions, and is established for the Religious, Intellectual, and Social Elevation of the Working Classes, by means of Gospel Services held in Mission Halls, Tents, Chapels or Churches, either rented, purchased, or built specially for the said purpose; Cottage Meetings held in the homes of the poor or otherwise, Addresses to Tramps and others in Lodging-house Kitchens, Open-Air Preaching, Special Services for Children, Sunday Schools, Mothers' Meetings, Maternity Societies, Clothing and other Clubs, Bible Classes, House to House Visitation, Tract Distribution, Working Men's Institutes, with Reading and Coffee Rooms, Lectures on Self-help, Thrift, &c., and other Social and Religious Subjects, Entertainments and Concerts, Temperance Societies, Bands of Hope, and Excursions into the country; also

For the benevolent and charitable purpose of Relieving the Sick and Destitute Poor by means of Temporary or Permanent Pecuniary Aid in derserving cases, weekly Irish-stew Dinners to poor Children, and gratuitous Distribution of Food, Fuel, and Clothing.

Also supports a large Convalescent and Country Home for poor Children, with nearly One Hundred Beds, at Halls Green Farm, Sevenoaks Weald, Kent.

And carries on OUTCASTS' HAVEN, a Night and Day Refuge for Homeless and Destitute Girls, at Dod Street, Limehouse, where nearly Two Hundred Beds are made up nightly.

FUNDS ARE URGENTLY NEEDED to develop the good work the Mission has in view. Subscriptions and Donations will be gratefully received and acknowledged by Miss F. NAPTON, the Lady Superintendent, 304, Burdett Road, Limehouse, E.; the Bankers, THE LONDON and SOUTH-WESTERN BANK, 7, Fenchurch Street, E.C.; and by WALTER AUSTIN, *Managing Director*, 44, Finsbury Pavement, London, E.C. [298

CORPORATION of the SONS of the CLERGY.

The Hospital may be visited any day (except Sunday) between the hours of 12 and 6, by the Governors and Friends of the Institution.

Bankers.—Messrs. GLYN, MILLS, CURRIE and Co., 67, Lombard Street, E.C.
Post Office Orders payable at Queen Victoria Street, E.C.
FREDERIC ANDREW, *Secretary.* [124

EXTENSION

OF THE

HOSPITAL for CONSUMPTION,

BROMPTON.

The pressure for admission has rendered an Extension a long-felt necessity. A **NEW BUILDING** has been erected opposite the existing Hospital (with its 200 Beds), containing

137 ADDITIONAL BEDS

which are fully occupied.

The ordinary expenditure of the parent Hospital is about £17,000 a-year, and the Maintenance of the New Building adds about **£8,000 a-year to the expenses.** The Charity being ***unendowed,*** **is dependent on Donations, Annual Subscriptions, and Legacies.**

Contributions are therefore much needed, and are earnestly solicited in aid of the funds.

Treasurer—The EARL of LEVEN and MELVILLE.

HENRY DOBBIN, *Secretary.*

Bankers—Messrs. WILLIAMS, DEACON & CO. [120

CITY OF LONDON HOSPITAL

FOR

DISEASES OF THE CHEST,

Victoria Park, E.

Patron: Her MAJESTY the QUEEN.

President: H.R.H. the DUKE OF CONNAUGHT, K.G.

The Hospital contains 164 beds, and affords relief to the Poor and Working Classes afflicted with Consumption and Diseases of the Chest (including Heart Disease). The annual expenditure is more than £10,000, and the reliable income is less than £3,000. The Institution has *No Endowment whatever,* and the support of the public is therefore earnestly solicited to sustain its operations.

In-Patients under treatment, 1885.	1,127
Out-Patients "	17,058

T. STORRAR-SMITH, *Secretary.*

Office, 24, FINSBURY CIRCUS, E.C. [118

THE OLDEST HOSPITAL IN EUROPE FOR DISEASES OF THE CHEST,

THE ROYAL HOSPITAL FOR DISEASES OF THE CHEST.

CITY ROAD, LONDON, E.C.

Founded by H.R.H. the late Duke of Kent, 1814. Rebuilt, 1863. Enlarged and New Wing, 1876-77. New Wing for In-Patients, 1884.

Under the immediate Patronage of HER MAJESTY THE QUEEN.

Vice-Patrons—H.R.H. THE PRINCE OF WALES, K.G., &c. H.R.H. DUKE OF EDINBURGH, K.G., &c. H.R.H. DUKE OF CONNAUGHT, K.G., &c. H.R.H. DUKE OF CAMBRIDGE, K.G., &c.

President—

Trustees—The Right Hon. the Lord WOLVERTON. The Right Hon. the Lord CHARLES BRUCE. Colonel MAKINS, M.P. Lord ROTHSCHILD.

Treasurer—The Hon. PASCOE GLYN, 67, Lombard Street, E.C.

The Central Position of this old-established Hospital:

The fact that it receives Patients from *all parts of the Kingdom:*

That a New Wing, containing Eighty Beds for In-Patients, has just been added to the Hospital:

That it has dispensed its benefits *for more than Seventy years:*

And that it is dependent on *Voluntary Contributions:*

Urge the Council to commend its claim for increased support, especially in the form of additional Annual Subscribers.

Donors of £31 10s., or Annual Subscribers of £3 3s., may recommend One In-Patient and Eight or Four Out-Patients per annum.

JOHN J. AUSTIN, *Secretary.*

Bankers—Messrs. GLYN, MILLS & Co., 67, Lombard Street, E.C.

FORM OF BEQUEST.—"I give and bequeath to the Treasurer for the time being of the *Royal Hospital for Diseases of the Chest, City Road, London*, the sum of * to be applied in and towards carrying on the charitable objects of the Institution; the said sum of * to be paid free of Legacy Duty, out of such part of my personal estate as I may lawfully bequeath to the purposes of the said Institution, and I direct that the receipt of the Treasurer for the time being shall be a sufficient discharge to my executors for the same."

* *The sum to be expressed in words at length.* [207

North London Hospital for Consumption

AND DISEASES OF THE CHEST.

Mount Vernon, Hampstead, and Tottenham Court Road, W.

FOUNDED 1860.

Established for the reception of Patients from all parts of the Kingdom.

Treasurer.—ALFRED HOARE, Esq., 37, Fleet Street, E.C.

Chairman.—BENJAMIN A. LYON, Esq. *Deputy-Chairman.*—The Rt. Hon. Lord ROBARTES.

There is no disease the ravages of which extend to a greater degree amongst the people of the United Kingdom than Consumption, and the whole community must be interested in alleviating the sufferings of those who have been so unfortunate as to contract this disease.

160,000 Patients have been relieved since the foundation of the Charity.

Out-Patients are relieved at the Branch in Tottenham Court Road.

In-Patients are provided for in the Building at Hampstead, commenced in 1880.

6,000 Out-Patients } treated annually.
350 In-Patients }

The Charity has ***No Endowment whatever***, and is entirely supported by ***Voluntary Contributions.***

£8,000 urgently needed at once to pay off Mortgage of £5,000 on Building, Loan due to Bankers, and to meet current liabilities.

Donors of Ten Guineas in one or two payments shall be entitled to recommend one In-Patient during the year in which the Subscription is paid, and are also entitled for life to the same privileges as Annual Subscribers of One Guinea.

Annual Subscribers of Three Guineas are Governors, and are entitled to recommend one In-Patient and four Out-Patients annually.

Annual Subscribers of One Guinea are entitled to recommend four Out-Patients annually.

The privileges increasing in proportion to the Contribution.

LIONEL F. HILL, M.A., *Secretary.*

Offices:—216, TOTTENHAM COURT ROAD, LONDON, W. [254

THE NATIONAL HOSPITAL FOR CONSUMPTION,

on the Separate Principle, VENTNOR (*Incorporated by Royal Charter*), affords hospital treatment with home-like comforts to sufferers from Consumption and other Chest affections. It consists of ten Blocks of Buildings, with separate Bedrooms for each Patient, facing the South and overlooking the Sea; also a Chapel, &c.; and its situation is in the sheltered Undercliff of the Isle of Wight. The results achieved with the 6,000 cases already admitted have been most encouraging.

Funds for maintenance are urgently needed. A Donation of 30 guineas, or an Annual Subscription of 3 guineas, enables the contributor to recommend one In-Patient yearly. The yearly expenses exceed £9,000.

Patron — H.R.H. The DUKE of CAMBRIDGE, K.G.

Supported by Voluntary Contributions.

Crippled Children are here Relieved and Cured, and many Patients who were well-nigh hopeless cripples, cured by the surgical skill and timely aid of this Charity, are now earning a livelihood.

The Committee of Management very earnestly appeal for HELP, that the benefits of the Charity may be continued.

£1 1s. Annually gives "Annual Governorship;" £10 10s. Donation, "Life Governorship."
Letters of recommendation are not compulsory to the necessitous poor.
Bankers, Sir S. SCOTT, Bart., & Co., 1, Cavendish Square, W. Secretary, H. CANNING, Esq., who will gladly afford every information to those desirous of interesting themselves in the Hospital. [100

The CANCER HOSPITAL

(FREE, FOUNDED 1851).

BROMPTON, LONDON, S.W.

The late ARCHBISHOP of CANTERBURY, in a Sermon preached by his Grace on behalf of this hospital, said: "There is no disease more pitiable than that to which this Institution is specially devoted. Could the greatness of the suffering be laid before you, no one endued with the feelings of humanity could resist the spectacle; they would think all they possessed a trifling sacrifice if, at such a price, they could mitigate such misery."

The only special refuge for poor persons afflicted with this fearful disease, *who are admitted free without letters of recommendation.*

Diet required to be most generous and medicines of the most expensive kind.

Out-Patients are seen on their own application daily, at 2 o'clock, except Sundays.

New Annual Subscriptions & Donations are urgently solicited.

Hon. Treasurer: GEORGE T. HERTSLET, Esq., St. James's Palace, S.W.

Bankers: Messrs. COUTTS & Co., Strand, W.C.

LONDON FEVER HOSPITAL,

LIVERPOOL ROAD, ISLINGTON, N.

ESTABLISHED 1802.

Patron—H.R.H. The PRINCE OF WALES.

President—The EARL OF DEVON. *Treasurer*—Sir R. N. FOWLER, Bart., M.P.

Hon. Secretary—C. J. STEWART, Esq.

Secretary—Major W. CHRISTIE, at the Hospital.

There is No Endowment.

The LONDON FEVER HOSPITAL is *the only Hospital in London* for the special treatment and prevention of Infectious Fevers, in the case of persons who are not paupers.

Special Privileges to Governors.—Governors have the privilege of Free Admission for their own Domestic Servants. An Annual Subscriber of One Guinea, after the second payment, or a Donor of £10 10s. in one sum, becomes a Governor.

For an Annual Subscription of Two Guineas, Firms, Clubs and Hotels are entitled to send one employé to the Hospital free of cost; for an Annual Subscription of Four Guineas, two employés; and for an Annual Subscription of Five Guineas, three employés.

Admission to General Wards £3 3s. (average stay in hospital six weeks). There is private accommodation for those who may require it at £3 3s. per week.

During the last 38 years 50,000 patients have been treated.

FUNDS ARE MOST URGENTLY NEEDED, not only to carry on this useful work, but to enable the Committee to Build extra accommodation, suitable to the requirements—medical and otherwise—of the present day. [122

POPLAR HOSPITAL FOR ACCIDENTS,

BLACKWALL, LONDON, E.

OPEN FREE AT ALL HOURS FOR THE TREATMENT OF

ACCIDENTAL INJURY OR EMERGENCY.

President—Lord BRABAZON.
Vice-Presidents—The EARL OF DERBY, Sir DONALD CURRIE, K.C.M.G., M.P., and others.
Treasurer—Sir R. N. FOWLER, Bart., M.P. *Secretary*—Lieut.-Colonel FENERAN.

Number treated last year, 8,269.

Remote from observation by the wealthier classes, in the centre of a very dense, poor population, engaged in the most *dangerous and laborious industries*, this Hospital is exactly situated where most required.

Accidents in the Port of London, in the Docks and Shipping, amongst the Factories and great Engineering Works, are of continual occurrence, and of the most appalling character.

It is over two miles distant from the nearest general hospital. Delay and Transport, always painful, are often vital considerations.

It earnestly appeals for support.

Bankers—DIMSDALE, FOWLER & Co., 50, Cornhill, E.C. [180

For preserving the Complexion, keeping the skin soft, free from redness and roughness, and the hands in nice condition, it is the finest Soap in the world

M. Fortescue

THE BEST REMEDY FOR INDIGESTION.

TRADE

MARK.

CAMOMILE PILLS

Are confidently recommended as a simple but certain Remedy for Indigestion, which is the cause of nearly all the diseases to which we are subject, being a medicine so uniformly grateful and beneficial that it is with justice called the "Natural Strengthener of the Human Stomach." "Norton's Pills" act as a powerful tonic and gentle aperient; are mild in their operation, safe under any circumstances, and thousands of persons can now bear testimony to the benefits to be derived from their use, as they have been a never-failing Family Friend for upwards of 50 *years.*

Sold in Bottles at 1s. 1½*d.*, 2s. 9*d.*, *and* 11s. *each, in every Town in the Kingdom.*

CAUTION.

Be sure to ask for "NORTON'S PILLS," and do not be persuaded to purchase an imitation.

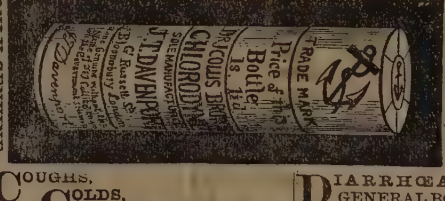
A CLEAR COMPLEXION.

GODFREY'S EXTRACT OF ELDER FLOWERS has long been known for its surprising effect in softening, improving, and preserving the Skin, and in rendering the Complexion clear and beautiful. It removes Tan, Sunburn, Redness, &c.; cures Pimples, Humours, and other Eruptions, and by persevering in its use the Skin becomes delicately soft, clear, and smooth. **GODFREY'S EXTRACT OF ELDER FLOWERS** possesses a delightful fragrance, and is an indispensable adjunct to the Toilet and Nursery.

Sold in Bottles, price 2s. 9*d.*, *by all Chemists and Perfumers.* [136

DR. J. COLLIS BROWNE'S CHLORODYNE

ORIGINAL AND ONLY GENUINE.



IS THE GREAT SPECIFIC FOR CHOLERA, DIARRHŒA, DYSENTERY.

GENERAL BOARD of HEALTH, London, REPORT that it ACTS as a CHARM, one dose generally sufficient.

Dr. GIBBON, Army Medical Staff, Calcutta, states: "2 DOSES COMPLETELY CURED ME of DIARRHŒA."

From SYMES & Co., Pharmaceutical Chemists, Simla. *Jan.* 5, 1880.

To J. T. DAVENPORT, London.

DEAR SIR,—We congratulate you upon the widespread reputation this justly-esteemed medicine has earned for itself all over the East. As a remedy of general utility, we much question whether a better is imported, and we shall be glad to hear of its finding a place in every Anglo-Indian home. The other brands, we are happy to say, are now relegated to the native bazaars, and, judging from their sale, we fancy their sojourn there will be but evanescent. We could multiply instances *ad infinitum* of the extraordinary efficacy of DR. COLLIS BROWNE'S CHLORODYNE in Diarrhœa and Dysentery, Spasms, Cramps, Neuralgia the Vomiting of Pregnancy, and as a general sedative, that have occurred under our personal observation during many years. In Choleraic Diarrhœa, and even in the more terrible forms of Cholera itself, we have witnessed its surprisingly controlling power. We have never used any other form of this medicine than Collis Browne's, from a firm conviction that it is decidedly the best, and also from a sense of duty we owe to the profession and the public, as we are of opinion that the substitution of any other than Collis Browne's is a deliberate breach of faith on the part of the chemist to prescriber and patient alike.—We are, Sir, faithfully yours, SYMES & CO., *Members of the Pharm. Society of Great Britain, His Excellency the Viceroy's Chemists.*

COUGHS, COLDS, ASTHMA, BRONCHITIS.

DR. J. COLLIS BROWNE'S CHLORODYNE.—Dr. J. C. BROWNE (late Army Medical Staff) DISCOVERED a REMEDY to denote which he coined the word CHLORODYNE. Dr. Browne is the SOLE INVENTOR, and, as the composition of Chlorodyne cannot possibly be discovered by Analysis (organic substances defying elimination), and since the formula has never been published, it is evident that any statement to the effect that a compound is identical with Dr. Browne's Chlorodyne *must be false.*

This Caution is necessary, as many persons deceive purchasers by false representations.

DR. J. COLLIS BROWNE'S CHLORODYNE.—Vice Chancellor Sir W. PAGE WOOD stated publicly in Court that Dr. J. COLLIS BROWNE was UNDOUBTEDLY the INVENTOR of CHLORODYNE, that the whole story of the defendant Freeman was deliberately untrue, and he regretted to say it had been sworn to.—See *The Times*, July 13th, 1864.

DR. J. COLLIS BROWNE'S CHLORODYNE is the TRUE PALLIATIVE in NEURALGIA, GOUT, CANCER, TOOTHACHE, RHEUMATISM.

DR. J. COLLIS BROWNE'S CHLORODYNE is a liquid medicine which assuages PAIN of EVERY KIND, affords a calm, refreshing sleep WITHOUT HEADACHE, and INVIGORATES the nervous system when exhausted.

DR. J. COLLIS BROWNE'S CHLORODYNE rapidly cuts short all attacks of EPILEPSY, SPASMS, COLIC, PALPITATION, HYSTERIA.

IMPORTANT CAUTION.—The IMMENSE SALE of this REMEDY has given rise to many UNSCRUPULOUS IMITATIONS. Be careful to observe Trade Mark. Of all Chemists. 1s. 1½d., 2s. 9d., and 4s. 6d.

SOLE MANUFACTURER, J. T. DAVENPORT, 33 Gt. Russell St., W.C.

Dr. BROWNE coined the word CHLORODYNE to designate his discovery, therefore to apply the word to other preparations is dishonest.

It is the *Greatest Medical Discovery of the Present Century, and is regarded as a boon to mankind.*
It is the best known remedy for *Coughs, Colds, Consumption, Whooping Cough, Bronchitis and Asthma.*

It effectually checks and arrests those too often fatal Diseases—*Diphtheria, Diabetes, Fever, Croup, Ague, &c.*

It acts like a charm in *Diarrhœa*, and is the only known Specific in *Cholera and Dysentery.*

It effectually cuts short all attacks of *Epilepsy, Hysteria, Palpitation, Convulsions and Spasms.*

It is the only Palliative in *Rheumatism, Gout, Cancer, Toothache, Neuralgia, Sciatica, Lumbago, &c.*

It rapidly relieves pain from whatever cause, allays the irritation of Fever, soothes and strengthens the system under exhaustive diseases, restores the deranged functions, stimulates healthy action of the secretions of the body, gives quiet and refreshing sleep, and **marvellously prolongs life.** It may be taken by Old and Young at all hours and times according to the Directions.

It is extensively used by Medical Men in their official and private practice, at Home and Abroad who have given numerous written testimonials of its wonderful efficacy.

SPECIMEN TESTIMONIAL.

264, PETIT SACONNEX, GENEVA, SWITZERLAND, *January 6th*, 1886.

DEAR SIR,—I send by same post £1 16s., or 46 francs, for 8 bottles, value 4s. 6d. each. Your Chlorodyne has been used in a case of Cancer, notorious at St. Leonards-on Sea, where Dr. Penhall and Dr. Harvey attended, and the case was given up as incurable, for the leg ought to have been cut off, and the patient was too weak to stand operation. Now, Dr. Metcalfe said the same thing, and your Chlorodyne cured the person, which indeed is my servant, after six years being still alive and perfectly well. I think it is due to you, as the Inventor of the remedy, to state the fact, that others in similar circumstances may never despair, as long as life is in the body. I authorise you to use my letter as you may think best, and also my name, to prevent people being humbugged by other rubbish, &c.

To Mr. RICHARD FREEMAN. Yours truly, WALTER SAVAGE LANDOR.

Sold by Chemists and Patent Medicine Dealers all over the World in bottles **1s. 1½d.**; 2 oz. **2s. 9d.**; 4 oz. **4s. 6d.**; half-pints, **11s.**; and pints, **20s.** each, and by the Inventor, **RICHARD FREEMAN, 70, Kennington Park Road, London, S.E.** Free by post.

Purchasers are CAUTIONED not to have palmed upon them any substitute. See that the Trade Mark, "THE ELEPHANT," *is on the wrapper, &c., and the words* "FREEMAN'S ORIGINAL CHLORODYNE" *are engraved on the Government Stamp—which is the only true Chlorodyne.* [156

Dr. G. H. JONES, F.R.S.L.

SURGEON DENTIST,

Has obtained the highest possible award, Diploma of Honour—Two Gold Medals, International Exhibition, **London**, 1885, and the **Paris** Gold Medal and Diploma of Merit for Dental Improvements Patented, and Painless Adjustment of Artificial Teeth. SCHWEITZER'S COCOATINA,

ANTI-DYSPEPTIC COCOA OR CHOCOLATE POWDER.

GUARANTEED PURE SOLUBLE COCOA of the FINEST QUALITY with the excess of fat extracted.

The FACULTY pronounce it "the most nutritious, perfectly digestible beverage for Breakfast, Luncheon, or Supper, and invaluable for Invalids and Children."

HIGHLY COMMENDED BY THE ENTIRE MEDICAL PRESS.

Being without Sugar, Spice, or other admixture, it suits all palates. Keeps for years in all climates, and is four times the strength of Cocoas thickened yet weakened with Arrowroot, Starch, &c., and in reality cheaper than such mixtures.

Made with *boiling water*, a teaspoonful to a Breakfast Cup, costing less than a Halfpenny.

COCOATINA possesses remarkable sustaining properties, and is specially adapted for early BREAKFAST. In Tins at 1s. 6d., 3s., 5s. 6d., &c., by Chemists and Grocers. [178

Gold Medals, Edinburgh and Liverpool Exhibitions, 1886.

FRY'S COCOA

TRADE MARK.

FRY'S PURE CONCENTRATED COCOA

Prepared by a new and special scientific process, securing extreme solubility, and developing the finest flavour of the Cocoa.

From Sir CHAS. A. CAMERON, M.D., *President of the Royal College of Surgeons, Ireland.*—"I have never tasted Cocoa that I like so well. IT IS ESPECIALLY ADAPTED TO THOSE WHOSE DIGESTIVE ORGANS ARE WEAK."

33 PRIZE MEDALS AWARDED TO THE FIRM. [186

VALUE OF GOLD.

"Here's the note,
How much your chain weighs to the utmost carat,
The fineness of the Gold, and charge for fashion."
SHAKSPERE—*Comedy of Errors.*

PICKFORD & CO. beg to make the following announcement regarding the VALUE OF GOLD, feeling assured that the interest, both of the Public and the Trader, will alike be promoted by a wide circulation of knowledge on the subject.

Gold is divided into 24 parts, or Carats, to the ounce Troy, and the ounce of pure gold being worth 85*s.*, it follows that gold of

		£	s.	d.
9	Carats fine to the ounce Troy, is worth	1	11	10½
10	" " " "	1	15	5
12	" " " "	2	2	6
15	" " " "	2	13	1½
16	" " " "	2	16	8
18	" " " "	3	3	9
22	(British Standard for Gold Coins)	3	17	11
24	(Pure unalloyed Gold)	4	5	0

The GOLD CHAINS and JEWELRY sold by PICKFORD & Co. bear a stamp, showing the guaranteed quality, and the gold will at any time be repurchased at the above quotations.

A large and carefully selected Stock of GOLD and SILVER WATCHES and CLOCKS always on view.

Country customers requiring any articles, from 10s. to £20, for Presentation or otherwise, should send an accurate description of the goods wanted, with a P. O. Order for the amount to be expended *and if the article should not suit the purchase money will be returned.*

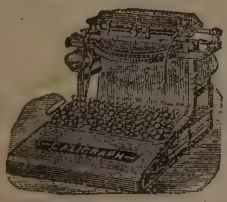
THE CALIGRAPH.

THE FASTEST, LIGHTEST, AND MOST DURABLE

WRITING MACHINE.

By its use more than 50 per cent. in time and labour is saved; and it turns off work that is as easily and rapidly read as printing.



It is operated by touching keys, as in playing the piano.

It is far less trying to the eyes than writing with the Pen, and it does not in the least cramp the hand.

The writing can be press-copied and manifolded, so that you can print your own circulars, and thus save time and money.

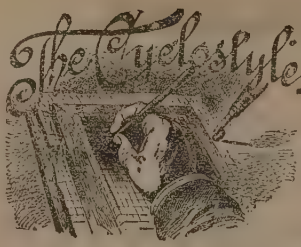
THE CYCLOSTYLE.

Price from 21s. (GESTETNER'S Patent.)



This is the best apparatus ever invented for taking a large number of copies from *one* original writing or drawing. It offers many advantages over any other system. In the first place, the writing with it is as easy and as quick as with an ordinary pencil. The process of writing can be suspended and resumed, if circumstances require it, without any difference whatever, at any subsequent time. Anybody can do the *printing* part of the arrangement—a lad or boy. The resulting copies, which can be obtained in any desired number, it only being a question of time, are in a *permanent* ink, no matter what the colour, and can, therefore, be put away and filed for reference years afterwards. There is no washing, *no soaking*, *no melting* and no copying press necessary, nor is any recourse had to electricity or chemicals. Ladies can use it as well as gentlemen, and the simplicity of the arrangement for reproducing copies of writings, drawings, plans or music is unequalled.

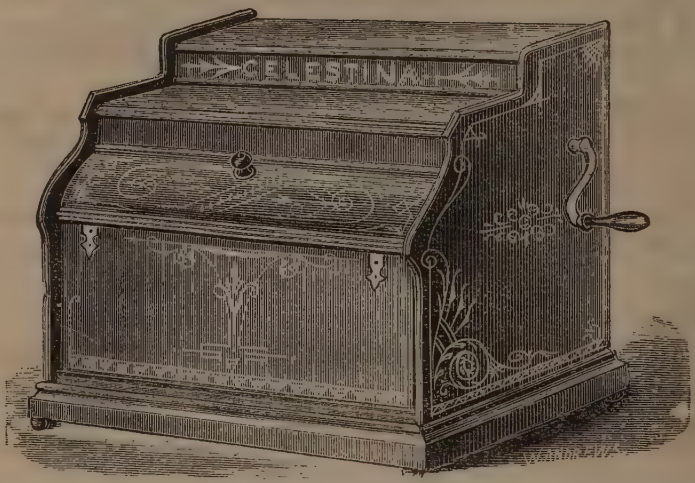
239, LONG LANE, SOUTHWARK, LONDON, S.E. [228

The 'CELESTINA'



Is an entirely New **AUTOMATIC MUSICAL INSTRUMENT,** surpassing anything of the kind ever offered to the public, and can be played by ***anyone*** without musical knowledge. A child can play it with as much precision as the most skilled musician. It performs every description of music for PSALM, SONG, MARCH, or DANCE.

The music is arranged *within the Instrument*, upon neat wooden rolls, so small as to be easily carried in the pocket. The price of the music is *less than one-third* that of any other instrument of equal capacity.

The tone of the CELESTINA enchants everyone who hears it. The Reeds are acted upon by new and ingenious Pneumatic devices, ensuring prompt and rapid action, and producing a volume of tone, *rich, round, mellow, and powerful* as that of a first-class **Parlour Organ.** It has also an effective Swell, by means of which the softest modulations can be produced.

The CELESTINA has no affinity with the cheap Orguinettes and toys so freely advertised, but is a **Genuine Musical Instrument,** fit to delight persons of refinement; and from its portability is eminently suited for the Dance, Garden Parties, Yachting, Mission Rooms, or for Social Gatherings of every kind.

Price, with one Roll of Music, £6 6s.

May be had on Easy Terms, or Discount allowed for Cash.

Smaller Instruments from £3 3s.

Liberal Terms to Shippers and the Trade.

EXTRACTS FROM THE PRESS, &c.

ROYAL BOTANIC SOCIETY OF LONDON,

REGENT'S PARK, LONDON, *June* 30, 1886.

SIR,—I have the pleasure to inform you that the Judges have awarded to you the Society's SPECIAL FIRST-CLASS GOLD MEDAL for your "FAIRY" GARDEN LAMPS.

I am, Sir, your obedient Servant,

Mr. S. CLARKE, Child's Hill, N.W. (Signed) WM. SOWERBY, *Secretary.*

ROYAL BOTANIC SOCIETY OF LONDON,

REGENT'S PARK, LONDON, *July* 10, 1886.

SIR,—By direction of the Council of the Royal Botanic Society of London, I have the pleasure to forward to you Copy of a Resolution passed at the Meeting held this day.

I am, Sir, your obedient Servant,

Mr. S. CLARKE, Child's Hill, N.W. (Signed) WM. SOWERBY, *Secretary.*

(*COPY.*)—"Resolved, that the best thanks of the Society are due to and are hereby given to Mr. Samuel Clarke for his great and liberal assistance at the Evening Fêtes of June 30th and July 7th, 1886, in placing many thousands of his 'Fairy' Lamps at the disposal of the Society for the Illumination of the Grounds, Conservatories, &c."

PUNCH, July 17, 1886.

"MEMORABLE IN THE ANNALS OF THE ROYAL BOTANIC SOCIETY.—Wednesday night, July 7th, on the occasion of the last Fête of this Season in the Botanical Gardens, was deliciously warm, and our enjoyment was not damped by a single drop, or by any number of drops, of rain. Fancy a Botanical Fête without a shower! Illuminations perfect. Great success. All sweetness and light."

TRUTH, February 25, 1886.

"So I must turn to another topic, and one that I know will please you. We were at a dinner party at the Veres' the other evening, and I do not think I have ever seen anything half so pretty as their table was. Up the centre ran a long strip of pale terra-cotta velvet, edged with something that looked like yellow-green moss; but whether it was real or not I could not discover. Between the velvet and the covers were dotted at intervals the new 'Fairy' lights, which are well named, for their effect is quite fairy-like. They are small lights, which are placed in the centre of a circular flower vase, and each is covered with a tinted glass shade, some opal, some pale rose, some the tenderest soft green. The flower circle was filled with moss and ferns, with just two or three pink and yellow tulip buds in each. The softness of the light gave an added beauty to the flowers and ferns, and, as the 'Fairy' Lamps are quite low on the table, the effect was extremely becoming to the diners.

"The next day I went to the agents for these lights, and found that they are not at all expensive. They burn for ten hours, but can be extinguished, and at any time relighted without being trimmed. The absence of grease makes them preferable to candles, even if the effect were not so much more beautiful. When next you give a ball, you must commission me to send you down some for the supper-tables, and a few of the pendants for the conservatories. Sentimental conversations will take on a deeper glow of feeling under such an illumination; and what otherwise might only be a simple, every-day flirtation, might result in a plain gold ring and St. George's. MADGE."

TRUTH, March 4, 1886.

"I am anxious to tell you about the 'Fairy' lights. I knew you would like the idea of them, and would want to buy some at once. Well, dear, they are to be had at all the best West-end and City shops where glass and china are sold. . . . The 'Fairy' lights are now sold at the Stores at 2*s.* 9*d.* . . . I expect that if Lilla were to compare the prices of a great many more of her 'Store bargains' with the charges made at the best shops, she would find out that she was paying heavily for the privilege of dealing at the Stores.

"With flower-circles the 'Fairy' lights cost rather more. Don't forget that they are Clarke's patent.

MADGE." [183

SAMUEL CLARKE,

PATENTEE,

'Pyramid' & 'Fairy' Lamp & Light Works

CHILD'S HILL, LONDON, N.W.

EXTRACTS FROM THE PRESS—*continued.*

THE POTTERY GAZETTE, August 2, 1886.

"THE FÊTES OF THE BOTANICAL SOCIETY, REGENT'S PARK.—Botany is not in the lines of glass and pottery, but this year's Fêtes at this popular Society's Gardens being especially remarkable for the illuminations, it becomes a duty and a pleasure on our part to notice it.

"Perhaps, during this century, in Europe there has been nothing done in outdoor illuminations equal to these Fêtes, for in addition to the usual grand display of lamps, there were added 15,000 'Fairy' lamps by Mr. Samuel Clarke. The Royal party who attended this fête signified their high appreciation of these pretty lamps.

"These charming little lamps, and in such a variety, gave a character to the fête as novel as it was new.

"The variegated colours, as well as the cut-glass varieties, were simply exquisite.

"We especially noticed a cut-glass illuminated service for a dinner table in a well-arranged tent in the grounds, which attracted a crowd of visitors the whole evening. This, doubtless, will become the rage during the autumn and winter in the West-end.

"We learn that Mr. Clarke has been awarded the gold medal of the society as well as a vote of thanks, for this novel introduction into the display of botany, which assists to display by artificial light what has hitherto been confined to daylight.

"The 'Fairy' lamp adds to the beautiful in flowers, and does not detract from the beautiful in the lamp. If this pretty invention does not

'Paint the lily nor add a perfume to the violet,'

it certainly gives us an opportunity of observing nature in a form and at a time when she can be most appreciated.

"Lovers of flowers are greatly indebted to Mr. Samuel Clarke for this useful invention, and we cordially congratulate him upon so successful a bit."

THE WORLD, April 21, 1886.

"There are new developments now in the modes of using the 'Fairy' lights which will be sure to make them very popular this season. Chandeliers from five to eighty lights, in all kinds of pretty glass, are made now; and with these and wall-brackets it is possible to illuminate a large drawing-room most successfully. The dome-shaped glasses look very well, some in mother-o'-pearl glass, some in stain glass, in cameo or in striped glass. One struck me as particularly pretty, made in a very soft pale-green colour. Of course, these coloured glasses, to a certain extent, obscure the light; and in a short time some shades of richly cut glass will be ready, which will quite double the light, instead of rendering it dimmer. For ball-rooms these lights are really perfection, as nothing can happen to them; no draught affects them in the least, no grease can fall, and the wind may come roughly through an open window without risk of any damage to dresses. They create no heat, the light is always steady, and has the curious advantage of increasing in brilliancy as it burns. Pretty little hanging lamps are made for conservatories or gardens suspended by a slender chain, so that they can be put right among the flowers; and also lamps with spikes, for illuminating flower-beds. FLOWER O' THE MAY."

LONDON FIGARO, April 3, 1886.

"I am not surprised that 'Fairy' lamps and 'Fairy' lights are the rage. If ever a man deserved well of hostesses who want to decorate their ball-rooms, their conservatories or their tables, in a fascinating manner, Mr. Samuel Clarke, of Child's Hill, is that individual. His invention is one of the happiest conceptions of the century. No lady who has not adorned her house with 'Fairy' lamps burning 'Fairy' lights has any idea of the charming results of the most moderate expenditure at the Pyramid Works."

THE IRONMONGER, September 11, 1886.

"Mr. Samuel Clarke, Ely Place, E.C., and Child's Hill, N.W., is continuously introducing new and pretty designs in the 'Fairy' lamp department, the expectations for a heavy demand of these specialties being supported by the favour which colonial and foreign visitors have bestowed upon them. 'Fairy' lamp pendants and cluster lights on stands, grouped in the most charming manner, with shades of exquisite hue, give an idea how attractive this style of illumination can be made, and the skilful taste of the manufacturer has been developed in this direction in a marvellous degree. Quite recently a number of richly cut glass shades have been introduced, and the prismatic colours blended with floral decorations produce effects of a pleasing character. Brackets, pedestals, table and floral decorations have all been introduced as tribute to the 'Fairy' lamps, and the splendid success which has followed the efforts thus put forth is another proof that a dainty thing in good taste will be sure to make its way, even with an unpromising beginning, but when handled in the practical manner as the 'Fairy' lamps have been the reward is proportionately greater."

WALKDEN'S
CELEBRATED WRITING INKS

Walkden's Extra Black Ink, as manufactured for 150 years, is unsurpassed for durability. It is *the Best Black Ink that can be made* for the use of Bankers, Lawyers, and Public Companies, and for all documents of importance.

Walkden's Blue-Black Writing Fluid, Warranted made from the Purest materials, is especially adapted for general Commercial use. It writes at first a splendid Blue Colour, and turns to an intense and very durable Black. It does not get thick or deposit sediment, and is the *Best Ink for Hot Climates.*

Walkden's Blue-Black Copying Fluid flows freely and pleasantly from the Pen. Will give three good copies at one impression, or one a long time after writing. It may be used for all purposes.

Walkden's Brilliant Scarlet Ink. A very beautiful preparation, which does not penetrate the Paper like some Red Inks. It is free from Acid, and may be used with Steel Pens.

Walkden's Steel Pens, Fine, Medium, and Broad Points, suitable for all writers. *Strongly Recommended.*

MELANYL:
A CHEMICAL MARKING INK.

Requires No Heat. In One Bottle, ready for use.

The Simplest and Best Marking Ink in the World. Absolutely Indelible. Warranted Harmless to any Fabric.

NOW!!! is the constant Syllable ticking from the Clock of Time.
NOW!!! is the Watchword of the Wise.
NOW!!! is on the Banner of the Prudent.
NOW!!! you can change the trickling stream, but to-morrow you may have the raging torrent to contend with.

WHAT EVERYBODY SHOULD READ.—How important it is to every individual to have at hand some simple, effective and palatable remedy such as

ENO'S FRUIT SALT

to check diseases at the onset for this is the time. With very little trouble you can change the course of the trickling mountain stream, but not the rolling river. It will defy all your tiny efforts. I feel I cannot sufficiently impress this important information upon all Householders and those who are visiting or residing in any Hot or Foreign Climate. Whenever a change is contemplated, likely to disturb the condition of health, let **ENO'S FRUIT SALT** be your companion, for, under any circumstances, its use is beneficial, and never can do harm. When you feel out of sorts, yet unable to say why, frequently without any warning you are suddenly seized with lassitude, disinclination for bodily or mental exertion, loss of appetite, sickness, pain in the forehead, dull aching of back and limbs, coldness of the surface, and often shivering, &c.; then your whole body is out of order, the spirit of danger has been kindled, but you do not know where it may end. It is a real necessity to have a simple remedy at hand, that will always answer the very best end, with a positive assurance of doing good in every case, and in no case any harm. The pilot can so steer and direct as to bring the ship into safety, but he cannot quell the raging storm. The common idea when not feeling well is, "I will wait and see—perhaps I shall be better to-morrow;" whereas, had a supply of **ENO'S FRUIT SALT** been at hand, and use made of it at the onset, all calamitous results might have been avoided. What dashes to the earth so many hopes, breaks so many sweet alliances, blasts so many auspicious enterprises, as untimely death? I used my **FRUIT SALT** in my last very severe attack of fever, and I have every reason to say it saved my life.

HEADACHE AND DISORDERED STOMACH.—"After suffering for nearly two and a half years from severe headache and disordered stomach, and after trying almost everything, and spending much money without finding any benefit, I was recommended by a friend to try your FRUIT SALT, and before I had finished one bottle I found it doing me a great deal of good: and now I am restored to my usual health; and others I know that have tried it have not enjoyed such good health for years. "Yours most truly, ROBERT HUMPHREYS, Post Office, Barrasford."

IMPORTANT TO TRAVELLERS AND ALL LEAVING HOME FOR A CHANGE.—"We have for the last four years used your FRUIT SALT during several important survey expeditions in the Malay peninsula, Siam, and Cambodia, and have undoubtedly derived very great benefit from it. In one instance only was one of our party attacked with Fever during that period, and that happened after our supply of FRUIT SALT had run out. When making long marches under the powerful rays of a vertical sun, or tramping through swampy districts, we have used the FRUIT SALT two and three times a day. The FRUIT SALT acts as a gentle aperient, keeps the blood pure and healthy, and wards off Fever. We have pleasure in voluntarily testifying to the value of your preparation; and our firm belief in its efficacy. We never go in the jungle without it, and have also recommended it to others. Yours truly,

"Commander A. J. LOFTUS, F.R.G.S., his Siamese Majesty's Hydrographer.
"E. C. DAVIDSON, Superintendent Siamese Government Telegraphs.
"Bangkok, Siam, May, 1883.—J. C. ENO, Esq., London."

HOW TO AVOID THE INJURIOUS EFFECTS OF STIMULANTS.—Experience shows that mild ales, port wine, dark sherries, sweet champagne, liqueurs, and brandy are all very apt to disagree, while light wines, and gin or whisky largely diluted with soda-water, will be found the least objectionable. **ENO'S FRUIT SALT** is peculiarly adapted for any constitutional weakness of the liver; it possesses the power of reparation when digestion has been disturbed or lost, and places the invalid on the right track to health.

THE SECRET OF SUCCESS.—"A new invention is brought before the public, and commands success. A score of *abominable imitations* are immediately introduced by the unscrupulous, who in copying the original closely enough to deceive the public, and yet not so exactly as to infringe upon legal rights, exercise an ingenuity that, employed in an original channel, could not fail to secure reputation and profit."—ADAMS.

Caution.—Examine each bottle and see that the Capsule is marked "**ENO'S FRUIT SALT.**" *Without it you have been imposed on by a worthless imitation.* **Sold by all Chemists.**

Directions in Sixteen Languages HOW TO PREVENT DISEASE. Protection in every country.

Prepared only at ENO'S Fruit Salt Works, Hatcham, London, S.E., by J. C. ENO'S Patent. [174
